Socrates:: The Lacedæmonians, therefore, O Alcibiades! admiring and imitating this of the poet, or whether they had of themselves considered the subject in the same manner as he did, every one of them in private, and all of them in public, make a prayer similar to his: for they beseech the Gods to grant them such good things as at the same time are beautiful; and nothing more were they ever heard to pray for. Accordingly, no people have hitherto been more prosperous than they. And if it has happened to them not to prosper in all things, it was not because they prayed amiss; but because the Gods, I presume, have it in their choice, either to grant a man that for which he prays, or to send him the reverse. I have a mind to relate to you somewhat else on this subject, what I once heard from certain elderly men;—that, in the differences between the Athenians and the Lacedæmonians, it so fell out, that whenever they came to a battle, whether by land or by sea, our city was always unsuccessful, and was never able to get one victory:—that the Athenians therefore, uneasy at these miscarriages, and at a loss for some contrivance to put an end to their pressing evils, held a council, and came to this conclusion,—that their best way would be to send to Ammon, and consult him what they should do; and at the same time to ask him this question father,—on what account the Gods always give victory to the Spartans their enemies, rather than to them; though of all the Grecians, we, said they, bring them the greatest number of sacrifices, and those the fairest in their kinds; and though we, beyond all other people, have decorated their temples with the presents that are hung up in them; and in honour of the Gods have made yearly processions, the most solemn and the most costly; and have paid them a greater tribute in money than all the rest of the Grecians put together: whilst the Lacedæmonians, they said, never regard any of these things; but, on the contrary, worship the Gods in so slighting a manner, as to make their sacrifices commonly of beasts full of blemishes; and, in all other instances, fall far short of us, said they, in honouring the Gods; at the same time that the riches they are masters of are not less than ours. When the ambassadors had thus spoken, and had inquired of the Oracle, what they should do to find an end of their present misfortunes, the prophet made no other answer than this; (for without doubt the God did not permit him:) sending for the Athenian ambassadors, he spake to them these words, Thus faith Ammon; he saith, that he prefers the pious addresses of the Lacedæmonians to all the sacrifices of all the Grecians.—These words, and no more, spake the prophet. Now it seems to me, that, by pious addresses, the God means only that prayer of theirs. And it is indeed much more excellent than the prayers of any other people. For the rest of the Grecians, when they have either led up to the altar oxen with their horns gilded, or brought rich offerings and presents to hang up in the temples, pray for whatever they happen to desire, whether it be really good or evil. The Gods therefore, when they hear their impious addresses, accept not of their costly processions, sacrifices, and presents. So that much caution and consideration seem to me requisite on this subject, what is fit to be spoken to the Gods, and what is not. You will also find in Homer sentiments similar to those I have been expressing: for he tells us, that the Trojans, on a certain night, taking up their quarters without the city walls.

> In honour of the blest Immortals, slew
> Unblemish'd hecatombs:

and that the smoke from these sacrifices was by the winds wasted up into heaven:

> Sweet odorif'rous smoke; yet by the Gods
> Rejected, and the sav'ry taste refus'd.
> For strong aversion in their holy minds
> Was rooted, against Troy's devoted tow'rs,
> Against th' injurious might of Troy's proud king,
> And 'gainst the Trojan people, who withheld
> Helen, unjustly, from her wedded lord.

It was of no advantage therefore, it seems, to them to sacrifice, or to offer presents, to the Gods whom they had made their enemies. For the divine nature, I presume, is not of such a kind as to be seduced by presents, like those whose trade it is to make the most of their money, and who care not by what means they are enriched. Besides, we plead very foolishly, in our expostulations with the Gods, if we think to get the better of the Lacedæmonians by such arguments. For it would be a sad thing indeed, if the Gods regarded our presents and our sacrifices, and not the disposition of the soul, when a religious and just man addressed them. Nay, in my opinion, they have much more regard to this, than they have to those pompous processions and costly sacrifices. For nothing hinders, but that any, whether private persons or civil states, let them have sinned against the Gods and against men ever so greatly, may be well able to pay the Gods such a tribute yearly. But they not being to be bribed, disdain all that outward worship; as faith the divine Oracle, and as also faith the Prophet of the Gods. It seems, therefore, that justice and prudence are honoured, above all things, by the Gods, and by men too, such as have good sense and understanding. Now the prudent and the just are no other persons than such as know what behaviour and what speech is proper to be used in our intercourse, whether with gods or with men. But I should be glad to hear from you what your thoughts are on this subject.

Alcibiades:: For my part, I am of the same opinion with you, Socrates, and with the Oracle. And indeed it would ill become me to give my vote opposite to the judgment of the God.

Socrates:: Do you not remember, that you acknowledged your being much at a loss concerning prayer; for fear you should unwarily pray for evil things, imagining them to be good?

Alcibiades:: I do remember it.

Socrates:: You perceive then, that it is not safe for you to go and make your prayer at the temple, as you intended; lest your addresses should happen to be impious, and the God hearing them should wholly reject your sacrifice, and you perhaps should draw upon your own head some farther evil. It seems to me, therefore, that your best way is to be at quiet. For because of your magnanimity, (that fairest of names given to folly,) I suppose you would not be willing to make use of the Lacedæmonian prayer. It is necessary, therefore, that a man should wait till he has learnt what disposition he ought to be in towards the Gods and towards men.

Alcibiades:: But, Socrates, how long will it be before that time comes? and who is he that will instruct me? for I should be very glad, methinks, to see that man, and to know who he is.

Socrates:: It is he, whose care you are the object of. But as Homer says of Minerva, that she removed the mist from before the eyes of Diomede;

> That he might clearly see, and gods from men
> Plainly distinguish,—

so must he in the first place, as it seems to me, remove from your soul the mist that now happens to surround it; and after that he will apply those medicines, by means of which you will clearly distinguish good from evil. For, at present, I think you would not be able so to do.

Alcibiades:: Let him then remove that mist, or any other obstruction that he pleases: for he will find me readily disposed to follow any of his prescriptions, whoever the man is, if by those means I may become a better man than I am at present.

Socrates:: It is wonderful to consider how greatly he is disposed towards the making you so.

Alcibiades:: Till that time therefore, I think, it is the better way to defer my sacrifice.

Socrates:: You think rightly too. For it is a safer way than to run so great a risk.

Alcibiades:: It is undeniable, O Socrates. In the mean time, however, since you seem to me to have counselled well, I shall put this crown about your brows. And to the

Gods we shall present crowns, and all other accustomed offerings, then, when I see that day arrived. Nor will the time be long before its arrival, if it so please the Gods.

Socrates:: Well, I accept of this: and should have pleasure in seeing the time come, when you yourself shall have received some other thing in return for your present to me. And as Creon, when Tiresias, showing him his crown [of Gold], said, it had been given him [by the Athenians], in honour of his science, as the first-fruits of [their] victory obtained over the enemy, is by Euripides made to say;

> This crown, a happy omen and preface,
> I deem, of conquest on our Theban side.
> For you know well, how temped-tost a sea
> We sail on—

I, in the same manner, deem this honour, you have now done me, to be a good presage. For, as I think myself sailing on a sea, no less tempest-tost than that of Creon, I should be glad to bear away the crown of victory from the rest of your admirers.

# Charmides

Wednesday, April 1, 2020

As we should know, at the outset of our study of grammar, that Language is a binary and grammar is a product of our behavior using the recursion of that binary, we eventually arrive at a place in that recursion which is simply many different ways of saying that off is not on, or again, a limit is not a relative difference, or again, a point is that which has no part, or as in this dialog, relation to self is inadmissible, a noun is not a verb we find that we have a standard by which to unlock the meaning of Plato's Dialogs. One of the items one should come away with in the dialog Parmenides, is that we can take our simple binary of noun and verb and construct a table of predication from, in regard of asserting or denying words of words. If the distinction, the divisions of words do not fall into one of two of the binary classes, that person is illiterate; this, of course, means that every book one may come across claiming to teach grammar, has been written by the illiterate. No grammar book, to my knowledge, has ever been written based on simple binary recursion, which is actually how information is managed based solely on the definition of a thing as a binary.

This dialog is one very creative way of exploring the elements of a thing and how we use those elements to form concepts by which to manipulate information by our recursion of those elements to develop complex comprehensions of their applications in every possible grammar.

What it also does for us is give us the ability to examine things in our past such as so called scholars, the pinnacles of the intelligentsia, pondering particular applications such as a search into the meaning of Euclid's use of it as the first definition of the Elements. I find it a contradiction to claim to be educated while at the same time being confused over the first principle which makes grammar even possible. We have only two primitive concepts, and the one is certainly not the other. People who make such mistakes call to my mind those people who stand upon some precipice, be it the top of a building, man made structure, or one made by nature, such as a cliff and claiming that they can fly. The sad part is all of the bystanders who actually believe that this person can pull it off, and in the aftermath of the mess on the ground go away claiming that someone has reached ascension!

Put into a brief set of words, or a whole entertaining dialog, it is simply the fact that makes even existence itself possible. Our own particular intelligence determines if we can always perform the recursions of language into grammar while maintaining an awareness of this similar idea in the many examples of our usage. It does take practice, especially when we are not equipped with bat wings. A rat with wings can certainly claim to fly, but not I.

This is a very elegant and well thought out dialog. As we should know, that each of the elements of a thing allow us to form two distinct concepts in our mind, equality, or no difference, and difference. We can say then that an absolute is not predicable of a relative, or that an absolute is not a relative, or that an absolute is not equal to a relative, or relation to self is inadmissible. Charmides was actually related to Plato, but the most beautiful thing actually meant in this dialog is not Charmides, but the intelligible concepts of equality and inequality. Thus, for example, doing one's own work, is a relative difference, i.e., each pair of correlatives contain its own business, function, purpose or its own work. So, on the surface you see the metaphors Plato is using, it takes practice to associate those metaphors with the intelligible parts of our binary construct as used for information processing.

All of the metaphors that Plato uses resolves down to the binary unit in all of his dialogs. This one fact that Plato's metaphorical grab bag goes right down to unity, is one way one can judge the value of any of the dialog set we have today is at least applicable to learning grammar or not, and often, if that dialog would have even been in use in Plato's Academy in order to teach grammar.

By this metaphorical foundation, I judge the value of each of the dialogs in the set we have today. In short, unlike the traditional scholar, I use the intelligible evidence applied to Plato's profession to determine a result.

The two elements of a thing is all we can name. By the recursion of this fact we acquire binary addressing in four distinct ways, the recursion of that binary as two squared; Common Grammar, Arithmetic, Algebra and Geometry. Although grammar systems do not provide us with information, they make it possible to recursively use that information in order to do our biologically defined job.

Therefore, in examining a dialog, that dialog will be aiming at how to use binary for a particular purpose, the entire dialog will be outlined on that function of binary. Plato not only targets the simple operations of grammar, but also complex psychological applications.

Plato presents a paradox, is it possible for there to be a science of binary recursion, i.e., a science of itself? In order to understand the argument in terms of relation to self better, we can refer to another dialog where the question is laid out in the simple.

> Or rather, shall we be able from truth to obtain truth itself, and its image, if the image is but properly fabricated? Cratylus by Plato, Jowett

The answer is that the ability to use binary processing is a biological given and it is called intelligence. On the level of first principles, it forms what appears to be a paradox. If all we can do is assert and deny, which is a binary expression, then can assertion and denial assert and deny itself? In terms of memory addressing, is an address to data, the data which is addressed? A noun is the name of a container, a verb is the name of that container's content. When we make a verb into a noun, we are moving the address to a different place in memory, this new noun then becomes a container for the remaining. And like memory addressing, there is always, eventually and EOF, End of File. One will notice that one mental malfunction observable in people is that when there is no remaining information, the mind does not stop and recognize it, but jumps to unrelated memory and unrelated operations.

## **Charmides.**

Translated by George Burges, M. A.

PERSONS OF THE DIALOGUE.

Socrates, Chærepho, Critias, Charmides.

---

Socrates:: The day before yesterday I came in the evening from the army at Potidaea, and pleased, like a person who had returned after a long period, I went to my usual haunts for passing the time; and I entered the wrestling-place of Taureas, which is opposite to the temple, close by the portico of the court of the Archon-king. Here I fell in with very many persons, some unknown to me, but the greater part my acquaintances. As soon as they saw me entering unexpectedly, immediately from different sides they tendered at a distance their greetings. But Chærepho, as if he were mad, leaping from the midst of them, ran towards me, and taking me by the hand said;

Chaerephon:: How, Socrates, were you saved from the battle?

Socrates:: For a short time before we the Athenians came away, there was an engagement at Potidæa, of which those present here have just now heard.

And I answering him, said, Thus, as you see.

Chaerephon:: Indeed, it was reported here, that it was a hard-fought battle, and that many of our acquaintances had fallen in it.

Socrates:: And you were told what is very much the truth.

Chaerephon:: But, were you in the engagement?

Socrates:: I was.

Chaerephon:: Sit down here and tell us about it, for we have not yet clearly heard the whole.

Socrates:: And at the same time leading me along, he seated me near Critias, the son of Callæschrus. On sitting down then, I saluted Critias and the rest, and, according as any one asked me, related what took place in the army. And some asked me one thing, and others another. And when we had had enough of such matters, I, in return, made inquiries about affairs here, as regards philosophy, what was its state at present; and respecting the young men, whether they had been remarkable for wisdom, or beauty, or both. Critias then, looking towards the door, and perceiving some young men entering and reviling each other, and another crowd following behind them, said;

Critias:: It appears to me, Socrates, with regard to beautiful youths, that you will know something on the instant. For those, who are now entering, are the forerunners and lovers of one, who is thought to be the most beautiful of all at the present time. And it appears to me, that, having advanced, he is already near.

Socrates:: But who is he, and of whom the son?

Critias:: You surely know,—although he was not yet grown up before you went away, Charmides, the son of our uncle Glauco, and my cousin.

Socrates:: I know him indeed, by Zeus; for he was not then to be despised, although but a boy; but now I think he must be almost a young man.

Critias:: You will immediately know of what age, and what kind he is.

Socrates:: And as he was thus speaking, Charmides entered.—And I, my friend, had no rule to go by; for with regard to handsome youths, I am a white rule; since nearly all young men appear to me to be beautiful. But he then appeared to me to be an object of wonder, both for his size and beauty; and all the rest seemed to me to be in love with him; so astonished and so disturbed were they, when he entered. Many other lovers also followed among those, who were behind him. And as to the men like us indeed, this was less wonderful; but I also paid attention to the youths, and saw that none of them turned their eyes elsewhere than on him, not even the smallest among them, but all looked upon him, as on a statue. And Chæropho calling me, said;

Chaerephon:: What does the youth appear to you, Socrates? Is he not very beautiful?

Socrates:: Surpassingly.

Chaerephon:: And yet, if he were to undress, he would appear to be faceless, so very beautiful is his form.

Socrates:: And in this all the rest agreed with Chærepho. And by Hercules, I replied, you speak of a man not to be conquered, if only one small thing still happens to be his.

Critias:: What is that?

Socrates:: If in his soul, he should happen to be well formed; and it is surely becoming, Critias, for him to be so, as being one of your family.

Critias:: And he is very beautiful and good in this respect.

Socrates:: Why then, do we not strip off this very thing of his, and look upon it prior to his external form? For since he is of such an age, he will in every respect be willing to discourse.

Critias:: Very much so; since he is a philosopher, and, as it seems both to others and himself, very poetic.

Socrates:: This beauty, friend Critias, descends to you remotely, through your alliance to Solon. But why do you not call the youth hither, and present him to me? For it would be no disgrace for us to discourse with him, even if he were younger than he is, in the presence of yourself, who art his tutor and cousin.

Critias:: You speak well; and we will call him.

Socrates:: And at the same time turning to his attendant;

Critias:: Call, Charmides, and tell him that I wish to bring him in contact with a physician, touching the weakness of which he lately spoke to me.

Socrates:: Critias then said to me;

Critias:: Charmides lately has complained of a heaviness in his head when he rises in the morning. What then should hinder you from pretending to him, that you know of a cure for the head?

Socrates:: Nothing; let him only come.

Critias:: And come he shall.

Socrates:: Which was indeed the case; for he came, and caused much laughter. For each of us that were seated together, through eagerness to sit near Charmides, pushed his neighbor, till of those that were seated at the extremity, one we forced to rise up, and another to fall sideways on the ground. But he came and sat between me and Critias. Then, however, friend, I was perplexed, and the former confidence which I had felt, that I could easily discourse with Charmides, was cut down. But afterwards, on Critias telling him that I was the person who knew of a cure, he fixed his eyes upon me in a perplexing manner, and brought himself near as if to ask a question. Then all that were in the place of exercise, immediately gathered round us; and when, my noble fellow, I looked within his cloak, I was inflamed with the view, and was no longer myself; and I thought that Cydias was most wise in amatory affairs;

who, when speaking of a beautiful boy, and giving a hint to another, said;

> “Beware, when coming in the face of lion,
> To take a portion of the flesh of fawn.”

For I seemed to have been caught by an animal of this kind. However, on Charmides asking me whether I knew of a remedy for the disorder in his head, with difficulty I replied, that I did know.

Charmides:: What is it?

Socrates:: It is a certain leaf, and a certain incantation in addition to the medicine, which if any one chanted and used at the same time as the leaf, the medicine could perfectly restore him to health; but that the leaf would be of no use without the incantation.

Charmides:: I will write down the incantation from you.

Socrates:: Will you do this, whether you persuade me or not?

Upon this he said, laughing;

Charmides:: I will, if I persuade you, Socrates.

Socrates:: Be it so; and do you accurately know my name?

Charmides:: Unless I am doing wrong; for there is no small talk about you amongst those of my age; and I can remember, too, that you associated with Critias when I was a boy.

Socrates:: You say well. For I will now tell you, with greater freedom of speech, what the incantation is. But just now I was doubtful after what manner I should show you its power. For this incantation is such, Charmides, that it is able to make not only the head sound; but, as perhaps you have already heard from clever physicians, when any one comes to them with a pain in their eyes, who say that they must not attempt to cure the eyes alone, but that it is necessary for them at the same time to attend to the head, if the eyes are to be in a good state, and, on the other hand, that it would be great stupidity to think of attending to the head alone without the whole body. In consequence of this very reasoning, they turn themselves to the whole body, and by diet and regimen endeavor to attend to and cure the part together with the whole. Or have you not heard that they thus speak, and that this is the case?

Charmides:: Entirely so.

Socrates:: Does it then appear to you that it has been well said; and do you admit their doctrine?

Charmides:: The most of all things.

Socrates:: And I, on hearing him express his praise, took courage, and my confidence was again a little excited and I revived; and such then, Charmides, is the power of this incantation; and I learnt it there during the expedition, from one of the Thracian physicians of Zamolxis, who are said to render men even immortal. This Thracian said that "the Greek physicians beautifully assert the same things as I now assert. But our king Zamolxis," said he, "being a god, says that, as it is not proper to attempt to cure the eyes without the head, nor the head without the body, so neither is it proper to cure the body without the soul; and that this was the reason why many diseases escape the Greek physicians, because they are ignorant of the whole, to which attention ought to be paid; for when this is not in a good state, it is impossible for a part to be well. For all things," said he, "proceed from the soul, both the good and bad, to the body and to the whole man, and flow from thence, as from the head to the eyes; and that it is therefore requisite to attend to that point first, and especially if the parts of the head and the rest of the body are to be in a good state." And he said, thou happy youth, "that the soul was cured by certain incantations; and that these incantations were beautiful reasons; and that such temperance was generated in the soul, which, when generated and present, can easily impart health both to the head and to the rest of the body." Having then taught me the medicine and the incantations, "Let none," said he, "persuade you to cure his head with this medicine, who shall not have first presented his soul to be cured by you with the incantation. For the fault, said he, of the present time respecting men is this, that certain persons endeavor to become physicians without a knowledge of either temperance or health." And he very earnestly enjoined me that no person should be so rich, or noble, or beautiful as to persuade me to act otherwise. I therefore, for I swore to him that I would obey him, and hence I must, will obey him. And indeed if you are willing, according to the injunctions of the stranger, to present your soul first for me to enchant by the incantations of the Thracian, I will administer also the medicine to your head; but if not, I cannot do any thing whatever for you, friend Charmides.

Critias therefore, on hearing me speak thus, observed;

Critias:: This weakness in his head, Socrates, will be a godsend to the youth, if he shall be compelled to become through his head better in his intellect likewise. I assure you moreover that Charmides is thought to surpass all his equals, not only in his form, but in that very thing for which you say you have an incantation. Now you mean temperance. Is it not so?

Socrates:: Entirely so.

Critias:: Know then, that he appears to be by far the most temperate of those living at present; and that as regard all other points he is, as far as his age goes, inferior to none.

Socrates:: And it is just, Charmides, that you should excel the others in all such points as these. For I do not think that any one of those here could readily show two families among the Athenians uniting in the same race, who could probably produce a more beautiful and excellent offspring than those from whom you are sprung. For your family on the father's side, that of Critias the son of Dropides, has been handed to us as being celebrated by Anacreon and Solon, and many other poets, for its excelling in beauty, and virtue, and the rest of what is called good fortune. And on his mother's side again in like manner. For not one of those that dwell on the continent of Asia is said to have been thought a man of greater beauty and size than your uncle Pyrilampes, as often as he went as an ambassador to the great king of Persia, or to any one else on the continent; and indeed the whole of his family on this side is in nothing inferior to that on the other. It is likely then that, sprung from such persons, you should be the first in all things. Hence, with respect to your visible form, you appear, thou dear son of Glauco, to me to disgrace none of your ancestors; and if, according to the assertion of this person here, you are sufficiently endued by nature as regards temperance and the other virtues, your mother, dear Charmides, has brought you forth blessed indeed. The case, then, is this: If temperance is present with you, as Critias here asserts, and you are sufficiently temperate, you will no longer require the incantations, either of Zamolxis, or the Hyperborean Abaris, but the medicine for the head should be immediately given you. But if you seem to be still in any respect wanting in these things, we must have the incantation before giving the medicine. Do you then tell me yourself whether you agree with this here Critias, and affirm that you participate sufficiently in temperance, or whether you are deficient. Hereupon

Charmides, blushing, appeared in the first place to be still more beautiful, for bashfulness was suited to his age, and in the next, he answered me not without spirit. For, said he;

Charmides:: It was not easy at present either to confess to or deny what was asked: for, if I say that I am not temperate, it would be absurd for me to state so against myself, and at the same time I should show that Critias has spoken falsely, and many others, to whom I appear to be temperate: but if, on the other hand, I say that I am temperate, by thus praising myself, I shall perhaps give offence: so that I do not know how to answer you.

Socrates:: You appear to me, Charmides, to say what is reasonable; and it seems we should consider in common whether you possess or not that, which I am asking about, that you may neither be compelled to say what you do not wish, nor I, on the other hand, turn myself without due consideration to the medical art. If, therefore, it is agreeable to you, I am willing to consider this matter together with you; but if it is not, to leave it alone.

Charmides:: Nay, but it is the most agreeable to me of all things; so that for this matter at least do you consider it in whatever manner appears to you to be the better.

Socrates:: In this way then, the inquiry respecting it seems to me to be the best, if temperance is present with you, for it is evident that you have some opinion about it; for it is surely necessary that if it is really inherent in you, it must furnish some sensation of itself, from which you would have an opinion respecting it, what it is, and of what kind a thing is temperance. Or do you not think so?

Charmides:: I do think so.

Socrates:: And could you not surely tell me, since you know how to speak Greek, what you think of it, and what it appears to you?

Charmides:: Perhaps so.

Socrates:: That we may therefore conjecture, whether it is inherent in you or not, tell me, what say you is temperance according to your opinion? And at first, indeed, he was shy and not altogether willing to answer. Afterwards, however, he said;

Charmides:: that temperance appears to consist in doing all things orderly and quietly, both in walking and discoursing in the public ways, and acting similarly in every thing else; and, in short, a certain quietness appears to be what you are asking about.

Socrates:: Are you then speaking correctly? At least, Charmides, persons say that the quiet are temperate. But let us see if they say any thing to the purpose. For, tell me, is not temperance one of the things beautiful?

Charmides:: Entirely so.

Socrates:: Whether then in a grammar-school is it more beautiful to write letters of the same size swiftly or slowly?

Charmides:: Swiftly.

Socrates:: And in reading, swiftly or slowly?

Charmides:: Swiftly.

Socrates:: And in playing on the harp, rapidly, and in wrestling, briskly, than quietly and slowly?

Charmides:: Yes.

Socrates:: And is there not the like in boxing, and contests where boxing and wrestling are united?

Charmides:: Entirely so.

Socrates:: And in running and leaping, and all other actions of the body, do not those that take place briskly and rapidly belong to the beautiful, and those that are done slowly, with difficulty, and quietly, to the not beautiful?

Charmides:: It appears so.

Socrates:: It appears then to us, that with respect to the body, not the quiet, but the most rapid, and most brisk, are the most beautiful. Is it not so?

Charmides:: Entirely so.

Socrates:: But temperance was something beautiful?

Charmides:: Yes.

Socrates:: Not quietness, therefore, but celerity will be the more temperate with respect to the body; since temperance is beautiful.

Charmides:: It seems so.

Socrates:: What then, is a facility in learning more beautiful than a difficulty?

Charmides:: It is.

Socrates:: But a facility in learning is to learn swiftly; and a difficulty in learning is to learn quietly and slowly.

Charmides:: It is.

Socrates:: And is it not more beautiful to teach another swiftly and vehemently, than quietly and slowly?

Charmides:: Yes.

Socrates:: What then, is it more beautiful to recollect and to remember things quietly and slowly, or vehemently and rapidly?

Charmides:: Vehemently and rapidly.

Socrates:: And is not sagacity a certain acuteness, and not a quietness of the soul?

Charmides:: True.

Socrates:: To understand then what is meant in the school of the grammarian, harpist, and every where else, not in the most quiet, but in the most rapid manner, is the most beautiful.

Charmides:: Yes.

Socrates:: Moreover in the investigations of the soul, and in deliberating, not he, who is the most quiet, as I think, and deliberates and discovers a thing with difficulty, is worthy of praise, but he who does this most easily and rapidly.

Charmides:: It is so.

Socrates:: Hence all things relating to the soul and the body, and such as are performed with quickness and briskness, appear to be more beautiful than such as are performed with slowness and quietness.

Charmides:: It appears so.

Socrates:: Temperance then will not be quietness, nor will a temperate life be a quiet one, at least from this reasoning; since a temperate one ought to be beautiful. For one of two things must take place, that either never, or very rarely, have quiet actions in life been shown to be more beautiful than such as are swift and strenuous. If then, my friend, not fewer actions, as quiet as possible, happen to be more beautiful than such as are vehement and rapid, not even on this ground would temperance consist at all the more in acting quietly, than vehemently and rapidly, either in walking or in speaking, or in any thing else; nor would a quiet orderly life be more temperate than the unquiet one; since by our reasoning, temperance has been laid down as one of things beautiful; and things swift have appeared to be no less beautiful than things quiet.

Charmides:: You appear to me, Socrates, to have spoken correctly.

Socrates:: Again, therefore, Charmides, be still more attentive, and looking to yourself, consider what kind of a person temperance, when present, causes you to be, and being what sort of a thing itself, it would accomplish this. Reasoning, therefore, on all these particulars, inform me well, and in a manly manner, what it appears to you.

And he, stopping a while, considering the matter thoroughly with himself, said, in a very manly manner;

Charmides:: Temperance then seems to me to make a man ashamed and bashful: and temperance to be what shame is.

Socrates:: Be it so. But did you not just now acknowledge that temperance is something beautiful?

Charmides:: Entirely so.

Socrates:: Are not therefore temperate, good men?

Charmides:: Yes.

Socrates:: Will therefore that be good, which does not render men good?

Charmides:: It will not.

Socrates:: Temperance, therefore, is not only beautiful, but good.

Charmides:: It appears so to me.

Socrates:: What then, will you not believe that Homer speaks well, when he says;

> Shame ill accompanies a man in need?

Charmides:: I do.

Socrates:: Shame, therefore, as it seems, is both not good, and good.

Charmides:: It appears so.

Socrates:: But temperance is good; since it makes those good, to whom it is present, but by no means bad.

Charmides:: The case appears to me to be as you say.

Socrates:: Temperance, therefore, will not be shame, if it happens to be a good thing, while shame is not in any respect more a good thing than a bad one.

Charmides:: It appears to me, Socrates, that this is rightly asserted. But consider this, what seems to you on the subject of temperance. For I have just now recollected what I had heard some one saying, that temperance is to manage one's own affairs. Consider, therefore, this, whether he, who says so, appears to you to have spoken correctly.

Socrates:: Thou vile youth! you have heard this from Critias, or from some other of the sophists.

Critias:: It seems, from some other person; for he did not from me.

Charmides:: But what difference does it make, Socrates, from whom I heard it?

Socrates:: None at all For we are not to consider this, who said it, but whether it is said correctly or not.

Charmides:: Now you speak correctly.

Socrates:: By Zeus, I do. But if we discover how this thing subsists, I shall wonder: for it is similar to a certain enigma.

Charmides:: On what account?

Socrates:: Because, the person, who said that temperance is to manage one's own affairs, did not mean what his words expressed. Or do you think that the teacher of letters does nothing when he writes or reads?

Charmides:: I think he does something.

Socrates:: Does the teacher of letters, therefore, appear to you to write and read his own name only, or to instruct you boys? And are ye not wont to write no less the names of your enemies than of your friends?

Charmides:: No less.

Socrates:: When, therefore, ye were doing this, were ye busily employed, and not temperate?

Charmides:: By no means.

Socrates:: And, moreover, were ye not doing your own business, if to write, and to read, is to do something?

Charmides:: It certainly is.

Socrates:: And besides, my friend, to heal, and to build, and to weave, and to effect by any art whatever any of the works belonging to arts, is surely to do something.

Charmides:: Entirely so.

Socrates:: What then, would that city appear to you to be well regulated through a law commanding each person to weave and wash his own garment, and to be the cobbler of his own shoes, and make an oil-cruse, and curry-comb, and every thing according to the same reasoning, but not to touch things belonging to others, but to work and manage his own affairs?

Charmides:: It would not appear to me so.

Socrates:: However, a city temperately regulated would be well regulated.

Charmides:: How not?

Socrates:: For a man, therefore, to do such things as these, and to manage his own affairs, would not be temperance.

Charmides:: It appears not.

Socrates:: He, therefore, who said, that to manage one’s own business is temperance, spoke, as I just now observed, obscurely; for he was surely not so stupid that his meaning should be the same as his words. Or did you, Charmides, hear some silly person assert this?

Charmides:: By no means; since he appeared to be very wise.

Socrates:: More than any thing, therefore, as it seems to me, he proposed this enigma, because it is difficult to know what is the transacting one's own affairs.

Charmides:: Perhaps so.

Socrates:: Can you then tell me, what it is to transact one's own affairs?

Charmides:: By Zeus, I do not know. But perhaps there is nothing to hinder the person, who said this, from not knowing what he meant.

Socrates:: And as he said this, he slightly smiled and looked at Critias. And it was now evident that Critias, who had been for some while in an agony, and stimulated by ambition in the presence of Charmides and those there, and who had with difficulty contained himself, was then no longer able to do so. And it appeared to me more than ever, that what I suspected was true, that Charmides had heard this definition of temperance from Critias. Charmides, therefore, being willing not to support himself the reason for the reply, but that the other Critias should do so, and urged him on himself, showed as if he thought him confuted. This Critias could not endure; but appeared to me to be angry with Charmides, as a poet is with an actor who exhibits his poems badly; so that, looking at him, he said;

Critias:: Think you thus, Charmides, that, if you do not know what he meant, who said, that temperance is to manage one's own affairs, he did not know?

Socrates:: It is, Critias, thou best of men, no wonder that Charmides, who is but a youth, should not know; but it is surely likely for you to know, both on account of your age and attention to the subject. If then you agree that temperance is, what this person asserts, and will take up from him the conversation, I shall with greater pleasure consider with you whether what has been said is true or not.

Critias:: Nay, I do agree, entirely, and accept the conversation.

Socrates:: And you do well. But tell me, do you admit what I was just now asking, that all artists do something?

Critias:: I do.

Socrates:: Do they appear to you to do only their own business, or the business of others likewise?

Critias:: Of others likewise.

Socrates:: Do they act temperately, therefore, who only do their own business?

Critias:: What should prevent them?

Socrates:: Not myself at all; but see whether there be not a hindrance to him, who, after having laid down that temperance is to transact one's own affairs, afterwards says, that nothing prevents those who transact the affairs of others from being temperate likewise.

Critias:: For where have I confessed that they, who transact the affairs of others, are temperate, like those, who I confessed make something?

Socrates:: Tell me, do you not say that to "make" a thing and to do is the same thing?

Critias:: Not I indeed, nor "to work" the same as "to make," for I have learned so from Hesiod, who says, "No work is a disgrace.", Think you, then, that if he had called by the terms of "to work" and "to make," such acts as you were just now speaking of, he would have said that there was no disgrace to a person being a cobbler, or a seller of pickled fish, or of one who sits at a brothel?, You must not think so, Socrates: but he I think did consider “a making” as something different from “action” and “working;” and that “making” is a disgrace, when it does not take place in conjunction with the beautiful; but that no “work” is ever a disgrace. For things which are made beautiful and useful, he called “works,” and “makings” of this kind workings and doings. You must say too that he considered such things good alone as belong to home; but every thing hurtful, as foreign. Hence, you must think that Hesiod, and every other sensible person, calls him, who transacts his own affairs, temperate.

Socrates:: As soon, Critias, as you began to speak, I perceived almost, that you called things belonging to home, a person’s own by the name of good, and “the making” of things good, actions. For I have heard Prodicus, when speaking of terms, make some ten thousand distinctions; and I will allow you to lay down every term as you please; but do you only clearly state, to what you would refer the term, of which you may be speaking. Now therefore again from the beginning define more clearly. Do you say that temperance is the “doing,” or the “making,” or in whatever manner you choose to call it, of good things?

Critias:: I do.

Socrates:: He therefore is not temperate who acts badly, but he who acts well.

Critias:: Does it not, thou best of men, appear so to you?

Socrates:: Dismiss this question for let us not consider what appears to me, but what you are saying now.

Critias:: Nay, I do not assert that he is temperate, who does not do good but evil, but that he is temperate, who does good and not evil. For I clearly define to you, that temperance is the practice of things good.

Socrates:: And perhaps there is nothing to prevent you from speaking the truth. But nevertheless I should wonder, if you thought that persons who conduct themselves temperately were ignorant that they are temperate.

Critias:: But I do not think so.

Socrates:: Was it not, asserted by you a little before, that there is nothing to prevent artists, who make on the other hand things belonging to others, from being temperate?

Critias:: It was so asserted by me; but what then?

Socrates:: Nothing. But tell me, does any physician appear to you, while making a person to be in health, to do what is useful both to himself, and to him whom he cures?

Critias:: To me he does.

Socrates:: Does not he, then, who acts thus, do what is fitting?

Critias:: Yes.

Socrates:: And is not he temperate, who does what is fitting?

Critias:: He is temperate.

Socrates:: Is it not then fitting for a physician to know when he is curing usefully, and when not? and for each artist to know, when he will derive a benefit from the work which he is doing, and when not?

Critias:: Perhaps not.

Socrates:: Sometimes then, when a physician acts usefully or hurtfully, he does not know himself how he is acting; although, according to your doctrine, when he acts usefully, he acts temperately; or did you not say so?

Critias:: I did.

Socrates:: Does it not then seem, that sometimes, when he acts usefully, he acts temperately, and is temperate, but is ignorant himself that he is temperate?

Critias:: But this, Socrates, could never take place; yet if you think that this necessarily results from what I have admitted above, I would rather retract some of those assertions; nor should I be ashamed to confess that I have improperly asserted something, rather than admit that the man, who is ignorant of himself, is temperate. For I almost assert, that to know oneself is temperance; and I agree with him who placed the precept upon the temple at Delphi, as being an address from the god to the comers, instead of “Hail!” Since this last to hail is not a correct address, nor should we exhort each other to this, but to be temperate. Thus the god addresses those coming to the temple, in a manner somewhat different to what men do; as he had in his mind, it appears to me, who put up the inscription; and he says to the person coming nothing else than “be temperate;” but, as being a prophet, he expresses it more enigmatically. For “Know thyself,” and “Be temperate,” is the same thing, as both the writings and myself assert. But perhaps some one may think it to be different; which appears to me to have been the case with those, who placed the subsequent inscriptions, “Nothing too much,” and “A surety is near to calamity.” For they thought that “Know thyself” was a bit of advice, and not an address from the god for the sake of the comers; and then, that they might put up bits of advice not less useful, they put up these inscriptions. Now the reason, Socrates, for the sake of which I am saying all these things, is this, that I give up to you all that has been said before; for perhaps you have spoken more correctly about them; and perhaps, too, I; and there is, of what we have said, nothing very clear. But now

I am willing to give you the reason for this, if you do not concede, that temperance is to know oneself.

Socrates:: But, Critias, you come against me, as if I asserted that I had a knowledge of what I am asking about, and if I wish, having agreed with you. But this is not the case. For I am seeking with you continually what is placed before us, through being myself ignorant. Hence, after having considered, I am willing to say whether I agree or not. But do you stop, till I have considered.

Critias:: Consider then.

Socrates:: I do consider.

For if to know a thing is temperance, it is evident that temperance would be some science, and of some thing. Or would it not?

Critias:: It is, and of itself.

Socrates:: Is not then medical science, the science of that which is healthy?

Critias:: Entirely so.

Socrates:: If then, you should ask me, for what is the medical science of that, which is healthy, useful to us, and what does it effect, I should reply, that it is of no small utility, because it effects for us health, a beautiful work. Do you admit this?

Critias:: I do admit it.

Socrates:: And if then you should ask me, what work does house-building, which is the science of house-building, effect, I should say, dwellings; and I should reply in a similar manner with respect to other arts. Since then, Critias, you say that temperance is the science of itself, you must, when asked, be able to tell in behalf of temperance, what beautiful work does temperance, being the science of itself, effect, and which deserves to be mentioned. Come then, tell me.

Critias:: Nay but, Socrates, you do not make the inquiry correctly. For temperance is not naturally similar to the other sciences, nor are the other sciences similar, some to some, and others to others. But you make your inquiry, as if they were similar. For tell me, what work is there in the calculating or geometric art, which is of the like nature with a dwelling, the work of the house-building art? or with that of a garment, the work of the weaving art? and in other works of such a kind, many of which any one would be able to show, as belonging to many arts? Can you in these show me any such work? You will not be able.

Socrates:: You speak the truth. But this I can show, of what thing each of these sciences is the science, and which is something different from the science itself. Thus, for instance, the calculating science is the science of the even and the odd, how they are situated as regards multitude, with respect to themselves and to each other. Is it not?

Critias:: Entirely so.

Socrates:: Are not, therefore, the even and the odd different from the calculating science?

Critias:: How not?

Socrates:: Moreover, the weighing science is that relating to a heavier and lighter weight; now the heavy and the light are different from the weighing science itself. Do you agree to this?

Critias:: I do.

Socrates:: Tell me then, of what is temperance the science, and which is different from temperance itself?

Critias:: This is that very thing, Socrates, to which you have arrived by seeking in what point does temperance differ from all the other sciences: but you are seeking after some similitude in it to other sciences. This, however, is not the case. For all the other sciences are sciences of another thing, but not of themselves; but this alone is both the science of other sciences and of itself likewise. And these things ought to be far from lying hid from you. But I think you are doing the very thing, which you just now said you were not doing: for you are attempting to confute me, after leaving alone that, about which is our discourse.

Socrates:: What are you doing, by your thinking that if I should confute you as much as possible, I should do it on any other account, than for the sake of thoroughly searching out what I mean myself; as I am fearful lest, whilst I think I know something, I am unconsciously knowing nothing? And now I say I am doing this, while considering the argument, principally indeed for my own sake, but perhaps also for the sake of the rest of our friends. Or do you not think it is a good, common for nearly all men, that each thing should become apparent in what state it is?

Critias:: Very much so, Socrates.

Socrates:: Boldly then, O give, thou blessed man, an answer when asked, how the matter appears to you, and leave, whether it is Critias or Socrates who is confuted, to go hang; but giving your attention to the reasoning itself, consider whither it will go, when confuted.

Critias:: I shall do so: for you appear to me to speak with moderation.

Socrates:: Tell me then, what do you mean on the question of temperance?

Critias:: I mean then, that this alone, of all other sciences, is both the science of itself and of the other sciences.

Socrates:: Will it then, be the science of ignorance, since it is of science?

Critias:: Entirely so.

Socrates:: The temperate man therefore alone will know himself, and be able to examine what it is he happens to know, and what he does not; and in like manner he will be able to look into the rest of things, what it is that a person knows, and thinks he knows, if indeed he knows, and what on the other hand he thinks he knows, but does not know; but no other person will be able. And this then is to be temperate; and it is temperance, and the knowledge of oneself, to know what one knows, and what one does not know. Are these the things you assert?

Critias:: They are.

Socrates:: Again then, let us consider the third point from the beginning, as if it were the cup to the savior deity. In the first place, whether it is possible or not to know, with respect to what a person knows, and does not know, that he does know, and does not know; and, in the next place, if this be ever so completely possible, what will be the utility of it, to us, who know it.

Critias:: It is requisite, to consider this.

Socrates:: Come then, Critias, and consider whether you are more able to find a way on these points than myself. For I am in doubt, and where I am in doubt I will tell you.

Critias:: By all means.

Socrates:: The following consequence then will ensue, if there be, what you just now asserted, some one science, which is the science of nothing else than itself and the rest of the sciences, and of ignorance besides.

Critias:: Entirely so.

Socrates:: See then, my friend, how absurdly we have endeavored to argue. For if you consider this very same thing in other matters, it will, I think, appear to you to be impossible.

Critias:: How and where?

Socrates:: In these. For consider, whether it appears to you that a seeing power exists, which is not the seeing power of those things, which are the objects of the rest of seeing powers, but is the seeing power of itself and the rest of seeing powers, and similarly of not seeing powers; and though it is a seeing power, it does not see any color, but sees itself and the rest of the seeing powers. Does it appear to you that there is such a seeing power as this?

Critias:: By Zeus, it does not to me at least.

Socrates:: What then say you to the hearing power, which does not hear any sound, but hears itself, and the rest of the hearing powers, and the non-hearing power besides?

Critias:: Nor yet this.

Socrates:: To speak briefly then, consider with respect to all the senses, whether it appears to you that there is any sense, which perceives other senses and itself, but perceives none of those things which the other senses perceive.

Critias:: It does not appear to me at least.

Socrates:: But does it appear to you that there is any desire, which is the desire of no pleasure, but is the desire of itself and of the rest of desires?

Critias:: It does not.

Socrates:: Nor, as I think, is there any will, which wills no good, but wills itself alone and the rest of wills.

Critias:: There is not.

Socrates:: But would you say that there is a love of such a kind, as to be the love of nothing beautiful, but which is the love of itself and the rest of loves?

Critias:: Not I.

Socrates:: Have you ever conceived that there is any fear, which fears itself and the rest of fears, but fears nothing fearful?

Critias:: I have not conceived.

Socrates:: And have you conceived any fancy, which fancies fancies and itself, but which forms no fancy respecting those things, which are the subjects of the rest of fancies?

Critias:: By no means.

Socrates:: But we say, as it seems, that there is a science of such a kind, as to be the science of no learning, but the science of itself and the rest of sciences.

Critias:: We do say so.

Socrates:: Would it not be strange if there were such a science? For let us not strenuously assert that there is not, but consider if there be.

Critias:: Right.

Socrates:: Come then, there is this science, the science of something; and it does possess some such power, as to be the science of something. Is it so?

Critias:: Entirely so.

Socrates:: For we also say that the greater possesses some such power, as to be greater than something?

Critias:: It does so possess.

Socrates:: Is it not then greater than something less, if it is greater?

Critias:: Of necessity.

Socrates:: If therefore we should find something greater, which is greater than the greater and than itself, but which is not greater than any of those things than which the rest of things are greater, it would surely be in this situation, that if it is greater than itself, it would be also less than itself?

Critias:: Of this there is, Socrates, a great necessity.

Socrates:: If therefore there is any thing which is the double of the rest of doubles and of itself, it will be the double of the rest of doubles and of itself, in consequence of its being the half; for nothing can be the double of any thing else than of the half.

Critias:: True.

Socrates:: But being more than itself, will it not also be less than itself? and being heavier, be lighter than itself? and being older, be younger than itself? and similarly as regards all other properties? For whatever has a power of its own with respect to itself, will it not possess likewise that existence, to which that power is related? I mean some such thing as this. For instance, we say that hearing is nothing else than a hearing of sound.—Is it not so?

Critias:: Yes.

Socrates:: If therefore it could hear itself, would it not hear itself, as having a voice? For otherwise it would not hear.

Critias:: This is perfectly necessary.

Socrates:: The sight too, thou best of men, if it could itself see itself, must necessarily have some color. For sight would never be able to see any thing colorless.

Critias:: It would not.

Socrates:: You see therefore, Critias. that the matters we have gone through, appear to us to be, some of them, altogether impossible; and of others it is greatly disbelieved that they could have a power of their own with respect to themselves. For as regards magnitudes, multitudes, and things of this kind, it is perfectly impossible. Or is it not?

Critias:: Entirely so.

Socrates:: Again, that hearing hears itself, and sight sees itself, and that motion moves itself, and heat burns itself, and all other such like assertions, would bring disbelief to some, but to some perhaps not. There is then, my friend, a need of some great man to draw sufficiently a distinction through all things on this point, whether of existing things not one except science has naturally a power of its own with respect to itself, but with respect to another thing, or that some have, and some not: and again, if there are certain things, which have a power with respect to themselves, whether amongst these is the science, which we say is temperance. For I do not believe myself to be sufficient to draw such a distinction. Hence I am not able to affirm positively, whether it is possible for this to take place, that there is a science of science; nor, if there is, will I admit that temperance is that science, until I have considered whether, being such, it would be useful to us, or not. For I divine that temperance is something useful and good. Do you then, son of Callæschrus,—since you lay down that temperance is this science of a science, and likewise of a not-science,—show in the first place this; that what I have just now mentioned it is possible for you to show; and in the next place, in addition to its being possible, show that it is useful; and thus perhaps you will satisfy me that you are correctly speaking about temperance, what it is.

On Critias hearing this, and seeing that I was in doubt, he did, as they do, who, through looking in the face of those, who are gaping, are affected in the very same way;

and he seemed to me to be compelled by my doubting to be seized with a doubt himself. However, being in great repute on every occasion, he felt a shame before those who were present; and was neither willing to concede that he was unable to draw the distinction on points that I had proposed to him, nor did he say any thing clearly, but concealed his perplexity. But,—in order that the discourse might proceed, if it seems good to you, Critias, let us now concede this, that it is possible for a science of a science to exist. But let us consider again whether it is or not in this way. Come then, if it is in the highest degree possible, in what way is it the more possible to know what a person does know, and what he does not? For we surely said that this is to know oneself, and to be temperate. Or did we not?

Critias:: Entirely so; and this happens in a certain respect to be the case, Socrates. For if any one possesses the science, which knows itself, he will be such as that is which he possesses. Just as when any one possesses swiftness, he is swift; and when beauty, is beautiful; and when knowledge, is knowing. So too when any one possesses the knowledge, that knows itself, he will surely then become knowing himself.

Socrates:: I do not doubt that when any one possesses that, which knows itself, he will be then knowing himself; but, what necessity is there for the person who possesses this knowledge, to know what he knows, and what he does not know?

Critias:: Because, Socrates, this is the same with that.

Socrates:: Perhaps so; but I am near to being always similar to myself. For I do not well understand how it is the same thing for a person to know, what he knows, and to know what he does not know.

Critias:: How do you mean?

Socrates:: Thus. Since there is a science of science, will it be able to draw a distinction more than this; that of these things this is a science, and that is ignorance?

Critias:: It will not; but thus far alone.

Socrates:: Is the science, then, and ignorance of that, which is healthful, the same with the science and ignorance of that, which is just?

Critias:: By no means; but the one is, I think, a medical, and the other a political science; but this is nothing else than a science.—How not?

Socrates:: He therefore who does not know the healthy and the just, but knows only a science, as alone possessing a science of this, that he knows something, and that he possesses a certain science, would probably have a knowledge respecting both himself and the other things. Is it not so?

Critias:: Yes.

Socrates:: But how will he by this science know what he knows? For he knows the healthful by medical science, and not by temperance; and the harmonical by musical science, and not by temperance; and house-building by house-building science, and not by temperance; and so in every thing else. Is it not so?

Critias:: So it appears.

Socrates:: But how by temperance, if it is only a science of sciences, will he know that it knows the salubrious, or house-building?

Critias:: By no means.

Socrates:: The person then ignorant of this will not know what he knows, but only that he knows.

Critias:: So it seems.

Socrates:: To know then what he knows and what he does not know, will not be to be temperate, nor will it be temperance, but, as it seems, only that he knows, and that he does not know.

Critias:: It nearly appears so.

Socrates:: Nor will this person be able to examine another, who professes to know something, whether he knows, or does not, what he says he knows; but as it seems he will only know thus much, that he possesses a certain science, but of what thing, temperance will not cause him to know.

Critias:: It does not appear it will.

Socrates:: Neither then will he be able to distinguish one who pretends to be a physician, but is not, from one who is a true physician; nor any one else of those who are skilled or who are not. But let us view it from these points. If a temperate man, or any other person, intends to distinguish the true and false physician, will he not act in this way? He will not discourse with him respecting the medical science; for, as we have said, a physician attends to nothing but the healthy and the diseased, the salubrious and the noxious. Is it not so?

Critias:: It is.

Socrates:: But of science he knows nothing; for this we have attributed to temperance alone.

Critias:: Yes.

Socrates:: The physician therefore will not know any thing of the medical art, since the medical art is a science.

Critias:: True.

Socrates:: And the temperate man will know, that the physician possesses a certain science; but some one else will look into the science of the physician, what it is, and of what things; which is then laid open, when it is known of what things it is the science. Or is not each science defined by this, by not only being a science, but by being what, and of what things?

Critias:: Yes.

Socrates:: And the medical science has been defined to be different from the rest of sciences by its being the science of the healthy and diseased.

Critias:: It is.

Socrates:: Is it not therefore necessary, for the person wishing to consider the medical science, to view it in the things in which it is? For it is surely not to be considered in things external, in which it is not.

Critias:: Certainly not.

Socrates:: He therefore who considers rightly, will consider a physician, so far as he is a physician, in things healthy and diseased.

Critias:: So it seems.

Socrates:: In what is thus either said or done, he will be considering whether what is said is said truly, and what is done is done correctly?

Critias:: It is necessary.

Socrates:: But could any one without medical science be able to follow either method?

Critias:: Certainly not.

Socrates:: Nor yet can any other person, as it seems, but the physician, nor truly the temperate man. For he would be a physician in addition to temperance.

Critias:: So it is.

Socrates:: More than all, if temperance is merely the science of a science, and of ignorance, it will be able to distinguish neither the physician, who knows his art, nor him, who does not; the person who pretends to be, and him, who thinks he is a physician; nor any other person, who knows any thing whatever, except a fellow-artist, as is the case with other operatives.

Critias:: It appears so.

Socrates:: What utility then, Critias, shall we derive from temperance, if it is of such a kind? For if, as we laid down at the beginning, the temperate man knew what he knew and what he did not know, the former because he knows, and the latter because he does not know, and if he were able to consider respecting another person affected in the very same manner, there would, we assert, be some vast utility to us in being temperate. For both we, who possess temperance, and all the rest that were governed by us, would have passed through life without fault; for we should neither ourselves have endeavored to do any thing, which we did not know, but finding out those who did know, we should have handed over those things to them; nor should we have permitted to the rest of those, whom we commanded, to do any thing else than what by doing they would do well; now this would be that, of which they possessed a knowledge. And thus a family governed by temperance, would be about to be well governed, and a state correctly administered, and every thing else, over which temperance rules. For error being taken away, and rectitude being the leader in every action, it is necessary for the persons thus situated to act honorably and well, and for those who act well, to be happy. Were we not, Critias, speaking in this manner about temperance, saying how great a good it is to know what one does know, and what one does not know?

Critias:: Entirely so.

Socrates:: But now, you see that no such science has appeared to us any where.

Critias:: I see it.

Socrates:: Has not therefore, temperance, which we have now found to be that, which knows both science and ignorance, this good, that he who possesses it, will easily learn whatever else he may attempt to learn, and all things will appear in a clearer point of view to him, inasmuch as he is looking upon the science, which relates to each thing he may learn? And will he not examine other persons better respecting what he may learn? And must not they, who examine others without this, do it in a more weak and trifling manner? Are these, my friend, the things we enjoy through temperance? and do we look to something greater, and seek for it to be greater than it is?

Critias:: Perhaps, this would be the case.

Socrates:: Perhaps so; but perhaps too we have sought after nothing useful. And I conjecture so, because certain absurdities distinctly present themselves to me respecting temperance, if it be of such a nature. For let us see, if you please, admitting that it is possible for science to know, and, what we laid down at the beginning, that temperance is to know what it does know, and what it does not know, let us not take this away, but concede it; and having conceded all these points, let us still better consider, if being such it will benefit us at all. For what we just now said, that temperance would, if it were of such a nature, be a great good, by regulating families and states, appears to me, Critias, to have been not correctly conceded.

Critias:: How so.

Socrates:: Because, we too easily conceded that it would be a great good to mankind, if each of us performed those things which we knew, and committed those, which we did not know, to persons who did know.

Critias:: Did we not then, rightly concede?

Socrates:: To me, we did not appear so.

Critias:: You are speaking, Socrates, really absurdly.

Socrates:: By the dog, so it appears to me. And just now, looking to these points, that they seemed to me to be absurd, and that I was afraid we had not rightly considered them. For in reality, if temperance be ever so much of such a nature, it does not appear evident to me, what good it will effect for us.

Critias:: How is this? speak, that we may also know what you mean.

Socrates:: I fancy, that I am trifling; nevertheless it is necessary to consider that, which presents itself to our view, and not carelessly to pass it by, if any one takes the least thought of himself.

Critias:: You speak well.

Socrates:: Hear then, my dream, no matter whether it has passed through the gate of horn or ivory. For if temperance ruled us ever so much, would it not, being such as we have now defined it, be acted upon according to the sciences; and neither would he, who boasts to be a pilot when he is not, deceive us; nor would a physician, or a general of an army, or any other person, who pretends to know that, which he does not know, lie hid from us. But from this state of things something else would happen to us; for our bodies would be more healthy than at present, and we should be preserved, when in danger at sea and in war; and all our utensils and garments, and all our shoes, and all the necessaries of life, all things else, would be made more scientifically through our employing true artists. And if you are willing, let us grant that prophecy is the science of that which is to be; and that temperance, presiding over it, turns away the boastful diviners, but appoints over us the true prophets of things to come. Furnished then in this way, the human race would, I concede, act and live scientifically. For temperance being our guard, it would not permit ignorance to interfere and cooperate with us. But that, by acting scientifically, we should do well and be happy, this, friend Critias, I am not yet able to understand.

Critias:: But, you will not however easily find any other method of doing well, if you despise the doing a thing scientifically.

Socrates:: Instruct me then still a little, of what scientifically doing are you speaking? Is it that of leather-cutting?

Critias:: By Zeus, it is not.

Socrates:: Is it that of brass-work?

Critias:: By no means.

Socrates:: But is it that of working in wool, or wood, or any such things?

Critias:: It is not.

Socrates:: We do then, no longer persist in the assertion, that he is happy, who lives scientifically. For those artists, although living scientifically, are confessed by you to be not happy; but you seem to me to separate the happy man from them, when they possess a science of certain things. And perhaps you call happy the diviner, whom I just now mentioned, who knows all that is to be. Do you mean this, or any other person?

Critias:: Both this, and another.

Socrates:: What other? You surely do not speak of the person, who knows, in addition to future events, every thing past and present, and is ignorant of nothing; for let us admit that there is such a man, you will not say, I think, that any one lives more scientifically than he at least does.

Critias:: Certainly not.

Socrates:: But this also I desiderate.—Which of the sciences makes him happy? Or do all the sciences equally produce this effect?

Critias:: By no means equally.

Socrates:: But which the most? Is it that, by which he knows some of things present, past, and to come? Is it that, by which he knows the science of back-gammon?

Critias:: What back-gammon?

Socrates:: But is it that, by which he knows the calculating science?

Critias:: By no means.

Socrates:: But is it that, by which he knows things healthful.

Critias:: Rather so?

Socrates:: But is it, that, of which I am speaking especially, by which he knows what?

Critias:: By which he knows good and evil.

Socrates:: O thou vile man; who for some while hast been drawing me round in a circle, concealing from me, that to live scientifically was not the causing to do well and to be happy, nor belonging to all the other sciences, but to one science alone, relating to good and evil. Since, Critias, if you were willing to take away this last science from the other sciences, the physician's science will no less cause one to be healthy; and that of the shoe-maker, to be shod; and that of the weaver, to be clad; and no less the pilot's science prevent one from losing one's life at sea, and the general's science in war?

Critias:: No less.

Socrates:: But, friend Critias, by this science being absent, it will be no longer left for each of those other sciences to turn out well and usefully.

Critias:: You speak the truth.

Socrates:: But this science, as it seems, is not temperance, but that, the work of which is to benefit us: for it is not the science of sciences and ignorances, but that of good and evil. So that if this be useful, temperance would be something else than useful.

Critias:: What then, would not temperance be useful? For if temperance is as much as possible a science of sciences, and presides over the other sciences, it will surely benefit us by ruling over that science which relates to the good.

Socrates:: But will temperance, cause us to be in health, and not the medical science? And will this perform the rest of the works of the arts, and not the rest, each its own work? Or did we not some time since testify that temperance is a science of science, and ignorance alone, but of nothing else? Is it not so?

Critias:: So it appears.

Socrates:: It is not then the worker of health.

Critias:: Clearly not.

Socrates:: For health is the work of another art. Is it not?

Critias:: Of another.

Socrates:: Nor is it, my friend, of utility; for we attributed this very work to another art. Did we not?

Critias:: Entirely so.

Socrates:: How then will temperance be beneficial, since it is the worker of no utility?

Critias:: By no means, Socrates, as it seems.

Socrates:: Do you not see then, Critias, that I felt very properly some time since a fear, and justly blamed myself, because I could descry nothing useful about temperance? For that which is confessed to be the most beautiful of all things, would not have appeared to us to be useless, if there were any thing useful in myself towards making a search correctly. But now, for we are vanquished on every side, and unable to discover for what purpose the name-founder assigned to temperance this very name. And yet we have conceded many things that did not result correctly from the reasoning. For we conceded, that there is a science of sciences, although the reasoning neither permits nor asserts this; and on the other hand, we conceded that we know by this science the works of the other sciences, the reasoning permitting not even this, in order that the temperate man might be one, who has a knowledge of what he knows, because he knows, and of those which he does not know, because he does not know. This indeed we conceded very liberally, without ever considering that it is impossible for a person to know in any way whatever what he does not know at all. For our concession says that he knows those things, because he does not know them. And yet as I think there is nothing which would appear more absurd than this. The inquiry however, having met with us so very easy tempered and by no means morose, is not a bit more able to discover the truth; but has rather laughed at it so much, that, what we formerly conceded to be temperance, and, after molding it into some shape, laid it down to be, this it has very saucily shown to us as being of no use. On my own account then I am less indignant; but for your sake, Charmides, I am, very indignant, if you, so beautiful in body, and most temperate to boot in mind, derive no advantage from this temperance, and if it does not by its presence bring to you any benefit during life. But I am still more indignant for the sake of the incantation, which I learned from the Thracian, if being a thing of no worth, I have learnt it with so much labor. I do not then very much then think that this is the case, but that I am a bad searcher; since I consider temperance to be a great good, and that, if you possess it, you are blessed indeed. But see whether you do possess it, and do not require at all the incantation. For if you do possess it, I would rather advise you to think me a trifler, and incompetent to search out any thing whatever by a course of reasoning, and yourself so much the happier, as you are the more temperate.

Charmides:: But by Zeus, Socrates, I do not know whether I possess it, or not. For how can I know that, which not even you can discover what it is, as you say yourself? I am not however much persuaded by you; and I consider myself, Socrates, to be greatly in want of the incantation; and no business of mine hinders me from being daily enchanted by you, until you shall say that I have had enough.

Critias:: Be it so. But, Charmides, if you act thus, it will be a proof to me at least that you are temperate, if you will give yourself up to Socrates to be enchanted, and will not desert him for any thing, either great or small.

Charmides:: Consider me, as about to follow and not to desert him. For I should act in a fearful manner, if I did not obey you, my tutor, nor do as you bid me.

Critias:: Nay then, I do bid you.

Charmides:: I shall therefore do so, beginning from this very day.

Socrates:: But what are ye two deliberating to do?

Charmides:: Nothing: we have ceased to deliberate.

Socrates:: Will you then, use violence, and not grant me a previous inquiry?

Charmides:: Consider me as about to use violence, since Critias commands me. Do you therefore take counsel about what you are to do.

Socrates:: But no consultation, is left for me: for not one man will be able to oppose you, when endeavoring to do any thing yourself and forcing him.

Charmides:: Do not you then oppose me.

Socrates:: I shall not indeed, oppose you.

## Charmides.

Translated by Benjamin Jowett.

PERSONS OF THE DIALOGUE.

Socrates, Chærephon, Critias, Charmides.

---

Socrates:: Yesterday evening we returned from the army at Potidaea, and having been a good while away, I thought that I should like to go and look at my old haunts. So I went into the palaestra of Taureas, which is over against the temple of Basile, and there I found a number of persons, most of whom I knew, but not all. My visit was unexpected, and no sooner did they see me entering than they saluted me from afar on all sides, and Chaerephon, who always behaves like a madman, started up from among them and ran to me, seizing my hand and saying;

Chaerephon:: How did you escape from the battle, Socrates?

Socrates:: An engagement had taken place at Potidaea not long before we came away, of which the news had only just reached Athens.

Just as you see me now.

Chaerephon:: There was a report that the engagement was very severe, and that many of our acquaintance had fallen.

Socrates:: That was not far from the truth.

Chaerephon:: I suppose that you were present.

Socrates:: I was.

Chaerephon:: Then sit down here, and tell us the whole story, which as yet we have only heard imperfectly.

Socrates:: So saying he led me to a place by the side of Critias, the son of Callaeschrus, and when I had sat down and saluted him and the rest of the company, I told them the news from the army, and answered their several inquiries.

Then, when there had been enough of this, I, in my turn, began to make inquiries about matters at home—about the present state of philosophy, and about the youth. I asked whether any of them were remarkable for wisdom or beauty, or both.

Critias glanced at the door and saw some youths coming in, and disputing noisily with one another, followed by a crowd.

Critias:: Of the beauties, Socrates, I fancy that you will soon be able to form a judgment. For those who are just entering are the advance guard and lovers of the great beauty of the day, as he is thought to be, and he is likely to be not far off himself.

Socrates:: Who is he and who is his father?

Critias:: Charmides is his name. He is my cousin, and the son of my uncle Glaucon. I rather think that you know him too, although he was not grown up at the time of your departure.

Socrates:: Certainly, I know him for he was remarkable even then when he was still a child, and I should imagine that by this time he must be almost a young man.

Critias:: You will see in a moment what age he has reached and what he is like.

Socrates:: He had scarcely said the word, when Charmides entered.

Now you know, my friend, that I am not good at measuring, and in the presence of the beautiful I am like a measuring line without marks, for almost all young persons appear to be beautiful in my eyes. But at that moment, when I saw him, I confess that I was quite astonished at his beauty and stature. All the company seemed to be enamored of him. Amazement and confusion reigned when he entered, and a second troop of lovers followed behind him. That grown-up men like ourselves should have been affected in this way was not surprising, but I observed the boys and saw that all of them, down to the very smallest, turned and looked at him, as if he had been a statue.

Chaerephon called me and said;

Chaerephon:: What do you think of the young man, Socrates? Has he not a beautiful face?

Socrates:: Most beautiful.

Chaerephon:: But you would think nothing of his face if you could see his naked form; he is absolutely perfect.

Socrates:: And to this they all agreed.

Ye gods what a paragon, if he has only one other slight addition!

Critias:: What is that?

Socrates:: If he has a noble soul. And being of your house, Critias, he may be expected to have this.

Critias:: He is as fair and good within, as he is without.

Socrates:: Then, before we see his body, should we not ask him to strip and show us his soul? He is surely just of an age at which he will like to talk.

Critias:: That he will and I can tell you that he is indeed a philosopher already, and also a considerable poet, not in his own opinion only, but in that of others.

Socrates:: That, my dear Critias is a distinction which has long been in your family, and is inherited by you from Solon. But why do you not call him, and show him to me? For even if he were younger than he is, there could be no impropriety in his talking to us before you, his guardian and cousin.

Critias:: Very well then I will call him.

Socrates:: And turning to the attendant, he said;

Critias:: Call Charmides, and tell him that I want him to come and see a physician about the illness of which he spoke to me the day before yesterday.

Socrates:: Then again addressing me, he added;

Critias:: He has been complaining lately of having a headache when he rises in the morning. Now why should you not make him believe that you know a cure for the headache?

Socrates:: Why not if only he will come.

Critias:: He will be sure to come.

Socrates:: So he came as he was bidden. Great amusement was occasioned by everyone making room and pushing with might and main at his neighbor in order to sit next to him, until at the two ends of the row one had to get up and the other was rolled over sideways. And he came and sat down between Critias and me. But I, my friend, was beginning to feel awkward. My former bold belief in my powers of conversing naturally with him had vanished. And when Critias told him that I was the person who had the cure, he looked at me in an indescribable manner, and made as though to ask me a question. And all the people in the palaestra crowded about us, and at that moment, my good friend, I caught a sight of the inwards of his garment, and took the flame. Then I could no longer contain myself. I thought how well Cydias understood the nature of love, when, in speaking of a fair youth, he warns someone ‘not to bring the fawn in the sight of the lion to be devoured by him,’ for I felt that I had been overcome by a sort of wild-beast appetite. But still when he asked me if I knew the cure for the headache, I answered, though with an effort, that I did know.

Charmides:: And what is it?

Socrates:: It is a kind of leaf, which required to be accompanied by a charm, and if a person would repeat the charm at the same time that he used the cure, he would be made whole, but that without the charm the leaf would be of no avail.

Charmides:: Then I will write out the charm from your dictation.

Socrates:: With my consent? Or without my consent?

Charmides:: With your consent, Socrates.

Socrates:: he said, laughing.

Very good. So you know my name, do you?

Charmides:: I ought to know you, for there is a great deal said about you among my companions, and I remember when I was a child seeing you in company with Critias here.

Socrates:: I am glad to find that you remember me, for I shall now be more at home with you and shall be better able to explain the nature of the charm, about which I felt a difficulty before. For the charm will do more, Charmides, than only cure the headache. I dare say that you have heard eminent physicians say to a patient who comes to them with bad eyes, that they cannot undertake to cure his eyes by themselves, but that if his eyes are to be cured, his head must be treated too. And then again they say that to think of curing the head alone, and not the rest of the body also, is the height of folly. And arguing in this way they apply their regime to the whole body, and try to treat and heal the whole and the part together. Did you ever observe that this is what they say?

Charmides:: Yes.

Socrates:: And they are right, and you would agree with them?

Charmides:: Yes, certainly I should.

Socrates:: His approving answers reassured me, and I began by degrees to regain confidence, and my natural heat returned to me.

Such, Charmides, is the nature of the charm, which I learned when serving with the army from one of the physicians of the Thracian king Zalmoxis who are said to be able even to give immortality. This Thracian told me that in these notions of theirs, which I was just now mentioning, ‘the Greek physicians are quite right as far as they go, but Zalmoxis,’ he added, ‘our king, who is also a god, says further, ‘that as you ought not to attempt to cure the eyes without the head, or the head without the body, so neither ought you to attempt to cure the body without the soul.’ And this,’ he said, ‘is the reason why the cure of many diseases is unknown to the physicians of Hellas, because they disregard the whole, which ought to be studied also, for the part can never be well unless the whole is well.’ ‘For all good and evil, whether in the body or in the whole man, originates,’ as he declared, ‘in the soul, and overflows from thence, as if from the head into the eyes. And therefore if the head and body are to be well, you must begin by curing the soul—that is the first and essential thing.’ And the cure of the soul, my dear youth, has to be effected by the use of certain charms, and these charms are fair words, and by them temperance is implanted in the soul, and where temperance comes and stays, there health is speedily imparted, not only to the head, but to the whole body. And when he taught me the cure and the charm he added, ‘Let no one persuade you to cure his head, until he has first given you his soul to be cured by the charm. For this,' he said, 'is the great error of our day in the treatment of human beings, that men try to be physicians of health and temperance separately.' And he strictly enjoined me not to let anyone, however rich or noble or fair, persuade me to give him the cure, without the charm. Now I have sworn, and I must keep my oath, and therefore if you will allow me to apply the Thracian charm first to your soul, as the stranger directed, I will afterward proceed to apply the cure to your head. But if not, I do not know what I am to do with you, my dear Charmides.

Critias, when he heard this, said;

Critias:: The headache will be a blessing to my young cousin, if the pain in his head compels him to improve his mind. Yet I can tell you, Socrates, that Charmides is not only preeminent in beauty among his equals, but also in that quality for which you say you have the charm—temperance, is it not?

Socrates:: Yes.

Critias:: Then let me tell you that he is the most temperate of the young men of today, and for his age inferior to none in any quality.

Socrates:: Indeed, Charmides, I think that you ought to excel others in all good qualities, for if I am not mistaken there is no one present who could easily point out two Athenian houses, whose union would be likely to produce a better or nobler scion than the two from which you are sprung. There is your father's house, which is descended from Critias, the son of Dropides, whose family has been commemorated in the panegyrics of Anacreon, Solon, and many other poets, as famous for beauty and virtue and all other high fortune. And your mother's house is equally distinguished, for your maternal uncle, Pyrilampes, is reputed never to have found his superior for stature and beauty in Persia at the court of the Great King, or anywhere on the continent of Asia in all the places to which he went as ambassador; that whole family is not a whit inferior to the other. Having such ancestors you ought to be first in all things, and, sweet son of Glaucon, your outward form is no dishonor to any of them. If to beauty you add temperance, and if in other respects you are what Critias declares you to be, then, dear Charmides, blessed is the son your mother bore. And here lies the point. For if, as he declares, you have this gift of temperance already, and are temperate enough, in that case you have no need of any charms, whether of Zalmoxis or of Abaris the Hyperborean, and I may as well let you have the cure of the head at once.

But if you have not yet acquired this quality, I must use the charm before I give you the medicine. Please, therefore, to inform me whether you admit the truth of what Critias has been saying. Have you or have you not this quality of temperance?

Charmides blushed, and the blush heightened his beauty, for modesty is becoming in youth. He then made the graceful reply that he really could not at once answer, either yes or no, to the question which I had asked.

Charmides:: For if I affirm that I am not temperate, that would be a strange thing for me to say against myself, and also I should give the lie to Critias, and to many others who, according to him, think that I am temperate. But, on the other hand, if I say that I am, I shall have to praise myself, which would be ill manners, and therefore I do not know how to answer you.

Socrates:: That is a natural reply, Charmides, and I think that you and I ought together to inquire whether you have this quality about which I am asking or not, and then you will not be compelled to say what you do not like; neither shall I rashly have recourse to medicine. Therefore, if you please, I will share the inquiry with you, but I will not press you if you would rather not.

Charmides:: There is nothing which I should like better, and as far as I am concerned you may proceed in the way which you think best.

Socrates:: I think that it would be best to approach the question in this way. If temperance abides in you, you must have an opinion about her. She must give some intimation of her nature and qualities, which may enable you to form a notion of her. Is not that true?

Charmides:: Yes, that I think is true.

Socrates:: You know your native language and therefore you must be able also to express your opinion.

Charmides:: Perhaps.

Socrates:: In order, then, that we may form a conjecture whether you have temperance abiding in you or not, tell me, what, in your opinion, is temperance?

At first he hesitated, and was not very willing to answer. Then he said that he thought

Charmides:: temperance is doing all things orderly and quietly—for example, walking in the streets, and talking, and indeed doing everything in that way. In a word, I should answer that, in my opinion, temperance is a kind of quietness.

Socrates:: Are you right, Charmides? No doubt some would affirm that the quiet are temperate, but let us see whether there is anything in this view. And first tell me whether you would not acknowledge temperance to be of the class of the noble and good?

Charmides:: Yes.

Socrates:: But which is better when you are at the writing master's, to write the same letters quickly or quietly?

Charmides:: Quickly.

Socrates:: And to read quickly or slowly?

Charmides:: Quickly again.

Socrates:: And in playing the lyre, or wrestling, quickness and sharpness are far better than quietness and slowness?

Charmides:: Yes.

Socrates:: And the same holds in boxing and in the pancratium?

Charmides:: Certainly.

Socrates:: And in leaping and running and in bodily exercises generally, actions done quickly and with agility are good and noble; those done slowly and quietly are bad and unsightly?

Charmides:: It seems so.

Socrates:: Then, in all bodily actions, not quietness, but the greatest agility and quickness, is noblest and best?

Charmides:: Yes, certainly.

Socrates:: And is temperance a good?

Charmides:: Yes.

Socrates:: Then, in reference to the body, not quietness, but quickness will be the more temperate, if temperance is a good?

Charmides:: Apparently.

Socrates:: Again, which is better—facility in learning, or difficulty in learning?

Charmides:: Facility.

Socrates:: Yes, and facility in learning is learning quickly, and difficulty in learning is learning quietly and slowly?

Charmides:: True.

Socrates:: And is it not better to teach another quickly and energetically, rather than quietly and slowly?

Charmides:: Yes.

Socrates:: Once more, which is better, to call to mind and to remember quickly and readily, or quietly and slowly?

Charmides:: The former.

Socrates:: And is not cleverness a quickness of the soul, and not a quietness?

Charmides:: True.

Socrates:: Is it not then better to understand what is said, whether at the writing master's or the music master's or anywhere else, not as quietly as possible, but as quickly as possible?

Charmides:: Yes.

Socrates:: And further, in the searchings or deliberations of the soul, not the quietest, as I imagine, and he who with difficulty deliberates and discovers, is thought worthy of praise, but he who does so most easily and quickly?

Charmides:: Quite true.

Socrates:: Well then, in all that concerns either body or soul, swiftness and activity are clearly better than slowness and quietness?

Charmides:: Probably.

Socrates:: Then temperance is not quietness, nor is the temperate life quiet—certainly not upon this view, for the life which is temperate is admitted to be the good. And of two things one is true—either never, or very seldom, do the quiet actions in life appear to be better than the quick and energetic ones, or supposing at the best that of the nobler actions there are as many quiet as quick and vehement; still, even if we grant this, temperance will not be acting quietly any more than acting quickly and energetically, either in walking or talking or in anything else. Nor will the quiet life be more temperate than the unquiet, seeing that temperance was placed by us among the good and noble things, and the quick have been shown to be as good as the quiet.

Charmides:: I think that you are right, Socrates.

Socrates:: Then once more, Charmides, fix your attention more closely and look within you. Consider the effect which temperance has upon yourself, and the nature of that which should have this effect. Think over all this, and tell me truly and courageously—what is temperance?

After a moment's pause, in which he made a real manly effort to think, he said;

Charmides:: My opinion is, Socrates, that temperance makes a man ashamed or modest, and that temperance is the same as modesty.

Socrates:: Very good, and did not you admit, just now, that temperance is noble?

Charmides:: Yes, certainly.

Socrates:: And therefore that temperate men are good men?

Charmides:: Yes.

Socrates:: And can that be good which does not make men good?

Charmides:: Certainly not.

Socrates:: And you would infer that temperance is not only noble, but also good?

Charmides:: That is my opinion.

Socrates:: Well, but surely you would agree with Homer when he says, ‘Modesty is not good for a needy man’?

Charmides:: Yes, I agree.

Socrates:: Then I suppose that modesty is and is not good?

Charmides:: Apparently.

Socrates:: But temperance, whose presence makes men only good, and not bad, is always good?

Charmides:: That appears to me to be as you say.

Socrates:: And the inference is that temperance cannot be modesty—if temperance is good, and if modesty is as much an evil as a good?

Charmides:: All that, Socrates, appears to me to be true, but I should like to know what you think about another definition of temperance, which I have just remembered that I heard from someone, ‘Temperance is doing our own business.’ Please consider whether he was right who affirmed that.

Socrates:: You wicked boy! This is what Critias, or some other philosopher has told you.

Critias:: Someone else then, for certainly I have not.

Charmides:: But what matter from whom I heard this?

Socrates:: No matter at all, for the point is not who said the words, but whether they are true or not.

Charmides:: There you are in the right, Socrates.

Socrates:: To be sure. Yet I should be surprised if we are able to discover their truth or falsehood, for they are a kind of riddle.

Charmides:: What makes you think so?

Socrates:: Because, he who uttered them seems to me to have meant one thing, and said another. Is the schoolmaster, for example, to be regarded as doing nothing when he reads or writes?

Charmides:: I should rather think that he was doing something.

Socrates:: And does the schoolmaster write or read, or teach you boys to write or read, his own name only, or did you write your enemies’ names as well as your own and your friends’?

Charmides:: As much one as the other.

Socrates:: And was there anything meddling or intemperate in this?

Charmides:: Certainly not.

Socrates:: And yet you were doing what was not your own business if reading and writing are a form of doing.

Charmides:: But they certainly are.

Socrates:: And the healing art, my friend, and building, and weaving, and doing anything whatever which is done by art—these all clearly come under the head of doing?

Charmides:: Certainly.

Socrates:: And do you think that a state would be well ordered by a law which compelled every man to weave and wash his own coat, and make his own shoes, and his own flask and strigil, and other implements, on this principle of everyone doing and performing his own, and abstaining from what is not his own?

Charmides:: I think not.

Socrates:: But a temperate state will be a well-ordered state.

Charmides:: Of course.

Socrates:: Then temperance will not be doing one's own business—not at least in this way, or doing things of this sort?

Charmides:: It seems not.

Socrates:: Then, as I was just now saying, he who declared that temperance is a man doing his own business had a hidden meaning, for I do not think that he could have been such a fool as to mean this. Was he a fool who told you, Charmides?

Charmides:: Nay, I certainly thought him a very wise man.

Socrates:: Then I am quite certain that he put forth his definition as a riddle, thinking that no one would easily discover the meaning of the words, 'doing his own business.'

Charmides:: I dare say.

Socrates:: And what is the meaning of a man doing his own business? Can you tell me?

Charmides:: Indeed, I cannot, and I should not wonder if the man himself who used this phrase did not understand what he meant.

Socrates:: Whereupon he laughed slyly, and looked at Critias. Critias had long been showing uneasiness, for he felt that he had a reputation to maintain with Charmides and the rest of the company. He had, however, hitherto managed to restrain himself, but now he could no longer forbear, and I am convinced of the truth of the suspicion which I entertained at the time, that it was from Critias that Charmides had heard this answer about temperance. And Charmides, who did not want to defend it himself, but to make Critias defend it, tried to stir him up. He went on pointing out that he had been refuted, at which Critias grew angry, and appeared, as I thought, inclined to quarrel with him—just as a poet might quarrel with an actor who spoiled his poems in reciting them. So he looked hard at him and said;

Critias:: Do you imagine, Charmides, because you do not understand the meaning of this definition of temperance that its author likewise did not understand the meaning of his own words?

Socrates:: Why, at his age, most excellent Critias, he can hardly be expected to understand, but you, who are older, and have studied, may well be assumed to know the meaning of them. And therefore, if you agree, and accept his definition of temperance, I would much rather argue with you than with him about the truth or falsehood of the definition.

Critias:: I entirely agree and accept the definition.

Socrates:: Very good, and now let me repeat my question. Do you admit, as I was just now saying, that all craftsmen make or do something?

Critias:: I do.

Socrates:: And do they make or do their own business only, or that of others also?

Critias:: That of others also.

Socrates:: And are they temperate, seeing that they do not make or do their own business only?

Critias:: Why not?

Socrates:: No objection on my part, but there may be a difficulty on his who proposes as a definition of temperance, ‘doing one’s own business,’ and then says that there is no reason why those who do the business of others should not be temperate.

Critias:: Nay, did I ever acknowledge that those who do the business of others are temperate? I said those who make, not those who do.

Socrates:: What! Do you mean to say that doing and making are not the same?

Critias:: No more than making and working are the same. Thus much I have learned from Hesiod, who says that 'work is no disgrace.' Now do you imagine that if he had meant by working and doing such things as you were describing, he would have said that there was no disgrace in them—for example, in the manufacture of shoes, or in selling dried fish, or sitting for hire in a house of ill fame? That, Socrates, is not to be supposed, but I conceive him to have distinguished making from doing and work, and, while admitting that making anything might sometimes become a disgrace, when the employment was not honorable, to have thought that work was never any disgrace at all. For things nobly and usefully made he called works, and such makings he called workings, and doings. And he must be supposed to have deemed only such things to be man's proper business, and all that is hurtful, not to be his business, and in that sense Hesiod, and any other wise man, may be reasonably supposed to call him wise who does his own work.

Socrates:: O Critias, no sooner had you opened your mouth than I pretty well knew that you would call that which is proper to a man, and that which is his own, good, and that the makings of the good you would call doings, for I am no stranger to the endless distinctions which Prodicus draws about names. Now I have no objection to your giving names any signification which you please, if you will only tell me to what you apply them. Please then to begin again, and be a little plainer. Do you mean that this doing or making, or whatever is the word which you would use, of good things, is temperance?

Critias:: I do.

Socrates:: Then not he who does evil, but he who does good, is temperate?

Critias:: Yes, and you, friend, would agree.

Socrates:: No matter whether I should or not. Just now, not what I think, but what you are saying, is the point at issue.

Critias:: Well, I mean to say that he who does evil, and not good, is not temperate, and that he is temperate who does good, and not evil. For temperance I define in plain words to be the doing of good actions.

Socrates:: And you may be very likely right in what you are saying, but I am surprised that you think temperate men to be ignorant of their own temperance?

Critias:: I do not think so.

Socrates:: And yet were you not saying, just now, that craftsmen might be temperate in doing another's work, as well as in doing their own?

Critias:: I was, but what is your drift?

Socrates:: I have no particular drift, but I wish that you would tell me whether a physician who cures a patient may do good to himself and good to his patient also.

Critias:: I think that he may.

Socrates:: And he who does so does his duty?

Critias:: Yes.

Socrates:: And does not he who does his duty act temperately or wisely?

Critias:: Yes, he acts wisely.

Socrates:: But must the physician necessarily know when his treatment is likely to prove beneficial, and when not? And must every worker necessarily know when he is likely to be benefited, and when not to be benefited, by the work which he is doing?

Critias:: I suppose not.

Socrates:: Then, the physician may sometimes do good or harm, without knowing which he has done, and yet in doing good, as you say, he has done temperately or wisely. Was not that your statement?

Critias:: Yes.

Socrates:: Then, as would seem, in doing good he may act wisely or temperately, and be wise or temperate, but not know his own wisdom or temperance?

Critias:: But that, Socrates, is impossible, and therefore if this is, as you imply, the necessary consequence of any of my previous admissions, I will withdraw them and will not be ashamed to acknowledge that I made a mistake, rather than admit that a man can be temperate or wise who does not know himself. For I would almost say that self-knowledge is the very essence of temperance, and in this I agree with him who dedicated the inscription 'Know thyself!' at Delphi. That inscription, if I am not mistaken, is put there as a sort of salutation which the god addresses to those who enter the temple—as much as to say that the ordinary salutation of 'Hail!' is not right, and that the exhortation 'Be temperate!' is far better. If I rightly understand the meaning of the inscription, the god speaks to those who enter his temple, not as men speak, but whenever a worshiper enters, the first word which he hears is 'Be temperate!' This, however, like a prophet he expresses in a sort of riddle, for 'Know thyself!' and 'Be temperate!' are the same, as I maintain, and as the words imply, and yet they may be thought to be different. And succeeding sages who added 'Never too much,' or 'Give a pledge, and evil is nigh at hand,' would appear to have so distinguished them, for they imagined that 'Know thyself!' was a piece of advice which the god gave, and not his salutation of the worshipers at their first coming in, and they dedicated their own inscriptions under the idea that they too would give equally useful pieces of advice. Shall I tell you, Socrates, why I say all this? My object is to leave the previous discussion—in which I know not whether you or I are more right, but, at any rate, no clear result was attained—and to raise a new one in which I will attempt to prove, if you deny it, that temperance is self-knowledge.

Socrates:: Yes, Critias, but you come to me as though I professed to know about the questions which I ask, and as though I could, if I only would, agree with you. Whereas the fact is that I am inquiring with you into the truth of that which is advanced from time to time, just because I do not know, and when I have inquired, I will say whether I agree with you or not. Please then to allow me time to reflect.

Critias:: Reflect.

Socrates:: I am reflecting, and discover that temperance or wisdom, if it is a species of knowledge, must be a science, and a science of something.

Critias:: Yes, the science of a man's self.

Socrates:: Is not medicine the science of health?

Critias:: True.

Socrates:: And suppose that I were asked by you what is the use or effect of medicine, which is this science of health. I should answer that medicine is of very great use in producing health, which, as you will admit, is an excellent effect.

Critias:: Granted.

Socrates:: And if you were to ask me what is the result or effect of architecture, which is the science of building, I should say houses, and so of other arts, which all have their different results. Now I want you, Critias, to answer a similar question about temperance or wisdom, which, according to you, is the science of a man's self. Admitting this view, I ask of you, what good work, worthy of the name wise, does temperance or wisdom, which is the science of a man's self, effect? Answer me.

Critias:: That is not the true way of pursuing the inquiry, Socrates, for wisdom is not like the other sciences, any more than they are like one another, but you proceed as if they were alike. For tell me, what result is there of computation or geometry, in the same sense as a house is the result of building, or a garment of weaving, or any other work of any of the many other arts? Can you show me any such result of them? You cannot.

Socrates:: That is true, but still I can show you that each of these sciences has a subject which is different from the science. The art of computation, for instance, has to do with odd and even numbers in their numerical relations to themselves and to each other. Is not that true?

Critias:: Yes.

Socrates:: And the odd and even numbers are not the same with the art of computation?

Critias:: They are not.

Socrates:: The art of weighing, again, has to do with lighter and heavier, but the art of weighing is one thing, and the heavy and the light are another. Do you admit that?

Critias:: Yes.

Socrates:: Now, I want to know, what is that which is not wisdom, and of which wisdom is the science?

Critias:: You are just falling into the old error, Socrates. You come asking wherein wisdom or temperance differs from the other sciences, and then you try to discover some respect in which it is like them. But it is not, for all the other sciences are of something else, and not of themselves. Wisdom alone is a science of other sciences and of itself. And of this, as I believe, you are very well aware, and you are only doing what you denied that you were doing just now, trying to refute me, instead of pursuing the argument.

Socrates:: And what if I am? How can you think that I have any other motive in refuting you but what I should have in examining into myself? This motive would be just a fear of my unconsciously fancying that I knew something of which I was ignorant. And at this moment, I assure you, I pursue the argument chiefly for my own sake, and perhaps in some degree also for the sake of my other friends. For would you not say that the discovery of things as they truly are is a good common to all mankind?

Critias:: Yes, certainly.

Socrates:: Then, be cheerful, sweet sir, and give your opinion in answer to the question which I asked, never minding whether Critias or Socrates is the person refuted. Attend only to the argument, and see what will come of the refutation.

Critias:: I think that is reasonable and I will do as you say.

Socrates:: Tell me, then, what you mean to affirm about wisdom.

Critias:: I mean to say that wisdom is the only science which is the science of itself as well as of the other sciences.

Socrates:: But the science of science will also be the science of the absence of science.

Critias:: Very true.

Socrates:: Then the wise or temperate man, and he only, will know himself, and be able to examine what he knows or does not know, and to see what others know and think that they know and do really know, and what they do not know and fancy that they know when they do not. No other person will be able to do this. And this is wisdom and temperance and self-knowledge—for a man to know what he knows, and what he does not know. That is your meaning?

Critias:: Yes.

Socrates:: Now then, since the third time brings luck, let us begin again, and ask, in the first place, whether it is or is not possible for a person to know that he knows what he knows and that he does not know what he does not know, and in the second place, whether, if perfectly possible, such knowledge is of any use.

Charmides:: That is what we have to consider.

Socrates:: Well then, Critias, see if you are in a better position than I am. I am in a difficulty. Shall I tell you the nature of the difficulty?

Critias:: By all means.

Socrates:: Does not what you have been saying, if true, amount to this, that there must be a single science which is wholly a science of itself and of other sciences, and that the same is also the science of the absence of science?

Critias:: Yes.

Socrates:: But consider how monstrous this proposition is, my friend. In any parallel case, the impossibility will be obvious to you.

Critias:: How is that? And in what cases do you mean?

Socrates:: In such cases as this. Suppose that there is a kind of vision which is not like the ordinary vision, but a vision of itself and of other sorts of vision, and of the defect of them, which in seeing sees no color, but only itself and other sorts of vision. Do you think that there is such a kind of vision?

Critias:: Certainly not.

Socrates:: Or is there a kind of hearing which hears no sound at all, but only itself and other sorts of hearing, or the defects of them?

Critias:: There is not.

Socrates:: Or take all the senses together. Can you imagine that there is any sense which is a sense of itself and of other senses, but is incapable of perceiving the objects of the senses?

Critias:: I think not.

Socrates:: Could there be any desire which is not the desire of any pleasure, but of itself and of all other desires?

Critias:: Certainly not.

Socrates:: Or can you imagine a wish which wishes for no good, but only for itself and all other wishes?

Critias:: I should answer no.

Socrates:: Or would you say that there is a love which is not the love of beauty, but of itself and of other loves?

Critias:: I should not.

Socrates:: Or did you ever know of a fear which fears itself or other fears, but none of the objects of fear?

Critias:: I never did.

Socrates:: Or of an opinion which is an opinion of itself and of other opinions, and which has no opinion on the subjects of opinion in general?

Critias:: Certainly not.

Socrates:: But, it seems, we are assuming a science of this kind, which, having no subject matter, is a science of itself and of the other sciences?

Critias:: Yes, that is what is affirmed.

Socrates:: It is certainly a curiosity if it really exists. We must not however as yet absolutely deny the possibility of such a science, but continue to inquire whether it exists.

Critias:: You are quite right.

Socrates:: Well then, this science of which we are speaking is a science of something, and is of a nature to be a science of something?

Critias:: Yes.

Socrates:: Just as that which is greater is of a nature to be greater than something else?

Critias:: Yes.

Socrates:: And this something else is less, if the other is conceived to be greater?

Critias:: To be sure.

Socrates:: And if we could find something which is at once greater than itself and greater than other great things, but not greater than those things in comparison of which the others are greater, then that thing would have the property of being greater and also less than itself?

Critias:: That, Socrates, is the inevitable inference.

Socrates:: Or if there be a double which is double of itself and of other doubles, both they and itself will be halves, for the double is relative to the half?

Critias:: That is true.

Socrates:: And that which is more than itself will also be less, and that which is heavier will also be lighter, and that which is older will also be younger—and the same of other things. That which has a nature relative to self will retain also the nature of its object; I mean to say, for example, that hearing is, as we say, of sound or voice. Is that true?

Critias:: Yes.

Socrates:: Then if hearing hears itself, it must hear a voice, for there is no other way of hearing.

Critias:: Certainly.

Socrates:: And sight also, my excellent friend, if it sees itself must have a color, for sight cannot see that which has no color.

Critias:: No.

Socrates:: Do you remark, Critias, that in several of the examples which have been recited the notion of a relation to self is altogether inadmissible, and in other cases hardly credible—inadmissible, for example, in the case of magnitudes, numbers, and the like?

Critias:: Very true.

Socrates:: But in the case of hearing and sight, or in the power of self-motion, and the power of heat to burn, and so on, this relation to self will be regarded as incredible by some, but perhaps not by others. And some great man, my friend, is wanted, who will satisfactorily determine for us whether there is nothing which has an inherent property of relation to self rather than to something else, or some things only and not others, and whether in this class of self-related things, if there be such a class, that science which is called wisdom or temperance is included. I altogether distrust my own power of determining these matters. I am not certain whether such a science of science can possibly exist, and even if it does undoubtedly exist, I should not acknowledge it to be wisdom or temperance, until I can also see whether such a science would or would not do us any good, for I have an impression that temperance is a benefit and a good. And therefore, O son of Callaeschrus, as you maintain that temperance or wisdom is a science of science, and also of the absence of science, I will request you to show in the first place, as I was saying before, the possibility, and in the second place, the advantage, of such a science. And then perhaps you may satisfy me that you are right in your view of temperance.

Critias heard me say this, and saw that I was in a difficulty, and as one person when another yawns in his presence catches the infection of yawning from him, so did he seem to be driven into a difficulty by my difficulty. But as he had a reputation to maintain, he was ashamed to admit before the company that he could not answer my challenge or determine the question at issue, and he made an unintelligible attempt to hide his perplexity.

In order that the argument might proceed, I said to him, Well then, Critias, if you like, let us assume that this science of science is possible—whether the assumption is right or wrong may hereafter be investigated. Admitting its complete possibility, will you tell me how such a science enables us to distinguish what we know or do not know, which, as we were saying, is self-knowledge or wisdom? Was not that it?

Critias:: Yes, Socrates, and the rest I think follows. For he who has this science or knowledge which knows itself will become like the knowledge which he has, in the same way that he who has swiftness will be swift, and he who has beauty will be beautiful, and he who has knowledge will know. In the same way he who has that knowledge which is self-knowing, will know himself.

Socrates:: I do not doubt that a man will know himself, when he possesses that which has self-knowledge, but what necessity is there that, having this, he should know what he knows and what he does not know?

Critias:: Because, Socrates, they are the same.

Socrates:: Very likely, but I fear I remain as stupid as ever, for still I fail to comprehend how this knowing what you know and do not know is the same as the knowledge of self.

Critias:: What do you mean?

Socrates:: This is what I mean; I will admit that there is a science of science. Can this do more than determine that of two things one is and the other is not science or knowledge?

Critias:: No, just that.

Socrates:: Is it then the same thing as knowledge or want of knowledge of health, or the same as knowledge or want of knowledge of justice?

Critias:: Certainly not.

Socrates:: The one is medicine, and the other is politics, whereas that of which we are speaking is knowledge pure and simple.

Critias:: Very true.

Socrates:: And if a man has only knowledge of knowledge, without any further knowledge of health and justice, the probability is that he will only know that he knows something, and has a certain knowledge, both in his own case and in that of others.

Critias:: True.

Socrates:: Then how will this knowledge or science teach him to know what he knows? For he knows health not through wisdom or temperance but through the art of medicine, and he has learned harmony from the art of music and building from the art of building, but in neither case from wisdom or temperance—and the same of other things.

Critias:: It seems so.

Socrates:: How will wisdom, regarded only as a knowledge of knowledge or science of science, ever teach him that he knows health, or that he knows building?

Critias:: It is impossible.

Socrates:: Then he who is ignorant of these things will only know that he knows, but not what he knows?

Critias:: True.

Socrates:: Then wisdom or being wise appears to be not the knowledge of the things which we do or do not know, but only the knowledge that we know or do not know?

Critias:: That is the inference.

Socrates:: Then he who has this knowledge will not be able to establish whether a claimant knows or does not know that which he says that he knows; he will only know that he has a knowledge of some kind, but wisdom will not show him of what the knowledge is?

Critias:: It seems not.

Socrates:: Neither will he be able to distinguish the pretender in medicine from the true physician, nor between any other true and false professor of knowledge. Let us consider the matter in this way. If the wise man or any other man wants to distinguish the true physician from the false, how will he proceed? He will not talk to him about the science of medicine, for as we were saying, the physician understands nothing but health and disease.

Critias:: True.

Socrates:: But the physician knows nothing about science, for this has been assumed to be the province of wisdom alone.

Critias:: True.

Socrates:: And further, since medicine is science, we must infer that he does not know anything about medicine.

Critias:: Exactly.

Socrates:: Then the wise man may indeed know that the physician has some kind of science or knowledge, but when he wants to discover the nature of this he will ask, What is the subject matter? For the several sciences are distinguished not by the mere fact that they are sciences, but by the nature of their subjects. Is not that true?

Critias:: Quite true.

Socrates:: And medicine is distinguished from other sciences as having the subject matter of health and disease?

Critias:: Yes.

Socrates:: And he who would inquire into the nature of medicine must test it in health and disease, which are the sphere of medicine, and not in what is extraneous and is not its sphere?

Critias:: True.

Socrates:: And he who wishes to make a fair test of the physician as a physician will test him in what relates to these?

Critias:: He will.

Socrates:: He will consider whether what he says is true, and whether what he does is right, in relation to health and disease?

Critias:: He will.

Socrates:: But can anyone pursue the inquiry into either unless he have a knowledge of medicine?

Critias:: He cannot.

Socrates:: No one at all, it would seem, except the physician can have this knowledge—and therefore not the wise man. He would have to be a physician as well as a wise man.

Critias:: Very true.

Socrates:: Then, assuredly, wisdom or temperance, if it is no more than a science of science and of the absence of science or knowledge, will not be able to distinguish the physician who knows what concerns his profession from one who does not know but pretends or thinks that he knows, or any other professor of anything at all. Like any other artist, the wise or temperate man will only know the man of his own trade, and no one else.

Critias:: That is evident.

Socrates:: But then what profit, Critias, is there any longer in wisdom or temperance which yet remains, if this is wisdom? If, indeed, as we were supposing at first, the wise man were able to distinguish what he knew and did not know, and that he knew the one and did not know the other, and to recognize a similar faculty of discernment in others, there would certainly be a great advantage in being wise, for then we should never make a mistake, but should pass through life the unerring guides of ourselves and of those who are under us. We should not attempt to do what we did not know, but we should find out those who know, and hand the business over to them and trust in them. Nor should we allow those who were under us to do anything which they were not likely to do well, and they would be likely to do well just that of which they had knowledge. And the house or state which was ordered or administered under the guidance of wisdom, and everything else of which wisdom was the lord, would be sure to be well ordered, for with truth guiding and error eliminated, in all their doings men must do nobly and well, and doing well means happiness. Was not this, Critias, what we spoke of as the great advantage of wisdom—to know what is known and what is unknown to us?

Critias:: Very true.

Socrates:: And now you perceive, that no such science is to be found anywhere.

Critias:: I perceive.

Socrates:: May we assume, then, that wisdom, viewed in this new light as a knowledge of knowledge and ignorance, has this advantage—that he who possesses such knowledge will more easily learn anything which he learns, and that everything will be clearer to him, because, in addition to the several objects of knowledge, he sees the science, and this also will better enable him to test the knowledge which others have of what he knows himself, whereas the inquirer who is without this knowledge may be supposed to have a feebler and less effective insight? Are not these, my friend, the real advantages which are to be gained from wisdom? And are not we looking and seeking after something more than is to be found in her?

Critias:: It may be.

Socrates:: Perhaps it may or perhaps again we have been inquiring to no purpose—as I am led to infer, because I observe that if this is wisdom, some strange consequences would follow. Let us, if you please, assume the possibility of this science of sciences, and not refuse to allow that, as was originally suggested, wisdom is the knowledge of what we know and do not know. Assuming all this, let us consider more closely, Critias, whether wisdom, such as this, would do us much good. For we were wrong, I think, in supposing, as we were saying just now, that such wisdom ordering the government of house or state would be a great benefit.

Critias:: How so?

Socrates:: Why, we were far too ready to admit the great benefits which mankind would obtain from their severally doing the things which they knew, and committing the things of which they are ignorant to those who were better acquainted with them.

Critias:: Were we not right in making that admission?

Socrates:: I think not.

Critias:: How very strange, Socrates!

Socrates:: There, I most emphatically agree with you, and I was thinking as much just now when I said that strange consequences would follow, and that I was afraid we were on the wrong track. For however sure we may be that this is wisdom, I certainly cannot make out what good this sort of thing does to us.

Critias:: What do you mean? I wish that you could make me understand what you mean.

Socrates:: I dare say that what I am saying is nonsense, and yet if a man has any feeling of what is due to himself, he cannot let the thought which comes into his mind pass away unheeded and unexamined.

Critias:: I like that.

Socrates:: Hear, then, my own dream—whether coming through the horn or the ivory gate, I cannot tell. The dream is this. Let us suppose that wisdom is such as we are now defining, and that she has absolute sway over us. Then, each action will be done according to the arts or sciences, and no one professing to be a pilot when he is not, no physician or general or anyone else pretending to know matters of which he is ignorant, will deceive or elude us. Our health will be improved; our safety at sea, and also in battle, will be assured; our coats and shoes, and all other instruments and implements will be skillfully made, because the workmen will be good and true. Aye, and if you please, you may suppose that prophecy will be a real knowledge of the future, and will be under the control of wisdom, who will deter deceivers and set up the true prophets in their place as the revealers of the future. Now I quite agree that mankind, thus provided, would live and act according to knowledge, for wisdom would watch and prevent ignorance from intruding on us in our work. But whether by acting according to knowledge we shall act well and be happy, my dear Critias—this is a point which we have not yet been able to determine.

Critias:: Yet I think, that if you discard knowledge, you will hardly find the crown of happiness in anything else.

Socrates:: Well, just answer me one small question. Of what is this knowledge? Do you mean a knowledge of shoemaking?

Critias:: God forbid.

Socrates:: Or of working in brass?

Critias:: Certainly not.

Socrates:: Or in wool, or wood, or anything of that sort?

Critias:: No, I do not.

Socrates:: Then, we are giving up the doctrine that he who lives according to knowledge is happy, for these live according to knowledge, and yet they are not allowed by you to be happy. But I think that you mean to confine happiness to those who live according to knowledge of some particular thing, such for example as the prophet, who, as I was saying, knows the future. Is it of him you are speaking or of someone else?

Critias:: Yes, I mean him, but there are others as well.

Socrates:: Who? Evidently someone who knows the past and present as well as the future, and is ignorant of nothing. Let us suppose that there is such a person, and if there is, you will allow that he is the most knowing of all living men.

Critias:: Certainly he is.

Socrates:: Yet I should like to know one thing more. Which of the different kinds of knowledge makes him happy? Or do all equally make him happy?

Critias:: Not all equally.

Socrates:: But which most tends to make him happy? The knowledge of what past, present, or future thing? Is it, for example, the knowledge of the game of draughts?

Critias:: Nonsense, draughts indeed!

Socrates:: Or of computation?

Critias:: No.

Socrates:: Or of health?

Critias:: That is nearer the truth;

Socrates:: And that knowledge, which is nearest of all, is the knowledge of what?

Critias:: The knowledge with which he discerns good and evil.

Socrates:: You villain! You have been carrying me round in a circle, and all this time hiding from me the fact that it is not the life according to knowledge which makes men act rightly and be happy, not even if it be knowledge of all the sciences, but one science only, that of good and evil. For, let me ask you, Critias, whether, if you take away this science from the others, medicine will not equally give health, and shoemaking equally produce shoes, and the art of the weaver clothes—whether the art of the pilot will not equally save our lives at sea, and the art of the general in war?

Critias:: Equally.

Socrates:: And yet, my dear Critias, none of these things will be well or beneficially done, if the science of the good be wanting.

Critias:: True.

Socrates:: But this science, it seems, is not wisdom or temperance, but a science of human advantage—not a science of other sciences, or of ignorance, but of good and evil. And if this be of advantage, then wisdom or temperance must be something else.

Critias:: And why will not wisdom be of advantage? For, however much we assume that wisdom is a science of sciences, and has a sway over other sciences, surely she will have this particular science of the good under her control, and in this way will benefit us.

Socrates:: And will wisdom give health? Is not this rather the effect of medicine? Or does wisdom do the work of any of the other arts—do they not each of them do their own work? Have we not long ago asseverated that wisdom is only the knowledge of knowledge and of ignorance, and of nothing else?

Critias:: It seems so.

Socrates:: Then wisdom will not be the producer of health?

Critias:: Certainly not.

Socrates:: We found that health belonged to a different art?

Critias:: Yes.

Socrates:: Nor does wisdom give advantage, my good friend, for that again we have just now been attributing to another art.

Critias:: Very true.

Socrates:: How then can wisdom be advantageous, when it produces no advantage?

Critias:: Apparently it cannot, Socrates.

Socrates:: You see, then, Critias, that I was not far wrong in fearing that I was making no sound inquiry into wisdom—I was quite right in depreciating myself, for that which is admitted to be the best of all things would never have seemed to us useless, if I had been good for anything at an inquiry. But now I have been utterly defeated, and have failed to discover what that is to which the lawgiver gave this name of temperance or wisdom. And yet many more admissions were made by us than could be fairly granted, for we admitted that there was a science of science, although the argument said no, and protested against us. And we admitted further that this science knew the works of the other sciences—although this too was denied by the argument—because we wanted to show that the wise man had knowledge of what he knew and of what he did not know. We generously made the concession, and never even considered the impossibility of a man knowing in a sort of way that which he does not know at all. According to our admission, he knows that which he does not know—than which nothing, as I think, can be more irrational. And yet, after finding us so easy and good-natured, the inquiry is still unable to discover the truth, but mocks us to a degree, and has insolently proved the inutility of temperance or wisdom if truly described by a definition such as we have spent all this time in discussing and fashioning together—which result, as far as I am concerned, is not so much to be lamented.

But for your sake, Charmides, I am very sorry—that you, having such beauty and such wisdom and temperance of soul, should have no profit nor good in life from your wisdom and temperance. And still more am I grieved about the charm which I learned with so much pain, and to so little profit, from the Thracian, in order to produce a thing which is nothing worth. I think indeed that there is a mistake, and that I must be a bad inquirer, for wisdom or temperance I believe to be really a great good. And happy are you, Charmides, if you possess it. Wherefore examine yourself, and see whether you have this gift and can do without the charm, for if you can, I would rather advise you to regard me simply as a fool who is never able to reason out anything, and to rest assured that the more wise and temperate you are, the happier you will be.

Charmides:: I am sure that I do not know, Socrates, whether I have or have not this gift of wisdom and temperance, for how can I know whether I have a thing, of which even you and Critias are, as you say, unable to discover the nature? Yet I do not quite believe you, and I am sure, Socrates, that I do need the charm, and as far as I am concerned, I shall be willing to be charmed by you daily, until you say that I have had enough.

Critias:: Very good, Charmides. If you do this I shall have a proof of your temperance—that is, if you allow yourself to be charmed by Socrates, and never desert him in things great or small.

Charmides:: You may depend on my following and not deserting him. If you who are my guardian command me, I should be very wrong not to obey you.

Critias:: And I do command you.

Charmides:: Then I will do as you say, and begin this very day.

Socrates:: You, sirs, what are you conspiring about?

Charmides:: We are not conspiring. We have conspired already.

Socrates:: And you are about to use violence, without even giving me a hearing in court?

Charmides:: Yes, I shall use violence, since he orders me, and therefore you had better consider what you will do.

Socrates:: But the time for consideration has passed. When you are determined on anything, and in the mood of violence, you are irresistible.

Charmides:: Do not you resist me then.

Socrates:: I shall not resist you then.

# Charmides, Or Temperance.

Translated by Lamb.

[or ON TEMPERANCE: TENTATIVE]

CHARACTERS

Socrates, Chaerephon, Critias, Charmides

---

Socrates:: We arrived yesterday evening from the army at Potidaea, and I sought with delight, after an absence of some time, my wonted conversations. Accordingly I went into the wrestling-school of Taureas, opposite the Queen's shrine, and there I came upon quite a number of people, some of whom were unknown to me, but most of whom I knew. And as soon as they saw me appear thus unexpectedly, they hailed me from a distance on every side; but Chaerephon, like the mad creature that he is, jumped up from their midst and ran to me, and grasping me by the hand;

Chaerephon:: Socrates, how did you survive the battle?

Socrates:: (Shortly before we came away there had been a battle at Potidaea, of which the people here had only just had news.)

In the state in which you see me.

Chaerephon:: It has been reported here, you know, that the battle was very severe, and that many of our acquaintance have lost their lives in it.

Socrates:: Then the report is pretty near the truth.

Chaerephon:: You were present at the fighting?

Socrates:: I was present.

Chaerephon:: Then sit down here and give us a full account; for as yet we have had no clear report of it all.

Socrates:: And with that he led me to a seat by Critias, son of Callaeschrus. So I sat down there and greeted Critias and the rest, and gave them all the news from the battlefield, in answer to their various questions; each had his inquiry to make.

When we had had enough of such matters, I in my turn began to inquire about affairs at home, how philosophy was doing at present, and whether any of the rising young men had distinguished themselves for wisdom or beauty or both. Then Critias, looking towards the door, for he saw some young fellows who were coming in with some railing at each other, and a crowd of people following on behind them, said;

Critias:: Concerning the beauties, Socrates, I expect you will get your knowledge at once: for these who are coming in are in fact forerunners and lovers of the person who is held, for the moment at least, to be the greatest beauty; and he himself, I imagine, must by now be nearly upon us.

Socrates:: Who is he and whose son?

Critias:: You must know, but he was not yet grown up when you went away,—Charmides, son of our uncle Glaucon, and my cousin.

Socrates:: I do know, to be sure; for he was not to be despised even then, when he was still a child, and now, I suppose, he will be quite a youth by this time.

Critias:: You will know this moment, both how much and to what purpose he has grown.

Socrates:: And just as he spoke these words, Charmides entered.

Now I, my good friend, am no measurer: I am a mere “white line in measuring beautiful people, for almost everyone who has just grown up appears beautiful to me. Nay and this time, moreover, the young man appeared to me a marvel of stature and beauty; and all the rest, to my thinking, were in love with him, such was their astonishment and confusion when he came in, and a number of other lovers were following in his train. On the part of men like us it was not so surprising; but when I came to observe the boys I noticed that none of them, not even the smallest, had eyes for anything else, but that they all gazed at him as if he were a statue. Then Chaerephon called me and said;

Chaerephon:: How does the youth strike you, Socrates? Has he not a fine face?

Socrates:: Immensely so.

Chaerephon:: Yet if he would consent to strip, you would think he had no face, he has such perfect beauty of form.

Socrates:: And these words of Chaerephon were repeated by the rest. Then,—By Heracles! What an irresistible person you make him out to be, if he has but one more thing—a little thing—besides.

Critias:: What?

Socrates:: If in his soul, he is of good grain. And I should think, Critias, he ought to be, since he is of your house.

Critias:: Ah, he is right fair and good in that way also.

Socrates:: Why then, let us strip that very part of him and view it first, instead of his form; for anyhow, at that age, I am sure he is quite ready to have a discussion.

Critias:: Very much so; for, I may say, he is in fact a philosopher, and also—as others besides himself consider—quite a poet.

Socrates:: That, my dear Critias, is a gift which your family has had a long while back, through your kinship with Solon. But why not call the young man here and show him to me? For surely, even if he were younger still, there could be no discredit in our having a talk with him before you, who are at once his guardian and his cousin.

Critias:: You are quite right, and we will call him.

Socrates:: Thereupon he said to his attendant,;

Critias:: Boy, call Charmides; tell him I want him to see a doctor about the ailment with which he told me he was troubled yesterday.

Socrates:: Then, turning to me,;

Critias:: You know, he has spoken lately of having a headache, on getting up in the morning: now why should you not represent to him that you know a cure for headache?

Socrates:: Why not? only he must come.

Critias:: Oh, he will be here.

Socrates:: And so it was; for he came, and caused much laughter, because each of us who were seated made room for him by pushing hard at his neighbor so as to have him sitting beside himself, until at either end of the seat one had to stand up, and we tumbled the other off sideways; and he came and sat down between me and Critias. But here, my friend, I began to feel perplexed, and my former confidence in looking forward to a quite easy time in talking with him had been knocked out of me. And when, on Critias telling him that it was I who knew the cure, he gave me such a look with his eyes as passes description, and was just about to plunge into a question, and when all the people in the wrestling-school surged round about us on every side—then, ah then, my noble friend, I saw inside his cloak and caught fire, and could possess myself no longer; and I thought none was so wise in love-matters as Cydias, who in speaking of a beautiful boy recommends someone to “beware of coming as a fawn before the lion, and being seized as his portion of flesh”; for I too felt I had fallen a prey to some such creature. However, when he had asked me if I knew the cure for headache, I somehow contrived to answer that I knew.

Charmides:: Then what is it?

Socrates:: So I told him that the thing itself was a certain leaf, but there was a charm to go with the remedy; and if one uttered the charm at the moment of its application, the remedy made one perfectly well; but without the charm there-was no efficacy in the leaf.

Charmides:: Then I will take down the charm, from you in writing.

Socrates:: Do you prefer to get my consent first, or to do without it?

This made him laugh, and he said:

Charmides:: To get your consent, Socrates.

Socrates:: Very well; and are you certain of my name?

Charmides:: Unless I am at fault; for there is no little talk of you among the set of our age, and I remember as a mere child the sight of you in company with Critias here.

Socrates:: That is a good thing: for I shall speak more freely to you about the charm, and its real nature; just now I was at a loss for the way to apprise you of its power. For it is of such a nature, Charmides, that it cannot cure the head alone; I daresay you have yourself sometimes heard good doctors say, you know, when a patient comes to them with a pain in his eyes, that it is not possible for them to attempt a cure of his eyes alone, but that it is necessary to treat his head too at the same time, if he is to have his eyes in good order; and so again, that to expect ever to treat the head by itself, apart from the body as a whole, is utter folly. And on this principle they apply their regimen to the whole body, and attempt to treat and heal the part along with the whole; or have you not observed that this is what they say, and is done in fact?

Charmides:: Certainly I have.

Socrates:: And you consider it well said, and accept the principle?

Charmides:: Most assuredly.

Socrates:: Then I, on hearing his approval, regained my courage; and little by little I began to muster up my confidence again, and my spirit began to rekindle. So I said,—Such, then, Charmides, is the nature of this charm. I learnt it on campaign over there, from one of the Thracian physicians of Zalmoxis, who are said even to make one immortal. This Thracian said that the Greeks were right in advising as I told you just now: “but Zalmoxis,” he said, “our king, who is a god, says that as you ought not to attempt to cure eyes without head, or head without body, so you should not treat body without soul”; and this was the reason why most maladies evaded the physicians of Greece—that they neglected the whole, on which they ought to spend their pains, for if this were out of order it was impossible for the part to be in order. For all that was good and evil, he said, in the body and in man altogether was sprung from the soul, and flowed along from thence as it did from the head into the eyes. Wherefore that part was to be treated first and foremost, if all was to be well with the head and the rest of the body. And the treatment of the soul, so he said, my wonderful friend, is by means of certain charms, and these charms are words of the right sort: by the use of such words is temperance engendered in our souls, and as soon as it is engendered and present we may easily secure health to the head, and to the rest of the body also. Now in teaching me the remedy and the charms he remarked,—”Let nobody persuade you to treat his head with this remedy, unless he has first submitted his soul for you to treat with the charm. For at present," he said, "the cure of mankind is beset with the error of certain doctors who attempt to practice the one method without the other." And he most particularly enjoined on me not to let anyone, however wealthy or noble or handsome, induce me to disobey him. So I, since I have given him my oath, and must obey him, will do as he bids; and if you agree to submit your soul first to the effect of the Thracian charms, according to the stranger's injunctions, I will apply the remedy to your head: otherwise we shall be at a loss what to do with you, my dear Charmides.

Then Critias, when he heard me say this, remarked,;

Critias:: This affection of the head, Socrates, will turn out to be a stroke of luck for the young man, if he is to be compelled on account of his head to improve his understanding also. However, let me tell you, Charmides is considered to excel his comrades not only in appearance, but also in that very thing which you say is produced by your charm: temperance you say it is, do you not?

Socrates:: Certainly.

Critias:: Then be assured, that he is considered to be far and away the most temperate person now alive, while in every other respect, for a youth of his age, he is second to none.

Socrates:: Why, yes, and it is only right, Charmides, that you should excel the rest in all these respects; for I do not suppose there is anyone else here who could readily point to a case of any two Athenian houses uniting together which would be likely to produce handsomer or nobler offspring than those from which you are sprung. For your father's house, which comes from Critias, son of Dropides, has been celebrated by Anacreon and Solon and many other poets, so that it is famed by tradition among us as pre-eminent in beauty and virtue and all else that is accounted happiness; and then, your mother's house is famous in the same way, for of Pyrilampes, your uncle, it is said that no one in all the continent was considered to be his superior in beauty or stature, whenever he came as envoy to the great king or anyone else in Asia, and his house as a whole is no whit inferior to the other. Sprung from such people, it is to be supposed that you would be first in all things. And indeed, as regards your visible form, dear son of Glaucon, I consider that nowhere have you fallen behind any of your ancestors. But if your nature is really rich in temperance and those other things, as our friend here says, blessed is the son, dear Charmides, that your mother has borne in you! However, the case stands thus: if you already possess temperance, as Critias here declares, and you are sufficiently temperate, then you never had any need of the charms of Zalmoxis or of Abaris the Hyperborean, and might well be given at once the remedy for the head; but if you prove to be still lacking that virtue, we must apply the charm before the remedy. So tell me yourself whether you agree with our friend, and can say that you are already sufficiently provided with temperance, or are deficient in it?

At this Charmides blushed and, for one thing, looked more beautiful then ever, for his modesty became his years; and then, too, he answered most ingenuously, saying

Charmides:: It is no easy matter at the moment either to admit or to deny the words of the question. For if, I say I am not temperate, not only is it a strange thing to say against oneself, but I shall at the same time be taxing with untruth both Critias and many others who consider me to be temperate, as he gives out; while if, on the other hand, I say I am, and praise myself, it will probably be found distasteful; so that I cannot see what answer I am to give you.

Socrates:: Your answer is a natural one, in my opinion, Charmides; and I think, that we must join in inquiring whether you possess the thing I am asking after, or not, in order that neither you may be forced to say what you do not wish, nor I on my part may recklessly try my hand at medicine. So if it is agreeable to you, I am ready to inquire with you; but, if it is not, to let it alone.

Charmides:: Why, nothing, could be more agreeable to me: so far as that goes, therefore, inquire in whatever way you think we had better proceed.

Socrates:: Then this is the way, in which I consider that our inquiry into this matter had best be conducted. Now, it is clear that, if you have temperance with you, you can hold an opinion about it. For being in you, I presume it must, in that case, afford some perception from which you can form some opinion of what temperance is, and what kind of thing it is: do you not think so?

Charmides:: I do.

Socrates:: And since you understand the Greek tongue, you can tell me, I suppose, your view of this particular thought of yours?

Charmides:: I daresay.

Socrates:: Then in order that we may make a guess whether it is in you or not, tell me, what you say of temperance according to your opinion.

He at first hung back, and was not at all willing to answer: but presently he said that, to his mind;

Charmides:: Temperance is doing everything orderly and quietly—walking in the streets, talking, and doing everything else of that kind; and in a word, I think the thing about which you ask may be called quietness.

Socrates:: Well, are you right there? They do say, you know, Charmides, that quiet people are temperate: so let us see if there is anything in what they say. Tell me, is not temperance, however, among the honorable things?

Charmides:: To be sure.

Socrates:: Well, which is most honorable at the writing-master's, to write the same sort of letters quickly or quietly?

Charmides:: Quickly.

Socrates:: And in reading, to do it quickly or slowly?

Charmides:: Quickly.

Socrates:: And so, in the same way, to play the lyre quickly, or to wrestle nimbly, is far more honorable than to do it quietly and slowly?

Charmides:: Yes.

Socrates:: And what of boxing, alone or combined with wrestling? Is it not the same there too?

Charmides:: To be sure.

Socrates:: And in running and leaping and all activities of the body, are not nimble and quick movements accounted honorable, while sluggish and quiet ones are deemed disgraceful?

Charmides:: Apparently.

Socrates:: So we find, that in the body, at least, it is not quietness, but the greatest quickness and nimbleness that is most honorable, do we not?

Charmides:: Certainly.

Socrates:: And temperance was an honorable thing?

Charmides:: Yes.

Socrates:: Then in the body, at least, it is not quietness but quickness that will be the more temperate thing, since temperance is honorable.

Charmides:: So it seems.

Socrates:: Well now; in learning, is facility the more honorable, or difficulty?

Charmides:: Facility.

Socrates:: And facility in learning, is learning quickly, and difficulty in learning is learning quietly and slowly?

Charmides:: Yes.

Socrates:: And is it not more honorable to teach another quickly and forcibly, rather than quietly and slowly?

Charmides:: Yes.

Socrates:: Well now, is it more honorable to be reminded and to remember quietly and slowly, or forcibly and quickly?

Charmides:: Forcibly, and quickly.

Socrates:: And is not readiness of mind a sort of nimbleness of the soul, not a quietness?

Charmides:: True.

Socrates:: And to apprehend what is said, whether at the writing-master's or the lyre-master's or anywhere else, not as quietly as possible, but as quickly, is most honorable?

Charmides:: Yes.

Socrates:: Well, and in the searchings of the soul, and in deliberation, it is not the quietest person, I imagine, or he who deliberates and discovers with difficulty, that is held worthy of praise, but he who does this most easily and quickly.

Charmides:: That is so.

Socrates:: Then in all, Charmides, that concerns either our soul or our body, actions of quickness and nimbleness are found to be more honorable than those of slowness and quietness?

Charmides:: It looks like it.

Socrates:: So temperance cannot be a sort of quietness, nor can the temperate life be quiet, by this argument at least; since, being temperate, it must be honorable. For we have these two alternatives: either in no cases, or I should think in very few, can we find that the quiet actions in life are more honorable than the quick and vigorous ones; or at all events, my friend, if of the more honorable actions there are absolutely as many quiet ones as forcible and quick, not even so will temperance be acting quietly any more than acting forcibly and quickly, either in walking or in talking or in any other sphere; nor will the quiet life be more temperate than the unquiet; since in our argument we assumed that temperance is an honorable thing, and have found that quick things are just as honorable as quiet things.

Charmides:: Your statement, Socrates, seems to me to be correct.

Socrates:: Once more then, Charmides, attend more closely and look into yourself; reflect on the quality that is given you by the presence of temperance, and what quality it must have to work this effect on you. Take stock of all this and tell me, like a good, brave fellow, what it appears to you to be.

He paused a little, and after a quite manly effort of self-examination:

Charmides:: Well, I think that temperance makes men ashamed or bashful, and that temperance is the same as modesty.

Socrates:: Well now, did you not admit a moment ago that temperance is honorable?

Charmides:: Certainly I did.

Socrates:: And temperate men are also good?

Charmides:: Yes.

Socrates:: Well, can that be good which does not produce good men?

Charmides:: No, indeed.

Socrates:: And we conclude that it is not only honorable, but good also.

Critias:: I think so.

Socrates:: Well then, are you not convinced that Homer is right in saying;

Modesty, no good mate for a needy man?

Charmides:: I am.

Socrates:: Then it would seem that modesty is not good, and good.

Charmides:: Apparently.

Socrates:: But temperance is good, if its presence makes men good, and not bad.

Charmides:: It certainly seems to me to be as you say.

Socrates:: So temperance cannot be modesty, if it is in fact good, while modesty is no more good than evil.

Charmides:: Why, I think, Socrates, that is correctly stated; but there is another view of temperance on which I would like to have your opinion. I remembered just now what I once heard someone say, that temperance might be doing one’s own business. I ask you, then, do you think he is right in saying this?

Socrates:: You rascal, you have heard it from Critias here, or some other of our wise men!

Critias:: Seemingly, from some other; for indeed he did not from me.

Charmides:: But what does it matter, Socrates, from whom I heard it?

Socrates:: Not at all; for in any case we have not to consider who said it, but whether it is a true saying or no.

Charmides:: Now you speak rightly.

Socrates:: Yes, on my word: but I shall be surprised if we can find out how it stands; for it looks like a kind of riddle.

Charmides:: Why so?

Socrates:: Because, presumably the speaker of the words “temperance is doing one’s own business” did not mean them quite as he spoke them. Or do you consider that the scribe does nothing when he writes or reads?

Charmides:: I rather consider that he does something.

Socrates:: And does the scribe, in your opinion, write and read his own name only, and teach you boys to do the same with yours? Or did you write your enemies’ names just as much as your own and your friends’?

Charmides:: Just as much.

Socrates:: Well, were you meddlesome or intemperate in doing this?

Charmides:: Not at all.

Socrates:: And you know you were not doing your own business, if writing and reading are doing something.

Charmides:: Why, so they are.

Socrates:: And indeed medical work, my good friend, and building and weaving and producing anything whatever that is the work of any art, I presume is doing something.

Charmides:: Certainly.

Socrates:: Well then, do you think a state would be well conducted under a law which enjoined that everyone should weave and scour his own coat, and make his own shoes, and his own flask and scraper, and everything else on the same principle of not touching the affairs of others but performing and doing his own for himself?

Charmides:: I think not.

Socrates:: But still, a state whose conduct is temperate will be well conducted.

Charmides:: Of course.

Socrates:: Then doing one's own business in that sense and in that way will not be temperance.

Charmides:: Apparently not.

Socrates:: So that person was riddling, it seems, just as I said a moment ago, when he said that doing one's own business is temperance. For I take it he was not such a fool as all that: or was it some idiot that you heard saying this, Charmides?

Charmides:: Far from it, for indeed he seemed to be very wise.

Socrates:: Then it is perfectly certain, in my opinion, that he propounded it as a riddle, in view of the difficulty of understanding what "doing one's own business" can mean.

Charmides:: I daresay.

Socrates:: Well, what can it mean, this "doing one's own business"? Can you tell me?

Charmides:: I do not know, upon my word: but I daresay it may be that not even he who said it knew in the least what he meant.

Socrates:: And as he said this he gave a sly laugh and glanced at Critias.

Now Critias for some time had been plainly burning with anxiety to distinguish himself in the eyes of Charmides and the company, and having with difficulty restrained himself heretofore, he now could do so no longer; for I believe that what I had supposed was perfectly true—that Charmides had heard this answer about temperance from Critias. And so Charmides, wishing him to make answer instead of himself, sought to stir him up in particular, and pointed out that he himself had been refuted; but Critias rebelled against it, and seemed to me to have got angry with him, as a poet does with an actor who mishandles his verses on the stage: so he looked hard at him and said:

Critias:: Do you really suppose, Charmides, that if you do not know what can have been the meaning of the man who said that temperance was doing one’s own business, he did not know either?

Socrates:: Why, my excellent Critias, no wonder if our friend, at his age, cannot understand; but you, I should think, may be expected to know, in view of your years and your studies. So if you concede that temperance is what he says, and you accept the statement, for my part I would greatly prefer to have you as partner in the inquiry as to whether this saying is true or not.

Critias:: Well, I quite concede it, and accept it.

Socrates:: That is good, then. Now tell me, do you also concede what I was asking just now—that all craftsmen make something?

Critias:: I do.

Socrates:: And do you consider that they make their own things only, or those of others also?

Critias:: Those of others also.

Socrates:: And are they temperate in not making their own things only?

Critias:: Yes: what reason is there against it?

Socrates:: None for me; but there may be for him who, after assuming that temperance is doing one's own business, proceeds to say there is no reason against those also who do others' business being temperate.

Critias:: And have I, pray, admitted that those who do others' business are temperate? Or was my admission of those who make things?

Socrates:: Tell me, do you not call making and doing the same?

Critias:: No indeed, nor working and making the same either: this I learnt from Hesiod, who said, "Work is no reproach." Now, do you suppose that if he had given the names of working and doing to such works as you were mentioning just now, he would have said there was no reproach in shoe-making or pickle-selling or serving the stews? It is not to be thought, Socrates; he rather held, I conceive, that making was different from doing and working, and that while a thing made might be a reproach if it had no connection with the honorable, work could never be a reproach. For things honorably and usefully made he called works, and such makings he called workings and doings; and we must suppose that it was only such things as these that he called our proper concerns, but all that was harmful, the concerns of others. So that we must conclude that Hesiod, and anyone else of good sense, calls him temperate who does his own business.

Socrates:: Ah, Critias, you had hardly begun, when I grasped the purport of your speech—that you called one's proper and one's own things good, and that the makings of the good you called doings; for in fact I have heard Prodicus drawing innumerable distinctions between names. Well, I will allow you any application of a name that you please; only make clear to what thing it is that you attach such-and-such a name. So begin now over again, and define more plainly. Do you say that this doing or making, or whatever is the term you prefer, of good things, is temperance?

Critias:: I do.

Socrates:: Then not he who does evil, but he who does good, is temperate?

Critias:: And do not you, my excellent friend, think so?

Socrates:: Leave that aside; for we have not to consider yet what I think, but what you say now.

Critias:: Well, all the same, I say, that he who does evil instead of good is not temperate, whereas he who does good instead of evil is temperate: for I give you "the doing of good things is temperance" as my plain definition.

Socrates:: And there is no reason, I daresay, why your statement should not be right; but still I wonder whether you judge that temperate men are ignorant of their temperance.

Critias:: No, I do not.

Socrates:: A little while ago, were you not saying that there was no reason why craftsmen should not be temperate in making others' things as well?

Critias:: Yes, I was, but what of it?

Socrates:: Nothing; only tell me whether you think that a doctor, in making someone healthy, makes a helpful result both for himself and for the person whom he cures.

Critias:: I do.

Socrates:: And he who does this does his duty?

Critias:: Yes.

Socrates:: Is not he who does his duty temperate?

Critias:: Indeed he is.

Socrates:: Well, and must the doctor know when his medicine will be helpful, and when not? And must every craftsman know when he is likely to be benefited by the work he does, and when not?

Critias:: Probably not.

Socrates:: Then sometimes, the doctor may have done what is helpful or harmful without knowing the effect of his own action; and yet, in doing what was helpful, by your statement, he has done temperately. Or did you not state that?

Critias:: I did.

Socrates:: Then it would seem that in doing what is helpful he may sometimes do temperately and be temperate, but be ignorant of his own temperance?

Critias:: But that, Socrates, could never be: if you think this in any way a necessary inference from my previous admissions, I would rather withdraw some of them, and not be ashamed to say my statements were wrong, than concede at any time that a man who is ignorant of himself is temperate. For I would almost say that this very thing, self-knowledge, is temperance, and I am at one with him who put up the inscription of those words at Delphi. For the purpose of that inscription on the temple, as it seems to me, is to serve as the god's salutation to those who enter it, instead of "Hail!"—this is a wrong form of greeting, and they should rather exhort one another with the words, "Be temperate!" And thus the god addresses those who are entering his temple in a mode which differs from that of men; such was the intention of the dedicator of the inscription in putting it up, I believe; and that he says to each man who enters, in reality, "Be temperate!" But he says it in a rather riddling fashion, as a prophet would; for

“Know thyself!” and “Be temperate!” are the same, as the inscription and I declare, though one is likely enough to think them different—an error into which I consider the dedicators of the later inscriptions fell when they put up “Nothing overmuch” and “A pledge, and thereupon perdition.” For they supposed that “Know thyself!” was a piece of advice, and not the god’s salutation of those who were entering; and so, in order that their dedications too might equally give pieces of useful advice, they wrote these words and dedicated them. Now my object in saying all this, Socrates, is to abandon to you all the previous argument—for, though perhaps it was you who were more in the right, or perhaps it was I, yet nothing at all certain emerged from our statements—and to proceed instead to satisfy you of this truth, if you do not admit it, that temperance is knowing oneself.

Socrates:: Why, Critias, you treat me as though I professed to know the things on which I ask questions, and needed only the will to agree with you. But the fact of the matter is rather that I join you in the inquiry, each time that a proposition is made, because I myself do not know; I wish therefore to consider first, before I tell you whether I agree or not. Now, give me a moment to consider.

Critias:: Consider then.

Socrates:: Yes, and I am considering. For if temperance is knowing anything, obviously it must be a kind of science, and a science of something, must it not?

Critias:: It is and of self.

Socrates:: And medicine is a science of health?

Critias:: Certainly.

Socrates:: Then if you should ask me wherein medicine, as a science of health is useful to us, and what it produces, I should say it is of very great benefit, since it produces health; an excellent result, if you allow so much.

Critias:: I allow it.

Socrates:: And so, if you should ask me what result I take to be produced by building, as the builder’s science, I should say houses; and it would be the same with the other arts. Now it is for you, in your turn, to find an answer to a question regarding temperance—since you say it is a science of self, Critias—and to tell me what excellent result it produces for us, as science of self, and what it does that is worthy of its name. Come now, tell me.

Critias:: But, Socrates, you are not inquiring rightly. For in its nature it is not like the other sciences, any more than any of them is like any other; whereas you are making your inquiry as though they were alike. For tell me, what result is there of the arts of reckoning and geometry, in the way that a house is of building, or a coat of weaving, or other products of the sort that one might point to in various arts? Well, can you, for your part, point to any such product in those two cases? You cannot.

Socrates:: What you say is true; but I can point out to you what is the peculiar subject of each of these sciences, distinct in each case from the science itself. Thus reckoning, I suppose, is concerned with the even and the odd in their numerical relations to themselves and to one another, is it not?

Critias:: Certainly.

Socrates:: And you grant that the odd and the even are different from the actual art of reckoning?

Critias:: Of course.

Socrates:: And once more, weighing is concerned with the heavier and the lighter weight; but the heavy and the light are different from the actual art of weighing: you agree?

Critias:: I do.

Socrates:: Then tell me, what is that of which temperance is the science, differing from temperance itself?

Critias:: There you are, Socrates: you push your investigation up to the real question at issue—in what temperance differs from all the other sciences—but you then proceed to seek some resemblance between it and them; whereas there is no such thing, for while all the rest of the sciences have something other than themselves as their subject, this one alone is a science of the other sciences and of its own self. And of this you are far from being unconscious, since in fact, as I believe, you are doing the very thing you denied you were doing just now: for you are attempting to refute me, without troubling to follow the subject of our discussion.

Socrates:: How can you think, if my main effort is to refute you, that I do it with any other motive than that which would impel me to investigate the meaning of my own words—from a fear of carelessly supposing, at any moment, that I knew something while I knew it not? And so it is now: that is what I am doing, I tell you. I am examining the argument mainly for my own sake, but also, perhaps, for that of my other intimates. Or do you not think it is for the common good, almost, of all men, that the truth about everything there is should be discovered?

Critias:: Yes indeed, I do, Socrates.

Socrates:: Then take heart, my admirable friend, and answer the question put to you as you deem the case to be, without caring a jot whether it is Critias or Socrates who is being refuted: give the argument itself your attention, and observe what will become of it under the test of refutation.

Critias:: Well, I will do so; for I think there is a good deal in what you say.

Socrates:: Then tell me, what you mean in regard to temperance.

Critias:: Why, I mean that it alone of all the sciences is the science both of itself and of the other sciences.

Socrates:: So then, it will be the science of the lack of science also, besides being the science of science?

Critias:: Certainly.

Socrates:: Then only the temperate person will know himself, and be able to discern what he really knows and does not know, and have the power of judging what other people likewise know and think they know, in cases where they do know, and again, what they think they know, without knowing it; everyone else will be unable. And so this is being temperate, or temperance, and knowing oneself—that one should know what one knows and what one does not know. Is that what you mean?

Critias:: It is.

Socrates:: Once more then, as our third offering to the Savior, let us consider afresh, in the first place, whether such a thing as this is possible or not—to know that one knows, and does not know, what one knows and what one does not know; and secondly, if this is perfectly possible, what benefit we get by knowing it.

Critias:: We must indeed consider.

Socrates:: Come then, Critias, consider if you can show yourself any more resourceful than I am; for I am at a loss. Shall I explain to you in what way?

Critias:: By all means.

Socrates:: Well, what all this comes to, if your last statement was correct, is merely that there is one science which is precisely a science of itself and of the other sciences, and moreover is a science of the lack of science at the same time.

Critias:: Certainly.

Socrates:: Then mark what a strange statement it is that we are attempting to make, my friend: for if you will consider it as applied to other cases, you will surely see—so I believe—its impossibility.

Critias:: How so? In what cases?

Socrates:: In the following: ask yourself if you think there is a sort of vision which is not the vision of things that we see in the ordinary way, but a vision of itself and of the other sorts of vision, and of the lack of vision likewise; which, while being vision, sees no color, but only itself and the other sorts of vision. Do you think there is any such?

Critias:: Upon my word, I do not.

Socrates:: And what do you say to a sort of hearing which hears not a single sound, but hears itself and the other sorts of hearing and lack of hearing?

Critias:: I reject that also.

Socrates:: Then take all the senses together as a whole, and consider if you think there is any sense of the senses and of itself, but insensible of any of the things of which the other senses are sensible.

Critias:: I do not.

Socrates:: Now, do you think there is any desire which is the desire, not of any pleasure, but of itself and of the other desires?

Critias:: No, indeed.

Socrates:: Nor, again, is there a wish, I imagine, that wishes no good, but wishes itself and the other wishes.

Critias:: Quite so; there is not.

Socrates:: And would you say there is any love of such a sort that it is actually a love of no beauty, but of itself and of the other loves?

Critias:: Not I.

Socrates:: And have you ever observed any fear which fears itself and the other fears, but has no fear of a single dreadful thing?

Critias:: No, I have not.

Socrates:: Or an opinion which is an opinion of opinions and of itself, but without any opinion such as the other opinions have?

Critias:: By no means.

Socrates:: But it is apparently a science of this kind that we are assuming—one that is a science of no branch of study, but a science of itself and of the other sciences.

Critias:: So we are.

Socrates:: And it is a strange thing, if it really exists? For we should not affirm as yet that it does not exist, but should still consider whether it does exist.

Critias:: You are right.

Socrates:: Well now, this science is a science of something, that is, it has a certain faculty whereby it can be a science of something, has it not?

Critias:: Certainly.

Socrates:: For, you know, we say the greater has a certain faculty whereby it can be greater than something?

Critias:: Quite so.

Socrates:: That is, than something smaller, if it is to be greater.

Critias:: Necessarily.

Socrates:: So if we could find a greater which is greater than other greater things, and than itself, but not greater than the things beside which the others are greater, I take it there can be no doubt that it would be in the situation of being, if greater than itself, at the same time smaller than itself, would it not?

Critias:: Most inevitably, Socrates.

Socrates:: Or again, if there is a double of other doubles and of itself, both it and the others must of course be halves, if it is to be their double; for, you know, a double cannot be "of" anything else than its half.

Critias:: True.

Socrates:: And what is more than itself will also be less, and the heavier will be lighter, and the older younger, and so on with everything else: whatever has its own faculty applied to itself will have also the natural quality to which its faculty was applicable, will it not? For instance, hearing is, as we say, just a hearing of sound, is it not?

Critias:: Yes.

Socrates:: So if it is to hear itself, it will hear a sound of its own; for it would not hear otherwise.

Critias:: Most inevitably.

Socrates:: And sight, I suppose, my excellent friend, if it is to see itself, must needs have a color; for sight can never see what is colorless.

Critias:: No more it can.

Socrates:: Then do you perceive, Critias, in the various cases we have propounded, how some of them strike us as absolutely impossible, while others raise serious doubts as to the faculty of the thing being ever applicable to itself? For with magnitudes, numbers, and the like it is absolutely impossible, is it not?

Critias:: Certainly.

Socrates:: But again, with hearing and sight, or in the further cases of motion moving itself and heat burning itself, and all other actions of the sort, the fact must appear incredible to some, but perhaps not to others. So what we want, my friend, is some great man who will determine to our satisfaction in every respect whether there is nothing in nature so constituted as to have its own faculty applicable to itself, and not only some other object, or whether there are some such, and others not such; and whether, again, if there are things that have such relation to themselves, they include a science which we assert to be temperance. For my part, I distrust my own competence to determine these questions, and hence I am neither able to affirm whether it is possible that there should be a science of science, nor willing, let it be ever so true, to acknowledge this to be temperance until I have made out whether such a thing as this would benefit us or not. For, you see, I have a presentiment that temperance is something beneficial and good; and you, therefore, son of Callaeschrus—since you lay it down that temperance is this very science of science, and moreover of the lack of science—shall first indicate the possibility, as I put it just now, and then the benefit added to the possibility, of such a thing; and perhaps you will then satisfy me that your definition of temperance is correct.

Socrates:: Now when Critias heard this and saw me in a difficulty, he seemed to me—just as the sight of someone yawning opposite causes people to be affected in the same way—to be compelled by the sense of my difficulty to be caught in a difficulty himself. And so, since he usually contrived to distinguish himself, he was too ashamed to bring himself to admit to me before the company that he was unable to determine the questions with which I challenged him, but made a very indistinct reply in order to conceal his difficulty. Then I, to forward the discussion, remarked: Well, if you prefer, Critias, let us concede for the moment that there may possibly be a science of science: some other time we shall consider whether such is the fact or not. Come then; suppose it is perfectly possible: how is one helped thereby to know what one knows and does not know? For this, you are aware, we said was the meaning of self-knowledge and temperance, did we not?

Critias:: Certainly; and it must surely follow, Socrates; for if a man has a science which knows itself, he will be similar himself to that which he has. For instance, he who has swiftness will be swift, he who has beauty will be beautiful, and he who has knowledge will know; and when he has knowledge that is of itself, he will then, surely, be in the position of knowing himself.

Socrates:: I do not dispute that when a man has that which knows itself he will know himself; but having that, how is he bound to know what he knows and what he does not know?

Critias:: Because, Socrates, the two things are the same.

Socrates:: I daresay; but I am afraid I am still my old self: I still do not see how knowing what one knows and does not know is the same as the other.

Critias:: How do you mean?

Socrates:: In this way: will a science of science, if such exists, be able to do more than determine that one of two things is science, and the other is not science?

Critias:: No, only that.

Socrates:: Now, is science or lack of science of health the same as science or lack of science of justice?

Critias:: By no means.

Socrates:: For the one, I suppose, is medicine, and the other politics, while the thing in question is merely science.

Critias:: Yes, to be sure.

Socrates:: And if a man has no added knowledge of health and justice, but knows only science, as having science of that alone, he will probably know that he has a certain piece of scientific knowledge about. himself and about other people, will he not?

Critias:: Yes.

Socrates:: But how will this science help him to know what he knows? For of course he knows health by means of medicine, not temperance, and harmony by means of music, not temperance, and building by means of the builder's art, not temperance; and so it will be in every case, will it not?

Critias:: Apparently.

Socrates:: And how will temperance, supposing it is only a science of sciences, help him to know that he knows health, or that he knows building?

Critias:: By no means.

Socrates:: Then he who is ignorant of all this will not know what he knows, but only that he knows.

Critias:: So it seems.

Socrates:: Then being temperate, or temperance, will not be this knowledge of what one knows or does not know, but, it would seem, merely knowing that one knows or does not know.

Critias:: It looks like it.

Socrates:: Then such a person will also be unable to examine another man's claim to some knowledge, and make out whether he knows or does not know what he says he knows: he will merely know, it would seem, that he has a certain knowledge; but of what it is, temperance will not cause him to know.

Critias:: Apparently not.

Socrates:: So he will be able to distinguish neither the man who pretends to be a doctor, but is none, from the man who really is one, nor any other man who has knowledge from him who has none. But let us consider it another way: if the temperate man or anybody else would discriminate between the true doctor and the false, he will go to work thus, will he not? He will surely not talk to him about medicine; for, as we were saying, the doctor understands nothing else but health and disease. Is not that so?

Critias:: Yes, it is.

Socrates:: But about science he knows nothing, for that, you know, we assigned to temperance alone.

Critias:: Yes.

Socrates:: So the medical man knows nothing about medicine either, since medicine is, of course, a science.

Critias:: True.

Socrates:: Then the temperate man will know, indeed, that the doctor has a certain science; but when he has to put its nature to the proof, must he not consider what its subjects are? Is not each science marked out, not merely as a science, but as a particular one, by the particular subjects it has?

Critias:: It is, to be sure.

Socrates:: And medicine is marked out as different from the other sciences by being a science of health and disease.

Critias:: Yes.

Socrates:: And so anyone who wishes to inquire into medicine must make those things, whatever they may be, with which it is concerned, the matter of his inquiry; not those foreign things, I presume, with which it is not?

Critias:: No, indeed.

Socrates:: Then he who conducts his inquiry aright will consider the doctor, as a medical man, in connection with cases of health and disease.

Critias:: So it seems.

Socrates:: And will inquire whether, in what is said or done in such cases, his words are truly spoken, and his acts rightly done?

Critias:: He must.

Socrates:: Well now, could anyone follow up either of these points without the medical art?

Critias:: No, indeed.

Socrates:: Nobody at all, it would seem, but a doctor; and so not the temperate man either: for he would have to be a doctor, in addition to his temperance.

Critias:: That is so.

Socrates:: Then inevitably, if temperance is only a science of science and of lack of science, it will be equally unable to distinguish a doctor who knows the business of his art from one who does not know but pretends or thinks he does, and any other person who has knowledge of anything at all: one will only distinguish one's fellow-artist, as craftsmen usually can.

Critias:: Apparently.

Socrates:: Then what benefit, Critias, can we still look for from temperance, if it is like that? For if, as we began by assuming, the temperate man knew what he knew and what he did not know, and that he knows the one and does not know the other, and if he were able to observe this same condition in another man, it would be vastly to our benefit, we agree, to be temperate; since we should pass all our lives, both we who had temperance and all the rest who were governed by us, without error. For neither should we ourselves attempt to do what we did not know, instead of finding out those who knew and placing the matter in their hands, nor should we permit others under our governance to do anything but what they were likely to do aright; and they would do that when they had knowledge of it; and so it would be that a house which was ordered, or a state which was administered, as temperance bade, and everything else that was ruled by temperance, could not but be well ordered; for with error abolished, and rightness leading, in their every action men would be bound to do honorably and well under such conditions, and those who did well would be happy. Did we not so speak of temperance, Critias, when we remarked how great a boon it was to know what one knows and what one does not know?

Critias:: To be sure we did.

Socrates:: Whereas now, you see that nowhere can any such science be found.

Critias:: I see.

Socrates:: Then may we say, that there is this good point in the knowledge of knowledge and of lack of knowledge, which we now find to be what temperance is, that he who has it will not only learn more easily whatever he learns, but will perceive everything more plainly, since besides the particular things that he learns he will behold the science; and hence he will probe more surely the state of other men respecting the things which he has learnt himself, while those who probe without such knowledge will do it more feebly and poorly? Are these, my friend, the kind of advantages that we shall gain from temperance?

But are we really looking at something greater, and requiring it to be something greater than it really is?

Critias:: Probably, that is so.

Socrates:: I daresay; and I daresay also our inquiry has been worthless. And this I conclude, because I observe certain strange facts about temperance, if it is anything like that. For suppose, if you please, we concede that there may possibly be a science of science, and let us grant, and not withdraw, our original proposition that temperance is the knowledge of what one knows and does not know; granting all this, let us still more thoroughly inquire whether on these terms it will be of any profit to us. For our suggestion just now, that temperance of that sort, as our guide in ordering house or state, must be a great boon, was not, to my thinking, Critias, a proper admission.

Critias:: How so?

Socrates:: Because, we too lightly admitted that it would be a great boon to mankind if each of us should do what he knows, but should place what he did not know in the hands of others who had the knowledge.

Critias:: Well, was that not a proper admission?

Socrates:: Not to my mind.

Critias:: In very truth, your words are strange! Socrates.

Socrates:: Yes, by the Dog, and they strike me too in the same way; and it was in view of this, just now, that I spoke of strange results that I noticed, and said I feared we were not inquiring rightly. For in truth, let temperance be ever so much what we say it is, I see nothing to show what good effect it has on us.

Critias:: How so? Tell us, in order that we on our side may know what you mean.

Socrates:: I expect, I am talking nonsense: but still one is bound to consider what occurs to one, and not idly ignore it, if one has even a little concern for oneself.

Critias:: And you are quite right.

Socrates:: Hear then, my dream, whether it has come through horn or through ivory. Suppose that temperance were such as we now define her, and that she had entire control of us: must it not be that every act would be done according to the sciences, and no one professing to be a pilot when he was not would deceive us, nor would a doctor, nor a general, nor anyone else pretending to know something he did not know, go undetected; and would not these conditions result in our having greater bodily health than we have now, safety in perils of the sea and war, and skilful workmanship in all our utensils, our clothes, our shoes, nay, everything about us, and various things besides, because we should be employing genuine craftsmen? And if you liked, we might concede that prophecy, as the knowledge of what is to be, and temperance directing her, will deter the charlatans, and establish the true prophets as our prognosticators. Thus equipped, the human race would indeed act and live according to knowledge, I grant you (for temperance, on the watch, would not suffer ignorance to foist herself in and take a hand in our labors), but that by acting according to knowledge we should do well and be happy—this is a point which as yet we are unable to make out, my dear Critias.

Critias:: But still, you will have some difficulty in finding any other fulfillment of welfare if you reject the rule of knowledge.

Socrates:: Then inform me further, on one more little matter. Of what is this knowledge? Do you mean of shoe-making?

Critias:: Good heavens, not I!

Socrates:: Well, of working in brass?

Critias:: By no means.

Socrates:: Well, in wool, or in wood, or in something else of that sort?

Critias:: No, indeed.

Socrates:: Then we no longer hold, to the statement that he who lives according to knowledge is happy; for these workers, though they live according to knowledge, are not acknowledged by you to be happy: you rather delimit the happy man, it seems to me, as one who lives according to knowledge about certain things. And I daresay you are referring to my instance of a moment ago, the man who knows all that is to come, the prophet. Do you refer to him or to someone else?

Critias:: Yes, I refer to him and someone else too.

Socrates:: Whom? Is it the sort of person who might know, besides what is to be, both everything that has been and now is, and might be ignorant of nothing? Let us suppose such a man exists: you are not going to tell me, I am sure, of anyone alive who is yet more knowing than he.

Critias:: No, indeed.

Socrates:: Then there is still one more thing I would fain know: which of the sciences is it that makes him happy? Or does he owe it to all of them alike?

Critias:: By no means to all alike.

Socrates:: But to which sort most? One that gives him knowledge of what thing, present, past or future? Is it that by which he knows draught-playing?

Critias:: Draught-playing indeed!

Socrates:: Well, reckoning?

Critias:: By no means.

Socrates:: Well, health?

Critias:: More likely.

Socrates:: And that science to which I refer as the most likely, gives him knowledge of what?

Critias:: Of good and of evil.

Socrates:: Vile creature! You have all this time been dragging me round and round, while concealing the fact that the life according to knowledge does not make us do well and be happy, not even if it be knowledge of all the other knowledges together, but only if it is of this single one concerning good and evil. For, Critias, if you choose to take away this science from the whole number of them, will medicine any the less give us health, or shoemaking give us shoes, or weaving provide clothes, or will the pilot's art any the less prevent the loss of life at sea, or the general's in war?

Critias:: None the less.

Socrates:: But, my dear Critias, to have any of these things well and beneficially done will be out of our reach if that science is lacking.

Critias:: That is true.

Socrates:: And that science, it seems, is not temperance, but one whose business is to benefit us; for it is not a science of sciences and lack of sciences, but of good and evil: so that if this is beneficial, temperance must be something else to us.

Critias:: But why should not it be beneficial? For if temperance is above all a science of the sciences, and presides too over the other sciences, surely she will govern this science of the good, and so benefit us.

Socrates:: And give us health also? Will she, and not medicine, do this? And will the several works of the other arts be hers, and not the particular works of each art? Have we not constantly protested that she is only knowledge of knowledge and of lack of knowledge, and of nothing else? Is not that so?

Critias:: Apparently it is.

Socrates:: Then she will not be a producer of health?

Critias:: No, indeed.

Socrates:: For health, we said, belongs to another art, did we not?

Critias:: We did.

Socrates:: Nor of benefit, my good friend; for this work, again, we assigned to another art just now, did we not?

Critias:: Certainly.

Socrates:: Then how will temperance be beneficial, if it produces no benefit?

Critias:: By no means, Socrates, as it seems.

Socrates:: So do you see, Critias, how all the time I had good reason for my fear, and fair ground for the reproach I made against myself, that my inquiry regarding temperance was worthless? For I cannot think that what is admitted to be the noblest thing in the world would have appeared to us useless if I had been of any use for making a good search. But now, you see, we are worsted every way, and cannot discover what thing it can possibly be to which the lawgiver gave this name, temperance. And yet we have conceded many points which were not deducible from our argument. For you know we conceded that there was a science of science, when the argument was against it and would not agree; and we further conceded that this science could know the works also of the other sciences, when the argument was against this too, in order to make out that the temperate man had a knowledge of what he knew and did not know, so as to know that he knew the one and did not know the other. And we made this concession in a really magnificent manner, without considering the impossibility of a man knowing, in some sort of way, things that he does not know at all; for our admission says that he knows that he does not know them; and yet, in my opinion, there can be nothing more irrational than this. Nevertheless, although it has found us so simple-minded and tractable, the inquiry remains quite incapable of discovering the truth, but has utterly flouted it by most impudently showing us the inutility of that which we had been ever so long assuming, by our joint admissions and fictions, to be the meaning of temperance. Now, so far as I am concerned, I am not particularly distressed: but for your sake, Charmides, I am seriously distressed to think that you, with your goodly form and most temperate soul besides, are to have no profit or advantage from the presence of that temperance in all your life. And I am still more distressed about the charm which I learnt from the Thracian, that I should have spent so much pains on a lesson which has had such a worthless effect. Now I really do not think that this can be the case, but rather that I am a poor hand at inquiring; for temperance I hold to be a great good, and you to be highly blessed, if you actually have it. See now whether you have it, and are in no need of the charm; for if it is yours, I should rather advise you to regard me as a babbler who is unable to argue out any subject of inquiry whatsoever, and yourself as advancing in happiness as you advance in temperance.

Then Charmides said:

Charmides:: Why, upon my word, Socrates, I do not know at all whether I have it or have it not. For how can I know, when even you two are unable to discover what this thing is?—so you say, but of this you do not at all convince me—and I quite believe, Socrates, that I do need the charm, and for my part I have no objection to being charmed by you every day of my life, until you say I have had enough of the treatment.

Critias:: Very well: now, Charmides, if you do this, it will be a proof to me of your temperance—if you submit to be charmed by Socrates and do not forsake him through thick and thin.

Charmides:: Count on me to follow and not forsake him; for it would ill become me to disobey you, my guardian, and refuse to do your bidding.

Critias:: Well now, I bid you.

Charmides:: Then I will do as you bid and will start this very day.

Socrates:: There, there, what are you two plotting to do?

Charmides:: Nothing; we have made our plot.

Socrates:: So you will use force before even allowing me to make my affidavit?

Charmides:: You must expect me to use force, since he gives me the command: take counsel, therefore, on your side, as to what you will do.

Socrates:: But that leaves no room for counsel; for if once you set about doing anything and use force, no man alive will be able to withstand you.

Charmides:: Then do not you withstand me.

Socrates:: Then I will not withstand you.

# Charmides

Translated by Rosamond Kent Sprague.

PERSONS OF THE DIALOGUE.

Socrates, Chærephon, Critias, Charmides.

---

Socrates:: We got back the preceding evening from the camp at Potidaea, and since I was arriving after such a long absence I sought out my accustomed haunts with special pleasure. To be more specific, I went straight to the palaestra of Taureas (the one directly opposite the temple of Basile), and there I found a good number of people, most of whom were familiar, though there were some, too, whom I didn't know. When they saw me coming in unexpectedly, I was immediately hailed at a distance by people coming up from all directions, and Chaerephon, like the wild man he is, sprang up from the midst of a group of people and ran towards me and, seizing me by the hand, exclaimed;

Chaerephon:: "Socrates! how did you come off in the battle?"

Socrates:: (A short time before we came away there had been a battle at Potidaea and the people at home had only just got the news.)

And I said in reply, "Exactly as you see me."

Chaerephon:: "The way we heard it here, the fighting was very heavy and many of our friends were killed."

Socrates:: "The report is pretty accurate."

Chaerephon:: "Were you actually in the battle?"

Socrates:: "Yes, I was there."

Chaerephon:: "Well, come sit down and give us a complete account, because we've had very few details so far."

Socrates:: And while he was still talking he brought me over to Critias, the son of Callaeschrus, and sat me down there.

When I took my seat I greeted Critias and the rest and proceeded to relate the news from the camp in answer to whatever questions anyone asked, and they asked plenty of different ones.

When they had had enough of these things, I in my turn began to question them with respect to affairs at home, about the present state of philosophy and about the young men, whether there were any who had become distinguished for wisdom or beauty or both. Whereupon Critias, glancing towards the door and seeing several young men coming in and laughing with each other, with a crowd of others following behind, said

Critias:: "As far as beauty goes, Socrates, I think you will be able to make up your mind straight away, because those coming in are the advance party and the admirers of the one who is thought to be the handsomest young man of the day, and I think that he himself cannot be far off."

Socrates:: "But who is he, and who is his father?"

Critias:: "You probably know him, but he was not yet grown up when you went away. He is Charmides, the son of my mother's brother Glaucon, and my cousin."

Socrates:: "Good heavens, of course I know him, because he was worth noticing even when he was a child. By now I suppose he must be pretty well grown up."

Critias:: "It won't be long, before you discover how grown up he is and how he has turned out."

Socrates:: And while he was speaking Charmides came in.

You mustn't judge by me, my friend. I'm a broken yardstick as far as handsome people are concerned, because practically everyone of that age strikes me as beautiful. But even so, at the moment Charmides came in he seemed to me to be amazing in stature and appearance, and everyone there looked to me to be in love with him, they were so astonished and confused by his entrance, and many other lovers followed in his train. That men of my age should have been affected this way was natural enough, but I noticed that even the small boys fixed their eyes upon him and no one of them, not even the littlest, looked at anyone else, but all gazed at him as if he were a statue. And Chaerephon called to me and said;

Chaerephon:: “Well, Socrates, what do you think of the young man? Hasn’t he a splendid face?”

Socrates:: “Extraordinary.”

Chaerephon:: “But if he were willing to strip, you would hardly notice his face, his body is so perfect.”

Socrates:: Well, everyone else said the same things as Chaerephon, and I said, “By Heracles, you are describing a man without an equal—if he should happen to have one small thing in addition.”

Critias:: “What’s that?”

Socrates:: “If he happens to have a well-formed soul, It would be appropriate if he did, Critias, since he comes from your family.”

Critias:: “He is very distinguished in that respect, too.”

Socrates:: “Then why don’t we undress this part of him and have a look at it before we inspect his body? Surely he has already reached the age when he is willing to discuss things.”

Critias:: “Very much so, since he is not only a philosopher but also, both in his own opinion and that of others, quite a poet.”

Socrates:: “This is a gift, my dear Critias, which has been in your family as far back as Solon. But why not call the young man over and put him through his paces? Even though he is still so young, there can be nothing wrong in talking to him when you are here, since you are both his guardian and his cousin.”

Critias:: “You are right, we’ll call him.”

Socrates:: And he immediately spoke to his servant and said;

Critias:: “Boy, call Charmides and tell him I want him to meet a doctor for the weakness he told me he was suffering from yesterday.”

Socrates:: Then Critias said to me;

Critias:: “You see, just lately he’s complained of a headache when he gets up in the morning. Why not pretend to him that you know a remedy for it?”

Socrates:: “No reason why not, if he will only come.”

Critias:: “Oh, he will come.”

Socrates:: Which is just what happened. He did come, and his coming caused a lot of laughter, because every one of us who was already seated began pushing hard at his neighbor so as to make a place for him to sit down. The upshot of it was that we made the man sitting at one end get up, and the man at the other end was toppled off sideways. In the end he came and sat down between me and Critias. And then, my friend, I really was in difficulties, and although I had thought it would be perfectly easy to talk to him, I found my previous brash confidence quite gone. And when Critias said that I was the person who knew the remedy and he turned his full gaze upon me in a manner beyond description and seemed on the point of asking a question, and when everyone in the palaestra surged all around us in a circle, my noble friend, I saw inside his cloak and caught on fire and was quite beside myself. And it occurred to me that Cydias was the wisest love-poet when he gave someone advice on the subject of beautiful boys and said that “the fawn should beware lest, while taking a look at the lion, he should provide part of the lion’s dinner,” because I felt as if I had been snapped up by such a creature. All the same, when he asked me if I knew the headache remedy, I managed somehow to answer that I did.

Charmides:: “What exactly is it?”

Socrates:: And I said that it was a certain leaf, and that there was a charm to go with it. If one sang the charm while applying the leaf, the remedy would bring about a complete cure, but without the charm the leaf was useless.

Charmides:: “Well, then I shall write down the charm at your dictation.”

Socrates:: “With my permission, or without it?”

Charmides:: “With it, of course, Socrates.”

Socrates:: he said, laughing.

“Very well, And are you quite sure about my name?”

Charmides:: “It would be disgraceful if I were not because you are no small topic of conversation among us boys, and besides, I remember you being with Critias here when I was a child.”

Socrates:: “Good for you. Then I shall speak more freely about the nature of the charm. Just now I was in difficulties about what method I would adopt in order to demonstrate its power to you. Its nature, Charmides, is not such as to be able to cure the head alone. You have probably heard this about good doctors, that if you go to them with a pain in the eyes, they are likely to say that they cannot undertake to cure the eyes by themselves, but that it will be necessary to treat the head at the same time if things are also to go well with the eyes. And again it would be very foolish to suppose that one could ever treat the head by itself without treating the whole body. In keeping with this principle, they plan a regime for the whole body with the idea of treating and curing the part along with the whole. Or haven't you noticed that this is what they say and what the situation is?"

Charmides:: "Yes, I have."

Socrates:: "Then what I have said appears true, and you accept the principle?"

Charmides:: "Absolutely."

Socrates:: And when I heard his approval, I took heart and, little by little, my former confidence revived, and I began to wake up. So I said, "Well Charmides, it is just the same with this charm. I learned it while I was with the army, from one of the Thracian doctors of Zalmoxis, who are also said to make men immortal. And this Thracian said that the Greek doctors were right to say what I told you just now. 'But our king Zalmoxis,' he said, 'who is a god, says that just as one should not attempt to cure the eyes apart from the head, nor the head apart from the body, so one should not attempt to cure the body apart from the soul. And this, he says, is the very reason why most diseases are beyond the Greek doctors, that they do not pay attention to the whole as they ought to do, since if the whole is not in good condition, it is impossible that the part should be. Because,' he said, 'the soul is the source both of bodily health and bodily disease for the whole man, and these flow from the soul in the same way that the eyes are affected by the head. So it is necessary first and foremost to cure the soul if the parts of the head and of the rest of the body are to be healthy. And the soul,' he said, 'my dear friend, is cured by means of certain charms, and these charms consist of beautiful words. It is a result of such words that temperance arises in the soul, and when the soul acquires and possesses temperance, it is easy to provide health both for the head and for the rest of the body.’ So when he taught me the remedy and the charms, he also said, ‘Don’t let anyone persuade you to treat his head with this remedy who does not first submit his soul to you for treatment with the charm. Because nowadays,’ he said, ‘this is the mistake some doctors make with their patients. They try to produce health of body apart from health of soul.’ And he gave me very strict instructions that I should be deaf to the entreaties of wealth, position, and personal beauty. So I (for I have given him my promise and must keep it) shall be obedient, and if you are willing, in accordance with the stranger’s instructions, to submit your soul to be charmed with the Thracian’s charms first, then I shall apply the remedy to your head. But if not, there is nothing we can do for you, my dear Charmides.”

When Critias heard me saying this, he said;

Critias:: “The headache will turn out to have been a lucky thing for the young man, Socrates, if, because of his head, he will be forced to improve his wits. Let me tell you, though, that Charmides not only outstrips his contemporaries in beauty of form but also in this very thing for which you say you have the charm; it was temperance, wasn’t it?”

Socrates:: “Yes, indeed it was.”

Critias:: “Then you must know that not only does he have the reputation of being the most temperate young man of the day, but that he is second to none in everything else appropriate to his age.”

Socrates:: “And it is quite right, Charmides, that you should be superior to the rest in all such things because I don’t suppose that anyone else here could so readily point to two Athenian families whose union would be likely to produce a more aristocratic lineage than that from which you are sprung. Your father’s family, that of Critias, the son of Dropides, has been praised for us by Anacreon, Solon, and many other poets for superior beauty, virtue, and everything else called happiness. It's the same on your mother's side. Your maternal uncle Pyrilampes has the reputation of being the finest and most influential man in the country because of his numerous embassies to the Great King and others, so that this whole side of the family is not a bit inferior to the other. As the offspring of such forebears, it is likely that you hold pride of place. In the matter of visible beauty, dear son of Glaucon, you appear to me to be in no respect surpassed by those who come before. But if, in addition, you have a sufficient share of temperance and the other attributes mentioned by your friend here, then your mother bore a blessed son in you, my dear Charmides. Now this is the situation: if temperance is already present in you, as Critias here asserts, and if you are sufficiently temperate, you have no need of the charms either of Zalmoxis or of Abaris the Hyperborean, and you may have the remedy for the head straightaway. But if you still appear to lack these things, you must be charmed before you are given the remedy. So tell me yourself: do you agree with your friend and assert that you already partake sufficiently of temperance, or would you say that you are lacking in it?"

At first Charmides blushed and looked more beautiful than ever, and his bashfulness was becoming at his age. Then he answered in a way that was quite dignified: he said that it was not easy for him, in the present circumstances, either to agree or to disagree with what had been asked.

Charmides:: "Because, if I should deny that I am temperate, it would not only seem an odd thing to say about oneself, but I would at the same time make Critias here a liar, and so with the many others to whom, by his account, I appear to be temperate. But if, on the other hand, I should agree and should praise myself, perhaps that would appear distasteful. So I do not know what I am to answer.”

Socrates:: “What you say appears to me to be reasonable, Charmides. And I think we ought to investigate together the question whether you do or do not possess the thing I am inquiring about, so that you will not be forced to say anything against your will and I, on the other hand, shall not turn to doctoring in an irresponsible way. If this is agreeable to you, I would like to investigate the question with you, but if not, we can give it up.”

Charmides:: “Oh, I should like it above all things, so go ahead and investigate the matter in whatever way you think best.”

Socrates:: “Well then, in these circumstances, I think the following method would be best. Now it is clear that if temperance is present in you, you have some opinion about it. Because it is necessary, I suppose, that if it really resides in you, it provides a sense of its presence, by means of which you would form an opinion not only that you have it but of what sort it is. Or don’t you think so?”

Charmides:: “Yes, I do think so.”

Socrates:: “Well, then, since you know how to speak Greek I suppose you could express this impression of yours in just the way it strikes you?”

Charmides:: “Perhaps.”

Socrates:: “Well, to help us decide whether it resides in you or not, say what, in your opinion, temperance is.”

At first he shied away and was rather unwilling to answer. Finally, however, he said that in his opinion temperance was doing everything in an orderly and quiet way—things like walking in the streets, and talking, and doing everything else in a similar fashion.

Charmides:: “So I think, taking it all together, that what you ask about is a sort of quietness.”

Socrates:: “Perhaps you are right, at least they do say, Charmides, that the quiet are temperate. Let’s see if there is anything in it. Tell me, temperance is one of the admirable things, isn’t it?”

Charmides:: “Yes indeed.”

Socrates:: “Now when you are at the writing master’s, is it more admirable to copy the letters quickly or quietly?”

Charmides:: “Quickly.”

Socrates:: “What about reading? Quickly or quietly?”

Charmides:: “Quickly.”

Socrates:: “And certainly to play the lyre quickly and to wrestle in a lively fashion is much more admirable than to do these things quietly and slowly?”

Charmides:: “Yes.”

Socrates:: “Well, isn’t the same thing true about boxing and the pancration?”

Charmides:: “Yes indeed.”

Socrates:: “And with running and jumping and all the movements of the body, aren’t the ones that are performed briskly and quickly the admirable ones, and those performed with difficulty and quietly the ugly ones?”

Charmides:: “It seems so.”

Socrates:: “And it seems to us that, in matters of the body, it is not the quieter movement but the quickest and most lively which is the most admirable. Isn’t it so?”

Charmides:: “Yes indeed.”

Socrates:: “But temperance was something admirable?”

Charmides:: “Yes.”

Socrates:: “Then in the case of the body it would not be quietness but quickness which is the more temperate, since temperance is an admirable thing.”

Charmides:: “That seems reasonable.”

Socrates:: “Well then, is facility in learning more admirable or difficulty in learning?”

Charmides:: “Facility.”

Socrates:: “But facility in learning is learning quickly? And difficulty in learning is learning quietly and slowly?”

Charmides:: “Yes.”

Socrates:: “And to teach another person quickly—isn’t this far more admirable than to teach him quietly and slowly?”

Charmides:: “Yes.”

Socrates:: “Well then, to recall and to remember quietly and slowly—is this more admirable, or to do it vehemently and quickly?”

Charmides:: “Vehemently and quickly.”

Socrates:: “And isn’t shrewdness a kind of liveliness of soul, and not a kind of quietness?”

Charmides:: “True.”

Socrates:: “And again this is also true of understanding what is said, at the writing master’s and at the lyre teacher’s and everywhere else: to act not as quietly but as quickly as possible is the most admirable.”

Charmides:: “Yes.”

Socrates:: “And, further, in the operations of thought and in making plans, it is not the quietest man, I think, and the man who plans and finds out things with difficulty who appears to be worthy of praise but the one who does these things most easily and quickly.”

Charmides:: “Exactly so.”

Socrates:: “Therefore, Charmides, in all these cases, both of soul and body, we think that quickness and speed are more admirable than slowness and quietness?”

Charmides:: “It seems likely.”

Socrates:: “We conclude then that temperance would not be a kind of quietness, nor would the temperate life be quiet, as far as this argument is concerned at any rate, since the temperate life is necessarily an admirable thing. There are two possibilities for us: either no quiet actions in life appear to be more admirable than the swift and strong ones, or very few. If then, my friend, even quite a few quiet actions should turn out to be more admirable than the violent and quick ones, not even on this assumption would temperance consist in doing things quietly rather than in doing them violently and quickly, neither in walking nor in speech nor in anything else; nor would the quiet life be more temperate than its opposite, since in the course of the argument we placed temperance among the admirable things, and the quick things have turned out to be no less admirable than the quiet ones.”

Charmides:: “What you say seems to me quite right, Socrates.”

Socrates:: “Then start over again, Charmides, and look into yourself with greater concentration, and when you have decided what effect the presence of temperance has upon you and what sort of thing it must be to have this effect, then put all this together and tell me clearly and bravely, what does it appear to you to be?”

He paused and, looking into himself very manfully, said;

Charmides:: “Well, temperance seems to me to make people ashamed and bashful, and so I think modesty must be what temperance really is.”

Socrates:: “But, didn’t we agree just now that temperance was an admirable thing?”

Charmides:: “Yes, we did.”

Socrates:: “And it would follow that temperate men are good?”

Charmides:: “Yes.”

Socrates:: “And could a thing be good that does not produce good men?”

Charmides:: “Of course not.”

Socrates:: “Then not only is temperance an admirable thing, but it is a good thing.”

Charmides:: “I agree.”

Socrates:: “Well, then, you don’t agree with Homer when he said that ‘modesty is not a good mate for a needy man’?”

Charmides:: “Oh, but I do.”

Socrates:: “So it seems to be the case that modesty both is and is not a good.”

Charmides:: “Yes, it does.”

Socrates:: “But temperance must be a good if it makes those good in whom it is present and makes bad those in whom it is not.”

Charmides:: “Why yes, it seems to me to be exactly as you say.”

Socrates:: “Then temperance would not be modesty if it really is a good and if modesty is no more good than bad.”

Charmides:: “What you say has quite convinced me, Socrates.” “But give me your opinion of the following definition of temperance: I have just remembered having heard someone say that temperance is minding one’s own business. Tell me if you think the person who said this was right.”

Socrates:: “You wretch, you’ve picked this up from Critias or from some other wise man.”

Critias:: “I guess it was from some other, because it was certainly not from me.”

Charmides:: “What difference does it make, Socrates, from whom I heard it?”

Socrates:: “None at all, since the question at issue is not who said it, but whether what he said is true or not.”

Charmides:: “Now I like what you say.”

Socrates:: “Good for you, but if we succeed in finding out what it means, I should be surprised, because it seems to be a sort of riddle.”

Charmides:: “In what way?”

Socrates:: “I mean, that when he uttered the words, I don’t suppose the person speaking really meant that temperance was minding your own business. Or do you consider that the writing master does nothing when he writes or reads?”

Charmides:: “On the contrary, I do think he does something.”

Socrates:: “And do you think the writing master teaches you to read and write your own name only or those of the other boys as well? And do you write the names of your enemies just as much as your own names and those of your friends?”

Charmides:: “Just as much.”

Socrates:: “And are you a busybody and intemperate when you do this?”

Charmides:: “Not at all.”

Socrates:: “But aren’t you doing other people’s business if to read and write are to do something?”

Charmides:: “I suppose I am.”

Socrates:: “And then healing, my friend, is doing something, I suppose, and so is house-building and weaving and engaging in any one of the arts.”

Charmides:: “Yes indeed.”

Socrates:: “Well then, do you think a city would be well governed by a law commanding each man to weave and wash his own cloak, make his own shoes and oil flask and scraper, and perform everything else by this same principle of keeping his hands off of other people’s things and making and doing his own?”

Charmides:: “No, I don’t think it would.”

Socrates:: “But, if a city is going to be temperately governed, it must be governed well.”

Charmides:: “Of course.”

Socrates:: “Then if temperance is ‘minding your own business’, it can’t be minding things of this sort and in this fashion.”

Charmides:: “Apparently not.”

Socrates:: “Then the person who said that temperance was ‘minding your own business’ must, apparently, have been riddling, as I pointed out just now, because I don’t suppose he was quite so simpleminded. Or was it some silly fellow you heard saying this, Charmides?”

Charmides:: “Far from it, he seemed very wise indeed.”

Socrates:: “Then I think he must certainly have tossed off a riddle, since it is difficult to know what in the world this ‘minding your own business’ can be.”

Charmides:: “Perhaps it is.”

Socrates:: “Then what in the world is ‘minding your own business’? Are you able to say?”

Charmides:: “I’m at a total loss.” “But perhaps the one who said it didn’t know what he meant either.”

Socrates:: And when he said this he smiled and looked at Critias.

It was clear that Critias had been agitated for some time and also that he was eager to impress Charmides and the rest who were there. He had held himself in with difficulty earlier, but now he could do so no longer. In my opinion, what I suspected earlier was certainly true, that Charmides had picked up this saying about temperance from Critias. And then Charmides, who wanted the author of the definition to take over the argument rather than himself, tried to provoke him to it by going on pointing out that the cause was lost. Critias couldn't put up with this but seemed to me to be angry with Charmides just the way a poet is when his verse is mangled by the actors. So he gave him a look and said;

Critias:: "Do you suppose, Charmides, that just because you don't understand what in the world the man meant who said that temperance was 'minding your own business', the man himself doesn't understand either?"

Socrates:: "Well, my dear Critias, there would be nothing remarkable in his being ignorant of the matter at his age, but you, because of your age and experience, are very likely to understand it. So if you agree that temperance is what the man said it was and take over the argument, I would be very happy to investigate with you the question whether what was said is true or not."

Critias:: "I am quite ready to agree, and to take over the argument."

Socrates:: "I admire you for it." "Now tell me: do you also agree with what I was just saying, that all craftsmen make something?"

Critias:: "Yes I do."

Socrates:: “And do they seem to you to make their own things only, or those of other people as well?”

Critias:: “Those of others as well.”

Socrates:: “And are they temperate in not making their own things only?”

Critias:: “Is there any objection?”

Socrates:: “None for me, but see whether there may not be one for the man who defines temperance as ‘minding your own business’ and then says there is no objection if those who do other people’s business are temperate too.”

Critias:: “But, have I agreed that those who do other people’s business are temperate by admitting that those making other people’s things are temperate?”

Socrates:: “Tell me, don’t you call making and doing the same thing?”

Critias:: “Not at all, nor do I call working and making the same. I have learned this from Hesiod, who said ‘work is no disgrace’. Do you suppose that Hesiod, if he referred to the sort of things you mentioned just now by both the term ‘work’ and the term ‘do’, would have said there was no disgrace in cobbling or selling salt fish or prostitution? One ought not to think this, Socrates, but rather believe, as I do, that he supposed making to be something other than doing and working, and that a ‘made’ or created thing became a disgrace on those occasions when it was not accompanied by the admirable, but that work is never any sort of disgrace. Because he gave the name ‘works’ to things done admirably and usefully, and it is creations of this sort which are ‘works’ and ‘actions’. We ought to represent him as thinking that only things of this sort are ‘one’s own’ and that all the harmful ones belong to other people. The result is that we must suppose that Hesiod and any other man of sense calls the man who minds his own business temperate.”

Socrates:: “Critias, I understood the beginning of your speech pretty well, when you said that you called things that were ‘one’s own’ and ‘of oneself’ good and called the doing of good things actions, because I have heard Prodicus discourse upon the distinction in words a hundred times. Well, I give you permission to define each word the way you like just so long as you make clear the application of whatever word you use. Now start at the beginning and define more clearly: the doing of good things or the making of them or whatever you want to call it—is this what you say temperance is?”

Critias:: “Yes, it is.”

Socrates:: “And the man who performs evil actions is not temperate, but the man who performs good ones?”

Critias:: “Doesn’t it seem so to you, my friend?”

Socrates:: “Never mind that, we are not investigating what I think but rather what you now say.”

Critias:: “Well then, I, deny that the man who does things that are not good but bad is temperate, and assert that the man who does things that are good but not bad is temperate. So I give you a clear definition of temperance as the doing of good things.”

Socrates:: “And there is no reason why you should not be speaking the truth. But it certainly does surprise me, if you believe that temperate men are ignorant of their temperance.”

Critias:: “I don’t think so at all.”

Socrates:: “But didn’t you say just a moment ago, that there was nothing to prevent craftsmen, even while they do other people’s business, from being temperate?”

Critias:: “Yes, I did say that.” “But what about it?”

Socrates:: “Nothing, but tell me if you think that a doctor, when he makes someone healthy, does something useful both for himself and for the person he cures.”

Critias:: “Yes, I agree.”

Socrates:: “And the man who does these things does what he ought?”

Critias:: “Yes.”

Socrates:: “And the man who does what he ought is temperate, isn’t he?”

Critias:: “Of course he is temperate.”

Socrates:: “And does a doctor have to know when he cures in a useful way and when he does not? And so with each of the craftsmen: does he have to know when he is going to benefit from the work he performs and when he is not?”

Critias:: “Perhaps not.”

Socrates:: “Then sometimes, the doctor doesn’t know himself whether he has acted beneficially or harmfully. Now if he has acted beneficially, then, according to your argument, he has acted temperately. Or isn’t this what you said?”

Critias:: “Yes, it is.”

Socrates:: “Then it seems that on some occasions he acts beneficially and, in so doing, acts temperately and is temperate, but is ignorant of his own temperance?”

Critias:: “But this, Socrates, would never happen. And if you think it necessary to draw this conclusion from what I admitted before, then I would rather withdraw some of my statements, and would not be ashamed to admit I had made a mistake, in preference to conceding that a man ignorant of himself could be temperate. As a matter of fact, this is pretty much what I say temperance is, to know oneself, and I agree with the inscription to this effect set up at Delphi. Because this inscription appears to me to have been dedicated for the following purpose, as though it were a greeting from the god to those coming in in place of the usual ‘Hail’, as though to say ‘hail’ were an incorrect greeting, but we should rather urge one another to ‘be temperate’. It is in this fashion, then, that the god greets those who enter his temple, not after the manner of man—or so I suppose the man thought who dedicated the inscription. What he says to the person entering is nothing else than ‘be temperate’; this is what he says. Now in saying this he speaks very darkly, as a seer would do. That ‘know thyself’ and ‘be temperate’ are the same (as the inscription claims, and so do I) might be doubted by some, and this I think to be the case with those who dedicated the later inscriptions ‘Nothing too much’ and ‘Pledges lead to perdition’. Because these people thought that ‘Know thyself’ was a piece of advice and not the god’s greeting to those who enter, so, with the idea of dedicating some admonitions which were no less useful, they wrote these things and put them up. But here’s the reason why I say all this, Socrates: I concede to you everything that was said before—perhaps you said something more nearly right on the subject and perhaps I did, but nothing of what we said was really clear—but now I wish to give you an explanation of this definition, unless of course you already agree that temperance is to know oneself.”

Socrates:: “But Critias, you are talking to me as though I professed to know the answers to my own questions and as though I could agree with you if I really wished. This is not the case—rather, because of my own ignorance, I am continually investigating in your company whatever is put forward. However, if I think it over, I am willing to say whether I agree or not. Just wait while I consider.”

Critias:: “Well, think it over.”

Socrates:: “Yes, I’m thinking.” “Well, if knowing is what temperance is, then it clearly must be some sort of science and must be of something, isn’t that so?”

Critias:: “Yes—of oneself.”

Socrates:: “Then medicine, too, is a science and is of health?”

Critias:: “Certainly.”

Socrates:: “Now, if you should ask me, ‘If medicine is a science of health, what benefit does it confer upon us and what does it produce?’ I would answer that it conferred no small benefit. Because health is a fine result for us, if you agree that this is what it produces.”

Critias:: “I agree.”

Socrates:: “And if you should ask me about house-building, which is a science of building houses, and ask what I say that it produces, I would say that it produces houses, and so on with the other arts. So you ought to give an answer on behalf of temperance, since you say it is a science of self, in case you should be asked, ‘Critias, since temperance is a science of self, what fine result does it produce which is worthy of the name?’ Come along, tell me.”

Critias:: “But, Socrates, you are not conducting the investigation in the right way. This science does not have the same nature as the rest, any more than they have the same nature as each other, but you are carrying on the investigation as though they were all the same. For instance, in the arts of calculation and geometry, tell me what is the product corresponding to the house in the case of house-building and the cloak in the case of weaving and so on—one could give many instances from many arts. You ought to point out to me a similar product in these cases, but you won’t be able to do it.”

Socrates:: “You are right. But I can point out to you in the case of each one of these sciences what it is a science of, this being distinct from the science itself. For instance, the art of calculation, of course, is of the odd and even—how many they are in themselves and with respect to other numbers—isn’t that so?”

Critias:: “Yes indeed.”

Socrates:: “Now aren’t the odd and even distinct from the art of calculation itself?”

Critias:: “Of course.”

Socrates:: “And again, the art of weighing is an art concerned with the heavier and lighter; and the heavy and light are distinct from the art of weighing. Do you agree?”

Critias:: “Yes, I do.”

Socrates:: “Then, since temperance is also a science of something, state what that something is which is distinct from temperance itself.”

Critias:: “This is just what I mean, Socrates.” “You arrive at the point of investigating the respect in which temperance differs from all the other sciences, and then you start looking for some way in which it resembles all the others. It’s not like this; but rather, all the others are sciences of something else, not of themselves, whereas this is the only science which is both of other sciences and of itself. And I think you are quite consciously doing what you denied doing a moment ago—you are trying to refute me and ignoring the real question at issue.”

Socrates:: “Oh come, how could you possibly think that even if I were to refute everything you say, I would be doing it for any other reasons than the one I would give for a thorough investigation of my own statements—the fear of unconsciously thinking I know something when I do not. And this is what I claim to be doing now, examining the argument for my own sake primarily, but perhaps also for the sake of my friends. Or don't you believe it to be for the common good, or for that of most men, that the state of each existing thing should become clear?"

Critias:: "Very much so, Socrates."

Socrates:: "Pluck up courage then, my friend, and answer the question as seems best to you, paying no attention to whether it is Critias or Socrates who is being refuted. Instead, give your attention to the argument itself to see what the result of its refutation will be."

Critias:: "All right, I will do as you say, because you seem to me to be talking sense."

Socrates:: "Then remind me, what it is you say about temperance."

Critias:: "I say, that it is the only science that is both a science of itself and of the other sciences."

Socrates:: "Would it then, also be a science of the absence of science, if it is a science of science?"

Critias:: "Of course."

Socrates:: "Then only the temperate man will know himself and will be able to examine what he knows and does not know, and in the same way he will be able to inspect other people to see when a man does in fact know what he knows and thinks he knows, and when again he does not know what he thinks he knows, and no one else will be able to do this. And being temperate and temperance and knowing oneself amount to this, to knowing what one knows and does not know. Or isn't this what you say?"

Critias:: "Yes, it is."

Socrates:: "Then for our third libation, the lucky one, let us investigate, as though from the beginning, two points: first, whether it is possible or not to know that one knows and does not know what he knows and does not know and second, should this be perfectly possible, what benefit there would be for those who know this."

Critias:: "Yes, we ought to look into this."

Socrates:: "Then, come on, Critias, and consider whether you appear better off than I in these matters, because I am in difficulties. Shall I tell you where my difficulty lies?"

Critias:: "Yes, do."

Socrates:: "Well, wouldn't the whole thing amount to this, if what you said just now is true, that there is one science which is not of anything except itself and the other sciences and that this same science is also a science of the absence of science?"

Critias:: "Yes indeed."

Socrates:: "Then see what an odd thing we are attempting to say, my friend— because if you look for this same thing in other cases, you will find, I think, that it is impossible."

Critias:: "How is that, and what cases do you mean?"

Socrates:: "Cases like the following: consider, for instance, if you think there could be a kind of vision that is not the vision of the thing that other visions are of but is the vision of itself and the other visions and also of the lack of visions, and, although it is a type of vision, it sees no color, only itself and the other visions. Do you think there is something of this kind?"

Critias:: "Good heavens, no, not I."

Socrates:: "And what about a kind of hearing that hears no sound but hears itself and the other hearings and nonhearings?"

Critias:: "Not this either."

Socrates:: “Then take all the senses together and see if there is any one of them that is a sense of the senses and of itself but that senses nothing which the other senses sense.”

Critias:: “I can’t see that there is.”

Socrates:: “And do you think there is any desire that is a desire for no pleasure but for itself and the other desires?”

Critias:: “Certainly not.”

Socrates:: “Nor indeed any wish, I think, that wishes for no good but only for itself and the other wishes.”

Critias:: “No, that would follow.”

Socrates:: “And would you say there was a love of such a sort as to be a love of no fine thing but of itself and the other loves?”

Critias:: “No, I would not.”

Socrates:: “And have you ever observed a fear that fears itself and the other fears, but of frightful things fears not a one?”

Critias:: “I have never observed such a thing.”

Socrates:: “Or an opinion that is of itself and other opinions but opines nothing that other opinions do?”

Critias:: “Never.”

Socrates:: “But we are saying, it seems, that there is a science of this sort, which is a science of no branch of learning but is a science of itself and the other sciences.”

Critias:: “Yes, we are saying that.”

Socrates:: “But isn’t it strange if there really is such a thing? However, we ought not yet to state categorically that there is not, but still go on investigating whether there is.”

Critias:: “You are right.”

Socrates:: “Come on then: is this science a science of something and does it have a certain faculty of being ‘of something’? What about it?”

Critias:: “Yes, it does.”

Socrates:: “And do we say the greater has a certain faculty of being greater than something?”

Critias:: “Yes, it has.”

Socrates:: “Presumably than something less, if it is going to be greater.”

Critias:: “Necessarily.”

Socrates:: “Then if we should discover something greater that is greater than the greater things and than itself, but greater than nothing than which the other greater things are greater, surely what would happen to it is that, if it were actually greater than itself, it would also be less than itself, wouldn’t it?”

Critias:: “That would certainly have to be the case, Socrates.”

Socrates:: “It would follow, too, that anything that was the double of the other doubles and of itself would, I suppose, be half of itself and of the other doubles—because I don’t suppose there is a double of anything else except a half.”

Critias:: “That’s true.”

Socrates:: “And something that is more than itself will also be less, and the heavier, lighter and the older, younger, and so with all the other cases—the very thing which has its own faculty applied to itself will have to have that nature towards which the faculty was directed, won’t it? I mean something like this: in the case of hearing don’t we say that hearing is of nothing else than sound?”

Critias:: “Yes.”

Socrates:: “Then if it actually hears itself, it will hear itself possessing sound? Because otherwise it would not do any hearing.”

Critias:: “Necessarily so.”

Socrates:: “And vision, I take it, O best of men, if it actually sees itself, will have to have some color? Because vision could certainly never see anything that has no color.”

Critias:: “No, that would follow.”

Socrates:: “You observe then, Critias, that of the cases we have gone through, some appear to us to be absolutely impossible, whereas in others it is very doubtful if they could ever apply their own faculties to themselves? And that magnitude and number and similar things belong to the absolutely impossible group, isn’t that so?”

Critias:: “Certainly.”

Socrates:: “Again, that hearing or vision or, in fact, any sort of motion should move itself, or heat burn itself—all cases like this also produce disbelief in some, though perhaps there are some in whom it does not. What we need, my friend, is some great man to give an adequate interpretation of this point in every detail, whether no existing thing can by nature apply its own faculty to itself but only towards something else, or whether some can, but others cannot. We also need him to determine whether, if there are things that apply to themselves, the science which we call temperance is among them. I do not regard myself as competent to deal with these matters, and this is why I am neither able to state categorically whether there might possibly be a science of science nor, if it definitely were possible, able to accept temperance as such a science before I investigate whether such a thing would benefit us or not. Now I divine that temperance is something beneficial and good. Do you then, O son of Callaeschrus, since the definition of temperance as the science of science and, more especially, of the absence of science belongs to you, first clear up this point, that what I just mentioned is possible and then, after having shown its possibility, go on to show that it is useful. And so, perhaps, you will satisfy me that you are right about what temperance is."

When Critias heard this and saw that I was in difficulties, then, just as in the case of people who start yawning when they see other people doing it, he seemed to be affected by my troubles and to be seized by difficulties himself. But since his consistently high reputation made him feel ashamed in the eyes of the company and he did not wish to admit to me that he was incapable of dealing with the question I had asked him, he said nothing clear but concealed his predicament. So I, in order that our argument should go forward, said, "But if it seems right, Critias, let us now grant this point, that the existence of a science of science is possible—we can investigate on some other occasion whether this is really the case or not. Come then, if this is perfectly possible, is it any more possible to know what one knows and does not know? We did say, I think, that knowing oneself and being temperate consisted in this?"

Critias:: "Yes indeed, and your conclusion seems to me to follow, Socrates, because if a man has a science which knows itself, he would be the very same sort of man as the science which he has. For instance, whenever a person has speed he is swift, and when he has beauty he is beautiful, and when he has knowledge he is knowing. So when a person has a knowledge which knows itself, then I imagine he will be a person who knows himself."

Socrates:: "It is not this point, on which I am confused, that whenever someone possesses this thing which knows itself he will know himself, but how the person possessing it will necessarily know what he knows and what he does not know.”

Critias:: “But this is the same thing as the other, Socrates.”

Socrates:: “Perhaps, but I’m in danger of being as confused as ever, because I still don’t understand how knowing what one knows and does not know is the same thing as knowledge of self.”

Critias:: “How do you mean?”

Socrates:: “It’s like this.” “Supposing that there is a science of science, will it be anything more than the ability to divide things and say that one is science and the other not?”

Critias:: “No, it amounts to this.”

Socrates:: “And is it the same thing as the science and absence of science of health, and as the science and absence of science of justice?”

Critias:: “Not at all.”

Socrates:: “One is medicine, I think, and the other politics, but we are concerned with science pure and simple.”

Critias:: “What else?”

Socrates:: “Therefore, when a person lacks this additional science of health and justice but knows science only, seeing that this is the only knowledge he has, then he will be likely, both in his own case and in that of others, to know that he knows something and has a certain science, won’t he?”

Critias:: “Yes.”

Socrates:: “And how will he know whatever he knows by this means of science? Because he will know the healthy by medicine, but not by temperance, and the harmonious by music, but not by temperance, and house-building by that art, but not by temperance, and so on—isn’t it so?”

Critias:: “It seems so.”

Socrates:: “But by temperance, if it is merely a science of science, how will a person know that he knows the healthy or that he knows house-building?”

Critias:: “He won’t at all.”

Socrates:: “Then the man ignorant of this won’t know what he knows, but only that he knows.”

Critias:: “Very likely.”

Socrates:: “Then this would not be being temperate and would not be temperance: to know what one knows and does not know, but only that one knows and does not know—or so it seems.”

Critias:: “Probably.”

Socrates:: “Nor, when another person claims to know something, will our friend be able to find out whether he knows what he says he knows or does not know it. But he will only know this much, it seems, that the man has some science; yes, but of what, temperance will fail to inform him.”

Critias:: “Apparently so.”

Socrates:: “So neither will he be able to distinguish the man who pretends to be a doctor, but is not, from the man who really is one, nor will he be able to make this distinction for any of the other experts. And let’s see what follows: if the temperate man or anyone else whatsoever is going to tell the real doctor from the false, how will he go about it? He won’t, I suppose, engage him in conversation on the subject of medicine, because what the doctor knows, we say, is nothing but health and disease, isn’t that so?”

Critias:: “Yes, that is the case.”

Socrates:: “But about science the doctor knows nothing, because we have allotted precisely this function to temperance alone.”

Critias:: “Yes.”

Socrates:: “Neither will the doctor know anything about medicine since medicine is a science.”

Critias:: “True.”

Socrates:: “However, the temperate man will know that the doctor has some science, but in order to try and grasp what sort it is, won’t he have to examine what it is of? Because hasn’t each science been defined, not just as science, but also by that which it is of?”

Critias:: “By that, certainly.”

Socrates:: “Now medicine is distinguished from the other sciences by virtue of its definition as science of health and disease.”

Critias:: “Yes.”

Socrates:: “It follows that the man who wants to examine medicine should look for it where it is to be found, because I don’t suppose he will discover it where it is not to be found, do you?”

Critias:: “Certainly not.”

Socrates:: “Then the man who conducts the examination correctly will examine the doctor in those matters in which he is a medical man, namely health and disease.”

Critias:: “So it seems.”

Socrates:: “And he will look into the manner of his words and actions to see if what he says is truly spoken and what he does is correctly done?”

Critias:: “Necessarily.”

Socrates:: “But, without the medical art, would anyone be able to follow up either of these things?”

Critias:: “Certainly not.”

Socrates:: “No one, in fact, could do this, it seems except the doctor—not even the temperate man himself. If he could, he would be a doctor in addition to his temperance.”

Critias:: “That is the case.”

Socrates:: “The upshot of the matter is, then, that if temperance is only the science of science and absence of science, the doctor will be able to distinguish neither the man who knows the particulars of his art from the man who does not know them but pretends or supposes he does, nor will he recognize any other genuine practitioner whatsoever, except the man in his own field, the way other craftsmen do.”

Critias:: “It seems so.”

Socrates:: “Then, Critias, what benefit would we get from temperance if it is of this nature? Because if, as we assumed in the beginning the temperate man knew what he knew and what he did not know (and that he knows the former but not the latter) and were able to investigate another man who was in the same situation, then it would be of the greatest benefit to us to be temperate. Because those of us who had temperance would live lives free from error and so would all those who were under our rule. Neither would we ourselves be attempting to do things we did not understand—rather we would find those who did understand and turn the matter over to them—nor would we trust those over whom we ruled to do anything except what they would do correctly, and this would be that of which they possessed the science. And thus, by means of temperance, every household would be well-run, and every city well-governed, and so in every case where temperance reigned. And with error rooted out and rightness in control, men so circumstanced would necessarily fare admirably and well in all their doings and, faring well, they would be happy. Isn’t this what we mean about temperance, Critias, when we say what a good thing it would be to know what one knows and what one does not know?”

Critias:: “This is certainly what we mean.”

Socrates:: “But now you see, that no science of this sort has put in an appearance.”

Critias:: “I see that.”

Socrates:: “Well then, is this the advantage of the knowledge of science and absence of science, which we are now finding out to be temperance— that the man who has this science will learn whatever he learns more easily, and everything will appear to him in a clearer light since, in addition to what he learns, he will perceive the science? And he will examine others on the subjects he himself knows in a more effective fashion, whereas those without the science will conduct their examinations in a weaker and less fruitful way. And are not these, my friend, the kind of benefits we shall reap from temperance? Or are we regarding it as something greater, and demanding that it be greater than it really is?”

Critias:: “Perhaps that may be so.”

Socrates:: “Perhaps, and perhaps we have been demanding something useless. I say this because certain odd things become clear about temperance if it has this nature. If you are willing, let us investigate the matter by admitting both that it is possible to know a science and also what we assumed temperance to be in the beginning: to know what one knows and does not know—let us grant this and not deny it. And, having granted all these things, let us investigate more thoroughly whether, if it is like this, it will benefit us in any way. Because what we were saying just now, about temperance being regarded as of great benefit (if it were like this) in the governing of households and cities, does not seem to me, Critias, to have been well said.”

Critias:: “In what way?”

Socrates:: “Because, we carelessly agreed that it would be a great good for men if each of us should perform the things he knows and should hand over what he does not know to those others who do.”

Critias:: “And weren’t we right in agreeing on this?”

Socrates:: “I don’t think we were.”

Critias:: “You certainly say some queer things, Socrates.”

Socrates:: “By the dog, they seem queer to me too, and that is why, when I became aware of this a moment ago, I said that some strange things would come to light and that I was afraid we were not conducting the examination correctly. Because truly, even if there were no doubt that temperance is like this, it appears in no way clear to me that it does us any good.”

Critias:: “How so?” “Tell me, so that we can both understand what you are saying.”

Socrates:: “I think I am making a fool of myself, but all the same it is necessary to investigate what occurs to us and not to proceed at random, if we are going to have the least care for ourselves.”

Critias:: “You are right.”

Socrates:: “Listen then, to my dream, to see whether it comes through horn or through ivory. If temperance really ruled over us and were as we now define it, surely everything would be done according to science: neither would anyone who says he is a pilot (but is not) deceive us, nor would any doctor or general or anyone else pretending to know what he does not know escape our notice. This being the situation, wouldn’t we have greater bodily health than we do now, and safety when we are in danger at sea or in battle, and wouldn’t we have dishes and all our clothes and shoes and things skillfully made for us, and many other things as well, because we would be employing true craftsmen? And, if you will, let us even agree that the mantic art is knowledge of what is to be and that temperance, directing her, keeps away deceivers and sets up the true seers as prophets of the future. I grant that the human race, if thus equipped, would act and live in a scientific way—because temperance, watching over it, would not allow the absence of science to creep in and become our accomplice. But whether acting scientifically would make us fare well and be happy, this we have yet to learn, my dear Critias.”

Critias:: “But on the other hand, you will not readily gain the prize of faring well by any other means if you eliminate scientific action.”

Socrates:: “Instruct me on just one more small point.” “When you say that something is scientifically done, are you talking about the science of cutting out shoes?”

Critias:: “Good heavens no!”

Socrates:: “Of bronze working, then?”

Critias:: “Certainly not.”

Socrates:: “Then of wool or wood or some similar thing?”

Critias:: “Of course not.”

Socrates:: “Then, we no longer keep to the statement that the man who lives scientifically is happy. Because those who live in the ways we mentioned are not admitted by you to be happy, but rather you seem to me to define the happy man as one who lives scientifically concerning certain specific things. And perhaps you mean the person I mentioned a moment ago, the man who knows what all future events will be, namely the seer. Are you referring to this man or some other?”

Critias:: “Both to this one, and another.”

Socrates:: “Which one?” “Isn’t it the sort of man who, in addition to the future, knows everything that has been and is now and is ignorant of nothing? Let us postulate the existence of such a man. Of this man I think you would say that there was no one living who was more scientific.”

Critias:: “Certainly not.”

Socrates:: “There is one additional thing I want to know: which one of the sciences makes him happy? Do all of them do this equally?”

Critias:: “No, very unequally.”

Socrates:: “Well, which one in particular makes him happy? The one by which he knows which one of the things are and have been and are to come? Will it be the one by which he knows checker playing?”

Critias:: “Oh for heaven’s sake.”

Socrates:: “Well, the one by which he knows calculation?”

Critias:: “Of course not.”

Socrates:: “Well, will it be that by which he knows health?”

Critias:: “That’s better.”

Socrates:: “But the most likely case, is that by which he knows what?”

Critias:: “By which he knows good, and evil.”

Socrates:: “You wretch, all this time you’ve been leading me right round in a circle and concealing from me that it was not living scientifically that was making us fare well and be happy, even if we possessed all the sciences put together, but that we have to have this one science of good and evil. Because, Critias, if you consent to take away this science from the other sciences, will medicine any the less produce health, or cobbling produce shoes, or the art of weaving produce clothes, or will the pilot’s art any the less prevent us from dying at sea or the general’s art in war?”

Critias:: “They will do it just the same.”

Socrates:: “But my dear Critias, our chance of getting any of these things well and beneficially done will have vanished if this is lacking.”

Critias:: “You are right.”

Socrates:: “Then this science, at any rate, is not temperance, as it seems, but that one of which the function is to benefit us. For it is not a science of science and absence of science but of good and evil. So that, if this latter one is beneficial, temperance would be something else for us.”

Critias:: “But why should not temperance be beneficial?” “Because if temperance really is a science of sciences and rules over the other sciences, then I suppose it would rule over this science of the good and would benefit us.”

Socrates:: “And would this science make us healthy, and not the art of medicine? And would it perform the tasks of the other arts rather than each of them performing its own task? Didn’t we protest solemnly just a moment ago that it is a science of science and absence of science only and of nothing else? We did, didn’t we?”

Critias:: “It seems so, at any rate.”

Socrates:: “Then it will not be the craftsman of health?”

Critias:: “Certainly not.”

Socrates:: “Because health belonged to some other art, didn’t it?”

Critias:: “Yes, to another.”

Socrates:: “Then it will be of no benefit, my friend. Because we have just awarded this work to another art, isn’t that so?”

Critias:: “Yes indeed.”

Socrates:: “Then how will temperance be beneficial when it is the craftsman of no beneficial thing?”

Critias:: “Apparently it won’t be any benefit at all, Socrates.”

Socrates:: “You see then, Critias, that my earlier fears were reasonable and that I was right to blame myself for discerning nothing useful in temperance? Because I don’t suppose that the thing we have agreed to be the finest of all would have turned out to be of no benefit if I had been of any use in making a good search. But now we have got the worst of it in every way and are unable to discover to which one of existing things the lawgiver gave this name, temperance. Furthermore, we gave our joint assent to many things which did not follow from our argument. For instance, we conceded that there was a science of science when the argument did not allow us to make this statement. Again, we conceded that this science knew the tasks of the other sciences, when the argument did not allow us to say this either, so that our temperate man should turn out to be knowing, both that he knows things he knows and does not know things he does not know. And we made this concession in the most prodigal manner, quite overlooking the impossibility that a person should in some fashion know what he does not know at all—because our agreement amounts to saying he knows things he does not know. And yet, I think, there could be nothing more irrational than this. But in spite of the fact that the inquiry has shown us to be both complacent and easy, it is not a whit more capable of discovering the truth. It has, in fact, made fun of the truth to this extent, that it has very insolently exposed as useless the definition of temperance which we agreed upon and invented earlier. I am not so much vexed on my own account, but on yours, Charmides, I am very vexed indeed, if, with such a body and, in addition, a most temperate soul, you should derive no benefit from this temperance nor should it be of any use to you in this present life. And I am still more vexed on behalf of the charm

I took so much trouble to learn from the Thracian, if it should turn out to be worthless. I really do not believe this to be the case; rather I think that I am a worthless inquirer. Because I think that temperance is a great good, and if you truly have it, that you are blessed. So see whether you do have it and are in no need of the charm—because if you do have it, my advice to you would rather be to regard me as a babbler, incapable of finding out anything whatsoever by means of argument, and yourself as being exactly as happy as you are temperate."

And Charmides said;

Charmides:: "But good heavens, Socrates, I don't know whether I have it or whether I don't—because how would I know the nature of a thing when neither you nor Critias is able to discover it, as you say? However, I don't really believe you, Socrates, but I think I am very much in need of the charm, and as far as I am concerned I am willing to be charmed by you every day until you say I have had enough."

Critias:: "Very well, Charmides, if you do this, it will convince me of your temperance—if you submit yourself to be charmed by Socrates and let nothing great or small dissuade you from it."

Charmides:: "This is the course I shall follow, and I shall not give it up. I would be acting badly if I failed to obey my guardian and did not carry out your commands."

Critias:: "Well then, these are my instructions."

Charmides:: "And I shall execute them, from this day forward."

Socrates:: "Look here, what are you two plotting?"

Charmides:: "Nothing,—our plotting is all done."

Socrates:: "Are you going to use force, and don't I get a preliminary hearing?"

Charmides:: “We shall have to use force, seeing that this fellow here has given me my orders. So you had better take counsel as to your own procedure.”

Socrates:: “What use is counsel? Because when you undertake to do anything by force, no man living can oppose you.”

Charmides:: “Well then, don’t oppose me.”

Socrates:: “Very well, I shan’t.”

# The Charmides.

Translated by Thomas Taylor.

THE PERSONS OF THE DIALOGUE.

SOCRATES, CRITIAS, and
CHÆREPHO, CHARMIDES.

Socrates:: Yesterday, when I came in the evening from the army, I gladly returned to my accustomed exercise, in consequence of having been for some time absent from it; and entered into the Palæstra of Taurean Neptune, which is opposite to the royal temple. Here I met with very many persons, some of whom were unknown to me, but the greater part of them I knew. And as soon as I was seen entering thus unexpectedly, some from all quarters immediately congratulated me at a distance. But Chærepho, as if he had been insane, leaping from the midst of them, ran towards me, and taking me by the hand.

Chaerephon:: O Socrates, how were you saved in the engagement?

Socrates:: For a short time before we came away there was a battle at Potidaea, of which those that are here just now heard.

And I answering them, It is as you see.

Chaerephon:: Indeed, a report was spread here, that a very sharp engagement had taken place, and that many of those that we know had perished in it.

Socrates:: You were told the truth.

Chaerephon:: But, was you in the engagement?

Socrates:: I was.

Chaerephon:: Sit down here and relate the affair to us; for we have not yet clearly heard the whole.

Socrates:: And at the same time leading me along, he seated me near Critias the son of Callæschrus. Being therefore seated, I saluted Critias, and the rest, and according as any one asked me, related the affairs of the army. But some asked me one thing, and others another. And when we had had enough of things of this kind, I again asked them respecting philosophy, how it was circumstanced at present; and whether there were any young men who were remarkable for wisdom, or beauty, or both. Critias then, looking towards the gate, and perceiving certain young men entering and reviling each other, and another crowd following behind them, said;

Critias:: It appears to me, Socrates, that you will immediately have an answer to your question respecting beautiful youths. For those that are now entering, are forerunners and lovers of one who seems to be the most beautiful of all of the present time. And it appears to me that he is now nearly entering.

Socrates:: But who is he? And of whom is he the son?

Critias:: Perhaps you know (but he was very young when you left this place;) I say, perhaps you know Charmides, the son of our uncle Glauco, but my cousin.

Socrates:: I know him indeed, by Jupiter, for he was not then to be despised, though he was but a boy, but now I think he must be almost a young man.

Critias:: You will immediately know, both his age, and the qualities which he has acquired.

Socrates:: And at the same time that he was thus speaking, Charmides entered.

No consideration therefore, my friend, is to be paid to me. For I am indeed a white rule with respect to those that are beautiful; since nearly all young men appear to me to be beautiful. But he then appeared to me to be wonderful, both on account of the magnitude and the beauty of his body: and all the rest seemed to me to be in love with him; so astonished and so disturbed were they, when he entered. Many other lovers also followed among those that were behind him. And as to the men indeed, this was less wonderful: but I also paid attention to the boys, and saw that none of these beheld any one else than him, not even the smallest among them, but the eyes of all were fixed on him, as on a statue. And Chærepho calling me, said;

Chaerephon:: What do you think of the youth, Socrates? Is he not a beautiful person?

Socrates:: Transcendently so.

Chaerephon:: But, if he were willing to show himself naked, he would appear to you to have a deformed face, his form is so very beautiful.

Socrates:: And this assertion of Chærepho was confirmed by all the rest.

I then said, By Hercules, you speak of an unconquerable man, if only one small thing further belongs to him.

Critias:: What is that?

Socrates:: If his soul is naturally in a good condition. It is however proper, Critias, that it should be so, as being one of your family.

Critias:: But, he is also very beautiful and good in this respect.

Socrates:: Why then, do we not expose this naked to the view, and contemplate it prior to his form? For since he is thus inwardly beautiful, he will in every respect be willing to discourse.

Critias:: Very much so; since he is a philosopher, and (as it appears both to others and himself) very poetic.

Socrates:: This beauty, friend Critias, descends to you remotely, through your alliance to Solon. But why do you not call the youth hither, and present him to me? For it would not disgrace us to discourse with him, even if he were younger than he is, while you are present, who are his cousin and tutor.

Critias:: You speak well; and we will call him.

Socrates:: And at the same time turning to the person that followed him;

Critias:: Call, Charmides, and tell him that I wish to commit him to the care of a physician, on account of the infirmity of which he has lately complained.

Socrates:: Critias therefore said to me;

Critias:: Charmides lately has complained of a heaviness in his head when he rose in the morning. What then should hinder you from pretending to him, that you know a remedy for this disorder of the head?

Socrates:: Nothing; let him only come.

Critias:: But he does come.

Socrates:: Which was indeed the case: for he came, and caused much laughter. For each of us that were seated together, through eagerness to sit near Charmides, pushed his neighbor; till of those that were seated last of all, some we forced to rise up, and others to fall on the ground. But he came and sat between me and Critias. And I then said, My friend, I am now perplexed, and the confidence which I before had, that I should easily discourse with Charmides, fails me. But when Critias had told him, that I was the person who knew a remedy for his disease, he fixed his eyes upon me as something prodigious, and drew near as if he meant to ask me a question. Then all that were in the

Palæstra immediately gathered round us; and when, O generous man, I saw the beauty of his form within his garments, I was inflamed with the view, and was no longer myself. I likewise thought that Critias was most wise in amatory affairs, who said, when speaking of a beautiful boy, but employing the similitude of something else, that I should be cautious lest a fawn coming opposite to the lion, a portion of the flesh should be taken away: for he appeared to me to have been captured by an animal of this kind. But at the same time, when Charmides asked me, if I knew a remedy for the head, I scarcely knew what to answer.

Charmides:: What is it?

Socrates:: It is a certain leaf, but that a certain incantation must be added to the medicine, which if any one employed together with the leaf, the medicine could perfectly restore him to health; but that the leaf would be of no use without the incantation.

Charmides:: I will write down this incantation from you.

Socrates:: Will you do this, whether you are persuaded by me or not?

Upon this, he said laughing;

Charmides:: I will, if I am persuaded by you, Socrates.

Socrates:: Be it so. And do you also accurately know my name?

Charmides:: I do, unless I am unjust. For there is no small talk about you, among those of my age: and I can remember that you associated with Critias when I was a boy.

Socrates:: You say well. For I shall now tell you, with greater freedom of speech, what the incantation is. But, just now, I was doubtful, after what manner I should show you its power. For this incantation is such, O Charmides, that it is not able to make the head alone well; just perhaps as you have often heard good physicians assert, when any one comes to them with diseased eyes: for then they say, that they must not attempt to cure the eyes alone, but that it is necessary for them at the same time to cure the head, if they design to render the eyes in a good condition. And again, that it would be very stupid to think to cure the head itself without the whole body. In consequence of this reasoning, they turn their attention to the regimen of the whole body, and endeavor to cure the part in conjunction with the whole. Or have you not heard that they thus speak, and that this is the case?

Charmides:: Entirely so.

Socrates:: Does it therefore appear to you that they speak well; and do you admit this doctrine?

Charmides:: The most of all things.

Socrates:: And I, on hearing him praise this method of cure, took courage, and my confidence again was a little excited and revived: and I said, Such, therefore, O Charmides, is the power of this incantation. But I learnt it there, in the army, from one of the Thracian physicians of Zamolxis, who are said to render men immortal. This Thracian too said, “The Grecian physicians beautifully assert the same things as I now assert. But Zamolxis, said he, our king, being a god, says, that as it is not proper to attempt to cure the eyes without the head, nor the head without the body, so neither is it proper to cure the body without the soul: and that the reason why many diseases are unknown to the Grecian physicians is, because they are ignorant of the whole, to which attention ought to be paid. For when this is not well disposed, it is impossible that a part should be well affected. For all things, said he, originate from the soul, both such as are good and such as are evil, and emanate from thence into the body, and the whole man, just as things flow from the head to the eyes. It is requisite therefore that the maladies of this should in the first place and especially be healed, in order that the head and the whole body my be well affected." But he said, O blessed youth, "that the soul was cured of its maladies by certain incantations; and that these incantations were beautiful reasons, from which temperance was generated in souls." He further added, "that when this was inserted and present, it was easy to impart health, both to the head and the rest of the body." Having therefore taught me the medicine, and the incantations, "Let none, said he, persuade you to cure the head of any one with this medicine, who has not first presented his soul to be cured by you with the incantation. For the fault, said he, of the present time, respecting men, is this, that certain persons endeavor to become physicians without a knowledge of temperance and health." And he very earnestly ordered me to take care, that neither any rich, or noble, or beautiful person, ever persuaded me to do otherwise. I therefore declared to him, with an oath, that I would not; and hence it is necessary I should obey him, which I am determined to do. And indeed, if you are willing, according to the mandate of the stranger, to present your soul first of all to be enchanted by the incantations of the Thracian, I will administer the medicine to your head; but if not, I cannot in any respect benefit you, O friend Charmides.

Critias therefore hearing me thus speak, said;

Critias:: This heaviness of the head, O Socrates, will be gain to the youth, if he should be compelled to become better in his dianoëtic part through his head. I can indeed assure you, that Charmides not only surpasses all his equals in the form of his body, but in this very thing for which you say you have an incantation. But you say this is temperance. Or do you not?

Socrates:: Entirely so.

Critias:: Know then, that Charmides appears to be by far the most temperate of those that exist at present; and that, as far as his age permits, he is not inferior to any one in every thing else.

Socrates:: It is but just, O Charmides, that you should excel all others in all such things as these. For I do not think that any one now present can easily show two families among the Athenians, from a conjunction, between which by marriage, a beautiful and excellent offspring is so likely, to be produced, as from those that were your progenitors. For the paternal family of Critias, here, the son of Diopis, is celebrated by Anacreon, and Solon, and many other poets, as excelling in beauty, virtue, and the rest of what is called felicity. And again, there is the same renown on his mother's side: for no one of those that dwell on the continent is said to surpass in, beauty and grandeur your uncle Pyrilampes, as often as he goes in the character of ambassador to the great king, or to some other inhabitant of the continent. But the whole of his family is in nothing inferior to any other. It is likely, therefore, that, being the offspring of such characters, you should be the first in all things. Hence, O beloved son of Glauco, with respect to your visible form, you, appear to me to disgrace no one of your progenitors: and, if you are naturally endued with all that is sufficient to the possession of temperance, and the other virtues, according to the assertion of Critias here, your mother, O dear Charmides, brought you forth blessed. The case, then, is this: If temperance is present with you, as Critias says it is, and if you are sufficiently temperate, you will no longer require the incantations, either of Zamolxis, or the Hyperborean Abaris, but the medicine for the head should be immediately administered you. But if you are in any respect indigent of this, the incantation must precede the medicine. Inform me therefore, whether you assent to Critias, and affirm that you sufficiently participate of temperance, or whether you are deficient in this respect.

Charmides therefore blushing, in the first place appeared to be still more beautiful (for bashfulness becomes his age); and in the next place he answered me not ignobly. For he said;

Charmides:: It is not easy either to admit or reject the subjects of the present investigation: for, if I should affirm that I am not temperate, it would be absurd that I should assert such a thing of myself, and at the same time I should evince that Critias has spoken falsely, and many others to whom I appear to be temperate. But again, if I should affirm that I am temperate, by thus praising myself, I shall perhaps give offence: so that I do not know how to answer you.

Socrates:: You appear to me, O Charmides, to speak well: and I think we should consider in common whether you possess that which I inquire after, or not; that you may neither be compelled to speak contrary to your will, nor I may again inconsiderately turn myself to the medicinal art. If, therefore, it is agreeable to you, I wish to consider this affair together with you; but if it is not, to dismiss it.

Charmides:: But it is the most agreeable to me of all things. Pursue therefore the inquiry, in whatever manner appears to you to be best.

Socrates:: This seems to me to be the best mode of considering the subject: For it is evident, if temperance is present with you, that you have some opinion about it; for it is necessary, if it is really inherent in you, that it must produce some sensation of itself, from which you will possess an opinion respecting it, what it is, and what are the qualities with which it is endued. Or do you not think so?

Charmides:: I do think so.

Socrates:: And do you not also think this, since you know how to speak the Greek tongue, that you can likewise inform me what temperance appears to you to be?

Charmides:: Perhaps so.

Socrates:: That we may therefore conjecture whether it is inherent in you or not, tell me, what temperance is, according to your opinion? And at first, indeed, he was tardy, and was not altogether willing to answer; but afterwards he said;

Charmides:: Temperance appears to consist in doing all things in an orderly manner, in walking and discoursing quietly in the public ways, and acting similarly in every thing else. And, in short that which is the object of your inquiry appears to me to be a certain quietness.

Socrates:: You speak well; for they say, O Charmides, that quiet are temperate persons. But let us see if they say any thing to the purpose: for, tell me, is not temperance something beautiful?

Charmides:: Entirely so.

Socrates:: Whether, therefore, in the grammatic art, is it most beautiful to write similar letters swiftly or slowly?

Charmides:: Swiftly.

Socrates:: But what with respect to reading? Is it most beautiful to read swiftly or slowly?

Charmides:: Swiftly.

Socrates:: And is it also by far more beautiful to play on the harp rapidly, and to wrestle with celerity, than quietly and slowly?

Charmides:: Yes.

Socrates:: And does not the like take place in pugilistic and pancratiatic contests?

Charmides:: Entirely so.

Socrates:: And with respect to running and leaping, and all other works of the body, are they not beautiful when performed with vigor and rapidity; but when performed slowly, with difficulty, and quietly, are they not base?

Charmides:: It appears so.

Socrates:: It appears to us, therefore, that with respect to the body, not the quiet, but the most rapid, and the most vigorous, are the most beautiful. Is it not so?

Charmides:: Entirely so.

Socrates:: But did we not say that temperance is something beautiful?

Charmides:: Yes.

Socrates:: Not quietness, therefore, but celerity will be the more temperate with respect to the body; since temperance is beautiful.

Charmides:: It seems so.

Socrates:: What then, is docility more beautiful than dullness?

Charmides:: It is.

Socrates:: But docility, is to learn swiftly; and dullness to learn quietly and slowly.

Charmides:: It is.

Socrates:: And is it not more beautiful to teach another swiftly and vehemently, than quietly and slowly.

Charmides:: Yes.

Socrates:: And which is the more beautiful to recollect and commit things to memory quietly and slowly, or vehemently and rapidly?

Charmides:: Vehemently and rapidly.

Socrates:: And with respect to sagacity, is it not a certain acute energy, and not a quietness of the soul?

Charmides:: True.

Socrates:: Does it not therefore, follow, that it is most beautiful in the grammatic art, in the art of playing on the harp, and in every thing else, to understand what is said, in the most rapid, and not in the most quiet manner?

Charmides:: Yes.

Socrates:: And again, in the investigations and consultations of the soul, it does not appear to me that he who consults and discovers in the most quiet manner, and with difficulty, is worthy of praise, but he who does this easily and rapidly.

To this also he assented.

Hence, in all things, both pertaining to the soul and the body, such as are performed with celerity and vigor appear to be more beautiful than such as are performed slowly and quietly.

Charmides:: It appears so.

Socrates:: Temperance, therefore, will not be quietness, nor will a temperate be a quiet life, from this reasoning: since that which is temperate ought to be beautiful: for one of two things must take place, viz. quiet actions in life must either never, or very rarely, appear to be more beautiful than such as are swift and strenuous. If then, my friend, it were even found that not fewer quiet actions are beautiful than such as are vehement and rapid, neither would it follow from hence that temperance consisted rather in acting quietly, than in vehement and rapid energy, either in walking or in reading, or any thing else; nor would a quiet and orderly life be more temperate than one which is not orderly, since it has been admitted in our discourse, that temperance is something beautiful. But things swift have appeared to be no less beautiful than such as are quiet.

Charmides:: What you have said, Socrates, appears to me to be right.

Socrates:: Again, therefore, O Charmides, be still more attentive, and looking to yourself, consider what kind of a person temperance, when present, causes you to be, and what sort of a thing it is itself while it accomplishes this: reasoning, therefore, on all these particulars, inform me well, and in a virile manner, what appears to you to be the truth.

But then Charmides, collecting and looking into himself, in a very manly manner said;

Charmides:: Temperance seems to me to make a man blush and be ashamed; and I, therefore, conclude that temperance is shame.

Socrates:: Be it so: but did we not just now acknowledge that temperance is something beautiful?

Charmides:: Entirely so.

Socrates:: Are not therefore temperate, good men?

Charmides:: Yes.

Socrates:: Will therefore that be good, which does not render men good?

Charmides:: It will not.

Socrates:: Temperance, therefore, is not only beautiful but good.

Charmides:: It appears so to me.

Socrates:: What then, will you not believe that Homer speaks well, when he says;

> "Shame ill accompanies a man in need?"

Charmides:: I do.

Socrates:: Shame, therefore, as it seems, is both not good, and good.

Charmides:: It appears so.

Socrates:: But temperance is good; since it makes those good, to whom it is present, but by no means evil.

Charmides:: The case appears to me to be as you say.

Socrates:: Temperance, therefore, will not be shame; since temperance is good, but shame is not in any respect more good than evil.

Charmides:: It appears to me, Socrates, that this is rightly asserted. But attend to what I shall adduce respecting temperance. For just now I recollected what I had heard a certain person assert, viz. that temperance is to manage our own affairs. Consider, therefore, whether what I say appears, to you to be well said.

Socrates:: O vile youth! you have heard this from Critias, or from some other of the wise.

Critias:: It seems, he must have heard it from some other person, for he did not hear it from me.

Charmides:: But of what consequence is it, Socrates, from whom I heard it?

Socrates:: None at all. For we are not to consider who said It, but whether he has spoken the truth or not.

Charmides:: Now you speak as you ought.

Socrates:: By Jupiter, I do. But if we discover how this thing subsists, I shall wonder: For it is similar to a certain enigma.

Charmides:: On what account.

Socrates:: Because, his meaning is not such as the words seem to imply, when he says that temperance is to manage our own affairs. Or do you think that a grammarian does nothing when he writes or reads?

Charmides:: I think he does something.

Socrates:: Does a grammarian, therefore, appear to you to write and read his own name only, or to instruct you boys? And do you in consequence of his instructions no less write the names of your enemies than the names of your friends?

Charmides:: No less.

Socrates:: When, therefore, you do this, are you too busily employed, and intemperate?

Critias:: By no means.

Socrates:: And besides this, you do not perform things pertaining to yourself, if to write, and also to read, is to do something. But it certainly is. And besides, my friend, to be healed, to build, to weave, and to accomplish the work of any art, is certainly to do something. Is it not?

Charmides:: Entirely so.

Socrates:: What then, does that city appear to you to be well instituted in which there is a law commanding every one to weave and wash his own garment, to make his own shoes, oil-cruise, currycomb, and every other necessary article, but not to touch things belonging to others, but to attend to his own affairs?

Charmides:: It does not appear to me that such a city is well instituted.

Socrates:: But, if a city is temperately, it is well instituted.

Charmides:: Undoubtedly.

Socrates:: For a man, therefore, to do such things as these, and to manage his own affairs, will not be temperance.

Charmides:: It does not appear that it will.

Socrates:: He, therefore, who said, that for a man to do things pertaining to himself is temperance, spoke, as I just now observed, obscurely: for he was not so stupid, as to mean that his words should be taken in the literal sense. Or did you hear some stupid person assert this, O Charmides?

Charmides:: By no means; since to me he appeared to be very wise.

Socrates:: More than any thing, therefore, as it seems to me, he proposed this enigma, because it is difficult to know what it is for a man to transact his own affairs.

Charmides:: Perhaps so.

Socrates:: Can you therefore tell me what it is to transact one’s own affairs?

Charmides:: By Jupiter, I do not know. But perhaps nothing hinders, but that he who said this did not know the meaning of the assertion.

Socrates:: And at the same time that he thus spoke, he laughed, and looked at Critias. But it was evident that Critias, who had formerly contended with, and was stimulated by ambition against Charmides, and those that were present, and who could then scarcely contain himself, was now no longer able to do so. And it appeared to me that my former suspicion was more than any thing true, that Charmides had heard this definition of temperance from Critias. Charmides, therefore, not being willing to support the definition himself, but being desirous that this province should fall to the lot of Critias, showed as if he thought him confuted. This Critias could not endure, but appeared to me to be as much enraged with Charmides, as a poet with a player who acts his poems badly. So that, looking at him, he said;

Critias:: Do you therefore think, O Charmides, that if you do not understand his meaning who said, that temperance is for a man to transact his own affairs, neither does he know what he asserted?

Socrates:: But, O Critias, best of men, it is nothing wonderful that Charmides, who is but a youth, should not understand this assertion; but it is fit that you should understand it, both on account of your age and employment. If therefore you affirm that this is a true definition of temperance, I shall very gladly consider with you, whether it is so or not.

Critias:: But I entirely assent to it.

Socrates:: You do well then. But inform me whether you admit what I just now asked: I mean, if all artists do something?

Critias:: I do.

Socrates:: Do they therefore appear to you to do things belonging to themselves only, or things also belonging to others?

Critias:: Things also belonging to others.

Socrates:: Do they act temperately, therefore, who only do things belonging to themselves?

Critias:: What should hinder?

Socrates:: Nothing, so far as respects myself; but see whether there may not be a hindrance with respect to him who, defining temperance to be the transacting one’s own affairs, afterwards says that nothing hinders but that those who transact the affairs of others may also be temperate.

Critias:: I, indeed, have confessed that those that transact the affairs of others may be temperate. But have I also acknowledged that this is the case with respect to those that make things pertaining to others?

Socrates:: But inform me, do you not affirm that to make a thing is the same us to do it?

Critias:: I do not indeed. Nor do I say that to operate is the same as to make. For I have learned to make this distinction from Hesiod, who says, “No work is a disgrace.” Do you therefore think that if he had called by the names of to operate and to do, such works as you now speak of, he would have said that no work is a disgrace, whether it is that of the shoe-maker, or of a salter of fish, or of one who sits in a shop?

It is not proper to think he would, Socrates: but I think that he considered making as something different from action and operation; and that a thing made sometimes becomes a disgrace, when it is not produced in conjunction with the beautiful; but that no work is ever a disgrace. For things which are made beautifully and with utility he calls works, and denominates operations and actions certain makings of this kind. It is likewise proper to assert that he considered such things as these, as alone domestic and allied, but every thing noxious as foreign. Hence, it is requisite to think that Hesiod, and every other prudent person, calls him who transacts his own affairs temperate.

Socrates:: O Critias, as soon as you began to speak, I almost immediately perceived, that you called things allied to a man, and which are his own good, and that you denominated the making of things good, actions. For I have ten thousand times heard Prodicus dividing names: and I will allow you to use every name as you please, if you only evince what you mean to signify by any particular name.

Now therefore again, from the beginning, define more clearly, whether you say that temperance is the doing, or the making, (or in whatever manner you may wish to denominate it,) of good things.

Critias:: I do.

Socrates:: He therefore is not temperate who acts badly, but he who acts well.

Critias:: Does it not, O best of men, appear so to you?

Socrates:: Dismiss this question: for we do not consider what appears to me to be the case, but what you now say.

Critias:: But indeed, I do not assert that he is temperate, who does not do good but evil. For I clearly define to you, that temperance is the practice of things good.

Socrates:: And perhaps nothing hinders but that you speak the truth. But nevertheless I should wonder if you thought that men who conduct themselves temperately were ignorant that they are temperate.

Critias:: But I do not think so.

Socrates:: Did you not say a little before, that nothing hindered but that artists who made things pertaining to others might be temperate?

Critias:: It was asserted by me. But what then?

Socrates:: Nothing. But inform me whether he appears to you to be a physician, who, in making any one well, does that which is advantageous both to himself, and to him whom he cures?

Critias:: To me he does.

Socrates:: Des not he, therefore, who acts in this manner, act well?

Critias:: Yes.

Socrates:: And is not he temperate who acts well?

Critias:: He is temperate.

Socrates:: Is it not therefore necessary that a physician should know when he cures with advantage, and when not? And likewise that every artist should know when he will be benefited by the work which he does, and when not?

Critias:: Perhaps not.

Socrates:: Sometimes, therefore, when a physician acts profitably, or noxiously, he will not know that he acts in this manner; though, according to your doctrine, when he acts profitably, he acts temperately. Or do you not say so?

Critias:: I do.

Socrates:: Does it not therefore seem, that sometimes, when he acts profitably, he acts temperately, and is temperate, but is himself ignorant that he is temperate?

Critias:: But this, Socrates, can never take place. If you think that this necessarily follows from what I have admitted above, I will readily grant it you. For I shall not be ashamed to confess, that something has been improperly asserted, rather than admit that the man who is ignorant of himself is temperate. For I nearly say, that to know ourselves, is temperance; and I agree with him who inscribed this precept in the temple of Apollo at Delphi. For this precept appears to me to have been inscribed as a salutation of Divinity, to be used by those that enter the temple, instead of *hail*! So that this inscription does not directly signify joy, or imply that we should exhort each other to rejoice, but rather, to be temperate. For thus the God speaks to those that enter the temple; and addresses us other wise than men are wont to do, as he also conceived, in my opinion, who placed this inscription. It likewise says nothing else to those that enter, than that they should live temperately. But as speaking prophetically, it says this in a more enigmatic manner. For “Know thyself,” is the same as “Be temperate,” as both the writings and I assert. But perhaps some one may think it has a different meaning, which appears to me to have been the case with those who placed those posterior inscriptions, “Nothing too much”, and “A surety is near to sorrow.” For they thought that “Know thyself,” was advice, and not an address of the Divinity to those that enter the temple. Afterwards, that they might suspend advice in no respect inferior to this, they placed these inscriptions. Hence, Socrates, that for the sake of which I assert all these things is this, that I may grant you all that has been said above. For perhaps you may have said something more right respecting them, and perhaps this may be the case with myself; but we have not advanced any thing clear. However, I now wish to give you the reason of this, if you do not grant that temperance is to know one’s self.

Socrates:: But, O Critias, you act by me as if I acknowledged that I knew that which is the subject of your inquiry. But this is not the case. For I always inquire in conjunction with you, respecting that which is proposed to be considered, in consequence of being myself ignorant. I am considering, therefore, whether I shall assent or not. But stop till I have considered.

Critias:: Consider then.

Socrates:: I do. For if to know a certain thing is temperance, it is evident that temperance will be a certain science, and a science of something. Or will it not?

Critias:: It is, and of itself.

Socrates:: Is not therefore, medicine the science of that which is healthy?

Critias:: Entirely so.

Socrates:: If then, you should ask, since medicine is the science of that which is healthy, of what advantage it is to us, and what it accomplishes, I should reply that it is of no small advantage, because it procures us health, the effecting of which is beautiful, if you admit this.

Critias:: I do admit it.

Socrates:: If therefore you should again ask me, what architecture effects, which is the science of building, I should say, houses; and I should reply in a similar manner with respect to other arts: it is requisite therefore, Critias, since you say that temperance is the science of itself, that you should be able to answer him who asks you, what beautiful work temperance effects, and which deserves to be named. Tell me therefore what it is?

Critias:: But Socrates, you do not interrogate rightly. For temperance is not naturally similar to other sciences, nor are other sciences similar to other. But you make your inquiry as if they were similar. For tell me, what work is there in the logistic, or geometric art, which is of the like nature with a house, the work of the architectural art, or with that of a garment, which is the work of the weaving art; and so in many other such particulars belonging to the several arts. Can you in these exhibit to me any such work? But you cannot.

Socrates:: You speak the truth. But this I can show you, of what each of these sciences is the science, and which is something different from that science. Thus, for instance, the logistic science is the science of even and odd multitude, how they subsist with respect to themselves and to each other. Is it not?

Critias:: Entirely so.

Socrates:: Are not, therefore, the even and the odd different from the logistic science?

Critias:: Undoubtedly.

Socrates:: Statics also is the science of the weight of a heavier and lighter body. And the heavy and the light are different from statics itself. Do you admit this?

Critias:: I do.

Socrates:: Tell me then, what that is of which temperance is the science, and which is different from temperance itself?

Critias:: This very thing, Socrates, which you are now seeking, is that by which temperance differs from all other sciences: but you inquire after a certain similitude of it to other sciences. This however is not the case: for all other sciences are sciences of something different from themselves; but this alone is both the science of other sciences and of itself. And of these things you ought by no means to be ignorant. But I think that you do the very thing which you just now denied that you did: for you attempt to confute me, and dismiss that which is the subject of our discourse.

Socrates:: What are you doing? Do you think that if I should endeavor to confute you, I should do it on any other account, than that I might discover the meaning of what I assert, as I am fearful, lest whilst I think myself knowing, when at the same time I am not, I should be unconscious of my ignorance? And now I say that I do this, viz. consider the discourse, principally indeed for my own sake, but, perhaps also for the sake of my other friends. Or do you not think it is a common good, for the condition of every thing to become apparent nearly to all men?

Critias:: Very much so, Socrates.

Socrates:: Boldly therefore, O blessed man, give your opinion in answer to the question, dismissing the consideration whether it is Critias or Socrates who is confuted; but attend to the discourse itself, considering what will be the consequence when either of us is confuted.

Critias:: I shall do so, for you appear to me to speak well.

Socrates:: Inform me therefore, what you say respecting temperance.

Critias:: I say then, that this alone, of all other science, is both the science of itself and of other sciences.

Socrates:: Will it therefore, be the science of ignorance, since it is of science?

Critias:: Entirely so.

Socrates:: The temperate man therefore alone will know himself, and will be able to explore what it is he knows, and what it is he does not know. In a similar manner likewise he will be able to consider respecting others, what it is which any one knows, and thinks he knows; and what it is which he himself thinks he knows, but does not know. But no other person will be able to accomplish this. Likewise this is to be temperate, and is temperance, and the knowledge of ourselves, to know what we know, and what we do not know. Are these the things which you assert?

Critias:: They are.

Socrates:: Again therefore, the third to the Savior, let us consider as it were from the beginning. In the first place, whether this is possible or not, that with respect to what a man knows, and does not know, he may know that he knows and does not know. And, in the next place, if this is possible, what will be the utility of it to us who know it.

Critias:: It is requisite, to consider this.

Socrates:: Come then, Critias, consider whether you have any clear conceptions respecting these things. For I am dubious, and I will tell you in what.

Critias:: By all means.

Socrates:: The following consequence then, will ensue (if that is true which you just now asserted), that there is one science which is not the science of any thing else than of itself and other sciences, and of ignorance. Will not this be the case?

Critias:: Entirely so.

Socrates:: See then, my friend, how absurdly we have endeavored to speak. For if you consider this same thing in other things, it will, I think, appear to you to be impossible.

Critias:: How and where?

Socrates:: In the following particulars. For consider, whether it appears to you that there is a certain sight, which is not the vision of those things which are the objects of other visions, but is the vision of itself and other visions, and is likewise the vision of that which is not vision: and again, in a similar manner, which does not see any color, though it is sight, but sees itself and other visions. Does it appear to you that there is such a sight as this?

Critias:: By Jupiter, it does not.

Socrates:: What then? Can there be an auditory sense, which does not hear any sound, but hears itself, and other hearings, together with a privation of hearing?

Critias:: Nor yet this.

Socrates:: In short, therefore, consider with respect to all the senses, whether it appears to you that there is any sense, which perceives other senses and itself, but perceives none of those things which are the objects of the other senses.

Critias:: This does not appear to me to be the case.

Socrates:: But does it appear to you that there is any desire, which is the desire of no pleasure, but is the desire of itself and of other desires?

Critias:: It does not.

Socrates:: Nor, as I think, is there any will which wills no good, but alone wills itself and other wills.

Critias:: There is not.

Socrates:: But will you say that there is a love of such a kind, as to be the love of nothing beautiful, but which is the love of itself and other loves?

Critias:: Not I.

Socrates:: Do you conceive then, that there is any fear which fears itself and other fears, but fears nothing dreadful?

Critias:: I do not.

Socrates:: But is there any opinion which opines opinions and itself, but which forms no opinion respecting those things which are the subjects of other opinions?

Critias:: By no means.

Socrates:: But we say, as it seems, that there is a science of such a kind, as to be the science of no discipline, but which is the science of itself and of other sciences.

Critias:: We do say so.

Socrates:: Must it not therefore be wonderful if there is such a science? For we do not as yet strenuously contend that there is not, but consider if there is.

Critias:: Right.

Socrates:: Come then, is this science the science of something? And does it possess a certain power, by which it is enabled to be the science of something?

Critias:: Entirely so.

Socrates:: And must we not also say that the greater possesses a certain power, by which it is greater than something?

Critias:: We must.

Socrates:: Must it not therefore be greater than something lesser, if it is greater?

Critias:: It is necessary.

Socrates:: If therefore we should find something greater, which is greater than things greater, and than itself, but which is not greater than any of those things than which other things are greater, would it not follow that a thing of this kind, since it is greater than itself, is also less than itself?

Critias:: This is perfectly necessary, Socrates.

Socrates:: If therefore there is any thing which is double of other doubles, and of itself, it will be double of other doubles, and of itself, in consequence of being half. For nothing can be double of any thing else than of half.

Critias:: True.

Socrates:: But being more than itself, will it not also be less than itself? And will not a thing which is heavier than, be also lighter than, itself? And that which is older than, be also younger than, itself? And in every thing else, in a similar manner, will it not follow, that whatever has a power of its own with respect to itself, will also possess that essence to which this power is related? But my meaning is this: Do we not say, that hearing is nothing else than a hearing of sound?

Critias:: We do?

Socrates:: If therefore it could hear itself, would it not hear in consequence of itself possessing a voice? For otherwise it would not hear.

Critias:: It is perfectly necessary this should be the case.

Socrates:: Sight likewise, O best of men, if it could itself see itself, must necessarily possess a certain color. For without color, sight would never be able to perceive any thing.

Critias:: It would not.

Socrates:: You see therefore, O Critias, that the particulars which we have discussed, appear to us to be partly altogether impossible, and partly dubious in the extreme, whether they possess a power of their own with respect to themselves. For it is perfectly impossible that this can be the case with magnitude, multitude, and other things of this kind. Or is it not?

Critias:: Entirely so.

Socrates:: Again, that hearing hears itself, and sight sees itself, and that motion moves itself, and heat burns itself, and all other such like assertions, may be not credited by some, but may perhaps be believed by others. But there is occasion, my friend, for some great man, who may be able to show sufficiently, by a division through all things, whether nothing except science naturally possesses a power of its own with respect to itself, and not a power only over something else; or whether this is the case with some things, and not with others: and again, if there are certain things which possess a power with respect to themselves, whether the science which we say is temperance, ranks in the number of these. For I do not believe myself sufficient for the discussion of these particulars: on which account I am not able strenuously to affirm, whether it is possible there can be a science of science. Nor if there is, could I admit that temperance is this science, till I had considered whether, being such, it would be of any advantage to us, or not. For I prophesy that temperance is something advantageous and good. Do you therefore, O son of Callæschrus, (since you assert that temperance is this science of science, and likewise of ignorance,) in the first place evince this, that it is possible for you to prove that which I have just now mentioned; and in the next place, in addition to its being possible, show that it is profitable: and thus perhaps you will satisfy me that what you have said respecting temperance is right.

But, Critias, when he had heard these things, and saw that I was dubious, in the same manner as those that look directly at others who are gaping, gape themselves, so he appeared to me to be involved in doubt, in consequence of my doubting. However, being very much celebrated, be was ashamed of those that were present; and was neither willing to grant me that he was incapable of deciding the question which I proposed to him, nor yet did he assert any thing perspicuous, but concealed his perplexity. But I, that the discourse might proceed, said, If it is agreeable to you, Critias, we will now grant this, that it is possible there may be a science of science. But again, let us consider whether it is so or not. If therefore this is in the highest degree possible, why is it more possible to know what any one knows, and what he does not know? For we say that this is for a man to know himself, and to be temperate. Or do we not?

Critias:: Entirely so, and this happens in a certain respect to be the case, Socrates. For if any one possesses that science which knows itself, he will be such as that is which he possesses. Just as when any one possesses swiftness, he is swift; when he possesses beauty, is beautiful; and when knowledge, is knowing. But when any one possesses a knowledge of himself, he will then become himself knowing himself.

Socrates:: I was not dubious, that when any one possesses the knowledge of himself, he then knows himself; but I was doubtful, what necessity compels the man who possesses this knowledge to know what he knows, and what he does not know.

Critias:: Because, Socrates, this is the same with that.

Socrates:: Perhaps so; but I seem to be always similarly affected. For again, I do not understand how it is the same thing for a man to know what he knows, and to know what he does not know.

Critias:: How do you mean?

Socrates:: Thus. Since there is a science of science, will this science be able to divide any further than this, that of these things this is science, and that is ignorance?

Critias:: It will not; but thus far alone.

Socrates:: Is the science therefore, and ignorance of that which is healthful, the same with the science and ignorance of the just?

Critias:: By no means.

Socrates:: But I think that the one is a medicinal, and the other a political science; and that the science of science is nothing else than science.

Critias:: Undoubtedly.

Socrates:: He therefore who has not a scientific knowledge of the healthy and the just, but alone knows science, as alone possessing science of this, such a one will know that he knows, and that he possesses a certain science, both with respect to himself and other things. Or will he not?

Critias:: Yes.

Socrates:: But how will he know that he knows through this science? For he knows the healthful through the medicinal science, and not through temperance; the harmonic through the musical science, and not through temperance; and that which pertains to building through the architectural science, and not through temperance; and so in every thing else. Is it not so?

Critias:: So it appears.

Socrates:: But how can temperance, if it is the science of sciences, know that it knows the salubrious, or that which pertains to building?

Critias:: It cannot by any means.

Socrates:: Being therefore ignorant of this, it will not know that which it knows, but will alone know that it knows.

Critias:: So it seems.

Socrates:: To know therefore that which we know, and that of which we are ignorant, will not be to be temperate, nor yet will be temperance, but as it seems this will consist alone in knowing that we know, and that we do not know.

Critias:: It appears so.

Socrates:: Hence, he who possesses this science of sciences, will not be able to examine another, who professes to have a scientific knowledge, whether he knows scientifically or not that which he says he knows; but as it seems he will alone know this, that he possesses a certain science, but temperance will not enable him to know the object of this science.

Critias:: It does not appear that it will.

Socrates:: Neither therefore will he be able to distinguish one who pretends to be a physician, but is not, from one who is a true physician, nor any other who is from one who is not endued with scientific knowledge. But let us thus consider; if a temperate man, or any other person, intends to discover a true and a false physician, will he not act as follows? He will not discourse with him respecting the medicinal science: for, as we have said, a physician attends to nothing else than the healthy and the diseased, the salubrious and the noxious. Is it not so?

Critias:: It is.

Socrates:: But he knows nothing respecting science; for this we have attributed to temperance alone.

Critias:: We have.

Socrates:: The physician therefore will not know any thing about medicine, since medicine is a science.

Critias:: True.

Socrates:: And the temperate man will know that he possesses a certain science; but it is necessary that of this science the physician should make trial; and to know what this science is must be the province of some other person. Or is not every science defined by this, not only that it is a science, but by ascertaining what science it is, and what are its objects?

Critias:: Yes.

Socrates:: The medicinal science, therefore, is defined to be different from other sciences in this, that it is the science of the salubrious and the noxious.

Critias:: It is.

Socrates:: Is it not therefore necessary, that he who wishes to consider the medicinal science, should consider the subjects with which it is conversant? For it is not proper to contemplate it in things external, with which it is not conversant.

Critias:: Certainly not.

Socrates:: He therefore who contemplates rightly, will contemplate a physician, so far as he is a physician, in things salubrious and noxious.

Critias:: So it seems.

Socrates:: In words and actions therefore, will not such a one consider whether what is asserted is true, and whether what is done is done rightly?

Critias:: It is necessary.

Socrates:: But can any one accomplish this without the medicinal science?

Critias:: Certainly not.

Socrates:: Nor yet can any other, as it seems, except the physician; nor can this be accomplished by the temperate man. For, besides being temperate, he would be a physician.

Critias:: True.

Socrates:: More than any thing therefore will it follow, if temperance is alone the science of science, and the science of ignorance, that neither can he who knows the medical art, nor he who does not, be able to distinguish the real or pretended physician, or one who thinks he is a physician, nor can any other person who is knowing in any thing whatever, be able to accomplish this, except him who professes the same art, as is the case with other artists.

Critias:: It appears so.

Socrates:: What further utility then, Critias, shall we derive from temperance, if it is such as we have asserted it to be? For if, as we supposed in the beginning, the temperate man knows that which he knows, and that of which he is ignorant, knowing with respect to the former that he knows, and with respect to the latter that he does not know, and is able to contemplate another person who is affected in the very same manner, if this be the case, we must say that we derive a great advantage from being temperate. For both we who possess temperance, and all such as are governed by us, shall pass through life without guilt; since we shall neither ourselves endeavor to do any thing which we do not know, but finding out skilful persons, commit it to their care, nor shall we allow those that are in subjection to us to do any thing else than what they will do well, but this will be that of which they possess a scientific knowledge. And thus through temperance we shall govern our families in a proper manner, well administer the affairs of cities, and every thing else which is under the dominion of temperance. For erroneous conduct being taken away, and rectitude being the leader in every action, it is necessary that men with these qualifications should act beautifully and well; and that those that act well should be happy. Should we not, O Critias, speak in this manner respecting temperance; asserting, how great a good it is to know what any one knows, and what he does not know?

Critias:: Entirely so.

Socrates:: But now, you see that no such science has appeared to us any where.

Critias:: I do see it.

Socrates:: Has not therefore, temperance, which we have now found to be that which knows both science and the privation of science, this good, that he who possesses it will easily learn whatever else he may attempt to learn, and all things will appear to him in a clearer point of view? Will not this likewise follow from his looking to science in whatever he learns? And will he not examine others better, respecting things which he has learned? And must not those who examine others without this, do it in a more imbecile and unbecoming manner? Are these the privileges, my friend, which we enjoy through the possession of temperance? But at the same time, do we look to something greater, and require temperance to be greater than it really is?

Critias:: Perhaps, this is the case.

Socrates:: Perhaps so. And perhaps too we have investigated nothing profitable. But I conjecture this from hence, that certain absurd consequences appear to me to ensue respecting temperance, if it is such as we have defined it to be. For let us see, if you please admitting that it is possible to have a scientific knowledge of science; and let us not deprive temperance of the power of knowing what it knows, and what it does not know, which we ascribed to it at first, but let us confer upon it this power. And, admitting all these particulars, let us still more diligently consider, if being such it will benefit us at present. For what we just now said, I mean that temperance would be a great good, if it were of such a nature as to govern families and cities, does not appear to me, O Critias, to have been properly granted.

Critias:: How so.

Socrates:: Because, we easily admitted, that it would be a great good to mankind, if each of us performed those things which we knew, and committed to others endued with knowledge the management of things of which we are ignorant.

Critias:: Did we not then, do right in assenting to these things?

Socrates:: It appears to me, that we did not.

Critias:: You really speak absurdly, Socrates.

Socrates:: By the dog, thus it appears to me. And just now looking at these things, that they seemed to me to be absurd, and that I was afraid we had not rightly considered them. For in reality, if temperance is such as we have described it, it does not appear evident to me, what good it will produce for us.

Critias:: Inform me how this is, that we also may know what you say.

Socrates:: I think that I am trifling; but at the same time, it is necessary to consider that which presents itself to our view, and not rashly omit it, if any one pays to it the smallest degree of attention.

Critias:: You speak well.

Socrates:: Hear then, my dream, whether it has passed through the gate of horn, or through that of ivory. For if temperance should govern us, being such as we have now defined it to be, it would indeed act scientifically; nor would he who asserts himself to be a pilot, when he is not, deceive us; nor would a physician, nor a general of an army, nor any other who pretends to know that which he does not know, elude our penetration. But from these things thus subsisting, something else would happen to us; for our bodies would be more healthful than they are at present, and we should be preserved in the perils of the sea and war. We should likewise possess all our vessels and instruments, together with our garments, shoes, and all the conveniences and necessaries of life, more artificially constructed than at present, because we should employ true artists. If also you are willing we should grant that prophecy is the science of that which is future, and that temperance presiding over it, avoids arrogant diviners, but chooses true prophets for the prediction of future events, I should affirm that the human race, furnished with this, would act and live scientifically. For temperance being our guard, it will not suffer ignorance interfering to cooperate with us. But that we shall act well and be happy, in consequence of acting scientifically, this, friend Critias, I am not yet able to understand.

Critias:: But indeed, you will not easily find any other end of acting well, if you despise acting scientifically.

Socrates:: Instruct me therefore more particularly, what kind of scientific action you mean. Is it that of cutting leather?

Critias:: It is not, by Jupiter.

Socrates:: Is it that of a brazier?

Critias:: By no means.

Socrates:: Is it that of a woolworker, or a turner, or any such like artists?

Critias:: It is not.

Socrates:: We must therefore, no longer persist in the assertion, that he is happy who lives scientifically. For these artists, though they live scientifically, are not acknowledged by you to be happy; but it appears to me that the happy man should be ranked among certain persons that live scientifically. And perhaps you will assert the happy man to be him whom I just now mentioned, I mean the diviner, who knows all future events. Do you speak of this, or of any other character?

Critias:: Of this and another.

Socrates:: What other? Do you speak of the man who, besides knowing future events, knows every thing past and present, and is not ignorant of any thing? For let us admit that there is such a man: for I think you will not say that any one lives more scientifically than this man.

Critias:: Certainly not.

Socrates:: But this also should be added, Which of the sciences makes him happy? Or do all the sciences similarly produce this effect?

Critias:: By no means.

Socrates:: But which most eminently accomplishes this? Is it that by which a man knows things past, present, and to come? And will it therefore be the science of chess?

Critias:: But why of chess?

Socrates:: Will it then be the logistic science?

Critias:: By no means.

Socrates:: Shall we say it is the science by which health is procured.

Critias:: Rather so.

Socrates:: But is it especially that science by which we know some particular thing?

Critias:: It is that by which we know good and evil.

Socrates:: O vile man, some time since you drew me round in a circle, concealing from me that to act well, and be happy, did not consist in living scientifically, and were not produced by the possession of all the other sciences, but are effected by one science alone, which enables us to know good and evil. And if, O Critias, you were willing to take away this science from the other sciences, would the medicinal science no less produce health, that of the leatherworker shoes, that of the weaver garments? And would the pilot's art no less prevent us from perishing in the sea, and the military science from being killed in battle?

Critias:: No less.

Socrates:: But, friend Critias, this science, by which we know good and evil, being taken away, each of these other sciences will no longer operate beneficially.

Critias:: True.

Socrates:: But this science, as it seems, is not temperance, but that, the employment of which is to benefit us: For it is not the science of sciences, and their privations, but it is the science of good and evil. So that if temperance is beneficial, it will be useful to us in some other respect.

Critias:: But, is not temperance then beneficial? For if temperance is the science of sciences, and presides over other sciences, it will also benefit us by ruling over this science which is conversant with the good.

Socrates:: But will temperance, give us health, and not the medicinal science? And will this effect all that the other arts effect, so that each of these will no longer accomplish its proper work? Or did we not some, time since testify that temperance is the science of science, and ignorance alone, but of nothing else? Is it not so?

Critias:: So it appears.

Socrates:: It is not therefore the artificer of health.

Critias:: Clearly not.

Socrates:: For health is the production of another art. Is it not?

Critias:: It is.

Socrates:: Hence, my friend, temperance is not the artificer of utility: for we attributed this effect to another art. Did we not?

Critias:: Entirely so.

Socrates:: How therefore will temperance be beneficial, since it is the artificer of no utility.

Critias:: By no means, Socrates, as it seems.

Socrates:: Do you not see, therefore, Critias, that I was very properly afraid some time since, and that I justly accused myself, because I beheld nothing useful respecting temperance? For that which is acknowledged to be the most beautiful of all things, would not have appeared to us to be useless, if I were myself in any respect useful for the purpose of proper investigation. But now we are every way vanquished, and by no means able to discover with what design the legislator instituted this name temperance; although we have granted many things which by no means followed from our discourse. For we admitted, that there is a science of science, though our discourse neither suffers nor affirms this. We likewise granted that the works of other sciences were known by this science, though neither did our discourse suffer this, in order that we might desire a temperate man to be one who knows that he knows the things which he knows, and who likewise knows that he does not know the things of which he is ignorant. This indeed we granted in a manner perfectly magnificent, not considering that it is impossible, after a manner, for a man to know that which he in no respect knows. For we agreed that he who is ignorant of any thing may know that he is ignorant of that thing, though in my opinion there is nothing which appears more irrational than this assertion. But at the same time, so silly were we, though not obstinate in the pursuit of this inquiry, that we were not rendered in any respect more able to discover the truth. Indeed, so ridiculous was our investigation, that what we had formerly acknowledged, and mutually devised to be temperance, this in a very insolent manner has appeared to us to be useless. On my own account, therefore, I am less indignant; but for your sake, O Charmides, I am very indignant, if you who are so beautiful in your body, and most temperate with respect to your soul, derive no advantage from this temperance, and are not in any respect benefited in life by its presence. But I am still more indignant for the sake of the incantation, which I learned from a Thracian, if being a thing of no worth, I have bestowed so much labor in learning it to no purpose. I do not, therefore, by any means think that this is the case, but I am of opinion that I am a bad investigator. For I consider temperance as a certain mighty good; and I am persuaded, that if you possess it, you are blessed. But see if you do possess it, and do not in any respect require the incantation. For if you possess it, I shall rather advise you to consider me as a trifler, and one who is incapable of investigating by discourse; but I shall advise you to consider yourself happy in proportion to the degree of temperance which you possess. And, O Charmides…

Charmides:: But, by Jupiter, Socrates, I do not know whether I possess it, or not. For how can I know that, the nature of which you, as you say, are unable to discover? I, indeed, am not very much persuaded by you, and I consider myself, Socrates, to be greatly in want of the incantation. I likewise am of opinion, so far as pertains to myself, that nothing hinders me from being daily enchanted by you, as long as you shall think it necessary.

Critias:: Be it so: but, O Charmides, if you act in this manner, it will be to me as an argument that you are temperate, because you will present yourself to Socrates to be enchanted, and will not desert him for any occasion, whether great or small.

Charmides:: I shall follow, and not desert him. For I should act in a dire manner, if I were not persuaded by you who are my tutor, and did not do what you order.

Critias:: But, I do order you.

Charmides:: I shall, therefore, act in this manner, beginning from this very day.

Socrates:: But what are these deliberating about?

Charmides:: Nothing: but we have determined to act in this manner.

Socrates:: You have employed violence, therefore, and do not permit me to interrogate.

Charmides:: Consider me as having used force, since Critias commands me to adopt this mode of conduct. Besides this, do you also consult what you are to do.

Socrates:: But, there is no place left for consultation: for no man is able to oppose you, when you are endeavoring and compelling to do any thing.

Charmides:: Do not you, therefore, resist.

Socrates:: I shall not indeed, oppose you.—

THE END OF THE CHARMIDES.

## Cratylus

Wednesday, April 1, 2020

“Now Thamus is reported to have said many things to Theuth respecting each art, both for and against it, which it would be tedious to relate. But when they came to the letters, “This knowledge, O king,” said Theuth, “will make the ‘Egyptians wiser, and better able to remember; for it has been invented as a medicine for memory and wisdom.” But he replied, “Most ingenious Theuth, one person is able to give birth to art, another to judge of what amount of detriment or advantage it will be to those who are to use it, and now you, as being the father of letters, out of fondness have attributed to them just the contrary effect to that which they will have. For this invention will produce forgetfulness in the minds of those who learn it through the neglect of memory, for that through trusting to writing, they will remember outwardly by means of foreign marks, and not inwardly by means of their own faculties. So that you have not discovered a medicine for memory, but for recollection. And you are providing for your disciples the appearance and not the reality of wisdom. For hearing many things through your means without instruction, they will appear to know a great deal, although they are for the most part ignorant, and will become troublesome associates, through thinking themselves wise instead of being so.” *Phaedrus* by Plaot, Henry Cary

A major theme in the Platonic dialogs is the association of meaning with names. On the perceptible level of Cratylus, Plato makes a lot of fun of the so called science of Etymology which is expressed as the clueless who look for meaning as if it appears out of some forgotten history, or strange geographical place; i.e. by those who are actually the most illiterate of a species. Going on archeological digs, or searching ancient libraries looking for the meaning of anything, a biological function of every individual, takes a very simple mind. I can certainly look for what someone else, some particular person, meant by a symbol or word, but not what a word means. On the intelligible level Plato examples using metaphor to construct names, this art, as he says, is only comprehensible by those who actually know the art of names. Plato layer’s, like the authors of the Bible, the art of names in regard to meaning and this layering is a way to address both the simple minded and the more advanced and complex thinkers. In this dialog, Plato is going to accentuate two facts about names, one is that, in of themselves, names have no meaning; two is that in order to use them, there has to be an agreement of a grammar user as to their designation, not only perceptibly but also intelligibly. Plato warns the reader, as he usually does, of this distinction between the perceptible and intelligible in regard to meaning by the use of the two friends which Socrates is in the company with at the time. Plato works on perceptible association, which simpler minds rely on and this makes a dialog which is in fun; on the complex metaphorical level of meaning which is only accessible by those minds which can follow the intelligible meaning, Plato presents a very serious topic. In the perceptible, this dialog is not serious; making a lot of fun of Etymology, on the intelligible level, there is a great deal of fact in regard to metaphorical associations which actually works on what some call the subconscious of the mind. In short, Plato makes an excellent source of learning psycholinguistics, which is not available, as he says, to the simple minded.

If one is really simple, then they cannot see either of these divisions, those minds simply quote what they read and often associate those quotes in the simplest manner possible. Psycholinguistics takes the perceptible grammar matrix and applies it simultaneously to the perceptible and simple minded thinkers and to the complex usages addressing the more intelligent of a species. It is a very hard thing to learn in grammar which is why I understand that I am certainly not as intelligent as Plato was.

Another thing that one has to understand is that these language abilities become functional after long periods of mental maturation, but that they will not mature unless one actually works on it. The parallel is going to a gym as a matter of habit or not.

What one should eventually realize is that Plato is showing you a ladder and that ladder is in regard to the association of names to meaning. The convention of names covers both the perceptible association and the intelligible association and it is a biological fact, each of us as an individual can only master this foundation commensurate with our own particular intelligence. Currently the human race has not even accomplished the most basic convention in regard to names—the perceptible association.

In regard to education, children will not have immediate access to the intelligible of this dialog, thus they will not often be happy about having to study it. This study which they are made to perform is not to be able to memorize and recall, and perform the arithmetic operations of quoting an author, but simply of implanting a seed in their memory which will grow over time. This cannot be tested other than the test of time. This fact is true of all learning, the intelligible of education is not actually accessible to children, nor is its testable when implanted in a mind; thus they have to be motivated by perceptible means which they do respond to and this is not always the same things for children and educators who are expecting an arithmetic result from this implanting have to be monitored for this lapse in their response to the process. This age restriction, biologically imposed, is also applicable to teachers. Most teachers today have no more ability to teach than any other child does. The greatest fact in regard to people thinking that they know that which they demonstrably do not know, is how it has effected and diminished our educational systems to the point of being almost worthless to the intelligent of a species.

This dialog can then be seen as a very concise introduction to psycholinguistics in regard to our convention of names. The principles exampled here are applicable to each grammar system in our matrix of grammars, Common Grammar, Arithmetic, Algebra and Geometry. Our ladder, in regard to these, is afforded by the recursion of our simple binary, and it will take a lot of pedantic work to trace the whole of it out. So, that when we set our sights on writing a grammar book, we have to first learn to see all of the things afforded by binary recursion that we need to trace out before hand and then slowly try to put it all down into a working system of education. However, prior to any of that, the convention of names has to be understood for each grammar in our matrix, and it has to become socially standardized. We, as a species, have not accomplished even the basics to establish an acceptable educational system. The concept of binary memory addressing is very simple and it affords us the building blocks of achieving the most complex results, yet, we are still proto-linguistic.

The perceptible level of convention for the association of our standard of behavior called naming has to come first. Then, one can construct the intelligible meaning using that foundation in regard to any given application aimed at achieving any particular goal. Binary is then applied to the convention of names, the perceptible for a noun, or the absolute, and the verb, or relative, in regard to application. It is a fact, the foundation for all of this is the perceptible, yet we do not even have, at this time in our history, even a standard dictionary… We are still in the rudimentary processes of standardizing names, which, due our general level of intelligence, may not even happen, at least not in the foreseeable future. Depression is often the result of asking what needs to be done first when factually things have to be achieved concurrently and involves elements which one personally, in of themselves, cannot achieve. On the flip side, it means there is always something to do and needs to be done.

We lay out the distinction between Language and Grammar. Language is Universal and Intelligible, a simple binary. Grammar is Particular and Perceptible afforded by the perceptible and intelligible recursion of that binary into four distinct systems of grammar. Each grammar is composed of standards of behavior in regard to symbol sets and the methods we recursively employ that symbol set to effect an addressing system. Each of these grammars works with exactly the same unit, while also affording a distinct method of employing it. These recursions bring us an absolute result as far as name construction and association goes. Intelligence then applies the binary again for the use of these memory addressing systems to produce intelligible results. This is a binary recursion for the construction and use of grammar systems. As I said, I am certainly not intelligent enough to map out this whole thing, at least not with anything resembling diligence and speed, but perhaps there is or will be someone one or some group who can. I cannot say.

We start the convention of names with the perceptible. The remaining portion of that convention is determined by one's own intelligence. Meaning is what motivates us, determines what we do. Therefore, the perceptible level of the convention of names is based on the fact that words, as a product of a convention which a grammar is based on, have no meaning. Even when we have constructed the most pedantic dictionary possible, those associations will not designate anything in regard to meaning, they only designate an addressing system to information. Meaning is derived from our intelligence which is used to achieve our biological function of a life support system. What do we, ourselves, contribute to that function? We mean things, not words or symbols. Believing that words have meaning is the most fundamental self-referential error in grammar; thus a science based on the history, origins, of the meaning of words really is a joke that only the intelligent can laugh at. We start knowing that grammar is an art, not a science, it is an art which makes every science possible. Binary is not a science, it is simply a physical fact. Science is the areas of technology for the intelligent use of binary by which we do our biologically defined job. Each science is the employment of our grammar matrix in order to afford us specific products in the accomplishment of our job. One cannot even say that we have science today, especially since it is provable that we do not even yet know grammar.

When it comes down to which is more correct, science or religion, both based on the very same grammar which can only produce exactly the same results, I have to laugh at the joke. Laughing at clowns is part of being human. As language is not different from itself, its recursion, correctly accomplished, cannot change that simple fact, however, an idiot can always get something wrong.

One of my criticisms of Plato is his use of the words true and false, which is still contemporary. Is such and such true or not? I have to ask, true to what? As they appear to me to be ellipsis and thus not complete sentences. This is fine for rhetorical conversational styles, but not for the sake of demonstration.

One can put this dialog into a simple observation, people fail in reasoning when they mistake a name, a simple memory address, to the data, or information at that address. This is the same as mistaking a noun for a verb.

Translated by George Burges, M. A.

PERSONS OF THE DIALOGUE.

Hermogenes, Cratylus, Socrates.

---

Hermogenes:: Are you willing then that we should communicate our discourse to Socrates here?

Cratylus:: If it seems good to you.

Hermogenes:: Cratylus here, O Socrates, says that there is a propriety of appellation naturally subsisting for every thing that exists; and that this name is not, what certain persons conventionally call it, while they articulate with a part of their speech; but that there is a certain propriety of names, naturally the same both among the Greeks and all Barbarians. I ask him then whether Cratylus is his true name, or not. He confesses it is. What then is the true name of Socrates? He replies, Socrates. In the case of all other persons then, said I, is not that the name of each, by which we call him? Your name, says he, is not Hermogenes, although all men call you so. And upon my putting a question, and being very desirous to know what he means, he does not state any thing distinctly, but uses dissimulation towards me, and a feint, as if he had some thoughts in his own mind, which, should he, as being conversant with the subject, be willing to state clearly, he would cause me to agree with him, and to say what he does himself. If then you can by any means unfold by guessing this oracular language of Cratylus, I shall very gladly hear you; or rather, if it is agreeable to you, I would much more gladly hear about the propriety of names, in what way the matter seems to stand to you.

Socrates:: O Hermogenes, son of Hipponicus, there is an old proverb, that beautiful things are somehow difficult to learn. Now the learning relating to names happens to be no small affair. If however I had heard that exhibition of Prodicus valued at fifty drachms, by which he who heard might have been instructed, as he himself says, on this very point, nothing would have prevented you from knowing immediately the truth respecting the propriety of names. But I never heard except the one for a single drachm. Hence I know not where the truth is on such-like points; but am nevertheless prepared to seek it along with you and Cratylus. But as to his telling you, that your name is not in reality Hermogenes, I suspect that in this he is, as it were, scoffing at you; for he thinks, perhaps, that though covetous of wealth, you have failed on each occasion in acquiring it. But, as I just now said, it is hard to know such-like matters; by placing however the arguments in common, it is meet to consider whether the fact is as you say, or as Cratylus.

Hermogenes:: In good truth, Socrates, although I have frequently disputed with this person and many others, I cannot be persuaded that there is any other propriety of appellation, than through convention and common consent. For to me it appears, that the name, which any one assigns to a thing, is the proper one; and that, if he should even change it to another, and call it no longer by the previous one, the latter name will be no less right than the former; just as we are accustomed to change the names of our servants, and the name so changed is not the less proper than the one previously given; for to each thing there is no name naturally inherent, but only through the law and custom of those who are wont so to call them. But, if the case is otherwise, I am ready both to learn and hear, not only from Cratylus, but from any other person whatever.

Socrates:: Perhaps, Hermogenes, you say something to the purpose. Let us then consider, Is that the name of a thing, which any one puts on each thing as its appellation?

Hermogenes:: To me it appears so.

Socrates:: And this, whether a private person so calls it, or a state?

Hermogenes:: So I say.

Socrates:: What then, if I should give a name to whatever that exists, in such a manner, as to denominate that a horse, which we now call a man, and that a man, which we now call a horse, the name of man will, as regards the public, remain to the same object; but as regards the individual, the name of horse? and on the other hand, as regards the individual, the name of man, but as regards the public, the name of horse? Do you say so?

Hermogenes:: It appears so to me.

Socrates:: Tell me then, do you say it is a thing, to speak true and false?

Hermogenes:: I do.

Socrates:: There will then be a discourse, one true but another false.

Hermogenes:: Entirely so.

Socrates:: Will not that discourse then, which speaks of things as they are, be true; but that which speaks of them as they are not, false?

Hermogenes:: Yes.

Socrates:: This then is possible, to speak in a discourse of things which are, and which are not.

Hermogenes:: Entirely so.

Socrates:: Is the discourse, which is true, true as a whole, while its parts are not true?

Hermogenes:: No; but the parts are true likewise.

Socrates:: But are the greater portions true, and the smaller, not? or are they all true?

Hermogenes:: I think all.

Socrates:: Is there any part of a discourse, of what you arc speaking, smaller than a name?

Hermogenes:: No. This is the smallest of all.

Socrates:: And the name is said to be a part of a true discourse?

Hermogenes:: Yes.

Socrates:: And it is, as you say, true.

Hermogenes:: Yes.

Socrates:: But is not the part of a false discourse false?

Hermogenes:: I say so.

Socrates:: It is then permitted to call a name true and false, since we can call a discourse so.

Hermogenes:: How not?

Socrates:: Is that, which each person says is the name of a thing, the name of each thing?

Hermogenes:: Yes.

Socrates:: Will there be as many names to a thing, as any person assigns to it? and at that time, when he assigns them?

Hermogenes:: I have no other propriety of appellation, Socrates, than this; that I should call a thing by one name, which I assign to it, and you by another, which you assign to it. And after this manner, I see that by each state, names are assigned individually, sometimes to the same things, both by Greeks apart from the other Greeks, and by Greeks apart from Barbarians.

Socrates:: Come, let us see, Hermogenes, whether things that are, appear to you to exist in such a manner, with respect to the peculiar essence of each, as Protagoras said, when he asserted that man was the measure of all things; and that things are to me, such as they appear to me; and that, on the other hand, they are to you such, as they appear to you; or do some of these seem to you to possess a certain stability of existence?

Hermogenes:: Already, Socrates, I have, through doubting, been led to this, which Protagoras asserts; but yet this does not perfectly appear to me to be the case.

Socrates:: But what, have you ever been led to this, so that it never seemed to you that a man existed perfectly evil?

Hermogenes:: Never, by Zeus! But I have often had this feeling, so as to think, that there are some men, and very many too, profoundly wicked.

Socrates:: But what, have there never seemed to you to be men very good?

Hermogenes:: Very few, indeed.

Socrates:: Yet they have seemed to be?

Hermogenes:: Yes, to me.

Socrates:: How, then, do you establish this? Is it thus? That the very good are very prudent, and the very bad are very imprudent?

Hermogenes:: It appears so to me.

Socrates:: Is it possible then, if Protagoras speaks the truth, and this is the truth itself, that each thing is such, as it appears to each one to be, for some of us to be prudent, and some imprudent?

Hermogenes:: By no means.

Socrates:: And this, as I think, appears perfectly evident to you, that, since prudence and imprudence exist, it is not possible for Protagoras to speak the truth entirely; for one person will not in truth be more prudent than another, if that, which seems to each one, is to each one true.

Hermogenes:: It is so.

Socrates:: I think however you will not, according to the theory of Euthydemus, imagine that all things exist to all persons in a similar manner, and at the same time, and always; for thus some persons would not be good, and others bad, if virtue and vice existed to all persons, and in a similar manner, and always inherent in all things.

Hermogenes:: You speak the truth.

Socrates:: If then neither all things exist similarly and at the same time, and always to all persons, nor each thing is what it seems to each person, it is evident that there are things, which possess themselves a certain firm existence of their own; and this not as regards us, nor by being drawn upwards and downwards by us, through our imagination, but possessing of themselves their own existence, which is naturally theirs.

Hermogenes:: This appears to me, Socrates, to be the case.

Socrates:: Will then the things themselves exist naturally in this manner, but their actions not in the same manner? or are not their actions themselves one species of things?

Hermogenes:: They are perfectly so.

Socrates:: Actions too are performed then according to their own nature, and not according to our opinion. As, for instance, if we should attempt to cut any of things existing, whether must each particular be cut as we please, and with what we please? or if we should desire to cut any thing, according to its nature of being cut, and with the instrument of which it is the nature to cut, shall we both cut and will something more take place, and shall we do this rightly? But if we wish to act contrary to nature, shall we not err, and effect nothing?

Hermogenes:: To me it appears so.

Socrates:: If then we should attempt to burn any thing, we ought not to burn it, according to every opinion, but according to that which is the right one; and this is in the way, in which each thing is by nature to be burnt and burn, and with what it is by nature.

Hermogenes:: It is so.

Socrates:: Are not thus too the rest of things?

Hermogenes:: Entirely so.

Socrates:: Is not then to speak one of the things called actions?

Hermogenes:: Yes.

Socrates:: Whether then does he, who speaks in the way he thinks he ought to speak, correctly speak? or, should he speak in the way in which it is the nature of things to speak and be spoken of, and with the instrument, will he effect something and speak; but if not, will he err and effect nothing?

Hermogenes:: It appears to me it is thus as you say.

Socrates:: Is it not then a part of speaking to name a thing? For they who name a thing, speak the discourses.

Hermogenes:: Entirely so.

Socrates:: Is it not then an action to name a thing? since to speak about things was a certain action.

Hermogenes:: Yes.

Socrates:: But actions have appeared as existing not with respect to us, but as having a certain proper nature of their own.

Hermogenes:: They have so.

Socrates:: We must then give names to things, in the way and by the instrument through which they exist in nature, to name and be named, and not as we please, if there is about to be an assent to what has been said before. And thus we shall do something more, and give a name, but otherwise not.

Hermogenes:: It appears so to me.

Socrates:: Come then, say we that a thing which we ought to cut, we ought to cut with something?

Hermogenes:: Certainly.

Socrates:: And that what we ought to weave, we ought to weave with something? And that what we ought to bore, we ought to bore with something?

Hermogenes:: Entirely so.

Socrates:: And what we ought to name, we ought to name by something?

Hermogenes:: It is so.

Socrates:: Now what is that with which we ought to bore?

Hermogenes:: An auger.

Socrates:: And what is that with which we ought to weave?

Hermogenes:: A shuttle.

Socrates:: And what is that by which we ought to name?

Hermogenes:: A name.

Socrates:: You speak well. The name then is a certain instrument.

Hermogenes:: Entirely so.

Socrates:: If then I were to ask, What instrument is a shuttle? would you not answer, It is that with which we weave?

Hermogenes:: Certainly.

Socrates:: But what do we perform with the shuttle? Do we not separate the warp and the woof, which have been mixed together?

Hermogenes:: Certainly.

Socrates:: Would you not be able to speak in the same manner of an auger, and the other instruments?

Hermogenes:: Entirely so.

Socrates:: Can you in like manner speak of a name? Using the name as an instrument, what do we perform by naming?

Hermogenes:: I cannot tell.

Socrates:: Do we teach one another something, and distinguish things as they are?

Hermogenes:: Entirely so.

Socrates:: A name then is a kind of instrument to teach and distinguish the parts of existence, as a shuttle does those of a web.

Hermogenes:: Certainly.

Socrates:: The shuttle is a weaving instrument?

Hermogenes:: How not?

Socrates:: He who weaves then will employ a shuttle well; and by well, is meant in a weaver-like manner; and he who teaches will employ a name well, and by well, is meant in a teacher-like manner.

Hermogenes:: Certainly.

Socrates:: By the work of whom does the weaver employ properly the shuttle, when he uses it?

Hermogenes:: The carpenter.

Socrates:: But is every one a carpenter, or he only who possesses that art?

Hermogenes:: He who possesses the art?

Socrates:: By the work of whom does the borer properly use the auger, when he uses it?

Hermogenes:: The smith’s.

Socrates:: Is then every one a smith, or he only who possesses that art?

Hermogenes:: He who possesses the art.

Socrates:: Well then, by the work of whom does the teacher employ a name, when he uses it?

Hermogenes:: Not even this can I tell.

Socrates:: Nor can you tell even this, who has handed down to us the names which we use?

Hermogenes:: Not I.

Socrates:: Does it not appear to you that custom has handed down these?

Hermogenes:: It does.

Socrates:: He then who teaches, employs the work of the custom-introducer when he uses a name.

Hermogenes:: It appears so to me.

Socrates:: But does every man appear to you to be a custom-introducer, or he only who possesses that art?

Hermogenes:: He who possesses that art.

Socrates:: It is not then the province of every man, Hermogenes, to establish a name, but of a certain artificer of names; and this, as it seems, is the custom-introducer, who is the most rare of artificers among men.

Hermogenes:: So it appears.

Socrates:: But come, consider, to what does the custom-introducer look when he establishes names; and make the survey from the previous instances. To what does the carpenter look, when he makes a shuttle? Is it not to some such thing as is weaving naturally?

Hermogenes:: Entirely so.

Socrates:: But if the shuttle should be broken by him while making it, would he make another, looking to the broken one, or to that form, according to which he was making the shuttle he had broken?

Hermogenes:: To that, it appears to me.

Socrates:: Should we not therefore most justly call that very form the shuttle itself?

Hermogenes:: It appears so to me.

Socrates:: When therefore it is requisite to make a shuttle, adapted to a thin or thick garment, either of thread or wool, or of any material whatever, it is necessary for all of them to have the form of the shuttle; but to impart its nature to each kind of work according as it is naturally the best suited for it.

Hermogenes:: Certainly.

Socrates:: And the same method applies in the case of other instruments. For he who has discovered an instrument naturally suited to each thing, must assign it to that work, from which he will make not what he pleases, but that which is natural to the instrument. For as it seems, a person ought to know how to form of iron an auger naturally suited for each work.

Hermogenes:: Entirely so.

Socrates:: And of wood a shuttle naturally suited for each work.

Hermogenes:: It is so.

Socrates:: For each shuttle, as it seems, is naturally suited to each kind of weaving; and so are the other instruments.

Hermogenes:: Certainly.

Socrates:: It is necessary then, O best of men, for the custom-introducer to know how to form a name of sounds and syllables; and looking to what is really a name, to frame and establish all names, if he is about to be the master-founder of names. But if each founder of names does not form of the same syllables a name, we ought not to be ignorant of this. For neither does every smith use the same iron, when making the same instrument for the sake of the same thing; but as long as he gives it the same form, although from even a different kind of iron, the instrument is equally correctly made, whether one makes it here, or among the Barbarians. Is not this the case?

Hermogenes:: Entirely so.

Socrates:: Will you not therefore deem it right to say, that, so long as the founder of names, both here and among the Barbarians, assigns the form of a name accommodated to each thing, in any kind of syllables whatever, the founder of names here is not worse than the founder in any other place whatever?

Hermogenes:: Entirely so.

Socrates:: Who then is likely to know whether the convenient form of a shuttle exists in any kind whatever of wood? Is it the carpenter who made it, or the weaver who is to use it?

Hermogenes:: It is more probable he who is to use it, Socrates.

Socrates:: Who is it then that uses the work of the lyre-maker? Is it not he, who knows how best to superintend the maker, and knows when it is made, whether it is properly made or not?

Hermogenes:: Entirely so.

Socrates:: But who is this?

Hermogenes:: The lyre-player.

Socrates:: And who is it that uses the work of the shipwright?

Hermogenes:: The pilot.

Socrates:: And who is he, that would superintend the best the work of the founder of names, and decide about it when finished, both here and among the Barbarians? Is it not he, who is to use it?

Hermogenes:: Yes.

Socrates:: And is not this person, one who knows how to interrogate?

Hermogenes:: Entirely so.

Socrates:: And likewise to answer?

Hermogenes:: Yes.

Socrates:: But would you call him, who knows how to interrogate and answer, any thing else, than a dialectician?

Hermogenes:: No; but this.

Socrates:: It is the business then of the shipwright to make a rudder, while the pilot is superintending, if the rudder is about to be a good one.

Hermogenes:: It appears so.

Socrates:: And to make a name it is the business of the name-founder, it seems, to have a dialectician as his superintendent, if he is about to found names correctly.

Hermogenes:: Such is the case.

Socrates:: It nearly appears then, Hermogenes, that the imposition of names is not, as you think it, an affair of no moment, nor for men of no mark, nor of such as may be met with any where. And Cratylus speaks truly, when he says that names belong to things from nature; and that every one is not the artificer of names, but he alone, who looks to that name, which is naturally suited to each thing, and who is able to mould its form into letters and syllables.

Hermogenes:: I know not, Socrates, how I ought to oppose myself to what you are saying. It is not however easy perhaps to be thus suddenly persuaded. But I think I should be more easily persuaded by you, if you could show me what is that which you call a natural propriety of appellation.

Socrates:: I myself, O blessed Hermogenes, say there is none. But you have forgotten, what I said a short time previously, that I knew nothing, but would consider the matter together with you. But now, to myself and you considering well the question together, thus much appears contrary to our former opinion, that the name possesses some natural propriety, and that it is not for every man to know how to give a name to any thing whatever correctly. Or is it not so?

Hermogenes:: Entirely so.

Socrates:: It is necessary then to inquire, if you desire to know it, after this, in what does the propriety of a name consist.

Hermogenes:: But I do desire to know it.

Socrates:: Consider then.

Hermogenes:: How must I consider?

Socrates:: The most correct inquiry, my friend, will be with those, who know through your telling out money to them, and giving them thanks. These are the sophists, to whom your brother Callias told out a mint of money, and now appears to be a wise man. But, since you are not the master of your patrimony, you must earnestly entreat your brother, and beg of him to show you the propriety respecting things of this kind, which he has learned from Protagoras.

Hermogenes:: But this request of mine would be absurd, Socrates, if, when I reject entirely “The Truth” of Protagoras, I should embrace what is stated in such a truth, as things of any value.

Socrates:: But if this does not please you, we must learn from Homer, and the other poets.

Hermogenes:: And what says Homer, Socrates, about names; and where?

Socrates:: In many places. But those are the chief and most beautiful passages, in which he distinguishes between the names, which men and gods assign to the same things. Or do you not think that he says something great and wonderful in those passages relating to the propriety of names? For it is evident surely that the gods call things according to the propriety which names naturally possess. Or do you not think so?

Hermogenes:: I well know, that if the gods call any thing by a name, they call it so correctly. But of what passages are you speaking?

Socrates:: Do you not know, that when speaking of the river at Troy, which fought in a single combat with Hephaestos, Vulcan, he says;

> Whom gods call Xanthus, but Scamander, men.

Hermogenes:: I do. What then?

Socrates:: Do you not think that this is something of high import, to know in what way it is right to call that river Xanthus, rather than Scamander? Or, if you prefer it, in the case of the bird, which he says;

> Chalcis the gods, but men Kymindis call.

Do you think this is a trifling piece of learning, to know how much more proper it is to call the same bird Chalcis than Cymindis, or Myrine than Batiea; and there are many other passages, both in this poet and in others. But these things are perhaps too great for me and you to discover. But the names Scamandrius and Astyanax are, as it appears to me, more for a common man to investigate and more easy to see, what is the propriety of the names, which, he says, were given to the son of Hector. For you doubtless know the verses, in which are the names I am speaking of.

Hermogenes:: Entirely so.

Socrates:: Which then of these names do you think Homer considered as more correctly given to the boy, Astyanax or Scamandrius?

Hermogenes:: I cannot tell.

Socrates:: But reflect in this way. If any one should ask you, whether you thought the more wise or the less wise would call things in the more correct manner?

Hermogenes:: It is manifest I should answer, the more wise.

Socrates:: Whether then do women, or men, to speak of the whole human race, appear to you to be the wiser in cities?

Hermogenes:: The men.

Socrates:: Do you not then know, that Homer says that the son of Hector was called by the men of Troy, Astyanax, but Scamandrius, it is plain, by the women; since the men were wont to call him Astyanax.

Hermogenes:: It appears so.

Socrates:: Do you not then conceive that Homer considered the men of Troy wiser than the women?

Hermogenes:: I think so.

Socrates:: He therefore thought that the name Astyanax was more correctly given to the boy than Scamandrius.

Hermogenes:: It appears so.

Socrates:: But let us consider why he did so. Or does he not himself give the best explanation for the reason? For he says;

> To throw a bulwark he alone was found,
> The city's gates and the long walls around.

On this account then, as it seems, it is proper to call the son of the savior, Astyanax; of that which, as Homer says, his father preserved.

Hermogenes:: So it appears to me.

Socrates:: But what is this? For I do not myself understand this at all. Do you understand it?

Hermogenes:: By Zeus, I do not.

Socrates:: But, my good friend, Homer has himself given to Hector his name.

Hermogenes:: Why so?

Socrates:: Because it appears to me that this name of Hector is something similar to Astyanax, and these names appear to be Greek; for king and Hector signify nearly the same thing; both the names to be royal. For over whatsoever one is a king, he is also doubtless a Hector over it; since he evidently rules over it, possesses and has it. Or do I appear to you to say nothing to the purpose, but unconsciously err, in thinking I have hit upon, as it were, the track of Homer's thoughts respecting the propriety of names?

Hermogenes:: By Zeus, not you indeed, as it seems to me; but perhaps you have hit upon something.

Socrates:: For it is just, as it appears to me, to call the offspring of a lion, a lion, and the offspring of a horse, a horse. I do not mean, should something else than a horse be produced, like a monster, from a horse, but I speak of that which should be its offspring as a natural production. For if a horse should, contrary to nature, beget a calf, the produce of a cow by nature, we must call it not a colt, but a calf. Nor do I think that, if from a man an offspring should be produced not of a man, the progeny ought to be called a man; but if it be the offspring. And similar is the case of trees, and all other things. Or do you not agree with me?

Hermogenes:: I do agree.

Socrates:: You speak well. But take care lest I somehow cheat you. For according to the same reasoning, the offspring of a king ought to be called a king. Now it matters not whether the signification be the same in syllables different in one way or another; nor if a letter be added or taken away, is even this any thing, so long as the existence of the thing is in force, and shown by the name.

Hermogenes:: How say you this?

Socrates:: Nothing complex; but as you know we pronounce the names of the elements, but not the elements themselves, except four, ε and υ, and ο and ω; and placing round, you know, other letters, as well to the other vowels as to the non-vowels, consonants, we form names, and pronounce them. But, as long as we insert the exhibited power of the element, it is well to call it by the name which the element exhibits. As, for instance, βῆτα. Here you see that, although the η and the τ and the α have been added, there is nothing to pain us, so as not to exhibit by the whole name the nature of that element which its name-founder intended; so well did he know how to give names to letters.

Hermogenes:: You appear to me to speak the truth.

Socrates:: Will not then the same reasoning take place respecting a king? For a king will be produced from a king, both good from a good one, and beautiful from a beautiful one; and so in the case of every thing else, from each genus another such is the progeny, unless something monstrous is produced, and they must be called by the same name. But it is possible to vary the names by syllables, so that, to an unskilled person, what are the same would appear to be different from each other. Just as the drugs of physicians, when varied by colors or smells, appear to us to be different, although really the same; but to the physician, as one who looks to the power of the drugs, they appear to be the same, nor is he struck at all with astonishment by the additions to them. In like manner, perhaps, he who is skilled in names looks to their value, and is not struck with astonishment if a letter is added, or changed, or taken away, or the same value of the name is found in the other letters taken all together. As in the names of Astyanax and Hector, which we have just spoken of; they do not possess any one of the same letters, except the τ, and yet they signify the same thing. And what has ἀρχέολις ruler of a city in its letters common with the two preceding names? and yet it means the same thing. And there are many other words which signify nothing else than a king; and others again which signify an army-leader, as Ἄγις, Πολέμαρχος, Εὐπόλεμος; and others connected with medicine, as Ἰατροκλῆς and Ἀκεσίμϐροτος. And perhaps we could find many others disagreeing in syllables and letters, but in their value speaking the same sense. Does this appear to you to be the case, or not?

Hermogenes:: Entirely so.

Socrates:: And that to those, who exist according to nature, the same names should be assigned?

Hermogenes:: Perfectly so.

Socrates:: What then, to those, who are born contrary to nature, and in the form of monsters, as when from a good and pious man an impious one is produced; surely, as we said before, that if a horse should beget a progeny from a cow the offspring ought not to have the name of the begetter, but of the party that brought it forth?

Hermogenes:: Entirely so.

Socrates:: To the impious man, then, produced from the pious one, the name of his genus must be assigned?

Hermogenes:: Such is the case.

Socrates:: Not Theophilus, god-loving, nor Mnesitheus, god-remembering, nor any name of this kind, but something which signifies the contrary to these, must we call such a son, if names are to possess any propriety.

Hermogenes:: By all means, Socrates.

Socrates:: Just as, Hermogenes, the name of Orestes nearly appears to be correct; whether a certain fortune assigned to him this appellation, or some poet, pointing out by this name the savageness of his nature, and his wildness, and the habits of a mountaineer.

Hermogenes:: So it appears, Socrates.

Socrates:: It seems also that the name of his father was according to nature.

Hermogenes:: It does so.

Socrates:: For it nearly appears that Agamemnon was such a person as, with respect to whatever he had determined to labor through and endure, to put the finish to what he had determined on through valor. And the proof of his patient endurance is his staying at Troy with so great a host. That this man therefore is to be admired for his staying, and is denoted by the name Agamemnon. Perhaps, too, Atreus is correctly said; for his murder of Chrysippus, and what he did so very cruelly to Thyestes, were all noxious and hurtful as regards virtue. The appellation, therefore, of the name turns a little on one side, and conceals its meaning, so as not to show the nature of the man to all; but to those who are skilled in names, Atreus sufficiently points out what it means. For his name properly exists in every way with reference to what is not worn down, not fearing, and hurtful. It appears also to me, that his name was properly given to Pelops: for this name signifies one who sees things near; and I think he is worthy of the appellation in some such way as this.

Hermogenes:: How?

Socrates:: In such a way as this. It is reported against this man, that in the murder of Myrtilus, he was neither able to think beforehand, nor perceive any of the things afar off relating to his whole race, with how great a calamity he would fill it; but only to see what was near, and on the instant; for such is the meaning of πέλας near, when he desired to obtain, by all means, his marriage with Hippodamia. From whence the name of Pelops comes from πέλας, near, and ὄψις, sight. To Tantalus, likewise, all would deem the name to have been properly and naturally assigned, if it be true what is told of him.

Hermogenes:: What is it?

Socrates:: That, while he was yet living, many and terrible misfortunes happened to him; of which at last his whole country was overthrown; and that, when he was dead, there was the vibration of the stone over his head in Hades, it being wonderfully in unison with his name; for it really seems as if one, wishing to call him ταλάντατος most miserable, did, concealing that name, call him by the name of Tantalus instead of Talantatus. And it seems that the accident of the rumor contributed to some such appellation. But it appears that the name of him, who was called his father, was made in an all-beautiful manner. It is however by no means easy to understand it. For in reality the name of Zeus is, as it were, a sentence; and persons dividing it into two parts, some of us make use of one part, and some of another; for some call him Zὴν, and some Δίς. But these parts collected into one, exhibit the nature of the god; which, as we have said, a name ought and should be able to do. For there is no one, who is more the cause of living, both to us and every thing else, than he who is the ruler and king of all. It follows therefore that this god is rightly named, through whom life is present to all living beings; but the name, though one, is distributed, as I have said, into two parts, Dis and Zēn. Now he, who hears on a sudden that this god is the son of Kronos, may perhaps think it an insulting assertion. But it is according to reason for Zeus to be the offspring of some great intellect. Now Koros does not signify a boy, but the pure and unmixed nature of intellect. Now he Kronos is the son of Ouranus Heaven: and the sight directed to things above has fairly a right to be called by this name, Ourania heavenly, from beholding things on high. From whence too, Hermogenes, they who discourse on sublime affairs, say that a pure intellect is present with him, and that the name of Ouranus is very properly given to him. Indeed, if I had remembered Hesiod’s genealogy of the gods, and whom he mentions as their still preceding progenitors, I should not have desisted from showing you how correctly their names have been laid down, until I had made trial of this wisdom, what it will effect, whether it faints or not, which has now recently come upon me so suddenly, I know not from whence.

Hermogenes:: Indeed, Socrates, you really appear to me to speak oracles on a sudden, like those inspired by a god.

Socrates:: And the reason I assign, Hermogenes, is, that this wisdom has come upon me through Euthyphron of the ward of Prospaltius: for I was much with him in the morning, and I gave him my ears. It nearly appears then, that, being divinely inspired, he has not only filled my ears with divine wisdom, but laid hold also of my very soul. It appears therefore to me, that we ought to act in this way; to make use of this wisdom to-day, and to contemplate what yet remains concerning the propriety of names; but to-morrow, if it seems good to you, we will send it away as a pollution, and purify ourselves from it, after finding out a person who is skilled in expiating things of this kind, whether he be one of the priests, or the sophists.

Hermogenes:: I assent to this; for I shall hear, with great pleasure, what remains of the discussion respecting names.

Socrates:: But it is necessary to act thus. From whence then do you wish us to begin the inquiry, since we have arrived at a certain form, that we may know whether the names themselves will testify in our favor, that they were not entirely fabricated from chance, but possess a certain propriety? Now the names that are mentioned of heroes and men would perhaps deceive us; for many of these exist according to the appellations of their ancestors, and do not suit some persons, as we stated at the commencement. But many assume them, as matters of boasting, such as Eutychides the son of the fortunate, Sosias the son of the saved, and Theophilus the god beloved, and many others. Such then as these, it appears to me, we ought to dismiss. But it is most probable that we shall find names properly imposed, respecting things existing for ever, and naturally produced; for in these it is especially fitting for the imposition of names to be a careful study. But perhaps some of these have been given by a power more divine than that of man.

Hermogenes:: You appear to me, Socrates, to speak well.

Socrates:: Will it not then be just, to begin from the gods, when we are considering that very thing, why the gods are properly called by that name?

Hermogenes:: It will be reasonable.

Socrates:: I suspect then it is of this kind. It appears to me that the first men of those connected with Greece, considered those only as gods, whom many at present of the Barbarians do; the sun, and the moon, and the earth, and the stars, and the heavens. Now as they perceived all these moving and running round in a perpetual course, from this nature of running they called them gods; but afterwards, perceiving that there were others, they called all of them by the same name. Seems what I say to be like the truth, or not?

Hermogenes:: It seems very like.

Socrates:: What then shall we consider after this? Is it not clear, we ought to consider about dæmons, heroes, and men?

Hermogenes:: About dæmons.

Socrates:: Now in good truth, Hermogenes, what does the word dæmons mean? Consider whether I say aught to the purpose?

Hermogenes:: Only say what it is.

Socrates:: Know you then whom Hesiod says are dæmons?

Hermogenes:: I do not understand.

Socrates:: But know you not that he says, the golden race of men was first created?

Hermogenes:: This I know.

Socrates:: He says, then, concerning it;

> But when concealed had Destiny this race,
> Dæmons there were, called holy, upon earth
> Good, ill-averters, and of man the guard.

Hermogenes:: What then?

Socrates:: I think he calls the race golden, not as being naturally of gold, but as being beautiful and good. And I infer this, from his calling us an iron race.

Hermogenes:: You speak the truth.

Socrates:: Do you not then think, that if any one of those living now were good, Hesiod would say he was of that golden race?

Hermogenes:: Probably.

Socrates:: But are the good any other than the prudent?

Hermogenes:: The prudent.

Socrates:: On this account then, especially, as it appears to me, he speaks of them as dæmons; because they were dæmons prudent and learned. And, in our old language, this very name occurs. Hence both he, and many other poets, say well, who say that when a good man shall have reached his end, he receives a mighty destiny and honor, and becomes a dæmon, according to the appellation of prudence. I therefore give my vote for this, that every dæmon learned man, who is good, is dæmon-like, both while living and when dead, and is properly called a dæmon.

Hermogenes:: And I, Socrates, seem to myself to give entirely the same vote with you on this point. But what can the name of hero be?

Socrates:: This is by no means difficult to understand. For their name is drawn aside a little, showing that its origin is from love.

Hermogenes:: How is this?

Socrates:: Do you not know that heroes are demigods?

Hermogenes:: What then?

Socrates:: All of them were doubtless begotten either from a god falling in love with a mortal woman, or from a mortal man falling in love with a goddess. If then you consider the matter according to the old Attic language, this too you will more clearly understand. For it will show you that the word hero is slightly drawn aside, for the sake of the name, from the word love, through which the heroes were begotten. And either this says the heroes, or because they were wise and rhetoricians, powerful and skilled in dialectic, and all-sufficient to interrogate; for εἔρειν is the same as to speak. Hence, as we just now said, in the Attic language they, who are called heroes, coincide as certain rhetoricians, interrogators, and lovers: so that the genus of rhetoricians and sophists becomes an heroic tribe. This, indeed, is not difficult to understand; but rather this respecting men, why they are called ἄνθρωποι. Can you tell the reason?

Hermogenes:: From whence, my good man, can I? And indeed were I at all able to find this out, I shall not exert myself, through my thinking that you will more easily discover it than myself.

Socrates:: You appear to me to rely on the inspiration of Euthyphron.

Hermogenes:: Evidently so.

Socrates:: And rightly relying. For I now seem to myself to understand it in a clever manner; and I shall run the risk, if I do not take care, of becoming to-day wiser than is fitting. But consider what I am saying. For this ought in the first place to be understood concerning names, that we often introduce letters, and often take some away, while we give names, as we please: and often change the acute syllables. As when we say Διὶ φίλος a friend of Dis: for, in order that there may be a noun instead of a verb, we take away the second ἰῶτα, and, instead of an acute syllable in the middle, we pronounce a grave one. But on the contrary, in others we introduce letters, and others again, with a graver accent, we pronounce with a more acute one.

Hermogenes:: You speak the truth.

Socrates:: Of these things one, as it appears to me, takes place in the name ἄνθρωπος man: for a noun is generated from a verb, one letter, α, being taken away, and the end of the word becoming more grave.

Hermogenes:: How do you mean?

Socrates:: Thus. This name ἄνθρωπος indicates that other animals, who can see, neither consider, nor reason, nor contemplate; but that man sees—for such is the meaning of ὄπωπε—and at the same time contemplates and reasons upon what he sees. Hence man alone, of all animals, is rightly denominated ἄνθρωπος, contemplating what he sees.

Hermogenes:: What then, shall I ask you what follows after this, and which I would very gladly hear?

Socrates:: By all means.

Hermogenes:: As then there appears to me to be something in order after these; for we surely call the soul and body of man by some name.

Socrates:: How not?

Hermogenes:: Let us, then, endeavor to divide these too, as we did the former subjects.

Socrates:: Do you say that you have considered first the soul, that it has with reason this name, and afterwards so has the body?

Hermogenes:: Certainly.

Socrates:: To speak then off-hand, I think that those, who called the soul by that name, understood some such thing as this; that whenever it is present to the body, it is the cause of its life, giving it the power to breathe, and cooling it; but as soon as the cooling power ceases, the body is dissolved and comes to an end. From whence, as it appears to me, they called the soul ψυχή. But, if you please, be quiet. For I think I see something carrying more conviction than this to the followers of Euthyphron; for this, as it appears to me, they would despise, and consider it as farcical. But consider whether this will please you.

Hermogenes:: Only say it.

Socrates:: What else but the soul do you think contains and carries the nature of the whole body, so that it lives and goes about.

Hermogenes:: No other.

Socrates:: But what, do you not believe with Anaxagoras, that intellect and soul orders and holds the nature of every thing else?

Hermogenes:: I do.

Socrates:: It will be proper then to give this name to that power which carries and holds nature, φυσέχην: but it may be called more elegantly ψυχή.

Hermogenes:: Entirely so; and this latter appellation appears to me to be more agreeable to art than the former.

Socrates:: For it is certainly so. It would however appear to be truly ridiculous, if it were named, as it is formed.

Hermogenes:: But what shall we next consider after this?

Socrates:: Are you speaking of the body?

Hermogenes:: Yes.

Socrates:: In many ways this appears to me, whether one causes it to deflect little or much. For some say it is the sepulcher of the soul, as being buried at the present time; and on the other hand, because whatever the soul marks out it marks out by the body; on this account it is properly called a mark. The followers however of Orpheus appear to me to have founded this name, especially since the soul suffers a punishment on account of the things it suffers; and that it may be preserved, it has this enclosure, the image of a prison; and that the body, as it is called, is the saving of the soul, until it the soul shall have paid the penalty due; and that there is no need of introducing a single letter.

Hermogenes:: On this, it appears to me, Socrates, enough has been said. But about the names of the gods, could we, in the same manner as you have just now spoken about Zeus, consider by what propriety their names are laid down.

Socrates:: By Zeus, Hermogenes, if we possessed any mind, we should have one the most beautiful method, by confessing that we know nothing of the gods either themselves or the names by which they call themselves; for it is evident that they call themselves by correct names. But the second mode of propriety consists in our calling the gods by those names, by which there is a law for us to invoke them in our prayers, whatever they are, and by whatever name they like to be addressed, since we know of nothing else; for this appears to me to have been beautifully ordained. If you are willing, therefore, let us consider this point, having previously, as it were, declared to the gods, that we shall speculate nothing about them—for we do not think ourselves worthy to do so—but about the men, what thoughts they had, when they gave the names; for this will not expose us to their wrath.

Hermogenes:: You appear to me, Socrates, to speak with moderation; let us therefore act in this manner.

Socrates:: Ought we not then to begin, according to custom, from Hestia?

Hermogenes:: It is just what we should.

Socrates:: What then shall we say the person intended, who gave the name of Ἑστία?

Hermogenes:: By Zeus, I do not think this is an easy thing.

Socrates:: The men, O good Hermogenes, who first founded names, seem almost to be no mean persons, but conversant with high subjects and discourses on them.

Hermogenes:: What then?

Socrates:: It seems to me that the founding of names was the work of some such men. And indeed, if any one considers foreign names, what each means is not the less discovered. For instance, in the case of that which we call Οὐσία, there are, who call it Ἐσία, and others again Ὠσία. In the first place then, according to one of these names Ἐσία, the existence of things Οὐσία has a right to be called Ἐστία; and again, because we call that which participates in existence by the name of Ἐστία, it would on this ground be properly called Ἐσία: for we too seem of old to have pronounced Οὐσία, Ἐσία. Moreover, if any one bears in mind the business of sacrifice, he will deem that this was in the thoughts of those who instituted the names. For it is likely, that they, who called Οὐσία Ousia, the existence of all things, Ἑστια Hestia, sacrificed to Hestia before all the gods. But they who called it Ὠσία Osia, would nearly, according to Heraclitus, consider that all things move, and nothing is at rest. The cause therefore and leader of things with them was τὸ ὠθοῦν the pushing on: and hence they very properly called it Ὠσία Osia. And thus much let it be said as if from those who know nothing. But, after Hestia, it is just to speculate about Rhea and Kronos, although we have discussed already the name of Kronos. But, perhaps, I say nothing to the purpose.

Hermogenes:: Why so, Socrates?

Socrates:: I perceive, my good man, a certain hive of wisdom.

Hermogenes:: Of what kind is it?

Socrates:: It is almost ridiculous to mention it; and yet I think it has some plausibility.

Hermogenes:: What is this?

Socrates:: I seem to myself to see Heracleitus speaking artlessly some old wise saw about Kronos and Rhea, which Homer too asserts.

Hermogenes:: How say you this?

Socrates:: Heracleitus says some where that all things move, and nothing is at rest; and comparing things to the flowing of a river, observes that “Thou canst not twice into the same stream go.”

Hermogenes:: Such is the fact.

Socrates:: What then, does he appear to you to think differently from Heracleitus, who gave the names of Rhea and Kronos to the progenitors of the other gods? And do you think that Heracleitus by chance assigned to both of them the names of flowing streams? As then Homer calls Ocean the generation of the gods, and Tethys their mother, so I think the same is asserted by Hesiod. Likewise Orpheus says some where;

> Ocean with lovely streams did first begin
> Marriage, and wedded Tethys, sister-kin.

Consider then, how all these harmonize with each, and all tend to the doctrine of Heracleitus.

Hermogenes:: You appear to me, Socrates, to Say something to the purpose. I do not however understand what the name Tethys means.

Socrates:: Surely it nearly implies this of itself, that there is a name of a fountain concealed; for that which is percolated, and strained through, is the representation of a fountain; and from both these names the name Tethys is composed.

Hermogenes:: This, Socrates, is elegant.

Socrates:: How is not about to be? But what is after this? Of Zeus we have already spoken.

Hermogenes:: Yes.

Socrates:: Let us then speak of his brothers, Poseidon and Pluto, and of that other name by which he is called.

Hermogenes:: By all means.

Socrates:: The name then of Poseidon appears to me to have been given by the party first naming it, because the nature of the sea stopped him when walking, and did not permit him to proceed any further, but became as it were a chain to his feet. He therefore denominated the ruler of this power Ποσειδῶν, as Ποσί-δεσμος ὤν being a foot-chainer. But the ε was perhaps added for the sake of elegance. And perhaps too it would not mean this; but two λλ were originally spoken instead of σ; signifying that this god is much-knowing. And perhaps likewise he was denominated ὁ σείων the shaking, from σείειν to shake, and π and δ were added. But Πλούτων Pluto was so called from the gift of Πλοῦτος wealth, because riches are dug out of the bowels of the earth. But by the appellation Αΐδης, the multitude appear to me to understand that τὸ ἀειδὲς was spoken of, and that, being terrified at this name, they call him Pluto.

Hermogenes:: But how does it seem, Socrates, to you?

Socrates:: In many ways do men appear to me indeed to have erred about the power of this god, and to have a fear of him, who is not worthy of it. For they fear that, when any one of us dies, he remains there for ever, and that the soul, divested of the body, departs to him, this too they fear. But all these things, the empire of the god, and his name, appear to me to tend to something the same.

Hermogenes:: How so?

Socrates:: I will tell you what appears to me. For tell me, Which of these is the stronger bond to any animal whatever, so as to cause it to remain in any place whatever, necessity, or desire?

Hermogenes:: Desire, Socrates, is by far the superior.

Socrates:: Do you not think that many would fly from Hades, unless it held those who go thither by the strongest bond?

Hermogenes:: This is evident.

Socrates:: It binds them then, as it appears, by a certain desire; since it binds them with the greatest bond, and not with necessity.

Hermogenes:: It appears so.

Socrates:: Now are there not many desires?

Hermogenes:: Yes.

Socrates:: It binds them therefore with the greatest of all desires, if it is about to bind them with the greatest of bonds.

Hermogenes:: Yes.

Socrates:: Is there then any greater desire, than when any one, by associating with another, thinks that, through him, he shall become a better man?

Hermogenes:: By Zeus, Socrates, there is not any whatever.

Socrates:: On this account, Hermogenes, let us say, that not one of those there is willing to come hither, not even the Syrens themselves; but that both they, and all others, are enchanted; such beautiful discourses does Pluto, it seems, know how to utter. And by this reasoning this god is both a perfect sophist, and a great benefactor to those with him; and who sends up to those here such good things; so many things does he have in superfluity; and from hence he has the name of Pluto. And on the other hand, through his unwillingness to associate with men invested with bodies, but only to have an intercourse with them, when the soul becomes cleansed from all the evils and desires which were around the body, does he not appear to you to be a philosopher, and to have well considered this, that he should thus detain them, by binding them with the desire for virtue; but that if they possessed the flutterings and mad feelings of the body, not even his father Kronos would be able to detain them with him, in those bonds with which he was said to be bound.

Hermogenes:: You nearly seem, Socrates, to speak something to the purpose.

Socrates:: The name then, O Hermogenes, of Ἀΐδης, wants much of being called Ἀΐδης from ʻἈειδὴς, “unseemly:” but it is much rather from knowing all beautiful things, that ʼἈΐδης was so called by the fabricator of names.

Hermogenes:: Be it so. But what shall we say of Demeter, and Hera, and Apollo, and Athena, and Hephaestus, and Ares, and of the rest of the gods?

Socrates:: It appears that Δημήτηρ Demeter was so called from the gift of food, as being διδοῦσα μήτηρ, “a giving mother.” But Ἥρα Hera from being ʼΕρατὴ beloved; as if Zeus is said to have loved her, and had her for a wife. Perhaps, also, the founder of this name, speculating upon things on high, denominated Ἀὴρ air Ἥρα: but, for the sake of concealment, he placed the beginning at the end. And this you will be convinced of, if you frequently pronounce the name Ἥρα. But Φερρέφαττα Proserpine many are terrified at, and at Ἀπόλλων Apollo, through a want of skill, as it appears, in the propriety of names. For by making a change, they think upon Φερσεφόνη; and this appears to them a thing of dread. But it Φερρέφαττα means, that the goddess is wise. For while things are carried along, that which touches upon, and handles, and is able to follow them, will be wisdom. This goddess therefore may with great propriety be named Φερέπαφα, or something of this kind, on account of her wisdom, and contact of that which is borne along: and hence the wise Ἀΐδης Pluto associates with her, because she too is such i.e. wise. But men now turn aside from this name, setting more value upon a good pronunciation than truth, so as to call her Φερρέφαττα. In like manner with respect to Ἀπόλλων Apollo, many, as I said before, are terrified at this name of the god, as if it signified something dreadful. Or know you not this?

Hermogenes:: I know it very well; and you speak the truth.

Socrates:: But this name, as it appears to me, is most beautifully laid down, with respect to the power of the god.

Hermogenes:: How?

Socrates:: I will endeavor to tell you what the fact appears to me. For there is no other name, which, although one, fits better with four powers of this god, so as to touch upon them all, and to show, in a certain manner, his art in music, prophecy, medicine, and archery.

Hermogenes:: Tell me, then; for you seem to me to speak of this name as something strange.

Socrates:: This name then is well fitted, as belonging to a musical god. For, in the first place, would not purgations and purifications, both according to the arts of medicine and prophecy, and likewise the going round with torches steeped in drugs, ordered by medical men and prophets, and the lustrations on such occasions, and the sprinklings, would not I say all these be able to do one thing, namely, to render a man pure, both in body and soul?

Hermogenes:: Entirely so.

Socrates:: Will not then the god who purifies, who washes, and who releases us from such evils, be of such a name?

Hermogenes:: Perfectly so.

Socrates:: According then to the releasings and washings which he affords, as being the physician in the case of such-like things, he will be properly called Ἀπολούων the washer. But according to his prophetic power, and truth and simplicity, for these two are the same, he would most properly be called Ἁπλοῦς simple, as the Thessalians call him now for all the Thessalians call this god Ἁπλῶν. But, on account of his being ever mighty in shooting arrows by his skill in archery, he is Ἀεὶ-βάλλων ever-darting. But with respect to his musical power, it is proper to understand that, as in the words ἀκόλουθος a follower, and ἄκοιτις a wife, a often signifies the same as together; so here α and πολέω signify τὴν ὁμοῦ πολμσιν the rolling together, both about heaven, which men call πόλους the poles; and about the harmony existing in song, which is called symphony; because all these, as the clever in music and astronomy assert, cause all things to roll together with a certain harmony. Now this god presides over harmony, ὁμοπολῶν, causing to roll all these things together, both among gods and men. As therefore we call ὁμόκελευθος following together and ὁμόκοιτις lying together, ἀκόλουθος and ἄκοιτις, by changing ο into α, so likewise we denominate Ἀπόλλων, who was ὁμοπολῶν, by inserting another λ because it would have been synonymous with the harsh name. And this some at the present day suspecting, in consequence of the value of this name not being rightly considered, are terrified at it, as if it signified some destruction. But, as was just now stated, the much is laid down, touching upon all the powers of the god, his simple, ever-darting, purifying, and together-rolling nature. But the name of the Μοῦσαι Muses, and of music universally, some one, as it seems, made from μῶσθαι to inquire, and from investigation and philosophy. But Λμτὼ Latona, is derived from the mildness of the goddess, with reference to her being ἐθελήμων willing, in what any one might request; but perhaps, as foreigners call her; for many call her Ληθώ. It seems then that she was called Ληθὼ by those calling her by this name, with reference not to the roughness, but the gentleness and smoothness of her manner. But Ἄρτεμις Diana appears to be so called on account of her conduct being ἀρτεμὲς, flawless and orderly through her desire of virginity. Perhaps also the founder of her name so called her, as being cognizant of virtue. And it may be, that hating the ἄροτον ploughing of man in a woman, or through some of these or all of them, the founder of the name gave it to the goddess.

Hermogenes:: But what is Dionysus and Aphrodite?

Socrates:: You are asking about great things, O son of Hipponicus. But the manner of the appellations given to these divinities, has been said to be both serious and jocose. Ask therefore others about the serious manner; but nothing hinders us from relating the jocose; for these deities are lovers of jesting and sport. Now Διόννυσος Dionysus would be the giver of wine, and may be jocosely called Διδ-οινυσος. And οἶνος wine may be most justly called οἰόνους, because it makes the majority of those who drink it to have wit, not having it before. But, with respect to Aphrodite, it is not proper to contradict Hesiod, but to allow that she was called Ἀφροδίτη, through her generation from ἀφρὸς foam.

Hermogenes:: But, Socrates, as you are an Athenian, you will not forget either Athena, or Hephaestus, or Ares.

Socrates:: For it is by no means reasonable.

Hermogenes:: It is not.

Socrates:: One of the names of her, Athena, it is not difficult to say why it was imposed.

Hermogenes:: Which?

Socrates:: We surely call her Pallas?

Hermogenes:: How not?

Socrates:: Considering then this name to have been formed from dancing in armor, we shall, as it appears to me, think properly; for to lift up oneself or any thing else on high, either from the earth, or to shake or be shaken in the hands, we call it to make to dance and to dance.

Hermogenes:: Entirely so.

Socrates:: The goddess therefore on this account we call Pallas.

Hermogenes:: And properly so. But what say you of her other name?

Socrates:: That of Athena?

Hermogenes:: Yes.

Socrates:: This name, my friend, is of greater weight. For the ancients appear to have considered Athena, as those of the present day do, who are skilled in the interpretation of Homer. For the majority of these, in explaining the poet, say that by Athena he intended mind and intellect. Now he who founded names seems to have understood some such thing as this respecting the goddess; or expressing rather something yet greater, he speaks of her as the intelligence of a god; for that she is a Θεοσνόη, the god-mind, employing after a foreign mode α instead of η, and taking away ι and σ. But perhaps it is not even in this way. But he called her Θεονόη, as she understood divine concerns better than all the rest. Nor is it far off to say that he was willing to call "intelligence in manner," as being this deity, by the name of Ἠθονόη. But either the founder himself, or some persons afterwards, turned the name aside to something more beautiful, as they thought, and called her Ἀθηνάα Athena.

Hermogenes:: But what will you say of Hephaestus?

Socrates:: Are you asking about the noble deity skilled in light?

Hermogenes:: I seem so.

Socrates:: Is he not evident to all as being Φαῖστος luminous, having drawn to himself the η.

Hermogenes:: It nearly appears so; unless as it seems it appears to you in some other way.

Socrates:: But, that it may not appear, ask about Ἄρης Mars.

Hermogenes:: I ask then.

Socrates:: If you please, then, the name of Ἄρης shall be derived from τὸ ἄρρεν the male, and τὸ ἀνδρεῖον the manly. But if, on the other hand, you wish it from his harsh and not-to-be-turned nature, which is called ἄρρατον, it will be proper for a god warlike every where, to be called by this name.

Hermogenes:: Entirely so.

Socrates:: Let us then, by the gods, free ourselves from the gods; for I fear to discourse about them. But about some others, if you wish it, propose as questions, that you may see of what kind are the horses of Euthyphro.

Hermogenes:: I will do what you say, after asking you one thing yet about Ἑρμῆς Hermes, since Cratylus says that I am not Hermogenes. Let us endeavor then to look into the name Hermes, that we may know whether he says any thing to the purpose.

Socrates:: This name of Hermes does indeed seem to pertain somewhat to discourse, and to imply that with reference to his being an interpreter and a messenger, and to his stealing and deceiving in discourses and market-dealing, the whole of his business is connected with the power of speech. As then we said before, τὸ εἴειν is the use of speech, and as Homer frequently says, ἐμήσατο, he planned, now this is to plan. From both of these then this god, planning to speak, and the speech—but εἴρειν means to speak—just as if the name-founder gives his command to us, He, O men, who has planned the speaking, would be justly called Εἰρέμης. But we of the present times, thinking to give elegance to the name, denominate him Ἑρμῆς, Hermes. And Iris too it seems is so called, from εἴρειν, to speak, because she is a messenger.

Hermogenes:: By Zeus, well does Cratylus seem to me to have said that I am Hermogenes. I am not indeed a ready planner of a discourse.

Socrates:: It is likewise probable, my friend, that Pan is the two-formed son of Hermes.

Hermogenes:: How so?

Socrates:: You know that speech signifies the all, and circulates and causes to roll perpetually; and that it is two-fold, true and false.

Hermogenes:: Entirely so.

Socrates:: Is not then the truth of it smooth and divine, and dwelling on high amongst the gods; but that which is false dwells below amongst the mass of mankind, and is rough and goat-like? For from hence are the greatest number of fables, and the falsehoods connected with the goat-like life.

Hermogenes:: Entirely so.

Socrates:: Rightly then would he, who indicates every thing, and ever rolls, be Πὰν αἰπόλος, the biform son of Hermes; who in his upper parts is smooth, but in his lower parts rough and goat-formed: and Pan is either speech, or the brother of speech, since he is the son of Hermes. But it is by no means wonderful that brother should be similar to brother. However, as I just now said, O blessed man! let us free ourselves from the gods.

Hermogenes:: From gods of this kind, if you please, Socrates. But what hinders you from discussing such divinities as Ηλιος sun, and Σελήνη moon, and Ἄστρα stars, and Γῆ earth, and Αἰθὴρ æther, and Ἀὴρ air, and Πῦρ fire, and Ὕδωρ water, and Ὧραι seasons, and Ἐνιαυτὸς year?

Socrates:: You enjoin me many things; still if it will gratify you, I am willing to speak.

Hermogenes:: You will indeed gratify me.

Socrates:: What then do you wish the first? Or shall we discuss as you have enumerated, first the sun?

Hermogenes:: Entirely so.

Socrates:: It seems then that this would become more manifest, if one should use the Doric name: for the Dorians call the sun Ἅλιος. He will therefore be Ἅλιος, from ἁλίζειν collecting men into one spot when he rises; and he would be so, from always εἱλεῖν revolving while going round the earth. And he would seem to be so, because in going he causes to be various the productions of the earth. Now the verbs ποικίλλειν and αἰολεῖν have the same meaning.

Hermogenes:: But what will you say of Σελήνη moon?

Socrates:: This name seems to press upon Anaxagoras.

Hermogenes:: Why?

Socrates:: It seems to indicate something of a more ancient date than what he lately stated, that the moon obtains her light from the sun.

Hermogenes:: But how?

Socrates:: Σέλας is the same with φῶς light.

Hermogenes:: Certainly.

Socrates:: Now this light about the moon is perpetually νέον new, and ἔνον old, if the Anaxagoreans say true; for, perpetually revolving in a circle, she perpetually renews this light; but the light of the former month becomes old.

Hermogenes:: Entirely so.

Socrates:: And many call her Σελαναιία.

Hermogenes:: Certainly.

Socrates:: But, because it perpetually possesses new and old splendor, it may be more justly called σελα-ενο-νεο-άει-α, but compressed together it is called Σελαναία.

Hermogenes:: This name, Socrates, is dithyrambic. But what will you say of Μὴν month, and Ἄστρα stars?

Socrates:: Μεὶς month would be properly called μείης from μειοῦσθαι to be diminished; but Ἄστρα stars appear to derive their name from Ἀστραπὴ lightning. Now ἀστραπὴ would be ἀναστρωπὴ, because it ὦπα ἀναστρέφει turns the eyes; but being formed with elegance, it is now called ἀστραπή.

Hermogenes:: But what are Πῦρ fire and Ὕδωρ water?

Socrates:: About Πῦρ fire I am at a loss; and it nearly appears, that either the Muse of Euthyphro has deserted me, or this word is very difficult. Behold then the artifice which I introduce in all such cases where I am at a loss.

Hermogenes:: What is it?

Socrates:: I will tell you. Answer me then. Do you know on what account Πῦρ fire was so called?

Hermogenes:: By Zeus, not I.

Socrates:: Consider then what my suspicions are concerning it. For I think that the Greeks, especially such as dwelt under the Barbarians, received many of their names from the Barbarians.

Hermogenes:: What then?

Socrates:: Should any one then investigate how reasonably these names were given according to the Greek language, and not according to that from which the name happens to come, you know he would be at a loss.

Hermogenes:: Very likely.

Socrates:: Consider then, whether this name, πῦρ fire, is not of Barbaric origin. For it is by no means easy to adapt this to the Greek language. But the Phrygians are thus clearly calling fire, with a trifling deviation, and the word ὕδωσ water, and κύνες dogs, and many other names.

Hermogenes:: They are so.

Socrates:: It is not proper then to use violence with these words; since any one can say about them. On this account therefore I reject the words πῦρ and ὕδωρ. But Ἀὴρ air, Hermogenes, is so called because αἴρει it raises things from the earth; or because ἀεὶ ῥεῖ it always flows; or because, from its flowing, a breathing is produced: for the poets call winds ἀῆται breathings. Perhaps then it means as if a person should say πνευματόρρουν a flowing breathing, or ἀητόρρουν a flowing wind, from whence he wishes to call it thus, because it is Ἀήρ. But I consider αἰθὴρ æther in some way as this; because ἀεὶ θεῖ περὶ τὸν ἀέρα ῥέων it always runs and flows about the air, it would be called ἀειθεήρ. But Γῆ earth, more plainly indicates its meaning, if any one calls it Γαῖα. For γαῖα would be properly called γεννήτειρα producer, as Homer says; for he speaks of γεγάασι as γεγενῆσθαι to have been produced.

Hermogenes:: Be it so.

Socrates:: What is there then for us after this?

Hermogenes:: Ὧραι hours, Socrates, and Ἐνιαυτὸς and Ἔτος.

Socrates:: Now Ὧραι must be pronounced Ὅραι, as of old in the Attic dialect, if you wish to know what is reasonable. For they are ὅραι, through their determining winters and summers and winds, and the fruits of the earth; and as ὁρίζουσαι determining, they would be justly called ὅραι. But Ἐνιαυτὸς and Ἔτος year, nearly appear to be one thing, each in turn. For that which brings to light the natural productions of the earth, and does, itself by itself, explore them, is Ἐνιαυτὸς the year. And as stated before, regarding the name of Zeus, divided into two, some called the deity Zeus and some Dis, so here with respect to the year, it is called by some Ἐνιαυτὸς, because it explores ἐν ἑαυτῷ in itself; but Ἔτος, because ἐτάζει it explores. And the whole reasoning is for that, which explores in itself, to be called, being one, twofold; so that two names are produced, Ἐνιαυτὸς and Ἔτος, from one reason.

Hermogenes:: But then, Socrates, you have made a great progress.

Socrates:: I seem, indeed, to have driven a long way on the road to wisdom.

Hermogenes:: Entirely so.

Socrates:: Perhaps you will speak something more.

Hermogenes:: But after this species of inquiry, I would most gladly contemplate those beautiful names relating to virtue, with what propriety φρόνησις prudence, σύνεσις consciousness, δικαιοσύνη justice, and all the rest of this kind are given.

Socrates:: You raise up, my friend, no mean a genus of names. But however, since I have put on the lion’s skin, I must not act the coward; but, as it seems, look into prudence, and intelligence, and thought, and knowledge, and all the other beautiful names of which you speak.

Hermogenes:: We ought by no means to stand apart previously.

Socrates:: And indeed, by the dog, I seem to myself not to act the part of a prophet badly, about what I understand at present, that those ancient men, who laid down names, did, like the majority of the wise men of the present period, through their frequently turning themselves round, while in search of the spot where existences are, become dizzy beyond all bounds; and that subsequently all things appear to them to turn round and to be borne along on every side. They do not however blame what they suffer within themselves as the cause of this opinion, but that things are of themselves so formed by nature, that nothing is abiding and firm, but that all things flow and are carried along, and are full of all kinds of generation and destruction. I speak this, as having thought on the names just now mentioned.

Hermogenes:: How is this, Socrates?

Socrates:: Perhaps you have not perceived that those lately mentioned were imposed upon things altogether borne along, flowing, and in a state of generation.

Hermogenes:: I do not altogether consider it.

Socrates:: Now, in the first place, what we mentioned first is entirely something of this kind.

Hermogenes:: Which is that?

Socrates:: Φρόνησις prudence. For it is the perception of a movement and flowing. One may also understand by it the utility of movement. But at least it is connected with the idea of being carried along. But if you will, Γνῶμη thought indicates altogether the looking-into and agitating mentally a begetting; for the word νωμᾷν to agitate is the same as the word σκοπεῖν to look into. Or if you will, νόμσις intelligence is τοῦ νέου ἕσις the desire of a novelty; since for existing things to be new, it indicates that they are perpetually in the course of being produced. Hence he, who founded the word νεόεσιν, pointed out that the soul was desirous of this novelty: for it was not called νόησις anciently, but instead of η, it was necessary to pronounce ε twice,—νεόεσιν, But Σωφροσύνη temperance is the σωτηρία safety of that φρόνησις prudence which we have just now considered. Ἐπιστήμη science moreover points out that the soul, which is worthy of notice, follows things hurried along, and is neither left behind them, nor goes before them. Hence by throwing out ε, it ought to be called πιστήμη. But Σύνεσις understanding, on the other hand, would thus appear to be, as it were, a syllogism. For when it says συνίεναι to understand, it follows that the same thing in every respect is meant as by the word ἐπίστασθαι to know: for συνιέναι means that the soul marches along with things. Σοφία wisdom, however, means to touch upon movement. This, however, is rather obscure and foreign. But we should recollect, from out of the poets, that they often say, when they happen to say of a person from among those, who begin to go forward quickly, that ἐσύθη he rushed forth they say: and a man of Lacedæmon, one of the famous, had the name of Σοῦς rusher: for by this appellation the Lacedæmonians denominate a rapid rush. Of this hurried motion then Σοφία wisdom signifies ἐπαφὴν the contact, as if things were continually carried along. But the word Ἀγαθὸν good is wont to be imposed as the name for that portion of all nature which is ἀγαστὸν to be admired: for since all existences march on, there is in some swiftness, but in others slowness prevails. Every thing therefore is not swift, but there is a part of it ἀγαστὸν to be admired. To this portion, ἀγαστὸν to be admired, is given the appellation ἀγαθὸν good. But of Δικαιοσύνη justice it is easy to conjecture that its name was imposed on the perception of what is just. But what is just in itself, it is difficult to say: for it appears to be agreed upon by the multitude up to a certain point; but beyond it to be disputed. For indeed, such as think that the universe is on a march, conceive the greatest part of it to be of such a nature, that it does nothing but yield; and that, on this account, there is something pervading the universe by which all generated natures are produced; and that this pervading thing is most swift and most attenuated: for otherwise it would be unable to pass through every thing while going on, unless it were the most attenuated, so as to hold nothing; and the most swift, so as to make use of the other things as if in a state of rest. Because therefore it governs all other things διαϊὸν by going through, it is properly called δίκαιον, receiving the value of the letter κ for the sake of an elegant pronunciation. And thus far, as we have just now stated, the multitude agree with us, that this is the meaning of the word δίκαιον just. But I, Hermogenes, being eager on this point, have inquired about all these things, and heard in the Ἀπόρρητα Mysteries to be unrevealed, that this is the just and the cause; for that, through which a thing is generated, is the cause; and some one has said privately, that it was on this account it was said so correctly. But when, after hearing this, I nevertheless quietly ask them, What, O best of men, is the just, if this is said so correctly? I seem to inquire beyond what is becoming, and to leap, as it is said, over the lines dug out; for they say I have sufficiently inquired and heard, and they endeavor, through the wish to satisfy me, to say, one one thing, and another another, and they no longer chime-in together. For one says that the Sun is τὸ δίκαιον the just; for that by it alone, διαϊόντα pervading and καίοντα burning, it becomes the guardian of all things. But when, delighted, as having heard something beautiful, I mention this to another person, the hearer laughs at me, and asks me if I think there is nothing just amongst men, when the sun has set? Upon my begging then to know what the other means, he says it is fire itself. But this is by no means easy to understand. But another person says, it is not fire itself, but the heat itself which exists in fire. Another again says, that he laughs at all these opinions; but that the just was that intellect of which Anaxagoras speaks; for he said that this possesses a power from itself, and is not mixed up with anything, but that it puts into order all things while pervading all things. But here, my friend, I am in a much greater difficulty than before I attempted to learn what justice is. But at least this name, for the sake of which we have been making the inquiry, appears to have been given to it justice for these reasons.

Hermogenes:: You appear to me, Socrates, to have heard these notions from some one, and not to improvise them yourself.

Socrates:: But what of the rest?

Hermogenes:: Not entirely so.

Socrates:: Hear then; for perhaps I may deceive you in what remains, as if I had not heard what I am saying. What then remains for us after justice? I think we have not yet discussed Ἀνδρεία fortitude; for injustice is evidently a real hindrance to the pervading power; but Ἀνδρεία fortitude signifies that it is so named from fortitude in fight. Now a fight, if things flow in reality, is nothing else than a contrary flowing. If then one takes away the δ from the name ἀνδρεία, the name Ἀνρεία, which remains, points out the thing itself. Hence it is evident that not the flowing, which is contrary to every flowing, is Ἀνδρεία fortitude, but only that which flows contrary to what is just; for otherwise fortitude would not be praised. In some similar manner τὸ ἄρρεν the male and ὁ ἀνὴρ man derive their origin from ἄνω ῥοή an upward flowing. But Γυνὴ woman appears to me to mean γονὴ begetting; and τὸ θῆλυ the female seems to be so called from θηλὴ the pap; but θηλὴ, Hermogenes, from causing, as it were, things irrigated to germinate.

Hermogenes:: It appears so, Socrates.

Socrates:: But the word ϑάλλειν to germinate appears to me to represent the increase of younglings, because it takes place swiftly and suddenly. Such then has he imitated by the name, having fitted it together from ϑεῖν to run and ἅλλεσθαι to leap. But do you not perceive that I am carried, as it were, out of the course, since I have come upon a smooth path? But many words yet remain of those that seem worthy of attention.

Hermogenes:: You speak the truth.

Socrates:: One of these is Τέχνη art, which we must look into and see what it means.

Hermogenes:: Entirely so.

Socrates:: Does not then this signify ἕξιν νοῦ a habit of thought, by taking away τ, and inserting ο between and χ, and between ν and η?

Hermogenes:: And this in a very poor manner, Socrates.

Socrates:: But do you not know, blessed man, that the names first formed, are now overlaid by those desirous of travestying them in a stilted style; and who, for the sake of an elegant pronunciation, add and take away letters, and twist them in every way, partly through ornament, and partly through time? For in the word Κάτοπτρον mirror, does it not appear to you that the ρ has been absurdly introduced? But such alterations some, I think, make, who care nothing for truth, but molding prettily the mouth; so that, after adding much to the first names, they at length rendered it impossible for a single man to understand what the name means; as in the case of the Sphynx, which they call Σφίγξ instead of Φίγξ, and so in many others.

Hermogenes:: Such is indeed the case, Socrates.

Socrates:: Indeed, should any one permit one to add to names, and take away from them whatever he wishes, there would be a very easy road; and one might adapt every name to every thing.

Hermogenes:: You speak the truth.

Socrates:: The truth indeed. But I think that you, who are a wise president, ought to keep a guard over what is moderate and the probable.

Hermogenes:: I wish I could.

Socrates:: And I too, Hermogenes, wish it with you. But do not, O divine man, discuss too accurately, “lest you perfectly exhaust my force:” for I shall ascend to the summit of what I have said, when, after τέχνην art, I have considered μηχανὴν artifice. For Μηχανὴ artifice seems to me to mean τὸ ἄνειν to complete a thing for the most part. For μῆκος signifies “length.” From both of these, μῆκος length and ἄνειν to complete, is formed the word μηχανή. But, as I just now said, it is proper to ascend to the summit of our discourse. For we must inquire what the names of Ἀρετὴ virtue and Κακία vice mean. Now one of these I do not as yet see clearly; but the other appears to me to be manifest; for it chimes-in with all that has been said before. For in consequence of all things moving on, whatever is κακῶς ἰὸν moving on badly will be κακία bad-moving; but this, when it subsists in the soul, through its badly moving on to her concerns, most eminently possesses the appellation of the whole of depravity. But that to move on badly, whatever it is, appears to me to show itself in Δειλία timidity, which we have not yet discussed, but have passed it over; although it is proper to consider it, after fortitude. And we likewise seem to have passed over many other names. Now δειλία timidity means, that the bond of the soul is strong: for the word λίαν vehemently is applied to strength: and hence the vehement and greatest bond of the soul will be timidity, just as ἀπορία want is an evil, and every thing, as it seems, which is an impediment to going and marching on. To go on badly, then, seems to signify the marching on in a restrained and shackled manner; which when the soul suffers, it becomes full of κακίας evil. But if to such things the name of vice is applicable, the contrary of this would be ἀρετὴ virtue, signifying, in the first place, ease in marching; and, in the next place, that τὴν ῥοὴν the flowing of a good soul is ever let loose; so that what always flows unrestrained and unimpeded, very properly, as it seems, receives this appellation. It is right then to call it ἀειρείτη. Perhaps also some one may call it αἱρετὴ, as this is a habit the most eligible. But the word is molded together and called ἀρετή. Perhaps, too, you will say again, that I feign; but I assert, that if the name of vice is correct, as I have said above, this name of virtue is correct likewise.

Hermogenes:: But what does Κακὸν evil mean, through which word you have explained many things previously?

Socrates:: It appears to me, by Zeus, something strange, and difficult to conjecture. I bring therefore to this too that artifice.

Hermogenes:: What is that?

Socrates:: To assert that this name too is something barbaric.

Hermogenes:: And you seem to be like a person speaking correctly. But, if it seems good, we will omit these; and endeavor to see in what way the words Καλὸν beautiful and Αἰσχρὸν base are well said.

Socrates:: Αἰσχρὸν base, then, seems to me just now to be very plain as to what it means. For it corresponds with the preceding remarks. For he who founded names, appears to me to have throughout found fault with that, which hinders and restrains things from their flowing; and that he now assigned the name ἀεισχοῤῥουν to that which is ἀεὶ ἴσχον ῥοῦν ever restraining the flowing. But at present they call it, by molding the words together, αἰσχρόν.

Hermogenes:: But what is Καλὸν beautiful?

Socrates:: This is more difficult to understand; although he says that it is a derived only by the harmony and length of the ου.

Hermogenes:: But how?

Socrates:: It appears that this name is some appellation for intellect.

Hermogenes:: How say you?

Socrates:: What think you is the cause of each existing thing being called by some name? Is it not that which gives names?

Hermogenes:: Entirely so.

Socrates:: Will not then this cause be the intellect either of gods, or men, or of both?

Hermogenes:: Yes.

Socrates:: That then which calls things, and the beautiful, are the same, this intellect.

Hermogenes:: It appears so.

Socrates:: Whatever things then mind and intellect effect, these are to be praised; but what they do not, are to be blamed?

Hermogenes:: Entirely so.

Socrates:: Now the medicinal business produces medical results; and the carpenter’s business carpentry results: or how say you?

Hermogenes:: I say thus.

Socrates:: And the beautiful produces things beautiful?

Hermogenes:: It must needs do so.

Socrates:: But this, as we have said, is intellect.

Hermogenes:: Entirely so.

Socrates:: Τὸ καλὸν the beautiful then will be properly the appellation of that φρόνησις prudence which produces such things as we call beautiful, and which we embrace.

Hermogenes:: It appears so.

Socrates:: What then remains of such like names?

Hermogenes:: Those that are conversant with the ἀγαθὸν good, and the καλὸν beautiful, such as Συμφέροντα things conducive, and Λυσιτελοῦντα profitable, and Ωφέλιμα advantageous, and Κερδαλέα gainful, and their contraries.

Socrates:: You may then by reflecting find τὸ συμφέρον the conducive from the previous remarks; for it appears to be a kind of a brother to science. For it exhibits nothing but the motion of the soul in conjunction with things; and that what results from some such a thing should be called συμφέροντα and σύμφορα conducive, from συμπεριφέρεσθαι to be carried round in conjunction, is reasonable.

Hermogenes:: It is reasonable.

Socrates:: But κερδαλέον gainful is from κέρδος gain; and to him, who puts a ν instead of a δ in this name, it points out what it means: for it thus gives, after another manner, the name for "good;" for as it is mingled with and pervades all things, he who assigned it this name expressed its power, and thus, by placing δ instead of ν, he pronounced it κέρδος.

Hermogenes:: But what is λυσιτελοῦν profitable?

Socrates:: It seems, Hermogenes, not as hucksters use it, should any one settle an expenditure, does it seem good to me to understand τὸ λυσιτελοῦν the profitable; but being the swiftest thing in existence, it does not suffer things to stand still, nor the rushing-on to obtain an end of being borne along, and to stand still and to cease; but always frees it, should any end attempt to be produced, and renders it unceasing and immortal. In this way it seems to me that λυσιτελοῦν the profitable obtained the reputation of ἀγαθὸν the good; for τὸ τῆς φορᾶς λύον τὸ τέλος that which dissolves the end of rushing was called λυσιτελοῦν. But Ὠφέλιμον useful is a foreign name which Homer himself often uses, τῷ ὀφέλλειν. But this is the appellation of increasing and making.

Hermogenes:: But how stand the contraries of these?

Socrates:: Such of these as express a negation, there is no need, it appears to me, to go through.

Hermogenes:: But what are they?

Socrates:: The non-conducive, and useless, and unprofitable, and the non-lucrative.

Hermogenes:: You speak the truth.

Socrates:: But Βλαϐερὸν hurtful, and Ζημιῶδες noxious.

Hermogenes:: Certainly.

Socrates:: Now τὸ Βλαϐερὸν the hurtful, he says, is that which is βλαπτὸν τὸν ῥοῦν hurting the flowing. But βλάπτον means τὸ βουλόμενον ἅπτειν that which wishes to bind; and ἅπτειν to bind, is the same as δεῖν: but this he blames every where. He, therefore, who wishes ἅπτειν ῥοῦν to bind a flowing, will be most properly called βουλαπτεροῦν; but it appears to me, that, being spoken elegantly, it becomes βλαβερόν.

Hermogenes:: A variety of names come out, Socrates, to your view; and you just now appeared to me to have played a prelude with your mouth, as it were, of the melody belonging to Athena, while you pronounced this name βουλάπτεροῦν.

Socrates:: I am not, Hermogenes, the cause of this, but those who founded the name.

Hermogenes:: You speak the truth; but what can the word ζημιῶδες noxious be?

Socrates:: What can ζημιῶδες noxious be? Behold, Hermogenes, how I shall speak the truth by saying, that through adding and taking away letters, persons vary so very much the meanings of names, that by turning then aside sometimes only a little they cause words to have the very contrary meaning. As in τὸ δέον the needful. For I understood, and called to mind just now, in consequence of what I am about to say to you, that this new speech of ours, itself the beautiful, has turned round τὸ δέον and ζημιῶδες, so as to indicate the contrary, and causing to disappear what they mean: but the ancient speech points out what both these words mean.

Hermogenes:: How say you?

Socrates:: I will tell you. Our ancestors you know very frequently used the ι and δ, and not the least the women, who particularly preserved the ancient tongue. But now, instead of the ι, they perversely use either ε or η, and ζ instead of δ, as being more stately.

Hermogenes:: But how?

Socrates:: Just as, for instance, the most ancient men called ἡμέρα day ἱμέρα, and some of them ἑμέρα; but those of the present times ἡμέρα.

Hermogenes:: This is so.

Socrates:: You know then that this ancient name alone points out what was in the mind of the founder; for, because light is wont to emerge from darkness upon men pleased with and desiring its beams, on this account they called day ἱμέρα.

Hermogenes:: It appears so.

Socrates:: But as it is now spoken in high-flown language, you can by no means understand what ἡμέρα means; although some think that day is called on this account ἡμέρα, because it renders things ἥμερα, gentle.

Hermogenes:: So it appears to me.

Socrates:: And you likewise know that the ancients called Ζυγὸν a yoke Δυογὸν.

Hermogenes:: Entirely so.

Socrates:: Now ζυγὸν indicates nothing. But that which exists for the two things together, for the sake of a binding, is justly called δυογόν. But it is now ζυγόν. And there are many others so circumstanced.

Hermogenes:: It appears so.

Socrates:: In this way then at first the word δέον binding, when it is thus spoken, signifies the contrary to all the names connected with ἀγαθὸν good. For this name being a species of the good, appears to be a binding of, and hindrance to, a rushing-on, as being the brother of βλαβερὸν noxious.

Hermogenes:: It appears, Socrates, to be very much so.

Socrates:: But not if you use the ancient name; which it is likely was founded with much more propriety than the present one. And it will agree with those former good names, if you substitute as of old ι for ε; for διὸν and not δέον, signifies that good, which the founder of names praises. And thus the founder of names will not contradict himself; but the names δέον, ὠφέλιμον, λυσιτελοῦν, κερδαλέον, ἀγαθὸν, συμφέρον, εὔπορον, easily-going, all appear the same; signifying by different names that what adorns and pervades every where is praised, but that what detains and binds, is blamed. And indeed, in the name ζημιῶδες, if, according to the ancient speech, you substitute δ for ζ, it will appear to you that this name was applied to δοῦντι τὸ ἰὸν binding that which is going, and was called δημιῶδες.

Hermogenes:: But, Socrates, what is Ἡδονὴ pleasure, and Λύπη pain, and Ἐπιθυμία desire, and such like names.

Socrates:: They do not appear to me to be very difficult, Hermogenes. For ἡδονὴ pleasure seems to have obtained this appellation as an action tending towards ὄνησις enjoyment; but the δ was added, that it might be called ἡδονὴ instead of ἡονή. But λύπη pain seems to be so named from the διάλυσις dissolution of the body, which the body undergoes in that suffering: and Ἀνία grief, as impeding τὸ ἰέναι going: but Ἀλγηδὼν torture appears to me to be some foreign word, and to be so called from ἀλγεινὸς torturing. But Ὀδύνη anxiety appears to be called from the ἔνδυσις ingress of pain. But Ἀχθηδὼν heaviness of heart is clear even to all that it is a name assimilated to the heaviness of rushing: for ἄχθος is “a burden,” and ἰὸν “a thing moving”. But Χαρὰ joy seems to be called from the διάχυσις diffusion and Εὐπορία easy going of the flowing of the soul; but Τέρψις delight was derived from τερπνὸν pleasant; but τερπνὸν was so called from being assimilated to πνοὴ the breath, creeping through the soul; it would be therefore justly called ἕρπ-νουν mind-creeping, but in time it was deflected into τερπνόν. But Εὐφροσύνη hilarity wants nothing to explain "the why" of its denomination; for it is obvious to all, that it received its name, εὐφεροσύνη, in strict justice from the soul being εὖ well συμφέρεσθαι borne along with all things; nevertheless we call it εὐφροσύνη. Nor is Ἐπιθυμία desire difficult: for it is plain that this name was applied to a power going on to ϑυμὸς anger. But ϑυμὸς anger would have its appellation from ϑύσεως raging and ζέσεως boiling. And again, Ἵμερος desire was so called from ῥοῦς a flowing vehemently drawing the soul. For because ἱέμενος ῥεῖ it flows urged on, and is desirous of things, and thus strongly draws the soul through the sending-forth of its flowing, it is, from the whole of this power, called ἵμερος. Moreover Πόθος regret is so called signifying that there is something of desire not present, and of a stream, but from that which is elsewhere, and absent. From whence it is called πόθος regret, a feeling which is then called ἵμερος desire, when that is present, for which there is a wish. But Ἔρως: love, because it flows inwardly from without, and because this flowing is not the property of him who possesses it, but is introduced through the eyes, was on this account called of old ἔσρος, from ἐσρεῖν to flow towards; but at present it is called ἔρως, through the change of ω into ο. But what say you shall we still consider?

Hermogenes:: What does Δόξα opinion, and such-like names, seem to you to signify.

Socrates:: Δόξα opinion was denominated either from δίωξις pursuit, in which the soul proceeds, while pursuing its knowledge as to how things exist; or else from τόξου βολῆ the darting of an arrow; and to this it seems more like. Hence Οἴησις opinion chimes in with this; for it seems to be like ἱέσις a sending-forth of the soul to all things, when it is showing to those in doubt what each is in reality. For just as Βουλὴ counsel is to βολὴ shooting, so βούλεσθαι to wish, which signifies τὸ ἐφίεσθαι to desire, is to βουλεύεσθαι to consult. For all these in following δόξα opinion, appear to be certain resemblances of βολὴ shooting; just again as, on the contrary, Ἀβουλια a want of counsel, appears to be the mishap of a person neither shooting, nor obtaining that at which he shot, and what he wished, and about what he deliberated, and what he desired.

Hermogenes:: You seem to me, Socrates, to have just now introduced these names rather thickly and rapidly.

Socrates:: For I now wish an end. But I wish then still to go through Ἀνάγκην necessity, which comes in order after those, and also Ἑκούσιον voluntary.

Socrates:: Now τὸ ἑκούσιον voluntary signifies τὸ εἶκον the yielding, and not the beating-against; but, as I say, εἶκον τῷ ἰόντι yielding to what is going on would be shown by this name, which exists according to βούλησις the will. But τὸ ἀναγκαῖον the necessary, and ἀντίτυπον the beating-against, the being contrary to the will, would be connected with ἁμαρτία error, and ἀμαθία ignorance. But they are likened to a going along κατὰ ἄγκη gorges; because being difficult to pass, and rugged and thick with bushes, they impede a going-on. And hence, perhaps, ἀνάγκη necessity was so called from its resemblance to a journey through a gorge. But as long as our strength remains, let us not give up the journey. Do not you then give up, but interrogate me.

Hermogenes:: I ask then about things the greatest and most beautiful, Ἀλήθεια truth, and Ψεῦδος falsehood, and τὸ Ὂν entity; and that very thing, about which is the subject of our present discourse, Ὄνομα name, why was it so called?

Socrates:: You say that μαίεσθαι means something.

Hermogenes:: I say it means ζητεῖν to inquire.

Socrates:: It looks like a name molded together from a discourse, which says that this name is an entity which an inquiry hits. But you would know it rather in the word which we pronounce ὀνομαστὸν to be named; for there it clearly states that that is ὂν entity of which there is μάσμα an inquiry. But Ἀλήθεια truth, this seems to have been molded together like the rest; for the divine rushing-on of entity appears to have been addressed by this name ἀλήθεια, as being ϑεία ἄλη a divine wandering. But Ψεῦδος falsehood is contrary to a rushing-on. For here again returns that which is abused as being detained and is compelled to be at rest; and the name is assimilated to those, who sleep; but the ψ being added conceals the meaning of the name. But Ὂν entity and Οὐσία existence agree with ἀλήθεια truth, by receiving the addition of an ι; for then they signify ἰὸν going, and ἰουσία the act of going. And on the other hand οὐκ ὂν non-being, as some also call it, οὐκ ἰὸν not-going.

Hermogenes:: You appear to me, Socrates, to have rattled through these questions in a very manly manner. But should any one ask you, what propriety of appellation have the words Ιὸν going, Ῥέον flowing, and Δοῦν binding—

Socrates:: Should I be able to answer him? you mean. Is it not so?

Hermogenes:: Perfectly so.

Socrates:: One thing I have just now got somehow, so that by answering I shall appear to say something to the purpose.

Hermogenes:: What is it?

Socrates:: To say that what we know not is of Barbarian origin: for perhaps this would be really the case with some; and the first names would be inscrutable on account of their antiquity. For through the names being twisted in every way, it would be not at all wonderful if the ancient speech, as compared with the present, differed in nothing from a Barbarian one.

Hermogenes:: You speak nothing from the purpose.

Socrates:: Nay, I speak what is reasonable. But yet the contest does not appear to me to admit of excuses; but we must be ready to reflect upon these matters; and let us consider, that, should any one always inquire into the verbs, through which a noun is spoken, and again those nouns through which verbs are enunciated, and should do this without ceasing, must not he, who answers such a one, fail at length in his replies?

Hermogenes:: It appears so to me.

Socrates:: When therefore will he, who fails to answer, justly fail? Will it not be when he arrives at those names, which are, as it were, the elements both of other discourses and names? For these, if they are so circumstanced, can no longer justly appear to be composed from other names. Just as we said above, that τὸ ἀγαθὸν was composed from ἀγαστὸς to be admired and ϑοὸς swift. But ϑοὸς, we may perhaps say, is composed from other words, and these last again from others: but if we ever lay hold of that, which is no longer composed from other names, we may justly say, that we have at length arrived at an element; and that we ought no longer to refer this to other names.

Hermogenes:: You seem to me to speak correctly.

Socrates:: Are not then the names, about which you are asking, elements? And must we not consider in some other manner what is their propriety?

Hermogenes:: It is likely.

Socrates:: It is likely indeed, Hermogenes. All the former names, therefore, must come back to these. And if this be the case, as it appears to me it is, consider again with me, lest I act like a silly person, while stating what the propriety of the first names ought to be.

Hermogenes:: Only do but speak, and I will, to the utmost of my power, consider the matter with you.

Socrates:: I think then you will agree with me in this, that there is one propriety in every name, both first and last; and that none of them differ, so far as they are names.

Hermogenes:: Entirely so.

Socrates:: But the propriety of the names we have just now discussed, was such as to show of what kind is each of the things existing.

Hermogenes:: How should it be not so?

Socrates:: This property then the prior names ought to possess no less than the posterior, if they are to be names.

Hermogenes:: Entirely so.

Socrates:: But the posterior names, as it appears, are able to effect this through the prior.

Hermogenes:: It appears so.

Socrates:: Be it so then. But after what manner will the first names, which no others precede, make, as much as they possibly can, the things existing clear to us, if they are about to be names? But answer me this. If we had neither voice nor tongue, and yet wished to point out things to one another, should we not, as the dumb do at present, endeavor to indicate them by the hands, head, and the rest of the body?

Hermogenes:: How could we otherwise, Socrates?

Socrates:: I think then that if we wished to indicate that which is going upwards and is light, we should raise our hands towards heaven and imitate the nature of the thing itself; but if to indicate things going downwards and heavy, we should point to the earth. And if we were desirous of indicating a horse running, or any other animal, you know that we should make our bodies and gestures as like as possible to those things.

Hermogenes:: It appears to me that the facts are necessarily as you say.

Socrates:: For in this manner, I think, the indication of any thing is produced by the body imitating, as it seems, that which any one wishes to point out.

Hermogenes:: Certainly.

Socrates:: But since we wish to indicate a thing by our voice, and tongue, and mouth, will not an indication of each thing then take place through these, when an imitation of any thing whatever is produced through them?

Hermogenes:: It appears to me necessarily so.

Socrates:: A name then is, as it seems, an imitation by the voice of that, which he who imitates, imitates and nominates by the voice what he imitates.

Hermogenes:: It appears so to me.

Socrates:: But, by Zeus, my friend, I do not think that I have yet spoken in a becoming manner.

Hermogenes:: Why so?

Socrates:: Because we should be compelled to confess, that they who imitate sheep and cocks, and other animals, give names to the things which they imitate.

Hermogenes:: You speak the truth.

Socrates:: But do you think this is correct?

Hermogenes:: I do not. But what imitation, Socrates, will the name be?

Socrates:: In the first place, as it appears to me, not if, as we imitate things with music, we so imitate, although we then imitate with the voice: and in the next place, if we imitate what music imitates, we do not appear to me to make use of names. But I assert something of this kind. There is a certain voice, figure to each thing, and a color to many.

Hermogenes:: Entirely so.

Socrates:: It appears then that although any one should imitate in this way, the name-giving art would not be conversant with these imitations; for these are partly musical and partly painting. Is it not so?

Hermogenes:: Yes.

Socrates:: But what is this? Seems there not to you an existence to every thing, as well as color, and the other things we just now mentioned? In the first place, is there not an existence to color itself, and voice, and to all the rest, which are deemed deserving of the appellation of being?

Hermogenes:: It appears so to me.

Socrates:: But what then, if any one is able to imitate this very thing, the existence of each thing, by letters and syllables, would he not indicate what each thing is?

Hermogenes:: Entirely so.

Socrates:: And what would you call him who is able to do this, as you called, of the former characters, one conversant with music, and the other with painting; how call you this?

Hermogenes:: This name, Socrates, appears to me what we are for some time seeking. For he would be a name-giver.

Socrates:: If then this is true, as it appears to be, let us consider those names about which you were inquiring; about Ροὴ flowing, and Ιέναι to go, and Σχέσις holding, whether in their letters and syllables a person lays hold of entity, so as to imitate existence or not.

Hermogenes:: By all means.

Socrates:: Come then, let us see whether these alone are a part of the first names, or whether there are many others.

Hermogenes:: I think there are many others.

Socrates:: For it is probable. But what shall be the mode of division from whence the imitator begins to imitate? Is it not, since the imitation happens to be by syllables and letters, the most proper to distribute first the elements? just as those who put their hands to rhythms, distribute first the powers of the elements, and afterwards of the syllables, and thus at length come to consider the rhythms themselves, but previously not?

Hermogenes:: Yes.

Socrates:: Ought we not then to divide thus the vowels, and afterwards the rest according to species, both consonants and mutes?—for so say those who are skilled in these matters—and again, such as are not indeed vowels yet are not mutes? and of the vowels themselves, such as have a different species from each other? and after we have properly distributed all these existences it is again requisite to impose names, and to consider, if there are certain things into which, as into elements, these may be referred; and from which it is possible to see both them, and whether there are species in them in the same manner as in the elements; and having well and thoroughly looked into all these points, it behooves us to know how to bring in each according to its likeness; whether it is necessary to bring in one to one, or to mix many with one; just as painters do, when they wish to produce a resemblance, sometimes introduce only the oyster a scarlet color, and sometimes any other pigment whatever; and sometimes again they mingle many colors together, as when they prepare the likeness of a man, or any thing else of this kind; according as, I think, each picture seems to require each color. In the same manner we will bring the elements of words to things, and one to one, wherever it seems to be necessary, and many together, making what persons call syllables; and again, combining those syllables together, from which nouns and verbs are composed; and again, from these nouns and verbs we will compose something great and beautiful and entire, and like the animal there described by the painter's art, discourse by the name-giving, or rhetorical, or whatever art it may be. Or rather, we will not do it. But I have in speaking been carried out of the course, for the ancients have put together the words in the way as they lie together. But we must, if we know how to consider them artistically, to distinguish them thus, and to see whether the first and last names were laid down in a proper manner or not; for to connect them otherwise take care lest it be wrong, my dear Hermogenes, and not in the road to reason.

Hermogenes:: Perhaps so, by Zeus, Socrates.

Socrates:: What then, can you trust yourself as being able to divide them in this manner? for I cannot.

Hermogenes:: I want indeed much of doing this.

Socrates:: Let us leave it then; or are you willing we should undertake it as we best can, although we are able to look but very little into them; by stating, as we said before, in the case of the gods, that, knowing nothing of the truth, we merely conjecture the dogmas of men concerning them; so now, on the other hand, we should proceed in our own case by declaring that, if these have been distributed in the best way either by us or by any other, they ought to have been so divided; but now it will be requisite for us to be busy about them as it said, as best we may. Or how say you?

Hermogenes:: It seems so to me.

Socrates:: I think, Hermogenes, it will appear ridiculous for things to become manifest through being imitated by letters and syllables. And yet it must be so. For we have not any thing better than this, to which we can refer, touching the truth of the first names; unless, indeed, as the writers of tragedies, when they are in any difficulty, fly to their machinery and introduce the gods, so we shall be released by asserting that the gods founded the first names, and that on this account they exist correctly. Is not this the best of reasons? or the other, that we have got them from some Barbarians?—for the Barbarians are more ancient than us.—Or that, through their antiquity it is impossible to perceive their meaning, as is the case with the Barbaric names? But all these would be the not very clever evasions on the part of him who is not willing to give a reason for the right imposition of the first names; although he who does not know the propriety of the first names, is surely unable to know that of the subsequent, which must necessarily be made manifest from the former, of which he knows nothing. But it is evident, that he who professes to be skilled in subsequent names ought to be able to explain the first, in the best and clearest manner, or to be well convinced that, as regards the subsequent, he is a mere trifler. Or does it appear otherwise to you?

Hermogenes:: Not otherwise, Socrates, in any respect whatever.

Socrates:: What I formerly fancied about the first names, appear to me now very saucy and ridiculous. If you wish it then, I will communicate them to you; but if you have any thing better to obtain from any quarter, communicate it to me.

Hermogenes:: I will do so; but do you speak now boldly.

Socrates:: In the first place then ρ appears to me to be, as it were, the organ of all motion; although we have not yet stated why Κίνησις has this name. It is evident however that it implies ἴεσις going; for η was not used formerly, but ει. Its origin is from κίειν to go, which is a foreign name, and signifies ἰέναι. If then any one could find out its ancient name, when transferred to our tongue, it might be very properly called ἴεσις. But now from the foreign name κίειν, and the change of the η, together with the interposition of the ν, it is called κίνησις, but it ought to be called κίειισις or ἴεσις. But Στάσις standing is the negation of ἰέναι to go; and for the sake of elegance is called στάσις. The element therefore ρ, as I said, appeared to the founder of names to be a beautiful instrument of motion, for the purpose of expressing a similitude to rushing on; and hence he in many places employed it for this purpose. And in the first place, the words Ῥεῖν to flow and Ῥοὴ flowing imitate a rushing on by this letter; and in the next place, in the words Τρόμος trembling and Τραχὺς; rough; also in such verbs as Κρούπτειν, to strike, Θραύειν to break, Ἐρείκειν to pierce, Θρύπτειν to fritter, Κερματίζειν to cut into small pieces, and Ῥυμβεῖν to rumble: in all these he made for the most part a resemblance to ρ to a rushing-on. For he saw that the tongue remains quiet for the least time on this letter, but is moved the most; and hence it appears to me that he employed this letter for those words, but the ι for all things attenuated, which especially go through all things. And hence he imitated, by the words ἰέναι to go and ἵεσθαι to be sent, ι, just as by ϕ, ψ, σ, and ζ, because these letters are inflated, the name-giver imitated all such things as Ψυχρὸν cold, Ζέον boiling, Σείεσθαι to be shaken, and universally Σεισμὸν a shaking. And when the name-founder would imitate any thing inflated, he every where, for the most part, appears to have introduced such-like letters. But he seems to have thought that the power of compression in δ and τ, and the pushing the tongue against the roof of the mouth, were useful for the imitation of the words Δεσμὸς bond and στάσις standing. But perceiving, on the other hand, that the tongue moves glibly in λ, by means of the resemblance he formed the names Λεῖα smooth, and the very word Ολισθάνειν to slide, Λιπαρὸν oily, Κολλῶδες glue-like, and all other such-like words. But where the power of γ lays hold of the tongue, sliding through λ, he imitated the Γλισχρὸν stickiness in Γλυκὺ sweet and Γλοιῶδες viscous. Perceiving likewise that the sound of the ν was within, he made the names Ἔνδον the within and Εντὸς within, that he might assimilate the acts to the letters. But he assigned α to Μέγας great and η to Μῆκος length, because these letters are great. But requiring for Γογγύλος round the sign of ο, he mixed up ο for the most part in that name. And thus too the name-giver appears to have forced, as regards both letters and syllables, other circumstances to each of existing things, making both a mark and name; and from these to have composed what still remains, by imitating in this way. Such, Hermogenes, appears to me to be the propriety in names, unless Cratylus here asserts any thing else.

Hermogenes:: In truth, Socrates, Cratylus very often gives me much trouble, as I stated at the beginning, by his asserting that there is a propriety in names; but he does not clearly inform me what it is; so that I am unable to know whether he thus obscurely speaks on each occasion willingly or unwillingly. Now then, Cratylus, state before Socrates, whether what Socrates says respecting names is pleasing to you, or whether you have any thing better to produce? and if you have, mention it, so that either you may learn from Socrates, or teach us both.

Cratylus:: But what, Hermogenes, does it appear to you to be an easy matter to learn and teach any thing so suddenly, and much less that which seems to be amongst the greatest?

Hermogenes:: To me, by Zeus, it does not. But the saying of Hesiod appears to me well said, that, should one a little to a little add, there would be something done of moment. If then you are able to do any thing at all, although but trifling, do not be faint-hearted, but benefit Socrates here, for you can, and me.

Socrates:: I would not myself, Cratylus, confidently assert a single point of what I have said above. But I have considered with Hermogenes in the way it seemed good to me; so that, on this account at least, speak boldly, as I am ready to receive it, if you have any thing better to say than this. Nor shall I wonder, if you have something to say better; for you seem to me to have considered things of this kind yourself, and to have learnt them from others. Should you then say any thing better, write me down as one of your disciples respecting the propriety of names.

Cratylus:: And in truth, Socrates, I have, as you say, made this the subject of my meditations; and perhaps I shall cause you to become one of my disciples. And yet I fear that the very contrary of all this will take place. For somehow it comes into my mind to say to you, what

Achilles did to Aias in that part of the poem called Λιταὶ supplications. For he says;

> "Aias, of Telamon the son, and sprung
> From Zeus, and leader of the people, all
> 'To my own heart thou seem'st to have well said."

And you too, Socrates, seem to have acted the prophet in a reasonable manner according to my notions, whether you were inspired by Euthyphron, or whether some other muse has been existing in you in secret.

Socrates:: My good Cratylus, I have for a long time ago been wondering myself at my own wisdom; and still do not believe it. I think it therefore requisite for me to examine again what I am saying. For to be deceived by one's own self is the most terrible of all things; for since the deceiver is never for a moment absent, but always present, how can it not be terrible? It is necessary then, as it seems, to turn ourselves frequently to what has been said before, and to endeavor, according to the saying of the poet, "to look at the same time before and behind." Let us then now take a view of what has been asserted. We said then, that the propriety of name is that which points out the quality of a thing. Shall we say that this is sufficiently laid down?

Cratylus:: To me, Socrates, it appears to be very much so.

Socrates:: Names then are spoken for the sake of teaching?

Cratylus:: Entirely so.

Socrates:: Shall we not therefore say that this is an art, and that there are workmen of it.

Cratylus:: Perfectly so.

Socrates:: But who are they?

Cratylus:: Those name-givers which you spoke of at the beginning.

Socrates:: Shall we then say, that this art subsists in men, like other arts also, or not? I mean to say some such thing as this. Painters are surely some worse, some better.

Cratylus:: Entirely so.

Socrates:: Will not the better exhibit more beautiful pictures of animals as their productions; but the worse, worse? And in like manner, do not builders erect some more beautiful dwellings, others more ugly?

Cratylus:: Yes.

Socrates:: And with respect to name-givers, will not some exhibit their works more beautiful, others more ugly?

Cratylus:: This does not appear to me.

Socrates:: Does it not therefore appear to you, that some name-workers are better and others worse?

Cratylus:: It certainly does not.

Socrates:: And does not one name seem to you to be better laid down than another?

Cratylus:: It does not.

Socrates:: Are all names then correctly laid down?

Cratylus:: As far as they are names.

Socrates:: But what then shall we say to the name of Hermogenes here, which we spoke of before? Shall we say that this name was not rightly given him. unless something of Ἑρμοῦ γενέσεως of the generation of Hermes belongs to him, or that it was indeed given him, but not correctly?

Cratylus:: It seems to me, Socrates, to be not given to him, but only appears to be given; but that this is the name of some other person, whose nature points out the name.

Socrates:: Will not then a person say false, who says that he is Hermogenes? for see, lest on the other hand even this be possible, to call this person Hermogenes, if he is not so.

Cratylus:: How say you?

Socrates:: Does your reasoning mean this, that it is impossible to speak a falsehood? For there are many, my dear Cratylus, who say this now, and have said it of old.

Cratylus:: How is it possible, Socrates, that, when any one speaks about any thing, he should speak about that which is not? Or is not this to speak a falsehood, to speak of things which are not?

Socrates:: This reasoning, my friend, is more clever than suits me or my time of life. But however tell me thus much. Does it appear to you not possible to speak about a falsehood, but possible to pronounce it?

Cratylus:: It appears to me not possible even to pronounce it.

Socrates:: Nor to speak of, nor to address you. As, for instance, if any one, meeting you, should, through his feeling as an host, take you by the hand, and say, All hail, Athenian guest, Hermogenes, son of Smicrion—would he say this, or pronounce this, or speak of this, or thus address, not you, but Hermogenes here, or no one?

Cratylus:: It appears to me, Socrates, that he would pronounce these words in vain.

Socrates:: With this then let us be contented. But whether would he, who pronounced these words, pronounce that which is true or false? Or would a part be true, and a part false? for this last would be sufficient.

Cratylus:: I should say, that such a one would, moving himself in vain, make a noise, as the person would, who should move a piece of brass and strike it.

Socrates:: Come then, Cratylus, and see since we are reconciled somehow, would you not say that the name is one thing, and that, of which it is the name, is another?

Cratylus:: I would.

Socrates:: And do you not confess, that the name is some imitation of a thing?

Cratylus:: Most of all.

Socrates:: And do you not say, that pictures are in some other manner imitations of certain things?

Cratylus:: I do.

Socrates:: Come then—for perhaps I do not understand sufficiently what you mean, although you are perhaps speaking correctly—is it possible to distribute and assign both these imitations, the pictures and the names, to the things, of which they are imitations, or not?

Cratylus:: It is possible.

Socrates:: But consider this first. Can any one assign the image of a man to a man, and that of a woman to a woman; and so in other things?

Cratylus:: Entirely so.

Socrates:: And is it possible, on the contrary, to assign the image of a man to a woman, and that of a woman to a man?

Cratylus:: This also is possible.

Socrates:: Are then both these assignments correct: or only one of them?

Cratylus:: Only one of them.

Socrates:: That, I think, which assigns to each, what is suited to it and similar?

Cratylus:: It appears so to me.

Socrates:: Lest then you and I, who are friends in fact, should become foes in words, receive from me what I say. For, my friend, I call such a distribution in the case of both imitations pictures of animals and names correct; but in the case of names, in addition to its being correct, true likewise: but I call the other, the giving and introduction, relating to the dissimilar, not correct; and, when it takes place in names, false.

Cratylus:: But consider, Socrates, whether this may not be in the case of paintings, to make an incorrect distribution, but in the case of names, not so; but that in this it is always necessarily correct.

Socrates:: How say you? In what doe this differ from that? May not a person, on meeting a man, say to him, “This is your picture,” and show him, it may be, his own likeness, or it may be, that of a woman? by showing, I mean, placing it before the sense of seeing.

Cratylus:: Entirely so.

Socrates:: But what, may he not again, meeting with the same person, say to him, “This is your name?” for a name, as well as a painting, is an imitation. I mean this. May he not say, “This is your name?” And after this, may he not present to the sense of hearing, it may be, an imitation of himself, by saying that it is a man; and, it may be, an imitation of a female of the human species, by saying that it is a woman? Does it not appear to you, that it is possible for this to occur sometimes?

Cratylus:: I am willing to concede it, Socrates; and let it be so.

Socrates:: You do well, my friend, if such be the state of the case; for there is no need at present to contest much about it. If, then, there is a distribution of this kind on this point in names, we are willing to say that one of these speaks truly, but the other falsely. And if this be the case, and it is possible to distribute nouns not correctly, and not to assign things adapted to each, and to assign what is not adapted, it will be possible to do the very same thing with verbs. And if it is possible to thus put down verbs and nouns, there is a necessity to do so with sentences likewise; for sentences are, I think, but the putting together of those. Or how say you, Cratylus?

Cratylus:: Thus; for you appear to me to speak beautifully.

Socrates:: If then we assimilate the first names to letters, it is possible, as in the pictures of animals, to assign all the fitting colors and figures; and on the other hand, not to assign all, but to leave some and to add others, more and greater. Is it not so?

Cratylus:: It is.

Socrates:: Does not he then, who assigns every thing proper, render beautiful both letters and resemblances; but he, who adds or takes away, works out indeed letters and images, but such as are faulty?

Cratylus:: Certainly.

Socrates:: But what does the person imitating the essence of things through syllables and letters? Will not there be, according to the same reasoning, a beautiful image, when he assigns every thing fitting? Now this is a name. But if he is deficient even in small matters, or sometimes makes an addition, a resemblance will be produced, but not a beautiful one, so that some of the names will be beautifully formed, but others badly?

Cratylus:: Perhaps so.

Socrates:: Perhaps then the one will be a good artificer of names, but the other a bad one.

Cratylus:: Certainly.

Socrates:: Now was not the name of this person a name-founder?

Cratylus:: Yes.

Socrates:: Perhaps then, by Zeus, as in other arts, one name-founder is good and another bad, if we agree in what has been said before.

Cratylus:: It is so. But you surely perceive, Socrates, that, when we assign the letters α and β, and each of the elements to names, according to the grammatical art, if we take away, add, or change any thing, a name indeed is written by us, yet not properly; or it is not written at all; but there is immediately something else, if it suffers any thing of this kind.

Socrates:: See, Cratylus, lest in viewing the matter in this way, we do not view it correctly.

Cratylus:: How then?

Socrates:: Perhaps such things as must necessarily be or not, when composed of a certain number, suffer what you say; as in the case of ten things, or whatever other number you will, if you take away or add aught, it immediately becomes some other number. But see that there is not the same propriety in the case of any certain quality and of every resemblance, but a contrary one; and that it is not necessary to assign to an image all such as is that which one represents, if it is about to be a resemblance. But consider if I say any thing to the purpose. Would there not be two things, such as Cratylus and the resemblance of Cratylus, if any one of the gods should not only make a likeness of yourself in color and figure, as painters do, but should make all the inward parts such as yours are, and infuse into them the same softness, and warmth, and motion, and soul, and intellect, as is in you; and, in one word, fashion every thing as you have, and place such other things close to you, whether would there be one Cratylus, and a resemblance of Cratylus, or two Cratyluses?

Cratylus:: It appears to me, Socrates, that there would be two.

Socrates:: You see then, my friend, that it is necessary to seek after another propriety of a resemblance than what we just now spoke of; and that there is no necessity, that, if any thing is taken away or added, for it to be any longer a resemblance. Or do you not perceive how much resemblances want from being the same as their patterns?

Cratylus:: I do.

Socrates:: Those things then, of which the names are names, would suffer a ridiculous fate through their names, if they were in every respect assimilated to them; for all things would become double; nor could one tell of either of them, which was the thing itself and which the name.

Cratylus:: You speak the truth.

Socrates:: Boldly then, my noble fellow, admit that one name is well imposed and another not; nor compel it to have every letter, in order that it may be really such as is that, of which it is the name; but suffer it to introduce a letter which is not fitting, and if you suffer a letter to do so, suffer likewise a noun in a discourse; and if a noun, suffer a sentence not suited to things to be introduced in a discourse, and not less a thing to be named and spoken of, so long as the type exists of the thing respecting which there is the discourse; just as in the names of the elements, which, if you remember, I and Hermogenes just now discussed.

Cratylus:: I do remember.

Socrates:: It is well. For when this the type is there, although it may not have all that is fitting, yet the thing itself will be told correctly, when all fitting things are there; incorrectly, when only a few. But let us now, blessed man! permit that the thing is spoken of, in order that we may not, like those who walk about late at night in Ægina, owe a debt; and thus appear to have arrived at the things by the truth itself, later than is becoming. Or at least seek after some other propriety of name, and do not confess that an indication by letters and syllables is a name: for, if you admit both these assertions, you cannot be consistent with yourself.

Cratylus:: But you appear to me, Socrates, to speak in a moderate manner; and I so do put down my vote.

Socrates:: Since then the same things seem good to us after these, let us consider this too. We say, that if the name is about to be properly imposed, it ought to have fitting letters.

Cratylus:: Yes.

Socrates:: And it ought to have the letters similar to things?

Cratylus:: Entirely so.

Socrates:: Such then as are beautifully composed are composed in this manner. But if any one is not correctly composed, it will perhaps, for the most part, consist of fitting and similar letters, if it shall be a resemblance; but it will have a portion not fitting, through which the name would be neither beautiful nor beautifully formed. Shall we speak in this way, or otherwise?

Cratylus:: There is no need, I think, to quarrel, Socrates; although it does not please me to say, that a name exists, and yet is not beautifully composed.

Socrates:: Does this too not please you, that the name is an indication of a thing?

Cratylus:: It does please me.

Socrates:: And does it not seem to you to be well said, that of names some are formed from the preceding, and others are themselves the first?

Cratylus:: To me it seems so.

Socrates:: But if the first names should be indications of certain things, have you any better method for their being indications than to make them as nearly as possible such as are the things which they ought to indicate? Or does the method which Hermogenes and many others speak of please you more, that names are conventional, and indicate their meaning to those who have agreed together and known beforehand the things so named; and that in this conventionality exists the propriety of names; and that it matters not whether any one agrees to call them, as they are at present imposed, or the contrary, to call that which is now small ο great ω, and great ω small ο? Which of these methods is agreeable to you?

Cratylus:: It is wholly and universally, Socrates, better to indicate by a resemblance what one wishes to indicate, but not by any chance method.

Socrates:: You speak well. If then the name shall be similar to a thing, is it not necessary for the elements, from which a person shall have composed the first names, to be naturally similar to the things themselves? My meaning is this, Could any one put together a picture, which we have just now said is the resemblance of something existing, unless the pigments, from which the picture of living things is composed, were naturally similar to those which the art of painting imitates? Or is it impossible?

Cratylus:: Impossible.

Socrates:: In like manner then names would never become similar to any thing, unless the things, from which names are composed, possessed originally at first some similitude to those of which the names are the imitations. Now elements are the things from which names are to be composed.

Cratylus:: Yes.

Socrates:: You therefore now take a share in the discourse which Hermogenes did a little before. Come then, do we seem to you to have said correctly, or not, that the letter ρ is similar to a rushing-on, and to motion, and to hardness?

Cratylus:: To me, correctly.

Socrates:: And that the letter λ is similar to the smooth and soft, and to what we just now mentioned?

Cratylus:: Yes.

Socrates:: Do you know then that for the same thing we say Σκληρότης, but the Eretrians Σκληρότηρ?

Cratylus:: Entirely so.

Socrates:: Do then both ρ and σ seem to be similar to the same thing? and does that word indicate the same thing to them, ending with a ρ, as it does to us ending with a ς? or does it indicate nothing to the others of us.

Cratylus:: It indicates one thing to both.

Socrates:: Whether in that ρ and ς are similar, or in that they are not?

Cratylus:: In that they are similar.

Socrates:: Are they then similar in every way?

Cratylus:: At least in indicating a rushing-on.

Socrates:: But what as regards the inserted λ? Does it not indicate the contrary of hardness?

Cratylus:: Perhaps, Socrates, it is not correctly inserted; just as in the names which you lately mentioned to Hermogenes, by taking away and adding letters where it was requisite. And you then appeared to me to act properly. And now, perhaps, ρ ought to be inserted instead of λ.

Socrates:: You say well. What then, do we, as we are now speaking, mutually understand nothing, when one pronounces the hard word σκληρόν hard? And do you not understand what I am saying?

Cratylus:: I do, my very good friend, through custom.

Socrates:: But in saying custom, do you think you are saying any thing different from convention? Or do you call custom any thing else than this, that when I pronounce this word, I understand it, and you know that I understand it? Do you not mean this?

Cratylus:: Certainly.

Socrates:: If then you know this, when I pronounce it, there is an indication of something to you through me.

Cratylus:: Certainly.

Socrates:: From that which is dissimilar to what I have in mind, when I pronounce it, if λ is dissimilar to the σκληρότης, which you pronounce. And if this is the case, what else is it, than that you have made a convention with yourself, and that the propriety of the name is a compact with yourself; since both similar and dissimilar letters, when meeting with custom and compact, indicate the same thing to you? But if custom is very far from being a compact, it will be no longer proper to say that similitude is an indication, but custom rather: for this, as it appears, indicates both by the similar and the dissimilar. Since then, Cratylus, we agree in this—for I will put down your silence as consent, it is surely necessary that compact and custom should contribute to the indication of what we have in mind and pronounce; since if, O best of men! you are willing to come to number, from whence do you think you will be able to attribute similar names to each number, if you do not permit this consent and compact of yours to possess some authority about the propriety of names? It pleases me, indeed, that names should be, as much as possible, similar to things; but yet I fear, lest perchance the attraction of this similitude be really very slight, according to the language of Hermogenes, and that it will be necessary for us to make use of that ridiculous thing, called compact, as regards a propriety of names; since words will be spoken perhaps in the most beautiful manner possible, when they shall be spoken by letters either entirely, or for the most part similar, that is, fitting; but in the most ugly manner, when the contrary takes place. But after these still tell me this. What power do names possess with respect to us, and what beautiful effect must we say they produce?

Cratylus:: To me, Socrates, they appear to teach; and that it is without exception true, that he who knows the names, knows the things likewise.

Socrates:: Perhaps, Cratylus, you mean some such thing as this; that when any one knows the quality of the name,—now it is of the same quality as the thing,—he then also knows the thing; since it is similar to the name; and that there is one and the same art in all things, which are similar to one another; and in consequence of this you appear to me to assert, that he, who knows the names, knows also the things.

Cratylus:: You speak most truly.

Socrates:: Come now, let us see what is this mode of teaching existing things, of which you are now speaking, and whether there is any other method, this however being the better; or whether there is no other than this. Which do you think is the case?

Cratylus:: I think thus, that there is no other method; but that this is the only one, and the best.

Socrates:: But whether do you think that there is likewise the very same invention of things existing, and that he, who invented the names, invented also the things, of which there are the names? Or that it is necessary to seek and find another method, but to learn this?

Cratylus:: Above all things to seek after and discover the very same method, as regards the same things.

Socrates:: Come then, let us consider, Cratylus, if any one, while seeking after things, follows after names, and looks upon the quality of each, do you not consider that there is no small danger of his being deceived?

Cratylus:: How?

Socrates:: It is plain, that he, who first founded names, formed them, as we have said, such as he thought the things themselves were. Is it not so?

Cratylus:: Certainly.

Socrates:: If then he did not think rightly, but formed them, as he fancied, what think you shall we suffer, who are his followers? Is it aught else, than for us to be deceived?

Cratylus:: But see, Socrates, lest this be not the case; but that it is necessary for him, who founded the names, to have founded them knowingly; for otherwise, as I before remarked, names would never have existed. And let this be the greatest proof to you that he, who founded them, did not stumble from the truth. For all things would not have thus chimed in with him. Or, did you not perceive this yourself, when you were saying, that all names were composed according to the same, and for the same?

Socrates:: But this apology, my worthy Cratylus, is of no weight. For if the founder of names, after stumbling at first, forced the rest of the words to this point, and compelled them to chime in with himself, there is nothing strange; just as in the case of diagrams, in which sometimes the first mistake being trifling and unapparent, all the remaining parts, although very numerous, follow as they ought, and agree with each other. There ought then at the beginning of every thing to be to every person much discussion and reflection, whether the principle is properly laid down or not; and this being sufficiently examined, the rest, I say, will appear to follow it. And yet I should not wonder if names chime in with each other. For let us again consider, what we discussed before, that of the whole going on, and carried on, and flowing, the names signify to us, we say, the existence. Do they seem to you to indicate any thing else than in this way?

Cratylus:: Very much so; and that they correctly signify this.

Socrates:: Let us consider then again taking from out of them, in the first place, this name, Ἐπιστήμη science; since it is doubtful, and seems to signify that ἵστησιν it stops our soul in acts, rather than that it is borne along with them; and hence it is more proper to enunciate its beginning as now, than by throwing out ε, πιστήμη, and to make an insertion in that of ι in the place of that in ε. In the next place, the word Βεβαιον firm is so called, because it is the imitation of a certain βάσις basis, and στάσις standing, but not of φορὰ rushing-on. Again, Ἱστορία history indicates surely that ἵστησι τὸν ροῦν it stops the flowing; and the word Πιστὸν credible indicates a thing ἱστᾶν causing to stand. Likewise Μνήμη memory indicates surely to every one, that there is a μονὴ abiding in the soul, but not a rushing-on. And, if you will, Ἁμαρτία error, and Συμφορα contingency, if any one follows them according to their name, will appear to be the same with the aforesaid intelligence, and ᾿Επιστήμη science, and all the other names connected with serious matters. Still further, Ἀμαθια ignorance, and Ἀκολασία intemperance, appear to be similar to these: for ἀμαθία ignorance appears to be the march of one going ἅμα θεῷ with a god; but ἀκολασία intemperance appears to be ἀκολουθία a following in all respects of things. And thus, the names which we consider applicable to the basest things, would appear to be most similar to those applicable to the most beautiful. And I think that any one would discover many others of this kind, if he busied himself about them; from which he would imagine, that the founder of names did not indicate things going on and borne along, but such as have an abiding.

Cratylus:: And yet you see, Socrates, that he indicated many things by that notion.

Socrates:: What is this, Cratylus? Shall we count the number of names as if they were votes by pebbles? And will their propriety consist in this, that the truth will be there, to which side soever the greater number of the names appear to point.

Cratylus:: Is not this reasonable?

Socrates:: Not in the least, my friend. But let us leave these points there, and consider whether you will agree or not with us in this. Have we not lately acknowledged, that those who founded names on each occasion in cities, both Grecian and Barbarian, were name-founders, and that the art, competent for this, is name-founding.

Cratylus:: Entirely so.

Socrates:: Tell me now, did they, who were the first name-founders, found the first names, while they knew the things to which they assigned their names, or did not know?

Cratylus:: I think, Socrates, while they knew them.

Socrates:: For surely, friend Cratylus, they could not do so while they did not know.

Cratylus:: It does not appear to me that they could.

Socrates:: Let us then return to the point from whence we digressed; for you just now, in what has preceded, stated, if you recollect, that he, who founded names, must have previously known the things to which he assigned their names. Are you then of this opinion still, or not?

Cratylus:: Still.

Socrates:: Say you, that he who founded the first names, founded them knowing the things?

Cratylus:: Knowing them.

Socrates:: From what names then did he either learn or find out the things, if the first names were not yet laid down? But, on the other hand, said we not, that it is impossible to learn and find out the things by any other way, than by learning or finding out ourselves the quality of names?

Cratylus:: You appear to me, Socrates, to say something to the purpose.

Socrates:: After what manner then shall we say that they knew the things and founded their names? or that there were name-founders before any name whatever was laid down, and that they knew the things, if indeed it is impossible to learn things otherwise than from names?

Cratylus:: I think, Socrates, that the account respecting these matters is the most true, which says that a power greater than that of man assigned the first names to things, so that they must of necessity be in a correct state.

Socrates:: Do you think then that he who laid down names, whether he was a certain dæmon, or a god, would lay down things contrary to himself? Or do we appear to you, to have just now said nothing to the purpose?

Cratylus:: But see lest the other sort of these are not names.

Socrates:: Which sort, thou best of men? those which lead to standing, or those to rushing-on? For, as we just now said, it will not be determined by their number.

Cratylus:: It is thus indeed just, Socrates.

Socrates:: The names then being divided into factions, and some asserting that they are like the truth, and others that they are, how shall we decide? or to what tribunal go? For surely we cannot go to other names, different from these; for there are no others. But it is plain that certain other things, besides names, must be sought after, which will show us, without names, which of these are true, after having pointed out, it is evident that, the truth of things.

Cratylus:: It appears so to me.

Socrates:: It is possible, therefore, Cratylus, if such be the case, to learn, as it seems, existing things without names.

Cratylus:: It appears so.

Socrates:: Through what else then do you expect to learn them? Is it through any thing else than what is reasonable and most just, through their communion with each other, if they are in any way mutually allied, and especially through themselves? For surely that, which is different from and foreign to these, would indicate something different and foreign, but not them?

Cratylus:: You appear to me to speak the truth.

Socrates:: But hold, by Zeus. Have we not often confessed that names properly imposed are like the things, of which they are the names laid down, and are the resemblances of the things?

Cratylus:: Yes.

Socrates:: If then one may learn, as much as possible, the things through names, and likewise through themselves, which will be the best and clearest method of learning? To learn from a resemblance, both itself, whether it is a beautiful likeness, and likewise the truth, of which it is the resemblance; or from the truth, both itself, and whether its resemblance has been fashioned in a becoming manner?

Cratylus:: There appears to me a necessity to learn from the truth.

Socrates:: After what manner then one must learn, or find out existing things, is perhaps a greater task than for me and you to know; and we must be content to confess this, that they are to be learned and sought for, not from the names, but much rather themselves from themselves?

Cratylus:: It appears so, Socrates.

Socrates:: Still further let us consider this; that these many names tending to the same thing may not deceive us; if, in reality, they who founded them considered all things as going-on ever and flowing—for they appear to me to have so considered—and if this were the case it would not thus be well. But these men have fallen, as it were, into a certain vortex, and are themselves stirred about, and by dragging us along, hurl us into it. For consider, O wondrous Cratylus, what I often dream about, whether we should say or not that there exists in the abstract the beautiful and the good, and each of the things existing.

Cratylus:: It appears to me, Socrates, that there does exist.

Socrates:: Let us then consider that very thing, not as if a countenance or any thing of this kind were beautiful—for all these appear to flow—but shall we say that beauty in the abstract is not always such as it is?

Cratylus:: We must.

Socrates:: Can one then correctly say, if it is always secretly going away, first, that it is, and next, that it is of such a kind? Or is it necessary, while we are speaking about it, for it to become immediately something else, and to secretly withdraw itself, and to be such no longer.

Cratylus:: It is necessary.

Socrates:: How then can that be any thing, which never subsists in a similar manner? For if it ever subsists in a similar manner, during that time when it subsists in a similar manner, it is evident that it does not change; but, if it always subsists in a similar manner, and is the same, how can it change, or be moved, not having started out from its own form of existence?

Cratylus:: By no means.

Socrates:: But neither can it be known by any one. For, as soon as that approaches which is about to know it, it becomes something else, and of a different kind, so that it cannot be known of what quality it is, or how it subsists. Now surely no knowledge knows that, which it knows has no manner of subsistence.

Cratylus:: It is as you say.

Socrates:: But neither, Cratylus, is it reasonable to say that knowledge exists, if all things change and fall away, and nothing abides. For if this very thing I mean knowledge itself does not change and fall away, so as to be not knowledge, it would remain for ever knowledge, and be knowledge; but if the form itself of knowledge changes and falls away, it will at the same time change and fall away into a form different from knowledge, and will be knowledge no longer; but if it always changes and falls away, it will always be not knowledge: and by this reasoning there would be neither the thing about to know, nor that about to be known. But if that always subsists which knows, then that which is known subsists, and the beautiful subsists, and the good subsists, and each single thing else of those existing; nor do these appear to me to be really similar to the flowing, or rushing-on, of which we were speaking. But whether these things subsist in this way, or in the way that the followers of Heraclitus and many others assert, see that it is by no means an easy subject of inquiry; nor is it the part of a person possessing much mind, to give himself up, and his own soul, to the study of names, and confiding in them and those that founded them, to make a bold assertion, as if he knew something, and to give a verdict against himself and existing things, as if nothing of any thing were sound, but that all things did, like unsound vessels of clay, let the water run through; and really, like persons laboring under a catarrh, fancy that things are so disposed, and things are seized with a flowing and catarrh. Perhaps then, Cratylus, this is the case, and perhaps not. Hence it is proper to reflect upon this well and manfully, and not to receive any thing easily: for as yet you are a young man, and possess the vigor of age; and if, after reflecting, you discover any thing, communicate it to me.

Cratylus:: And so I will do. But rest assured, Socrates, that even now I am not without consideration; but to me on reflection, and having had trouble, it appears to be much more on that side as Heraclitus asserts.

Socrates:: Do you then hereafter, my friend, when you return hither, instruct me; but now, as you have made preparations, proceed to the country; and Hermogenes, here, will attend you.

Cratylus:: This shall be, Socrates; and do you also endeavor to think upon these matters, as is meet.

# Cratylus

Translated by Benjamin Jowett.

PERSONS OF THE DIALOGUE.

Hermogenes, Cratylus, Socrates.

Hermogenes:: Suppose that we make Socrates a party to the argument.

Cratylus:: If you please.

Hermogenes:: I should explain to you, Socrates, that our friend Cratylus has been arguing about names. He says that they are natural and not conventional—not a portion of the human voice which men agree to use—but that there is a truth or correctness in them, which is the same for Hellenes as for barbarians. Whereupon I ask him whether his own name of Cratylus is a true name or not, and he answers yes. And Socrates? Yes. Then every man's name, as I tell him, is that which he is called. To this he replies, If all the world were to call you Hermogenes, that would not be your name. And when I am anxious to have a further explanation he is ironical and mysterious, and seems to imply that he has a notion of his own about the matter if he would only tell, and could entirely convince me if he chose to be intelligible. Tell me, Socrates, what this oracle means, or rather tell me, if you will be so good, what is your own view of the truth or correctness of names, which I would far sooner hear.

Socrates:: Son of Hipponicus, there is an ancient saying that ‘hard is the knowledge of the good.' And the knowledge of names is a great part of knowledge. If I had not been poor, I might have heard the fifty-drachma course of the great Prodicus, which is a complete education in grammar and language—these are his own words—and then I should have been at once able to answer your question about the correctness of names. But, indeed, I have only heard the single drachma course, and therefore I do not know the truth about such matters. I will, however, gladly assist you and Cratylus in the investigation of them. When he declares that your name is not really Hermogenes, I suspect that he is only making fun of you; he means to say that you are no true son of Hermes, because you are always looking after a fortune and never in luck. But, as I was saying, there is a good deal of difficulty in this sort of knowledge, and therefore we had better leave the question open until we have heard both sides.

Hermogenes:: I have often talked over this matter, both with Cratylus and others, and cannot convince myself that there is any principle of correctness in names other than convention and agreement. Any name which you give, in my opinion, is the right one, and if you change that and give another, the new name is as correct as the old—we frequently change the names of our slaves, and the newly imposed name is as good as the old. For there is no name given to anything by nature; all is convention and habit of the users.

Such is my view. But if I am mistaken I shall be happy to hear and learn of Cratylus, or of anyone else.

Socrates:: I dare say that you may be right, Hermogenes. Let us see—your meaning is that the name of each thing is only that which anybody agrees to call it?

Hermogenes:: That is my notion.

Socrates:: Whether the giver of the name be an individual or a city?

Hermogenes:: Yes.

Socrates:: Well, now, let me take an instance. Suppose that I call a man a horse or a horse a man. You mean to say that a man will be rightly called a horse by me individually, and rightly called a man by the rest of the world, and a horse again would be rightly called a man by me and a horse by the world—that is your meaning?

Hermogenes:: He would, according to my view.

Socrates:: But how about truth, then? You would acknowledge that there is in words a true and a false?

Hermogenes:: Certainly.

Socrates:: And there are true and false propositions?

Hermogenes:: To be sure.

Socrates:: And a true proposition says that which is, and a false proposition says that which is not?

Hermogenes:: Yes, what other answer is possible?

Socrates:: Then in a proposition there is a true and false?

Hermogenes:: Certainly.

Socrates:: But is a proposition true as a whole only, and are the parts untrue?

Hermogenes:: No, the parts are true as well as the whole.

Socrates:: Would you say the large parts and not the smaller ones, or every part?

Hermogenes:: I should say that every part is true.

Socrates:: Is a proposition resolvable into any part smaller than a name?

Hermogenes:: No, that is the smallest.

Socrates:: Then the name is a part of the true proposition?

Hermogenes:: Yes.

Socrates:: Yes, and a true part, as you say.

Hermogenes:: Yes.

Socrates:: And is not the part of a falsehood also a falsehood?

Hermogenes:: Yes.

Socrates:: Then, if propositions may be true and false, names may be true and false?

Hermogenes:: So we must infer.

Socrates:: And the name of anything is that which anyone affirms to be the name?

Hermogenes:: Yes.

Socrates:: And will there be so many names of each thing as everybody says that there are? And will they be true names at the time of uttering them?

Hermogenes:: Yes, Socrates, I can conceive no correctness of names other than this. You give one name, and I another, and in different cities and countries there are different names for the same things. Hellenes differ from barbarians in their use of names, and the several Hellenic tribes from one another.

Socrates:: But would you say, Hermogenes, that the things differ as the names differ? And are they relative to individuals, as Protagoras tells us? For he says that man is the measure of all things, and that things are to me as they appear to me, and that they are to you as they appear to you. Do you agree with him, or would you say that things have a permanent essence of their own?

Hermogenes:: There have been times, Socrates, when I have been driven in my perplexity to take refuge with Protagoras, not that I agree with him at all.

Socrates:: What! Have you ever been driven to admit that there was no such thing as a bad man?

Hermogenes:: No, indeed, but I have often had reason to think that there are very bad men, and a good many of them.

Socrates:: Well, and have you ever found any very good ones?

Hermogenes:: Not many.

Socrates:: Still you have found them?

Hermogenes:: Yes.

Socrates:: And would you hold that the very good were the very wise, and the very evil very foolish? Would that be your view?

Hermogenes:: It would.

Socrates:: But if Protagoras is right, and the truth is that things are as they appear to anyone, how can some of us be wise and some of us foolish?

Hermogenes:: Impossible.

Socrates:: And if, on the other hand, wisdom and folly are really distinguishable you will allow, I think, that the assertion of Protagoras can hardly be correct. For if what appears to each man is true to him, one man cannot in reality be wiser than another.

Hermogenes:: He cannot.

Socrates:: Nor will you be disposed to say with Euthydemus that all things equally belong to all men at the same moment and always, for neither on his view can there be some good and others bad, if virtue and vice are always equally to be attributed to all.

Hermogenes:: There cannot.

Socrates:: But if neither is right, and things are not relative to individuals, and all things do not equally belong to all at the same moment and always, they must be supposed to have their own proper and permanent essence;

they are not in relation to us, or influenced by us, fluctuating according to our fancy, but they are independent, and maintain to their own essence the relation prescribed by nature.

Hermogenes:: I think, Socrates, that you have said the truth.

Socrates:: Does what I am saying apply only to the things themselves, or equally to the actions which proceed from them? Are not actions also a class of being?

Hermogenes:: Yes, the actions are real as well as the things.

Socrates:: Then the actions also are done according to their proper nature, and not according to our opinion of them? In cutting, for example, we do not cut as we please, and with any chance instrument, but we cut with the proper instrument only, and according to the natural process of cutting, and the natural process is right and will succeed, but any other will fail and be of no use at all.

Hermogenes:: I should say that the natural way is the right way.

Socrates:: Again, in burning, not every way is the right way, but the right way is the natural way, and the right instrument the natural instrument.

Hermogenes:: True.

Socrates:: And this holds good of all actions?

Hermogenes:: Yes.

Socrates:: And speech is a kind of action?

Hermogenes:: True.

Socrates:: And will a man speak correctly who speaks as he pleases? Will not the successful speaker rather be he who speaks in the natural way of speaking, and as things ought to be spoken, and with the natural instrument? Any other mode of speaking will result in error and failure.

Hermogenes:: I quite agree with you.

Socrates:: And is not naming a part of speaking? For in giving names men speak.

Hermogenes:: That is true.

Socrates:: And if speaking is a sort of action and has a relation to acts, is not naming also a sort of action?

Hermogenes:: True.

Socrates:: And we saw that actions were not relative to ourselves, but had a special nature of their own?

Hermogenes:: Precisely.

Socrates:: Then the argument would lead us to infer that names ought to be given according to a natural process, and with a proper instrument, and not at our pleasure; in this and no other way shall we name with success.

Hermogenes:: I agree.

Socrates:: But again, that which has to be cut has to be cut with something?

Hermogenes:: Yes.

Socrates:: And that which has to be woven or pierced has to be woven or pierced with something?

Hermogenes:: Certainly.

Socrates:: And that which has to be named has to be named with something?

Hermogenes:: True.

Socrates:: What is that with which we pierce?

Hermogenes:: An awl.

Socrates:: And with which we weave?

Hermogenes:: A shuttle.

Socrates:: And with which we name?

Hermogenes:: A name.

Socrates:: Very good. Then a name is an instrument?

Hermogenes:: Certainly.

Socrates:: Suppose that I ask, What sort of instrument is a shuttle? And you answer, A weaving instrument.

Hermogenes:: Well.

Socrates:: And I ask again, What do we do when we weave? The answer is that we separate or disengage the warp from the woof.

Hermogenes:: Very true.

Socrates:: And may not a similar description be given of an awl, and of instruments in general?

Hermogenes:: To be sure.

Socrates:: And now suppose that I ask a similar question about names. Will you answer me? Regarding the name as an instrument, what do we do when we name?

Hermogenes:: I cannot say.

Socrates:: Do we not give information to one another, and distinguish things according to their natures?

Hermogenes:: Certainly we do.

Socrates:: Then a name is an instrument of teaching and of distinguishing natures, as the shuttle is of distinguishing the threads of the web.

Hermogenes:: Yes.

Socrates:: And the shuttle is the instrument of the weaver?

Hermogenes:: Assuredly.

Socrates:: Then the weaver will use the shuttle well—and well means like a weaver? And the teacher will use the name well—and well means like a teacher?

Hermogenes:: Yes.

Socrates:: And when the weaver uses the shuttle, whose work will he be using well?

Hermogenes:: That of the carpenter.

Socrates:: And is every man a carpenter, or the skilled only?

Hermogenes:: Only the skilled.

Socrates:: And when the piercer uses the awl, whose work will he be using well?

Hermogenes:: That of the smith.

Socrates:: And is every man a smith, or only the skilled?

Hermogenes:: The skilled only.

Socrates:: And when the teacher uses the name, whose work will he be using?

Hermogenes:: There again I am puzzled.

Socrates:: Cannot you at least say who gives us the names which we use?

Hermogenes:: Indeed I cannot.

Socrates:: Does not the law seem to you to give us them?

Hermogenes:: Yes, I suppose so.

Socrates:: Then the teacher, when he gives us a name, uses the work of the legislator?

Hermogenes:: I agree.

Socrates:: And is every man a legislator, or the skilled only?

Hermogenes:: The skilled only.

Socrates:: Then, Hermogenes, not every man is able to give a name, but only a maker of names, and this is the legislator, who of all skilled artisans in the world is the rarest.

Hermogenes:: True.

Socrates:: And how does the legislator make names? And to what does he look? Consider this in the light of the previous instances. To what does the carpenter look in making the shuttle? Does he not look to that which is naturally fitted to act as a shuttle?

Hermogenes:: Certainly.

Socrates:: And suppose the shuttle to be broken in making. Will he make another, looking to the broken one? Or will he look to the form according to which he made the other?

Hermogenes:: To the latter, I should imagine.

Socrates:: Might not that be justly called the true or ideal shuttle?

Hermogenes:: I think so.

Socrates:: And whatever shuttles are wanted, for the manufacture of garments, thin or thick, of flaxen, woolen, or other material, ought all of them to have the true form of the shuttle, and whatever is the shuttle best adapted to each kind of work, that ought to be the form which the maker produces in each case?

Hermogenes:: Yes.

Socrates:: And the same holds of other instruments. When a man has discovered the instrument which is naturally adapted to each work, he must express this natural form, and not others which he fancies, in the material, whatever it may be, which he employs. For example, he ought to know how to put into iron the forms of awls adapted by nature to their several uses?

Hermogenes:: Certainly.

Socrates:: And how to put into wood forms of shuttles adapted by nature to their uses?

Hermogenes:: True.

Socrates:: For the several forms of shuttles naturally answer to the several kinds of webs, and this is true of instruments in general.

Hermogenes:: Yes.

Socrates:: Then, as to names, ought not our legislator also to know how to put the true natural name of each thing into sounds and syllables, and to make and give all names with a view to the ideal name, if he is to be a namer in any true sense? And we must remember that different legislators will not use the same syllables. For neither does every smith, although he may be making the same instrument for the same purpose, make them all of the same iron. The form must be the same, but the material may vary, and still the instrument may be equally good of whatever iron made, whether in Hellas or in a foreign country—there is no difference.

Hermogenes:: Very true.

Socrates:: And the legislator, whether he be Hellene or barbarian, is not therefore to be deemed by you a worse legislator, provided he gives the true and proper form of the name in whatever syllables—this or that country makes no matter.

Hermogenes:: Quite true.

Socrates:: But who then is to determine whether the proper form is given to the shuttle, whatever sort of wood may be used? The carpenter who makes, or the weaver who is to use them?

Hermogenes:: I should say, he who is to use them, Socrates.

Socrates:: And who uses the work of the lyre maker? Will not he be the man who knows how to direct what is being done, and who will know also whether the work is being well done or not?

Hermogenes:: Certainly.

Socrates:: And who is he?

Hermogenes:: The player of the lyre.

Socrates:: And who will direct the shipwright?

Hermogenes:: The pilot.

Socrates:: And who will be best able to direct the legislator in his work, and will know whether the work is well done, in this or any other country? Will not the user be the man?

Hermogenes:: Yes.

Socrates:: And this is he who knows how to ask questions?

Hermogenes:: Yes.

Socrates:: And how to answer them?

Hermogenes:: Yes.

Socrates:: And him who knows how to ask and answer you would call a dialectician?

Hermogenes:: Yes, that would be his name.

Socrates:: Then the work of the carpenter is to make a rudder, and the pilot has to direct him, if the rudder is to be well made.

Hermogenes:: True.

Socrates:: And the work of the legislator is to give names, and the dialectician must be his director if the names are to be rightly given?

Hermogenes:: That is true.

Socrates:: Then, Hermogenes, I should say that this giving of names can be no such light matter as you fancy, or the work of light or chance persons. And Cratylus is right in saying that things have names by nature, and that not every man is an artificer of names, but he only who looks to the name which each thing by nature has, and is able to express the true forms of things in letters and syllables.

Hermogenes:: I cannot answer you, Socrates, but I find a difficulty in changing my opinion all in a moment, and I think that I should be more readily persuaded, if you would show me what this is which you term the natural fitness of names.

Socrates:: My good Hermogenes, I have none to show. Was I not telling you just now—but you have forgotten—that I knew nothing, and was I not proposing to share the inquiry with you? But now that you and I have talked over the matter, a step has been gained, for we have discovered that names have by nature a truth, and that not every man knows how to give a thing a name.

Hermogenes:: Very good.

Socrates:: And what is the nature of this truth or correctness of names? That, if you care to know, is the next question.

Hermogenes:: Certainly, I care to know.

Socrates:: Then reflect.

Hermogenes:: How shall I reflect?

Socrates:: The true way is to have the assistance of those who know, and you must pay them well both in money and in thanks—these are the Sophists, of whom your brother, Callias, has, rather dearly, bought the reputation of wisdom. But you have not yet come into your inheritance, and therefore you had better go to him, and beg and entreat him to tell you what he has learned from Protagoras about the fitness of names.

Hermogenes:: But how inconsistent should I be, if, while repudiating Protagoras and his truth, I were to attach any value to what he and his book affirm!

Socrates:: Then if you despise him, you must learn of Homer and the poets.

Hermogenes:: And where does Homer say anything about names, and what does he say?

Socrates:: He often speaks of them—notably and nobly in the places where he distinguishes the different names which gods and men give to the same things. Does he not in these passages make a remarkable statement about the correctness of names? For the gods must clearly be supposed to call things by their right and natural names, do you not think so?

Hermogenes:: Why, of course they call them rightly, if they call them at all. But to what are you referring?

Socrates:: Do you not know what he says about the river in Troy who had a single combat with Hephaestus—'whom,' as he says, ‘the gods call Xanthus, and men call Scamander'?

Hermogenes:: I remember.

Socrates:: Well, and about this river—to know that he ought to be called Xanthus and not Scamander—is not that a solemn lesson? Or about the bird which, as he says, ‘the gods call *chalcis,* and men *cymindis'?* To be taught how much more correct the name *chalcis is* than the name *cymindis*—do you deem that a light matter? Or about Batiea and Myrina? And there are many other observations of the same kind in Homer and other poets. Now, I think that this is beyond the understanding of you and me, but the names of Scamandrius and Astyanax, which he affirms to have been the names of Rector's son, are more within the range of human faculties, as I am disposed to think, and what the poet means by correctness may be more readily apprehended in that instance. You will remember, I dare say, the lines to which I refer.

Hermogenes:: I do.

Socrates:: Let me ask you, then, which did Homer think the more correct of the names given to Rector's son—Astyanax or Scamandrius?

Hermogenes:: I do not know.

Socrates:: How would you answer, if you were asked whether the wise or the unwise are more likely to give correct names?

Hermogenes:: I should say the wise, of course.

Socrates:: And are the men or the women of a city, taken as a class, the wiser?

Hermogenes:: I should say, the men.

Socrates:: And Homer, as you know, says that the Trojan men called him Astyanax (king of the city), but if the men called him Astyanax, the other name of Scamandrius could only have been given to him by the women.

Hermogenes:: That maybe inferred.

Socrates:: And must not Homer have imagined the Trojans to be wiser than their wives?

Hermogenes:: To be sure.

Socrates:: Then he must have thought Astyanax to be a more correct name for the boy than Scamandrius?

Hermogenes:: Clearly.

Socrates:: And what is the reason of this? Let us consider.

Does he not himself suggest a very good reason, when he says, ‘For he alone defended their city and long walls'? This appears to be a good reason for calling the son of the savior king of the city which his father was saving, as Homer observes.

Hermogenes:: I see.

Socrates:: Why, Hermogenes, I do not as yet see myself, and do you?

Hermogenes:: No, indeed, not I.

Socrates:: But tell me, friend, did not Homer himself also give Hector his name?

Hermogenes:: What of that?

Socrates:: The name appears to me to be very nearly the same as the name of Astyanax—both are Hellenic. And a king (ἀναξ) and a holder (ἑκτωρ) have nearly the same meaning, and are both descriptive of a king, for a man is clearly the holder of that of which he is king—he rules, and owns, and holds it. But, perhaps, you may think that I am talking nonsense, and indeed I believe that I myself did not know what I meant when I imagined that I had found some indication of the opinion of Homer about the correctness of names.

Hermogenes:: I assure you that I think otherwise, and I believe you to be on the right track.

Socrates:: There is reason, I think, in calling the lion's whelp a lion, and the foal of a horse a horse; I am speaking only of the ordinary course of nature, when an animal produces after his kind, and not of extraordinary births. If contrary to nature a horse have a calf, then I should not call that a foal but a calf; nor do I call any inhuman birth a man, but only a natural birth. And the same may be said of trees and other things. Do you agree with me?

Hermogenes:: Yes, I agree.

Socrates:: Very good. But you had better watch me and see that I do not play tricks with you. For on the same principle the son of a king is to be called a king. And whether the syllables of the name are the same or not the same makes no difference, provided the meaning is retained; nor does the addition or subtraction of a letter make any difference so long as the essence of the thing remains in possession of the name and appears in it.

Hermogenes:: What do you mean?

Socrates:: A very simple matter. I may illustrate my meaning by the names of letters, which you know are not the same as the letters themselves with the exception of the four, ε, υ, ο, ω. The names of the rest, whether vowels or consonants, are made up of other letters which we add to them, but so long as we introduce the meaning, and there can be no mistake, the name of the letter is quite correct. Take, for example, the letter *beta—the* addition of η, τ, a gives no offense, and does not prevent the whole name from having the value which the legislator intended—so well did he know how to give the letters names.

Hermogenes:: I believe you are right.

Socrates:: And may not the same be said of a king? A king will often be the son of a king, the good son or the noble son of a good or noble sire, and similarly the offspring of every kind, in the regular course of nature, is like the parent, and therefore has the same name. Yet the syllables may be disguised until they appear different to the ignorant person, and he may not recognize them, although they are the same, just as any one of us would not recognize the same drugs under different disguises of color and smell, although to the physician, who regards the power of them, they are the same, and he is not put out by the addition. And in like manner the etymologist is not put out by the addition or transposition or subtraction of a letter or two, or indeed by the change of all the letters, for this need not interfere with the meaning. As was just now said, the names of Hector and Astyanax have only one letter alike, which is the τ, and yet they have the same meaning. And how little in common with the letters of their names has Archepolis (ruler of the city)—and yet the meaning is the same. And there are many other names which just mean *king.* Again, there are several names for a general, as, for example, Agis (leader) and Polemarchus (chief in war) and Eupolemus (good warrior), and others which denote a physician, as Iatrocles (famous healer) and Acesimbrotus (curer of mortals), and there are many others which might be cited, differing in their syllables and letters, but having the same meaning. Would you not say so?

Hermogenes:: Yes.

Socrates:: The same names, then, ought to be assigned to those who follow in the course of nature?

Hermogenes:: Yes.

Socrates:: And what of those who follow out of the course of nature, and are prodigies? For example, when a good and religious man has an irreligious son, he ought to bear the name not of his father, but of the class to which he belongs, just as in the case which was before supposed of a horse foaling a calf.

Hermogenes:: Quite true.

Socrates:: Then the irreligious son of a religious father should be called irreligious?

Hermogenes:: Certainly.

Socrates:: He should not be called Theophilus (beloved of God) or Mnesitheus (mindful of God), or any of these names—if names are correctly given, his should have an opposite meaning.

Hermogenes:: Certainly, Socrates.

Socrates:: Again, Hermogenes, there is Orestes (the man of the mountains), who appears to be rightly called, whether chance gave the name, or perhaps some poet who meant to express the brutality and fierceness and mountain wilderness of his hero's nature.

Hermogenes:: That is very likely, Socrates.

Socrates:: And his father's name is also according to nature.

Hermogenes:: Clearly.

Socrates:: Yes, for as his name, so also is his nature. Agamemnon (admirable for remaining) is one who is patient and persevering in the accomplishment of his resolves, and by his virtue crowns them, and his continuance at Troy with all the vast army is a proof of that admirable endurance in him which is signified by the name Agamemnon. I also think that Atreus is rightly called, for his murder of Chrysippus and his exceeding cruelty to Thyestes are damaging and destructive to his reputation. The name is a little altered and disguised so as not to be intelligible to everyone, but to the etymologist there is no difficulty in seeing the meaning, for whether you think of him as ἀτειρής the stubborn, or as ατρεστος the fearless, or as ἀτηρός the destructive one, the name is perfectly correct in every point of view. And I think that Pelops is also named appropriately, for, as the name implies, he is rightly called Pelops who sees what is near only (ὁ τά πέλας ὁρῶν).

Hermogenes:: How so?

Socrates:: Because, according to the tradition, he had no forethought or foresight of all the evil which the murder of Myrtilus would entail upon his whole race in remote ages; he saw only what was at hand and immediate, or in other words, πέλας (near), in his eagerness to win Hippodamia by all means for his bride. Everyone would agree that the name of Tantalus is rightly given and in accordance with nature, if the traditions about him are true.

Hermogenes:: And what are the traditions?

Socrates:: Many terrible misfortunes are said to have happened to him in his life—last of all, came the utter ruin of his country—and after his death he had the stone suspended (ταλαντεία) over his head in the world below. All this agrees wonderfully well with his name. You might imagine that some person who wanted to call him ταλάντατος (most weighed down by misfortune) disguised the name by altering it into Tantalus, and into this form, by some accident of tradition, it has actually been transmuted. The name of Zeus, who is his alleged father, has also an excellent meaning, although hard to be understood, because really like a sentence, which is divided into two parts, for some call him Zena (Ζῆνα), and use the one half, and others who use the other half call him Dia (Δία); the two together signify the nature of the god, and the business of a name, as we were saying, is to express the nature. For there is none who is more the author of life to us and to all than the lord and king of all. Wherefore we are right in calling him Zena and Dia, which are one name, although divided, meaning the god through whom all creatures always have life (δι' όν ζήν ἀεὶ πᾶσι τοῖς ζῶσιν ὑπάρχει). There is an irreverence, at first sight, in calling him son of Cronus, who is a proverb for stupidity, and we might rather expect Zeus to be the child of a mighty intellect, which is the fact, for this is the meaning of his father's name—Κρόνος quasi Κόρος (κορέω, to sweep), not in the sense of a youth, but signifying τό καθαρόν καὶ ἀκήρατον τοῦ νοῦ, the pure and garnished mind (sc. ἀπό τοῦ κορεῖν). He, as we are informed by tradition, was begotten of Uranus, rightly so called (ἀπό τοῦ ὁρᾶν τά ἀνω) from looking upward, which, as philosophers tell us, is the way to have a pure mind, and the name Uranus is therefore correct. If I could remember the genealogy of

Hesiod, I would have gone on and tried more conclusions of the same sort on the remoter ancestors of the gods—then I might have seen whether this wisdom, which has come to me all in an instant, I know not whence, will or will not hold good to the end.

Hermogenes:: You seem to me, Socrates, to be quite like a prophet newly inspired, and to be uttering oracles.

Socrates:: Yes, Hermogenes, and I believe that I caught the inspiration from the great Euthyphro of the Prospaltian deme, who gave me a long lecture which commenced at dawn. He talked and I listened, and his wisdom and enchanting ravishment have not only filled my ears but taken possession of my soul, and today I shall let his superhuman power work and finish the investigation of names—that will be the way—but tomorrow, if you are so disposed, we will conjure him away, and make a purgation of him, if we can only find some priest or Sophist who is skilled in purifications of this sort.

Hermogenes:: With all my heart, for I am very curious to hear the rest of the inquiry about names.

Casting_Chr_2: Then let us proceed, and where would you have us begin, now that we have got a sort of outline of the inquiry? Are there any names which witness of themselves that they are not given arbitrarily, but have a natural fitness? The names of heroes and of men in general are apt to be deceptive because they are often called after ancestors with whose names, as we were saying, they may have no business, or they are the expression of a wish, like Eutychides (the son of good fortune), or Sosias (the Savior), or Theophilus (the beloved of God), and others. But I think that we had better leave these, for there will be more chance of finding correctness in the names of immutable essences—there ought to have been more care taken about them when they were named, and perhaps there may have been some more-than-human power at work occasionally in giving them names.

Hermogenes:: I think so, Socrates.

Socrates:: Ought we not to begin with the consideration of the gods, and show that they are rightly named gods?

Hermogenes:: Yes, that will be Well.

Socrates:: My notion would be something of this sort. I suspect that the sun, moon, earth, stars, and heaven, which are still the gods of many barbarians, were the only gods known to the aboriginal Hellenes. Seeing that they were always moving and running, from their running nature they were called gods or runners (θεοὐς, θἐοντας), and when men became acquainted with the other gods, they proceeded to apply the same name to them all. Do you think that likely?

Hermogenes:: I think it very likely indeed.

Socrates:: What shall follow the gods?

Hermogenes:: Must not daemons and heroes and men come next?

Socrates:: Daemons! And what do you consider to be the meaning of this word? Tell me if my view is right.

Hermogenes:: Let me hear.

Socrates:: You know how Hesiod uses the word?

Hermogenes:: I do not.

Socrates:: Do you not remember that he speaks of a golden race of men who came first?

Hermogenes:: Yes, I do.

Socrates:: He says of them;

> But now that Fate has closed over this race,
> They are holy daemons upon the earth,
> Beneficent, averters of ills, guardians of mortal men.

Hermogenes:: What is the inference?

Socrates:: What is the inference! Why, I suppose that he means by the golden men, not men literally made of gold, but good and noble, and I am convinced of this, because he further says that we are the iron race.

Hermogenes:: That is true.

Socrates:: And do you not suppose that good men of our own day would by him be said to be of golden race?

Hermogenes:: Very likely.

Socrates:: And are not the good wise?

Hermogenes:: Yes, they are wise.

Socrates:: And therefore I have the most entire conviction that he called them daemons, because they were δαήμονες (knowing or wise), and in our older Attic dialect the word itself occurs. Now he and other poets say truly that when a good man dies he has honor and mighty portion among the dead, and becomes a daemon, which is a name given to him signifying wisdom. And I say too, that every wise man who happens to be a good man is more than human (δαιμόνιον) both in life and death, and is rightly called a daemon.

Hermogenes:: Then I rather think that I am of one mind with you, but what is the meaning of the word *hero* (ἥρας, in the old writing ἔρως)?

Socrates:: I think that there is no difficulty in explaining, for the name is not much altered, and signifies that they were born of love.

Hermogenes:: What do you mean?

Socrates:: Do you not know that the heroes are demigods?

Hermogenes:: What then?

Socrates:: All of them sprang either from the love of a god for a mortal woman, or of a mortal man for a goddess. Think of the word in the old Attic, and you will see better that the name *heros* is only a slight alteration of Eros, from whom the heroes sprang. Either this is the meaning, or, if not this, then they must have been skillful as rhetoricians and dialecticians, and able to put the question (ἐρωτᾶν), for εἴρειν is equivalent to λέγειν. And therefore, as I was saying, in the Attic dialect the heroes turn out to be rhetoricians and questioners. All this is easy enough; the noble breed of heroes are a tribe of Sophists and rhetors. But can you tell me why men are called ἀνθρωποι? That is more difficult.

Hermogenes:: No, I cannot, and I would not try even if I could, because I think that you are the more likely to succeed.

Socrates:: That is to say, you trust to the inspiration of Euthyphro.

Hermogenes:: Of course.

Socrates:: Your faith is not vain, for at this very moment a new and ingenious thought strikes me, and, if I am not careful, before tomorrow's dawn I shall be wiser than I ought to be. Now, attend to me, and first, remember that we often put in and pull out letters in words, and give names as we please and change the accents. Take, for example, the word Διί φίλος; in order to convert this from a sentence into a noun, we omit one *iota* and sound the middle syllable grave instead of acute, as, on the other hand, letters are sometimes inserted in words instead of being omitted, and the acute takes the place of the grave.

Hermogenes:: That is true.

Casting_Chr_2: The name ἀνθρωπος, which was once a sentence, and is now a noun, appears to be a case just of this sort, for one letter, which is the α, has been omitted, and the acute on the last syllable has been changed to a grave.

Hermogenes:: What do you mean?

Socrates:: I mean to say that the word *man* implies that other animals never examine, or consider, or look up at (ἀναθρεϊ) what they see, but that man not only sees (ὀπωπε) but considers and looks up at that which he sees, and hence he alone of all animals is rightly called ἀνθρωπος, meaning ἀναθρῶν ἀ ὀπωπεν.

Hermogenes:: May I ask you to examine another word about which I am curious?

Socrates:: Certainly.

Hermogenes:: I will take that which appears to me to follow next in order. You know the distinction of soul and body?

Socrates:: Of course.

Hermogenes:: Let us endeavor to analyze them like the previous words.

Socrates:: You want me first of all to examine the natural fitness of the word ψυχή (soul) and then of the word σώμα (body)?

Hermogenes:: Yes.

Socrates:: If I am to say what occurs to me at the moment, I should imagine that those who first used the name ψυχή meant to express that the soul when in the body is the source of life, and gives the power of breath and revival (ἀναψῦχον), and when this reviving power fails then the body perishes and dies, and this, if I am not mistaken, they called *psyche.* But please stay a moment. I fancy that I can discover something which will be more acceptable to the disciples of Euthyphro, for I am afraid that they will scorn this explanation. What do you say to another?

Hermogenes:: Let me hear.

Socrates:: What is that which holds and carries and gives life and motion to the entire nature of the body? What else but the soul?

Hermogenes:: Just that.

Socrates:: And do you not believe with Anaxagoras that mind or soul is the ordering and containing principle of all things?

Hermogenes:: Yes, I do.

Socrates:: Then you may well call that power φυσέχη which carries and holds nature (ή φύσιν όχεί καί έχει), and this may be refined away into ψυχή.

Hermogenes:: Certainly, and this derivation is, I think, more scientific than the other.

Socrates:: It is so, but I cannot help laughing, if I am to suppose that this was the true meaning of the name.

Hermogenes:: But what shall we say of the next word?

Socrates:: You mean σώμα (body).

Hermogenes:: Yes.

Socrates:: That may be variously interpreted, and yet more variously if a little permutation is allowed. For some say that the body is the grave (σήμα) of the soul which may be thought to be buried in our present life, or again the index of the soul, because the soul gives indications to (σημαίνει) the body. Probably the Orphic poets were the inventors of the name, and they were under the impression that the soul is suffering the punishment of sin, and that the body is an enclosure or prison in which the soul is incarcerated, kept safe (σώμα, σώζηται), as the name σώμα implies, until the penalty is paid. According to this view, not even a letter of the word need be changed.

Hermogenes:: I think, Socrates, that we have said enough of this class of words. But have we any more explanations of the names of the gods, like that which you were giving of Zeus? I should like to know whether any similar principle of correctness is to be applied to them.

Socrates:: Yes, indeed, Hermogenes, and there is one excellent principle which, as men of sense, we must acknowledge—that of the gods we know nothing, either of their natures or of the names which they give themselves, but we are sure that the names by which they call themselves, whatever they may be, are true. And this is the best of all principles, and the next best is to say, as in prayers, that we will call them by any sort or kind of names or patronymics which they like, because we do not know of any other. That also, I think, is a very good custom, and one which I should much wish to observe. Let us, then, if you please, in the first place announce to them that we are not inquiring about them—we do not presume that we are able to do so. But we are inquiring about the meaning of men in giving them these names—in this there can be small blame.

Hermogenes:: I think, Socrates, that you are quite right, and I should like to do as you say.

Socrates:: Shall we begin, then, with Hestia, according to custom?

Hermogenes:: Yes, that will be very proper.

Socrates:: What may we suppose him to have meant who gave the name Hestia?

Hermogenes:: That is another and certainly a most difficult question.

Socrates:: My dear Hermogenes, the first imposers of names must surely have been considerable persons; they were philosophers, and had a good deal to say.

Hermogenes:: Well, and what of them?

Socrates:: They are the men to whom I should attribute the imposition of names. Even in foreign names, if you analyze them, a meaning is still discernible. For example, that which we term σὐσία is by some called ἐσσία, and by others again ὠσία. Now that the essence of things should be called ἐστία, which is akin to the first of these (ἐσσία = ἐστία), is rational enough. And there is reason in the Athenians' calling that ἐστία which participates in οὐσία. For in ancient times we too seem to have said ἐσσία for οὐσία, and this you may note to have been the idea of those who appointed that sacrifices should be first offered to ἐστία, which was natural enough if they meant that ἐστία was the essence of things. Those again who said ὠσία seem to have inclined to the opinion of Heraclitus, that all things flow and nothing stands; with them the pushing principle (ὠθον) was the cause and ruling power of all things, and was therefore rightly called ὠσία. Enough of this, which is all that we who know nothing can affirm. Next in order after Hestia we ought to consider Rhea and Cronus, although the name of Cronus has been already discussed. But I dare say that I am talking great nonsense.

Hermogenes:: Why, Socrates?

Socrates:: My good friend, I have discovered a hive of wisdom.

Hermogenes:: Of what nature?

Socrates:: Well, rather ridiculous, and yet plausible.

Hermogenes:: How plausible?

Socrates:: I fancy to myself Heraclitus repeating wise traditions of antiquity as old as the days of Cronus and Rhea, and of which Homer also spoke.

Hermogenes:: How do you mean?

Socrates:: Heraclitus is supposed to say that all things are in motion and nothing at rest; he compares them to the stream of a river, and says that you cannot go into the same water twice.

Hermogenes:: That is true.

Socrates:: Well, then, how can we avoid inferring that he who gave the names of Cronus and Rhea to the ancestors of the gods agreed pretty much in the doctrine of Heraclitus? Is the giving of the names of streams to both of them purely accidental? Compare the line in which Homer, and, as I believe, Hesiod also, tells of ‘Oceanus, the origin of gods, and mother Tethys.' And again, Orpheus says that The fair river of Oceanus was the first to marry, and he espoused his sister Tethys, who was his mother's daughter.' You see that this is a remarkable coincidence, and all in the direction of Heraclitus.

Hermogenes:: I think that there is something in what you say, Socrates, but I do not understand the meaning of the name Tethys.

Socrates:: Well, that is almost self-explained, being only the name of a spring, a little disguised, for that which is strained and filtered (διαττώμενον, ήθούμενον) may be likened to a spring, and the name Tethys is made up of these two words.

Hermogenes:: The idea is ingenious, Socrates.

Socrates:: To be sure. But what comes next? Of Zeus we have spoken.

Hermogenes:: Yes.

Socrates:: Then let us next take his two brothers, Poseidon and Pluto, whether the latter is called by that or by his other name.

Hermogenes:: By all means.

Socrates:: Poseidon is ποσίδεσμος, the chain of the feet. The original inventor of the name had been stopped by the watery element in his walks, and not allowed to go on, and therefore he called the ruler of this element Poseidon; the ε was probably inserted as an ornament. Yet, perhaps, not so, but the name may have been originally written with a double λ and not with a σ, meaning that the god knew many things (πολλά εἰδώς). And perhaps also he, being the shaker of the earth, has been named from shaking (σείειν), and then π and δ have been added. Pluto gives wealth (πλουτος), and his name means the giver of wealth, which comes out of the earth beneath. People in general appear to imagine that the term Hades is connected with the invisible (ἀειδές), and so they are led by their fears to call the god Pluto instead.

Hermogenes:: And what is the true derivation?

Socrates:: In spite of the mistakes which are made about the power of this deity, and the foolish fears which people have of him, such as the fear of always being with him after death, and of the soul denuded of the body going to him, my belief is that all is quite consistent, and that the office and name of the god really correspond.

Hermogenes:: Why, how is that?

Socrates:: I will tell you my own opinion. But first I should like to ask you which chain does any animal feel to be the stronger, and which confines him more to the same spot—desire or necessity?

Hermogenes:: Desire, Socrates, is stronger far.

Socrates:: And do you not think that many a one would escape from Hades, if he did not bind those who depart to him by the strongest of chains?

Hermogenes:: Assuredly they would.

Socrates:: And if by the greatest of chains, then by some desire, as I should certainly infer, and not by necessity?

Hermogenes:: That is clear.

Socrates:: And there are many desires?

Hermogenes:: Yes.

Socrates:: And therefore by the greatest desire, if the chain is to be the greatest?

Hermogenes:: Yes.

Socrates:: And is any desire stronger than the thought that you will be made better by associating with another?

Hermogenes:: Certainly not.

Socrates:: And is not that the reason, Hermogenes, why no one, who has been to him, is willing to come back to us? Even the Sirens, like all the rest of the world, have been laid under his spells. Such a charm, as I imagine, is the god able to infuse into his words. And, according to this view, he is the perfect and accomplished Sophist, and the great benefactor of the inhabitants of the other world, and even to us who are upon earth he sends from below exceeding blessings. For he has much more than he wants down there; wherefore he is called Pluto (the rich). Note also that he will have nothing to do with men while they are in the body, but only when the soul is liberated from the desires and evils of the body. Now there is a great deal of philosophy and reflection in that, for in their liberated state he can bind them with the desire of virtue, but while they are flustered and maddened by the body, not even father Cronus himself would suffice to keep them with him in his own far-famed chains.

Hermogenes:: There is a deal of truth in what you say.

Socrates:: Yes, Hermogenes, and the legislator called him Hades, not from the unseen (ἀειδές)—far otherwise—but from his knowledge (εἰδέναι) of all noble things.

Hermogenes:: Very good. And what do we say of Demeter, and Hera, and Apollo, and Athena, and Hephaestus, and Ares, and the other deities?

Socrates:: Demeter is ἡ διδοῦσα μήτηρ, who gives food like a mother. Hera is the lovely one (ἐρατή), for Zeus, according to tradition, loved and married her; possibly also the name may have been given when the legislator was thinking of the heavens, and may be only a disguise of the air (ἀήρ), putting the end in the place of the beginning. You will recognize the truth of this if you repeat the letters of Hera several times over. People dread the name of Pherephatta as they dread the name of Apollo—and with as little reason. The fear, if I am not mistaken, only arises from their ignorance of the nature of names, but they go changing the name into Phersephone, and they are terrified at this, whereas the new name means only that the goddess is wise (σοφή). For seeing that all things in the world are in motion (φερομένων), that principle which embraces and touches and is able to follow them is wisdom. And therefore the goddess may be truly called Pherepapha (Φερεπάφα), or some name like it, because she touches that which is in motion (τοῦ φερομένωυ ἐφαπτομένη), herein showing her wisdom. And Hades, who is wise, consorts with her, because she is wise. They alter her name into Pherephatta nowadays, because the present generation care for euphony more than truth. There is the other name, Apollo, which, as I was saying, is generally supposed to have some terrible signification. Have you remarked this fact?

Hermogenes:: To be sure, I have, and what you say is true.

Socrates:: But the name, in my opinion, is really most expressive of the power of the god.

Hermogenes:: How so?

Socrates:: I will endeavor to explain, for I do not believe that any single name could have been better adapted to express the attributes of the god, embracing and in a manner signifying all four of them—music, and prophecy, and medicine, and archery.

Hermogenes:: That must be a strange name, and I should like to hear the explanation.

Socrates:: Say rather a harmonious name, as beseems the god of harmony. In the first place, the purgations and purifications which doctors and diviners use, and their fumigations with drugs magical or medicinal, as well as their washings and lustral sprinklings, have all one and the same object, which is to make a man pure both in body and soul.

Hermogenes:: Very true.

Socrates:: And is not Apollo the purifier, and the washer, and the absolver from all impurities?

Hermogenes:: Very true.

Socrates:: Then in reference to his ablutions and absolutions, as being the physician who orders them, he may be rightly called ‘Απολούων (purifier), or in respect of his powers of divination, and his truth and sincerity, which is the same as truth, he may be most fitly called ‘Απλῶς, from ἁπλοῦς (sincere), as in the Thessalian dialect, for all the Thessalians call him ‘Απλὸς. Also, he is ἀει βάλλων (always shooting), because he is a master archer who never misses. Or again, the name may refer to his musical attributes, and then, as in ἀκόλονθος and ἀκοιτις, and in many other words, the α is supposed to mean ‘together'; so the meaning of the name Apollo will be ‘moving together,' whether in the poles of heaven as they are called, or in the harmony of song, which is termed concord, because he moves all together by a harmonious power, as astronomers and musicians ingeniously declare. And he is the god who presides over harmony, and makes all things move together, both among gods and among men. And as in the words ἀκόλουθος and ἀκοιτις the α is substituted for ὁμο; so the name ‘Απόλλων is equivalent to ὁμοπολῶν; only the second λ is added in order to avoid the ill-omened sound of destruction (ἀπολῶν). Now the suspicion of this destructive power still haunts the minds of some who do not consider the true value of the name, which, as I was saying just now, has reference to all the powers of the god, who is the single one, the ever-darting, the purifier, the mover-together (ἁπλοῦς, ἀει βάλλων, ἀπολούων, δμοπολῶν).

The name of the Muses and of music would seem to be derived from their making philosophical inquiries (μῶσθαι). And Leto is called by this name, because she is such a gentle goddess, and so willing (εθελήμων) to grant our requests, or her name may be Letho, as she is often called by strangers—they seem to imply by it her amiability, and her smooth and easy-going way of behaving. Artemis is named from her healthy (ἀρτεμής), well-ordered nature, and because of her love of virginity, perhaps because she is a proficient in virtue (ἀρετή), and perhaps also as hating intercourse of the sexes (τὸν ἄροτον μισήσασα). He who gave the goddess her name may have had any or all of these reasons.

Hermogenes:: What is the meaning of Dionysus and Aphrodite?

Socrates:: Son of Hipponicus, you ask a solemn question.

There is a serious and also a facetious explanation of both these names; the serious explanation is not to be had from me, but there is no objection to your hearing the facetious one, for the gods too love a joke. Διόννσος is simply διδοὺς oivov (giver of wine)—Διδοwυσος, as he might be called in fun—and οϊος is properly οἰόνονς, because wine makes those who drink think (οϊsσθαι) that they have a mind (νοῦν) when they have none. The derivation of Aphrodite, born of the foam (ἀφρός), may be fairly accepted on the authority of Hesiod.

Hermogenes:: Still there remains Athena, whom you. Socrates, as an Athenian, will surely not forget; there are also Hephaestus and Ares.

Socrates:: I am not likely to forget them.

Hermogenes:: No, indeed.

Socrates:: There is no difficulty in explaining the other appellation of Athena.

Hermogenes:: What other appellation?

Socrates:: We call her Pallas.

Hermogenes:: To be sure.

Socrates:: And we cannot be wrong in supposing that this is derived from armed dances. For the elevation of oneself or anything else above the earth, or by the use of the hands, we call shaking (πάλλειν), or dancing.

Hermogenes:: That is quite true.

Socrates:: Then that is the explanation of the name Pallas?

Hermogenes:: Yes, but what do you say of the other name?

Socrates:: Athena?

Hermogenes:: Yes.

Socrates:: That is a graver matter, and there, my friend, the modern interpreters of Homer may, I think, assist in explaining the view of the ancients. For most of these, in their explanations of the poet, assert that he meant by Athena *mind* (νοῦς) and *intelligence* (διάνοια). And the maker of names appears to have had a singular notion about her, and indeed calls her by a still higher title, *divine intelligence* (θεοῦ νόησις), as though he would say, This is she who has the mind of God (θεονόα)—using α as a dialectic variety for η, and taking away ι and σ. Perhaps, however, the name Θεονόη may mean *she who knows divine things* (θεϊα νοούσα) *better than others.* Nor shall we be far wrong in supposing that the author of it wished to identify this goddess with moral intelligence (ἐν ἤθει νόησιν), and therefore gave her the name Ἡθονόη, which, however, either he or his successors have altered into what they thought a nicer form, and called her Athena.

Hermogenes:: But what do you say of Hephaestus?

Socrates:: Speak you of the princely lord of light (φάεος ἵστορα)?

Hermogenes:: Surely.

Socrates:: Ἡφαιστος is Φαιστος, and has added the η by attraction; that is obvious to anybody.

Hermogenes:: That is very probable, until some more probable notion gets into your head.

Socrates:: To prevent that, you had better ask what is the derivation of Ares.

Hermogenes:: What is Ares?

Socrates:: Ares may be called, if you will, from his manhood (ἄρρεν) and manliness, or if you please, from his hard and unchangeable nature, which is the meaning of άρρατος; the latter is a derivation in every way appropriate to the god of war.

Hermogenes:: Very true.

Socrates:: And now, by the gods, let us have no more of the gods, for I am afraid of them. Ask about anything but them, and thou shalt see how the steeds of Euthyphro can prance.

Hermogenes:: Only one more god! I should like to know about Hermes, of whom I am said not to be a true son. Let us make him out, and then I shall know whether there is any meaning in what Cratylus says.

Socrates:: I should imagine that the name Hermes has to do with speech, and signifies that he is the interpreter (ἑρμηνεὑς), or messenger, or thief, or liar, or bargainer; all that sort of thing has a great deal to do with language. As I was telling you, the word εἴρειν is expressive of the use of speech, and there is an often-recurring Homeric word ἐμήσατο, which means *he contrived.* Out of these two words, εἴρειν and μήσασθαι, the legislator formed the name of the god who invented language and speech, and we may imagine him dictating to us the use of this name. O my friends, says he to us, seeing that he is the contriver of tales or speeches, you may rightly call him Εἰρέμης. And this has been improved by us, as we think, into Hermes. Iris also appears to have been called from the verb *to tell* (εἴρειν), because she was a messenger.

Hermogenes:: Then I am very sure that Cratylus was quite right in saying that I was no true son of Hermes (Ἑρμογένης), for I am not a good hand at speeches.

Socrates:: There is also reason, my friend, in Pan's being the double-formed son of Hermes.

Hermogenes:: How do you make that out?

Socrates:: You are aware that speech signifies all things (πἀν), and is always turning them round and round, and has two forms, true and false?

Hermogenes:: Certainly.

Socrates:: Is not the truth that is in him the smooth or sacred form which dwells above among the gods, whereas falsehood dwells among men below, and is rough like the goat of tragedy, for tales and falsehoods have generally to do with the tragic or goatish life, and tragedy is the place of them?

Hermogenes:: Very true.

Socrates:: Then surely Pan, who is the declarer of all things (πάν) and the perpetual mover (ἀεἰ πολῶν) of all things, is rightly called οἰπόλος (goatherd), he being the two-formed son of Hermes, smooth in his upper part, and rough and goat-like in his lower regions. And, as the son of Hermes, he is speech or the brother of speech, and that brother should be like brother is no marvel. But, as I was saying, my dear Hermogenes, let us get away from the gods.

Hermogenes:: From this sort of gods, by all means, Socrates. But why should we not discuss another kind of gods—the sun, moon, stars, earth, aether, air, fire, water, the seasons, and the year?

Socrates:: You impose a great many tasks upon me. Still, if you wish, I will not refuse.

Hermogenes:: You will oblige me.

Socrates:: How would you have me begin? Shall I take first of all him whom you mentioned first—the sun?

Hermogenes:: Very good.

Socrates:: The origin of the sun will probably be clearer in the Doric form, for the Dorians call him ἀλιος, and this name is given to him because when he rises he gathers (ἁλίζοι) men together or because he is always rolling in his course (ἀεί εἴλεῖν ἰών) about the earth, or from αἰολεῖν, of which the meaning is the same as ποικίλλειν (to variegate), because he variegates the productions of the earth.

Hermogenes:: But what is σελήνη (the moon)?

Socrates:: That name is rather unfortunate for Anaxagoras.

Hermogenes:: How so?

Socrates:: The word seems to forestall his recent discovery, that the moon receives her light from the sun.

Hermogenes:: Why do you say so?

Socrates:: The two words σέλας (brightness) and φώς (light) have much the same meaning?

Hermogenes:: Yes.

Socrates:: This light about the moon is always new (νέον) and always old (ἕνον), if the disciples of Anaxagoras say truly. For the sun in his revolution always adds new light, and there is the old light of the previous month.

Hermogenes:: Very true.

Socrates:: The moon is not infrequently called σελαναία.

Hermogenes:: True.

Socrates:: And as she has a light which is always old and always new (ᵍνον νέον ἀεί), she may very properly have the name σελαενονεοάεια, and this when hammered into shape becomes σελαναία.

Hermogenes:: A real dithyrambic sort of name that, Socrates. But what do you say of the month and the stars?

Socrates:: Μείς (month) is called from μειοῦσθαι (to lessen), because suffering diminution; the name of ἁστρα (stars) seems to be derived from ἀστραπή (blinding light), which is an improvement on ἀναστρωπή, signifying the upsetting of the eyes (ἀναστρέφειν ὠπα).

Hermogenes:: What do you say of πῦρ (fire) and ϋδωρ (water)?

Socrates:: I am at a loss how to explain πῦρ; either the Muse of Euthyphro has deserted me, or there is some very great difficulty in the word. Please, however, to note the contrivance which I adopt whenever I am in a difficulty of this sort.

Hermogenes:: What is it?

Socrates:: I will tell you, but I should like to know first whether you can tell me what is the meaning of the word πῦρ.

Hermogenes:: Indeed I cannot.

Socrates:: Shall I tell you what I suspect to be the true explanation of this and several other words? My belief is that they are of foreign origin. For the Hellenes, especially those who were under the dominion of the barbarians, often borrowed from them.

Hermogenes:: What is the inference?

Socrates:: Why, you know that anyone who seeks to demonstrate the fitness of these names according to the Hellenic language, and not according to the language from which the words are derived, is rather likely to be at fault.

Hermogenes:: Yes, certainly.

Socrates:: Well then, consider whether this πῦρ is not foreign, for the word is not easily brought into relation with the Hellenic tongue, and the Phrygians may be observed to have the same word slightly changed, just as they have ὑδωρ (water) and κύνες (dogs), and many other words.

Hermogenes:: That is true.

Socrates:: Any violent interpretations of the words should be avoided, for something to say about them may easily be found. And thus I get rid of πῦρ and ϋδωρ. ‘Αήρ (air), Hermogenes, may be explained as the element which raises (αιρει) things from the earth, or as ever flowing (ἀεὶ ρεi), or because the flux of the air is wind, and the poets call the winds *air blasts,* (ἀήται); he who uses the term may mean, so to speak, *air flux* (ἀητόρρουν), in the sense of *wind flux (*πνευματόρρουν), and because this moving wind may be expressed by either term he employs the word *air* (ἀήρ = ἀήτης ρέω). Αἰθήρ (aether) I should interpret as ἀειθεήρ; this may be correctly said, because this element is always running in a flux about the air (ἀεὶ θεi περὶ τὸν ἀέρα ρέων). The meaning of the word γῆ (earth) comes out better when in the form of γαια, for the earth may be truly called *mother* (γαία, γεννήτειρα), as in the language of Homer γεγάασι means γεγεννήσθαι.

Hermogenes:: Good.

Socrates:: What shall we take next?

Hermogenes:: There are ὡραι (the seasons), and the two names of the year, ἐνιαυτός and ἐτος.

Socrates:: The ὡραι should be spelled in the old Attic way, if you desire to know the probable truth about them; they are rightly called the οραι because they divide (ὁρίζουσw) the summers and winters and winds and the fruits of the earth. The words ἐνιαυτός and ετος appear to be the same—that which brings to light the plants and growths of the earth in their turn, and passes them in review within itself (ἐν ἑαντὼ ἐξετάζει)—this is broken up into two words, ἐνιαντός from ἐν ἑαυτώ, and ἑτος from ἑτάζει, just as the original name of Ζεὺς was divided into Ζήνα and Δία, and the whole proposition means that this power of reviewing from within is one, but has two names, two words ἐτος and ἐνιαντός being thus formed out of a single proposition.

Hermogenes:: Indeed, Socrates, you make surprising progress.

Socrates:: I am run away with.

Hermogenes:: Very true.

Socrates:: But am not yet at my utmost speed.

Hermogenes:: I should like very much to know, in the next place, how you would explain the virtues. What principle of correctness is there in those charming words—wisdom, understanding, justice, and the rest of them?

Socrates:: That is a tremendous class of names which you are disinterring; still, as I have put on the lion's skin, I must not be faint of heart. And I suppose that I must consider the meaning of wisdom (φρόνησις) and understanding (αύνεσις), and judgment (γνώμη) and knowledge (ἐπιστήμη), and all those other charming words, as you call them.

Hermogenes:: Surely, we must not leave off until we find out their meaning.

Socrates:: By the dog of Egypt I have not a bad notion which came into my head only this moment. I believe that the primeval givers of names were undoubtedly like too many of our modern philosophers, who, in their search after the nature of things, are always getting dizzy from constantly going round and round, and then they imagine that the world is going round and round and moving in all directions. And this appearance, which arises out of their own internal condition, they suppose to be a reality of nature; they think that there is nothing stable or permanent, but only flux and motion, and that the world is always full of every sort of motion and change. The consideration of the names which I mentioned has led me into making this reflection.

Hermogenes:: How is that, Socrates?

Socrates:: Perhaps you did not observe that in the names which have just been cited the motion or flux or generation of things is most surely indicated.

Hermogenes:: No, indeed, I never thought of it.

Socrates:: Take the first of those which you mentioned; clearly that is a name indicative of motion.

Hermogenes:: What was the name?

Socrates:: Φρόνησις (wisdom), which may signify φοράς καί ροῦ νόησις (perception of motion and flux), or perhaps φοράς όνησις (the blessing of motion), but is at any rate connected with φέρεσθαι (motion); γνώμη (judgment), again, certainly implies the ponderation or consideration (νώμησις) of generation (γονή), for to ponder is the same as to consider. Or, if you would rather, here is νόησις, the very word just now mentioned, which is νέον εσις (the desire of the new); the word νέος implies that the world is always in process of creation. The giver of the name wanted to express his longing of the soul, for the original name was νεόεσις, and not νόησις, but η took the place of a double ε. The word σωφροσύνη is the salvation (σωτηρία) of that wisdom (φρόνησις) which we were just now considering. Ἑπιστήμη (knowledge) is akin to this, and indicates that the soul which is good for anything follows (επεται) the motion of things, neither anticipating them nor falling behind them; wherefore the word should rather be read as ἑπειστήμη, inserting ε. Σύνεσις (understanding) may be regarded in like manner as a kind of conclusion; the word is derived from σννιέναι (to go along with), and, like ἑπίοτασθαι (to know), implies the progression of the soul in company with the nature of things. Σοφία (wisdom) is very dark, and appears not to be of native growth; the meaning is *touching the motion or stream of things.* You must remember that the poets, when they speak of the commencement of any rapid motion, often use the word ἐσύθη (he rushed), and there was a famous Lacedaemonian who was named Σοῦς (Rush), for by this word the Lacedaemonians signify rapid motion, and the touching (ἐπαφή) of motion is expressed by σοφία, for all things are supposed to be in motion. Good (ἀγαθόν) is the name which is given to the admirable (ἀγαστῷ) in nature, for, although all things move, still there are degrees of motion—some are swifter, some slower—but there are some things which are admirable for their swiftness, and this admirable part of nature is called ἀγαθόν.

Δικαιοσύνη (justice) is clearly δικαίου σύνεσις (understanding of the just), but the actual word δίκαιον is more difficult. Men are only agreed to a certain extent about justice, and then they begin to disagree. For those who suppose all things to be in motion conceive the greater part of nature to be a mere receptacle, and they say that there is a penetrating power which passes through all this, and is the instrument of creation in all, and is the subtlest and swiftest element, for if it were not the subtlest, and a power which none can keep out, and also the swiftest, passing by other things as if they were standing still, it could not penetrate through the moving universe. And this element, which superintends all things and pierces (διαϊόν) all, is rightly called δίκαιον; the letter κ is only added for the sake of euphony. Thus far, as I was saying, there is a general agreement about the nature of justice, but I, Hermogenes, being an enthusiastic disciple, have been told in a mystery that the justice of which I am speaking is also the cause of the world. Now a cause is that because of which anything is created, and someone comes and whispers in my ear that justice is rightly so called because partaking of the nature of the cause. And I begin, after hearing what he has said, to interrogate him gently. Well, my excellent friend, say I, but if all this be true, I still want to know what is justice. Thereupon they think that I ask tiresome questions, and am leaping over the barriers, and have been already sufficiently answered, and they try to satisfy me with one derivation after another, and at length they quarrel. For one of them says that justice is the sun, and that he only is the piercing (διαϊόντα) and burning (κάοντα) element which is the guardian of nature. And when I joyfully repeat this beautiful notion, I am answered by the satirical remark, What, is there no justice in the world when the sun is down? And when I earnestly beg my questioner to tell me his own honest opinion, he says, Fire in the abstract. But this is not very intelligible. Another says, No, not fire in the abstract, but the abstraction of heat in the fire. Another man professes to laugh at all this, and says, as Anaxagoras says, that justice is mind, for mind, as they say, has absolute power, and mixes with nothing, and orders all things, and passes through all things. At last, my friend, I find myself in far greater perplexity about the nature of justice than I was before I began to learn. But still I am of the opinion that the name, which has led me into this digression, was given to justice for the reasons which I have mentioned.

Hermogenes:: I think, Socrates, that you are not improvising now. You must have heard this from someone else.

Socrates:: And not the rest?

Hermogenes:: Hardly.

Socrates:: Well, then, let me go on in the hope of making you believe in the originality of the rest. What remains after justice? I do not think that we have as yet discussed courage (ἀνδρεία). Injustice (ἀδικία), which is obviously nothing more than a hindrance to the penetrating principle (διαϊόντος), need not be considered. Well, then, the name of ἀνδρεic seems to imply a battle—this battle is in the world of existence, and according to the doctrine of flux is only the counter-flux (εναντία ροή). If you extract the δ from ἀνδρεία, the name at once signifies the thing, and you may clearly understand that ἀνδρεία is not the stream opposed to every stream, but only to that which is contrary to justice, for otherwise courage would not have been praised. The words ἀρρην (male) and ἀνήρ (man) also contain a similar allusion to the same principle of the upward flux (τῆ ἀνω ροή). Γυνή (woman) I suspect to be the same word as γονή (birth); θήλν (female) appears to be partly derived from θηλή (the teat), because the teat is like rain, and makes things flourish (τεθηλέναι).

Hermogenes:: That is surely probable.

Socrates:: Yes, and the very word θάλλειν (to flourish) seems to figure the growth of youth, which is swift and sudden ever. And this is expressed by the legislator in the name, which is a compound of θεϊν (running) and ἁλλεσθαι (leaping). Pray observe how I gallop away when I get on smooth ground. There are a good many names generally thought to be of importance, which have still to be explained.

Hermogenes:: True.

Socrates:: There is the meaning of the word τέχνη (art), for example.

Hermogenes:: Very true.

Socrates:: That may be identified with ἐχονόη, and expresses the possession of mind—you have only to take away the ι and insert ο, between the x and ν, and between the ν and η.

Hermogenes:: That is a very shabby etymology.

Socrates:: Yes, my dear friend, but then you know that the original names have been long ago buried and disguised by people sticking on and stripping off letters for the sake of euphony, and twisting and bedizening them in all sorts of ways, and time too may have had a share in the change. Take, for example, the word κάτοπτρον (mirror). Why is the letter ρ inserted? This must surely be the addition of someone who cares nothing about the truth, but thinks only of putting the mouth into shape. And the additions are often such that at last no human being can possibly make out the original meaning of the word. Another example is the word σφίγξ, σφιγγός, which ought properly to be φίγξ, φιγγός, and there are other examples.

Hermogenes:: That is quite true, Socrates.

Socrates:: And yet, if you are permitted to put in and pull out any letters which you please, names will be too easily made, and any name may be adapted to any object.

Hermogenes:: True.

Socrates:: Yes, that is true. And therefore a wise dictator, like yourself, should observe the laws of moderation and probability.

Hermogenes:: Such is my desire.

Socrates:: And mine, too, Hermogenes. But do not be too much of a precisian, or 'you will unnerve me of my strength.' When you have allowed me to add μηχανή (contrivance) to τέχνη (art) I shall be at the top of my bent, for I conceive μηχανή to be a sign of great accomplishment (ἄνειν), for μῆκος has the meaning of greatness, and these two, μῆκος and ἄνειν, make up the word μηχανή. But, as I was saying, being now at the top of my bent, I should like to consider the meaning of the two words ἀρετή (virtue) and κακία (vice); ἀρετή I do not as yet understand, but κακία is transparent, and agrees with the principles which preceded, for all things being in a flux (ἰόντων), κακία is κακῶς ἰόν (going badly), and this evil motion when existing in the soul has the general name of κακία, or vice, specially appropriated to it. The meaning of κακῶς ἰέναι may be further illustrated by the use of δειλία (cowardice), which ought to have come after ἀνδρεία, but was forgotten, and, as I fear, is not the only word which has been passed over. Δειλία signifies that the soul is bound with a strong chain (δεσμός), for λίαν means strength, and therefore δειλία expresses the greatest and strongest bond of the soul. And ἀπορία (difficulty) is an evil of the same nature (from α *not* and πορεύεσθαι *to go*), like anything else which is an impediment to motion and movement. Then the word κακία appears to mean κακῶς ἰέναι, or going badly, or limping and halting, of which the consequence is that the soul becomes filled with vice. And if κακία is the name of this sort of thing, ἀρετή will be the opposite of it, signifying in the first place ease of motion, then that the stream of the good soul is unimpeded, and has therefore the attribute of ever flowing without let or hindrance, and is therefore called ἀρετή, or, more correctly, ἀειρειτή (ever flowing), and may perhaps have had another form, αἱρετή (eligible), indicating that nothing is more eligible than virtue, and this has been hammered into ἀρετή. I dare say that you will deem this to be another invention of mine, but I think that if the previous word κακία was right, then ἀρετή is also right.

Hermogenes:: But what is the meaning of κακόν (bad), which has played so great a part in your previous discourse?

Socrates:: That is a very singular word about which I can hardly form an opinion, and therefore I must have recourse to my ingenious device.

Hermogenes:: What device?

Socrates:: The device of a foreign origin, which I shall give to this word also.

Hermogenes:: Very likely you are right, but suppose that we leave these words, and endeavor to see the rationale of καλὸν (beautiful) and αἰσχρὸν (ugly).

Socrates:: The meaning of αισχρὸν is evident, being only άει ισχον ροῆς (always preventing from flowing), and this is in accordance with our former derivations. For the name giver was a great enemy to stagnation of all sorts, and hence he gave the name ἀεισχοροῦν to that which hindered the flux (άεὶ ϊσχον ροῦν), and this is now beaten together into αἰσχρὸν.

Hermogenes:: But what do you say of καλὸν?

Socrates:: That is more obscure; yet the form is only due to the quantity, and has been changed by altering ου into ο.

Hermogenes:: What do you mean?

Socrates:: This name appears to denote mind.

Hermogenes:: How so?

Socrates:: Let me ask you what is the cause why anything has a name. Is not the principle which imposes the name the cause?

Hermogenes:: Certainly.

Socrates:: And must not this be the mind of gods, or of men, or of both?

Hermogenes:: Yes.

Socrates:: Is not mind that which called (καλέσαν) things by their names, and is not mind the beautiful (καλὸν)?

Hermogenes:: That is evident.

Socrates:: And are not the works of intelligence and mind worthy of praise, and are not other works worthy of blame?

Hermogenes:: Certainly.

Socrates:: Physic does the work of a physician, and carpentering does the works of a carpenter?

Hermogenes:: Exactly.

Socrates:: And the principle of beauty does the works of beauty?

Hermogenes:: Of course.

Socrates:: And that principle we affirm to be mind?

Hermogenes:: Very true.

Socrates:: Then mind is rightly called beauty because she does the works which we recognize and speak of as the beautiful?

Hermogenes:: That is evident.

Socrates:: What more names remain to us?

Hermogenes:: There are the words which are connected with ἀγαθὸν and καλὸν, such as συμφέρον and λυσιτελοὺν, ὡφέλιμον, κερδαλέον, and their opposites.

Socrates:: The meaning of συμφέρον (expedient) I think that you may discover for yourself by the light of the previous examples, for it is a sister word to ἐπιστήμη, meaning just the motion (φορὰ) of the soul accompanying the world, and things which are done upon this principle are called σύμφορα or συμφέροντα, because they are carried round with the world.

Hermogenes:: That is probable.

Socrates:: Again, κερδαλέον (gainful) is called from κέρδος (gain), but you must alter the ν into δ if you want to get at the meaning, for this word also signifies good, but in another way; he who gave the name intended to express the power of admixture (κεραννύμενον) and universal penetration in the good; in forming the word, however, he inserted a δ instead of a ν, and so made κέρδος.

Hermogenes:: Well, but what is λυσιτελον (profitable)?

Socrates:: I suppose, Hermogenes, that people do not mean by the profitable the gainful or that which pays (λύει) the retailer, but they use the word in the sense of swift. You regard the profitable (λυσιτελοῦν) as that which, being the swiftest thing in existence, allows of no stay in things and no pause or end of motion, but always, if there begins to be any end, lets things go again (λύει), and makes motion immortal and unceasing. And from this point of view, as appears to me, the good was happily denominated λυσιτελοῦν—being that which looses (λύον) the end (τέλος) of motion. 'Ωφέλιμον (the advantageous) is derived from ὀφέλλειν, meaning that which creates and increases; this latter is a common Homeric word, and has a foreign character.

Hermogenes:: And what do you say of their opposites?

Socrates:: Of such as mere negatives I hardly think that I need speak.

Hermogenes:: Which are they?

Socrates:: The words ἀξύμφορον (inexpedient), ἀνωφελές (unprofitable), ἀλυσΙτελές (unadvantageous), ἀκερδές (ungainful).

Hermogenes:: True.

Socrates:: I would rather take the words βλαβερὸν (harmful), ζημιώδες (hurtful).

Hermogenes:: Good.

Socrates:: The word βλαβερὸν is that which is said to hinder or harm (βλάπτειν) the stream (ροῦν); βλάπτον is βουλὸμενον απτειν (seeking to hold or bind), for απτειν is the same as δεῖν, and δεὶν is always a term of censure; βουλὸμενον ἀτrτειν ρούν (wanting to bind the stream) would properly be βουλαπτεροῦν, and this, as I imagine, is improved into βλαβερὸν.

Hermogenes:: You bring out curious results, Socrates, in the use of names, and when I hear the word βουλαπτεροὺν I cannot help imagining that you are making your mouth into a flute, and puffing away at some prelude to Athena.

Socrates:: That is the fault of the makers of the name, Hermogenes—not mine.

Hermogenes:: Very true, but what is the derivation of ζημιὼδες?

Socrates:: What is the meaning of ζημιὼδες? Let me remark, Hermogenes, how right I was in saying that great changes are made in the meaning of words by putting in and pulling out letters; even a very slight permutation will sometimes give an entirely opposite sense. I may instance the word δὲον, which occurs to me at the moment, and reminds me of what I was going to say to you, that the fine fashionable language of modern times has twisted and disguised and entirely altered the original meaning both of δὲον and of ζημιὼδες, which in the old language is clearly indicated.

Hermogenes:: What do you mean?

Socrates:: I will try to explain. You are aware that our forefathers loved the sounds ι and δ, especially the women, who are most conservative of the ancient language, but now they change ι into η or ε, and δ into ζ—this is supposed to increase the grandeur of the sound.

Hermogenes:: How do you mean?

Socrates:: For example, in very ancient times they called the day either ἱμέρα or ἑμέρα, which is called by us ἡμέρα.

Hermogenes:: That is true.

Socrates:: Do you observe that only the ancient form shows the intention of the giver of the name? The reason is that men long for (ἱμείρουσι) and love the light which comes after the darkness, and is therefore called ιμέρα, from ἱμερος (desire).

Hermogenes:: Clearly.

Socrates:: But now the name is so travestied that you cannot tell the meaning, although there are some who imagine the day to be called ἡμέρα because it makes things gentle (ἡμερα).

Hermogenes:: Such is my view.

Socrates:: And do you know that the ancients said δυογὸν and not ζυγὸν?

Hermogenes:: They did so.

Socrates:: And ζνγὸν (yoke) has no meaning—it ought to be δυογὸν, which word expresses the binding of two together (δυεὶν δγωγὴ) for the purpose of drawing—this has been changed into ζυγὸν. And there are many other examples of similar changes.

Hermogenes:: There are.

Socrates:: Proceeding in the same train of thought I may remark that the word δὲον (obligation) has a meaning which is the opposite of all the other appellations of good, for δὲον is here a species of good, and is, nevertheless, the chain (δεσμὸς) or hinderer of motion, and therefore own brother of βλαβερὸν.

Hermogenes:: Yes, Socrates, that is quite plain.

Socrates:: Not if you restore the ancient form, which is more likely to be the correct one, and read διόν instead of δέον. If you convert the ε into an i after the old fashion, this word will then agree with other words meaning good, for διόν, not δέον, signifies the good, and is a term of praise. And the author of names has not contradicted himself, but in all these various appellations, δέον (obligatory), ὠφέλιμον (advantageous), λυσιτελοῦν (profitable), κερδαλέον (gainful), αγαθόν (good), συμφέρον (expedient), εὔπορον (plenteous), the same conception is implied of the ordering or all-pervading principle which is praised, and the restraining and binding principle which is censured. And this is further illustrated by the word ζημιώδης (hurtful), which if the ζ is only changed into δ, as in the ancient language, becomes δημιώδης, and this name, as you will perceive, is given to that which binds motion (δούντι ἰόν).

Hermogenes:: What do you say of ἡδονή (pleasure), λύπη (pain), ἐπιθυμία (desire), and the like, Socrates?

Socrates:: I do not think, Hermogenes, that there is any great difficulty about them—ἡδονή is ἡ ὄνησις, the action which tends to advantage, and the original form may be supposed to have been ἡονή, but this has been altered by the insertion of the δ. Λύπη appears to be derived from the relaxation (λύειν) which the body feels when in sorrow; ἀνία (trouble) is the hindrance of motion (α and ἰέναι); ἀλγηδών (distress), if I am not mistaken, is a foreign word, which is derived from ἀλγεινός (grievous); ὀδύνη (grief) is called from the putting on (ἔνδυσις) of sorrow; in ἀχθηδών (vexation) ‘the word too labors,' as anyone may see; χαρά (joy) is the very expression of the fluency and diffusion of the soul (χέω); τέρψις (delight) is so called from the pleasure creeping (ἕρπον) through the soul, which may be likened to a breath (πνοή) and is properly ἑρπνοῦν, but has been altered by time into τερπνόν. Εὐφροσύνη (cheerfulness) and ἐτιθνμία explain themselves; the former, which ought to be εὐφεροσύνη and has been changed into εὐφρσσύνη, is named, as everyone may see, from the soul moving (φέρεσθαι) in harmony with nature; ἐπιθυμία is really ἡ ἐπί τόν θνμόν ιουσα δύναμις, the power which enters into the soul. Θυμός (passion) is called from the rushing (θύσεως) and boiling of the soul ἱμερος (desire) denotes the stream (ροῦς) which most draws the soul διά τήν ἑσιν τής ροής, because flowing with desire (ἱέμενος), and expresses a longing after things and violent attraction of the soul to them, and is termed ἵμερος from possessing this power; πόθος (longing) is expressive of the desire of that which is not present but absent, and in another place (πον); this is the reason why the name πόθος is applied to things absent, as ἵμερος is to things present. “Ερως (love) is so called because flowing in (ἐσρών) from without; the stream is not inherent, but is an influence introduced through the eyes, and from flowing in was called ἑσρος (influx) in the old time when they used ο for ω, and is called ἑρως, now that ω is substituted for ο. But why do you not give me another word?

Hermogenes:: What do you think of δόξα (opinion), and that class of words?

Socrates:: Δόξα is either derived from δίωξις (pursuit), and expresses the march of the soul in the pursuit of knowledge, or from the shooting of a bow (τόξον). The latter is more likely, and is confirmed by οἴησις (thinking), which is only οἶσις (moving), and implies the movement of the soul to the essential nature of each thing, just as βουλή (counsel) has to do with shooting (βολή), and βούλεσθαι (to wish) combines the notion of aiming and deliberating—all these words seem to follow δόξα, and all involve the idea of shooting, just as ἀβουλἰα, absence of counsel, on the other hand, is a mishap, or missing, or mistaking of the mark, or aim, or proposal, or object.

Hermogenes:: You are quickening your pace now, Socrates.

Socrates:: Why yes, the end I now dedicate to God, not, however, until I have explained ἀνἀγκη (necessity), which ought to come next, and ἑκοὐσιον (the voluntary). Ἑκοὐσιον is certainly the yielding (εἴκον) and unresisting—the notion implied is yielding and not opposing, yielding, as I was just now saying, to that motion which is in accordance with our will. But the necessary and resistant, being contrary to our will, implies error and ignorance; the idea is taken from walking through a ravine which is impassable, and rugged, and overgrown, and impedes motion—and this is the derivation of the word ἀναγκαιον (necessary), ἀν' ἀγκη ϊὀν, going through a ravine. But while my strength lasts let us persevere, and I hope that you will persevere with your questions.

Hermogenes:: Well, then, let me ask about the greatest and noblest, such as ἀλἡθεια (truth) and ψὡῦδος (falsehood) and ὀν (being), not forgetting to inquire why the word ὀνομα (name), which is the theme of our discussion, has this name of ὀνομα.

Socrates:: You know the word μαἱεσθαι (to seek)?

Hermogenes:: Yes—meaning the same as ζητεἰν (to inquire).

Socrates:: The word ὀνομα seems to be a compressed sentence, signifying ὀν σν ζἡτημα (being for which there is a search), as is still more obvious in ὀνομαστὀν (notable), which states in so many words that real existence is that for which there is a seeking (ὀν ον μἀσμα); ἀλἡθεια is also an agglomeration of θεἱα ἀλη (divine wandering), implying the divine motion of existence. Ψεῦδος (falsehood) is the opposite of motion; here is another ill name given by the legislator to stagnation and forced inaction, which he compares to sleep (ὠῦδειν), but the original meaning of the word is disguised by the addition of ψ. ‘Ον and σὐσία are ἰὀν with an ι broken off; this agrees with the true principle, for being (ὀν) is also moving (ἰὀν), and the same may be said of not-being, which is likewise called not-going (οὐκἰον or οὐκι ὀν = σὐκ ἰὀν).

Hermogenes:: You have hammered away at them manfully, but suppose that someone were to say to you, What is the word ἰὀν, and what are ἑον and δοῦν? Show me their fitness.

Socrates:: You mean to say, how should I answer him?

Hermogenes:: Yes.

Casting_Chr_2: One way of giving the appearance of an answer has been already suggested.

Hermogenes:: What way?

Socrates:: To say that names which we do not understand are of foreign origin, and this is very likely the right answer, and something of this kind may be true of them, but also the original forms of words may have been lost in the lapse of ages; names have been so twisted in all manner of ways that I should not be surprised if the old language when compared with that now in use would appear to us to be a barbarous tongue.

Hermogenes:: Very likely.

Socrates:: Yes, very likely. But still the inquiry demands our earnest attention and we must not flinch. For we should remember that if a person goes on analyzing names into words, and inquiring also into the elements out of which the words are formed, and keeps on always repeating this process, he who has to answer him must at last give up the inquiry in despair.

Hermogenes:: Very true.

Socrates:: And at what point ought he to lose heart and give up the inquiry? Must he not stop when he comes to the names which are the elements of all other names and sentences? For these cannot be supposed to be made up of other names. The word αγαθὸν (good), for example, is, as we were saying, a compound of ἀγαστὸς (admirable) and θοὸς (swift). And probably θοὸς is made up of other elements, and these again of others. But if we take a word which is incapable of further resolution, then we shall be right in saying that we have at last reached a primary element, which need not be resolved any further.

Hermogenes:: I believe you to be in the right.

Socrates:: And suppose the names about which you are now asking should turn out to be primary elements. Must not their truth or law be examined according to some new method?

Hermogenes:: Very likely.

Socrates:: Quite so, Hermogenes. All that has preceded would lead to this conclusion. And if, as I think, the conclusion is true, then I shall again say to you, come and help me, that I may not fall into some absurdity in stating the principle of primary names.

Hermogenes:: Let me hear, and I will do my best to assist you.

Socrates:: I think that you will acknowledge with me that one principle is applicable to all names, primary as well as secondary—when they are regarded simply as names, there is no difference in them.

Hermogenes:: Certainly not.

Socrates:: All the names that we have been explaining were intended to indicate the nature of things.

Hermogenes:: Of course.

Socrates:: And that this is true of the primary quite as much as of the secondary names is implied in their being names.

Hermogenes:: Surely.

Socrates:: But the secondary, as I conceive, derive their significance from the primary.

Hermogenes:: That is evident.

Socrates:: Very good, but then how do the primary names which precede analysis show the natures of things, as far as they can be shown, which they must do, if they are to be real names? And here I will ask you a question. Suppose that we had no voice or tongue, and wanted to communicate with one another. Should we not, like the deaf and dumb, make signs with the hands and head and the rest of the body?

Hermogenes:: There would be no choice, Socrates.

Socrates:: We should imitate the nature of the thing; the elevation of our hands to heaven would mean lightness and upwardness; heaviness and downwardness would be expressed by letting them drop to the ground; if we were describing the running of a horse, or any other animal, we should make our bodies and their gestures as like as we could to them.

Hermogenes:: I do not see that we could do anything else.

Socrates:: We could not, for by bodily imitation only can the body ever express anything.

Hermogenes:: Very true.

Socrates:: And when we want to express ourselves, either with the voice, or tongue, or mouth, the expression is simply their imitation of that which we want to express?

Hermogenes:: It must be so, I think.

Socrates:: Then a name is a vocal imitation of that which the vocal imitator names or imitates?

Hermogenes:: I think so.

Socrates:: Nay, my friend, I am disposed to think that we have not reached the truth as yet.

Hermogenes:: Why not?

Socrates:: Because if we have we shall be obliged to admit that the people who imitate sheep, or cocks, or other animals, name that which they imitate.

Hermogenes:: Quite true.

Socrates:: Then could I have been right in what I was saying?

Hermogenes:: In my opinion, no. But I wish that you would tell me, Socrates, what sort of an imitation is a name?

Socrates:: In the first place, I should reply, not a musical imitation, although that is also vocal, nor, again, an imitation of what music imitates; these, in my judgment, would not be naming. Let me put the matter as follows. All objects have sound and figure, and many have color?

Hermogenes:: Certainly.

Socrates:: But the art of naming appears not to be concerned with imitations of this kind. The arts which have to do with them are music and drawing?

Hermogenes:: True.

Socrates:: Again, is there not an essence of each thing, just as there is a color, or sound? And is there not an essence of color and sound as well as of anything else which may be said to have an essence?

Hermogenes:: I should think so.

Socrates:: Well, and if anyone could express the essence of each thing in letters and syllables, would he not express the nature of each thing?

Hermogenes:: Quite so.

Socrates:: The musician and the painter were the two names which you gave to the two other imitators. What will this imitator be called?

Hermogenes:: I imagine, Socrates, that he must be the namer, or name giver, of whom we are in search.

Socrates:: If this is true, then I think that we are in a condition to consider the names ροή (stream), ἰέναι (to go), σχέσις (retention), about which you were asking, and we may see whether the namer has grasped the nature of them in letters and syllables in such a manner as to imitate the essence or not.

Hermogenes:: Very good.

Socrates:: But are these the only primary names, or are there others?

Hermogenes:: There must be others.

Socrates:: So I should expect. But how shall we further analyze them, and where does the imitator begin? Imitation of the essence is made by syllables and letters. Ought we not, therefore, first to separate the letters, just as those who are beginning rhythm first distinguish the powers of elementary and then of compound sounds, and when they have done so, but not before, proceed to the consideration of rhythms?

Hermogenes:: Yes.

Socrates:: Must we not begin in the same way with letters—first separating the vowels, and then the consonants and mutes, into classes, according to the received distinctions of the learned, also the semivowels, which are neither vowels nor yet mutes, and distinguishing into classes the vowels themselves? And when we have perfected the classification of things, we shall give their names, and see whether, as in the case of letters, there are any classes to which they may be all referred, and hence we shall see their natures, and see, too, whether they have in them classes as there are in the letters. And when we have well considered all this, we shall know how to apply them to what they resemble, whether one letter is used to denote one thing, or whether there is to be an admixture of several of them, just as, in painting, the painter who wants to depict anything sometimes uses purple only, or any other color, and sometimes mixes up several colors, as his method is when he has to paint flesh color or anything of that kind—he uses his colors as his figures appear to require them. And so, too, we shall apply letters to the expression of objects, either single letters when required, or several letters, and so we shall form syllables, as they are called, and from syllables make nouns and verbs, and thus, at last, from the combinations of nouns and verbs arrive at language, large and fair and whole. And as the painter made a figure, even so shall we make speech by the art of the namer or the rhetorician, or by some other art. Not that I am literally speaking of ourselves, but I was carried away—meaning to say that this was the way in which not we, but the ancients formed language, and what they put together we must take to pieces in like manner, if we are to attain a scientific view of the whole subject. And we must see whether the primary, and also whether the secondary elements are rightly given or not, for if they are not, the composition of them, my dear Hermogenes, will be a sorry piece of work, and in the wrong direction.

Hermogenes:: That, Socrates, I can quite believe.

Socrates:: Well, but do you suppose that you will be able to analyze them in this way? For I am certain that I should not.

Hermogenes:: Much less am I likely to be able.

Socrates:: Shall we leave them, then? Or shall we seek to discover, if we can, something about them, according to the measure of our ability, saying by way of preface, as I said before of the gods, that of the truth about them we know nothing, and do but entertain human notions of them. And in this present inquiry, let us say to ourselves, before we proceed, that the higher method is the one which we or others who would analyze language to any good purpose must follow, but under the circumstances, as men say, we must do as well as we can. What do you think?

Hermogenes:: I very much approve.

Socrates:: That objects should be imitated in letters and syllables, and so find expression, may appear ridiculous, Hermogenes, but it cannot be avoided—there is no better principle to which we can look for the truth of first names. Deprived of this, we must have recourse to divine help, like the tragic poets, who in any perplexity have their gods waiting in the air, and must get out of our difficulty in like fashion, by saying that ‘the gods gave the first names, and therefore they are right.' This will be the best contrivance, or perhaps that other notion may be even better still, of deriving them from some barbarous people, for the barbarians are older than we are, or we may say that antiquity has cast a veil over them, which is the same sort of excuse as the last, for all these are not reasons but only ingenious excuses for having no reasons concerning the truth of words. And yet any sort of ignorance of first or primitive names involves an ignorance of secondary words, for they can only be explained by the primary. Clearly then the professor of languages should be able to give a very lucid explanation of first names, or let him be assured he will only talk nonsense about the rest. Do you not suppose this to be true?

Hermogenes:: Certainly, Socrates.

Socrates:: My first notions of original names are truly wild and ridiculous, though I have no objection to imparting them to you if you desire, and I hope that you will communicate to me in return anything better which you may have.

Hermogenes:: Fear not. I will do my best.

Socrates:: In the first place, the letter ρ appears to me to be the general instrument expressing all motion (κίνησις). But I have not yet explained the meaning of this latter word, which is just ιεσις (going), for the letter η was not in use among the ancients, who only employed ε, and the root is κίειν, which is a foreign form, the same as ἰέαι. And the old word κίνησις will be correctly given as ἰεσις in corresponding modern letters. Assuming this foreign root κίειν, and allowing for the change of the η and the insertion of the ν, we have κίνησις, which should have been κιείνησις or εΐσις, and στάσις is the negative of ἰέναι (or εΐσις), and has been improved into στάσις. Now the letter ρ, as I was saying, appeared to the imposer of names an excellent instrument for the expression of motion, and he frequently uses the letter for this purpose. For example, in the actual words ρεῖν and ροή he represents motion by ρ—also in the words τρόμος (trembling), τραχὺς (rugged), and again, in words such as κρούειν (strike), θραύειν (crush), ἐρείκειν (bruise), θρύπτειν (break), κερματίζειν (crumble). ρυμβεῖν (whirl). Of all these sorts of movements he generally finds an expression in the letter ρ, because, as I imagine, he had observed that the tongue was most agitated and least at rest in the pronunciation of this letter, which he therefore used in order to express motion, just as by the letter ι he expresses the subtle elements which pass through all things. This is why he uses the letter ι as imitative of motion, ἰέναι, ϊεσθαι. And there is another class of letters, φ, ψ, *σ,* and ζ, of which the pronunciation is accompanied by great expenditure of breath; these are used in the imitation of such notions as ψυχρόν (shivering), ζέον (seething), σείεσθαι (to be shaken), σεισμός (shock). and are always introduced by the giver of names when he wants to imitate what is φυσώδες (windy). He seems to have thought that the closing and pressure of the tongue in the utterance of δ and τ were expressive of binding and rest in a place. He further observed the liquid movement of λ, in the pronunciation of which the tongue slips, and in this he found the expression of smoothness, as in λεϊος (level), and in the word όλισθάνειν (to slip) itself, λιπαρόν (sleek), in the word κολλώδες (gluey), and the like; the heavier sound of γ detained the slipping tongue, and the union of the two gave the notion of a glutinous clammy nature, as in γλίσχρος, γλυκύς, γλοιώδες. The ν he observed to be sounded from within, and therefore to have a notion of inwardness; hence he introduced the sound in ένδον and ιντός; α he assigned to the expression of size, and η of length, because they are great letters; ο was the sign of roundness, and therefore there is plenty of ο mixed up in the word γογγύλον (round). Thus did the legislator, reducing all things into letters and syllables, and impressing on them names and signs, and out of them by imitation compounding other signs. That is my view, Hermogenes, of the truth of names, but I should like to hear what Cratylus has more to say.

Hermogenes:: But, Socrates, as I was telling you before, Cratylus mystifies me; he says that there is a fitness of names, but he never explains what is this fitness, so that I cannot tell whether his obscurity is intended or not. Tell me now, Cratylus, here in the presence of Socrates, do you agree in what Socrates has been saying about names, or have you something better of your own? And if you have, tell me what your view is, and then you will either learn of Socrates, or Socrates and I will learn of you.

Cratylus:: Well, but surely, Hermogenes, you do not suppose that you can learn, or I explain, any subject of importance all in a moment—at any rate, not such a subject as language, which is, perhaps, the very greatest of all.

Hermogenes:: No, indeed, but, as Hesiod says, and I agree with him, 'to add little to little' is worth while. And, therefore, if you think that you can add anything at all, however small, to our knowledge, take a little trouble and oblige Socrates, and me too, who certainly have a claim upon you.

Casting_Chr_2: I am by no means positive, Cratylus, in the view which Hermogenes and myself have worked out, and therefore do not hesitate to say what you think, which if it be better than my own view I shall gladly accept. And I should not be at all surprised to find that you have found some better notion. For you have evidently reflected on these matters and have had teachers, and if you have really a better theory of the truth of names, you may count me in the number of your disciples.

Cratylus:: You are right, Socrates, in saying that I have made a study of these matters, and I might possibly convert you into a disciple. But I fear that the opposite is more probable, and I already find myself moved to say to you what Achilles in the ‘Prayers' says to Ajax;

> Illustrious Ajax, son of Telamon, lord of the people,
> You appear to have spoken in all things much to my mind.

And you, Socrates, appear to me to be an oracle, and to give answers much to my mind, whether you are inspired by Euthyphro, or whether some Muse may have long been an inhabitant of your breast, unconsciously to yourself.

Socrates:: Excellent Cratylus, I have long been wondering at my own wisdom. I cannot trust myself. And I think that I ought to stop and ask myself, What am I saying? For there is nothing worse than self-deception—when the deceiver is always at home and always with you—it is quite terrible, and therefore I ought often to retrace my steps and endeavor to ‘look fore and aft,' in the words of the aforesaid Homer. And now let me see, where are we? Have we not been saying that the correct name indicates the nature of the thing? Has this proposition been sufficiently proved?

Cratylus:: Yes, Socrates, what you say, as I am disposed to think, is quite true.

Socrates:: Names, then, are given in order to instruct?

Cratylus:: Certainly.

Socrates:: And naming is an art, and has artificers?

Cratylus:: Yes.

Socrates:: And who are they?

Cratylus:: The legislators, of whom you spoke at first.

Socrates:: And does this art grow up among men like other arts? Let me explain what I mean. Of painters, some are better and some worse?

Cratylus:: Yes.

Socrates:: The better painters execute their works, I mean their figures, better, and the worse execute them worse. And of builders also, the better sort build fairer houses, and the worse build them worse.

Cratylus:: True.

Socrates:: And among legislators, there are some who do their work better and some worse?

Cratylus:: No, there I do not agree with you.

Socrates:: Then you do not think that some laws are better and others worse?

Cratylus:: No, indeed.

Socrates:: Or that one name is better than another?

Cratylus:: Certainly not.

Socrates:: Then all names are rightly imposed?

Cratylus:: Yes, if they are names at all.

Socrates:: Well, what do you say to the name of our friend Hermogenes, which was mentioned before—assuming that he has nothing of the nature of Hermes in him, shall we say that this is a wrong name, or not his name at all?

Cratylus:: I should reply that Hermogenes is not his name at all, but only appears to be his, and is really the name of somebody else, who has the nature which corresponds to it.

Socrates:: And if a man were to call him Hermogenes, would he not be even speaking falsely? For there may be a doubt whether you can call him Hermogenes, if he is not.

Cratylus:: What do you mean?

Socrates:: Are you maintaining that falsehood is impossible? For if this is your meaning I should answer that there have been plenty of liars in all ages.

Cratylus:: Why, Socrates, how can a man say that which is not—say something and yet say nothing? For is not falsehood saying the thing which is not?

Socrates:: Your argument, friend, is too subtle for a man of my age. But I should like to know whether you are one of those philosophers who think that falsehood may be spoken but not said?

Cratylus:: Neither spoken nor said.

Socrates:: Nor uttered nor addressed? For example, if a person, saluting you in a foreign country, were to take your hand and say, Hail, Athenian stranger, Hermogenes, son of Smicrion—these words, whether spoken, said, uttered, or addressed, would have no application to you but only to our friend Hermogenes, or perhaps to nobody at all?

Cratylus:: In my opinion, Socrates, the speaker would only be talking nonsense.

Socrates:: Well, but that will be quite enough for me, if you will tell me whether the nonsense would be true or false, or partly true and partly false, which is all that I want to know.

Cratylus:: I should say that he would be putting himself in motion to no purpose, and that his words would be an unmeaning sound like the noise of hammering at a brazen pot.

Socrates:: But let us see, Cratylus, whether we cannot find a meeting point, for you would admit that the name is not the same with the thing named?

Cratylus:: I should.

Socrates:: And would you further acknowledge that the name is an imitation of the thing?

Cratylus:: Certainly.

Socrates:: And you would say that pictures are also imitations of things, but in another way?

Casting_Chr_4: Yes.

Socrates:: I believe you may be right, but I do not rightly understand you. Please to say, then, whether both sorts of imitation—I mean both pictures or words—are not equally attributable and applicable to the things of which they are the imitation.

Cratylus:: They are.

Socrates:: First look at the matter thus. You may attribute the likeness of the man to the man, and of the woman to the woman, and so on?

Cratylus:: Certainly.

Socrates:: And conversely you may attribute the likeness of the man to the woman, and of the woman to the man?

Cratylus:: Very true.

Socrates:: And are both modes of assigning them right, or only the first?

Cratylus:: Only the first.

Socrates:: That is to say, the mode of assignment which attributes to each that which belongs to it and is like it?

Cratylus:: That is my view.

Casting_Chr_2: Now then, as I am desirous that we being friends should have a good understanding about the argument, let me state my view to you. The first mode of assignment, whether applied to figures or to names, I call right, and when applied to names only, true as well as right, and the other mode of giving and assigning the name which is unlike, I call wrong, and in the case of names, false as well as wrong.

Cratylus:: That may be true, Socrates, in the case of pictures; they may be wrongly assigned. But not in the case of names—they must be always right.

Socrates:: Why, what is the difference? May I not go to a man and say to him, This is your picture, showing him his own likeness, or perhaps the likeness of a woman, and when I say show, I mean bring before the sense of sight.

Cratylus:: Certainly.

Socrates:: And may I not go to him again, and say, This is your name? For the name, like the picture, is an imitation. May I not say to him, This is your name? And may I not then bring to his sense of hearing the imitation of himself, when I say, This is a man, or of a female of the human species, when I say, This is a woman, as the case may be? Is not all that quite possible?

Cratylus:: I would fain agree with you, Socrates, and therefore I say, granted.

Socrates:: That is very good of you, if I am right, which need hardly be disputed at present. But if I can assign names as well as pictures to objects, the right assignment of them we may call truth, and the wrong assignment of them falsehood. Now if there be such a wrong assignment of names, there may also be a wrong or inappropriate assignment of verbs, and if of names and verbs then of the sentences, which are made up of them. What do you say, Cratylus?

Cratylus:: I agree, and think that what you say is very true.

Socrates:: And further, primitive nouns may be compared to pictures, and in pictures you may either give all the appropriate colors and figures, or you may not give them all—some may be wanting or there may be too many or too much of them—may there not?

Cratylus:: Very true.

Socrates:: And he who gives all gives a perfect picture or figure, and he who takes away or adds also gives a picture or figure, but not a good one.

Cratylus:: Yes.

Socrates:: In like manner, he who by syllables and letters imitates the nature of things, if he gives all that is appropriate will produce a good image, or in other words a name, but if he subtracts or perhaps adds a little, he will make an image but not a good one; whence I infer that some names are well and others ill made.

Cratylus:: That is true.

Socrates:: Then the artist of names may be sometimes good, or he may be bad?

Cratylus:: Yes.

Socrates:: And this artist of names is called the legislator?

Cratylus:: Yes.

Socrates:: Then like other artists the legislator may be good or he may be bad; it must surely be so if our former admissions hold good.

Cratylus:: Very true, Socrates, but the case of language, you see, is different. For when by the help of grammar we assign the letters α or β, or any other letters, to a certain name, then, if we add, or subtract, or misplace a letter, the name which is written is not only written wrongly, but not written at all, and in any of these cases becomes other than a name.

Socrates:: But I doubt whether your view is altogether correct, Cratylus.

Cratylus:: How so?

Socrates:: I believe that what you say maybe true about numbers, which must be just what they are, or not be at all. For example, the number ten at once becomes other than ten if a unit be added or subtracted, and so of any other number, but this does not apply to that which is qualitative or to anything which is represented under an image. I should say rather that the image, if expressing in every point the entire reality, would no longer be an image. Let us suppose the existence of two objects. One of them shall be Cratylus, and the other the image of Cratylus, and we will suppose, further, that some god makes not only a representation such as a painter would make of your outward form and color, but also creates an inward organization like yours, having the same warmth and softness, and into this infuses motion, and soul, and mind, such as you have, and in a word copies all your qualities, and places them by you in another form. Would you say that this was Cratylus and the image of Cratylus, or that there were two Cratyluses?

Cratylus:: I should say that there were two Cratyluses.

Socrates:: Then you see, my friend, that we must find some other principle of truth in images, and also in names, and not insist that an image is no longer an image when something is added or subtracted. Do you not perceive that images are very far from having qualities which are the exact counterpart of the realities which they represent?

Cratylus:: Yes, I see.

Socrates:: But then how ridiculous would be the effect of names on things, if they were exactly the same with them! For they would be the doubles of them, and no one would be able to determine which were the names and which were the realities.

Cratylus:: Quite true.

Socrates:: Then fear not, but have the courage to admit that one name may be correctly and another incorrectly given, and do not insist that the name shall be exactly the same with the thing, but allow the occasional substitution of a wrong letter, and if of a letter also of a noun in a sentence, and if of a noun in a sentence also of a sentence which is not appropriate to the matter, and acknowledge that the thing may be named, and described, so long as the general character of the thing which you are describing is retained. And this, as you will remember, was remarked by Hermogenes and myself in the particular instance of the names of the letters.

Cratylus:: Yes, I remember.

Socrates:: Good, and when the general character is preserved, even if some of the proper letters are wanting, still the thing is signified—well, if all the letters are given, not well, when only a few of them are given. I think that we had better admit this, lest we be punished like travelers in Regina who wander about the street late at night, and be likewise told by truth herself that we have arrived too late. Or if not, you must find out some new notion of correctness of names, and no longer maintain that a name is the expression of a thing in letters or syllables, for if you say both, you will be inconsistent with yourself.

Cratylus:: I quite acknowledge, Socrates, what you say to be very reasonable.

Socrates:: Then as we are agreed thus far, let us ask ourselves whether a name rightly imposed ought not to have the proper letters.

Cratylus:: Yes.

Socrates:: And the proper letters are those which are like the things?

Cratylus:: Yes.

Socrates:: Enough then of names which are rightly given. And in names which are incorrectly given, the greater part may be supposed to be made up of proper and similar letters, or there would be no likeness, but there will be likewise a part which is improper and spoils the beauty and formation of the word. You would admit that?

Cratylus:: There would be no use, Socrates, in my quarreling with you, since I cannot be satisfied that a name which is incorrectly given is a name at all.

Socrates:: Do you admit a name to be the representation of a thing?

Cratylus:: Yes, I do.

Socrates:: But do you not allow that some nouns are primitive, and some derived?

Cratylus:: Yes, I do.

Socrates:: Then if you admit that primitive or first nouns are representations of things, is there any better way of framing representations than by assimilating them to the objects as much as you can? Or do you prefer the notion of Hermogenes and of many others, who say that names are conventional, and have a meaning to those who have agreed about them, and who have previous knowledge of the things intended by them, and that convention is the only principle? And whether you abide by our present convention, or make a new and opposite one, according to which you call small great and great small—that, they would say, makes no difference, if you are only agreed. Which of these two notions do you prefer?

Cratylus:: Representation by likeness, Socrates, is infinitely better than representation by any chance sign.

Socrates:: Very good, but if the name is to be like the thing, the letters out of which the first names are composed must also be like things. Returning to the image of the picture, I would ask how anyone could ever compose a picture which would be like anything at all, if there were not pigments in nature which resembled the things imitated, and out of which the picture is composed.

Cratylus:: Impossible.

Socrates:: No more could names ever resemble any actually existing thing, unless the original elements of which they are compounded bore some degree of resemblance to the objects of which the names are the imitation. And the original elements are letters?

Cratylus:: Yes.

Socrates:: Let me now invite you to consider what Hermogenes and I were saying about sounds. Do you agree with me that the letter ρ is expressive of rapidity, motion, and hardness? Were we right or wrong in saying so?

Cratylus:: I should say that you were right.

Socrates:: And that λ was expressive of smoothness, and softness, and the like?

Cratylus:: There again you were right.

Socrates:: And yet, as you are aware, that which is called by us σκληρότης, is by the Eretrians called σκληρότηρ.

Cratylus:: Very true.

Socrates:: But are the letters ρ and σ equivalents, and is there the same significance to them in the termination ρ, which there is to us in σ, or is there no significance to one of us?

Cratylus:: Nay, surely there is a significance to both of us.

Socrates:: In so far as they are like, or in so far as they are unlike?

Cratylus:: In so far as they are like.

Socrates:: Are they altogether alike?

Cratylus:: Yes, for the purpose of expressing motion.

Socrates:: And what do you say of the insertion of the λ? For that is expressive not of hardness but of softness.

Cratylus:: Why, perhaps the letter λ is wrongly inserted, Socrates, and should be altered into ρ, as you were saying to Hermogenes, and in my opinion rightly, when you spoke of adding and subtracting letters upon occasion.

Socrates:: Good, but still the word is intelligible to both of us. When I say σκληρὸς (hard), you know what I mean.

Cratylus:: Yes, my dear friend, and the explanation of that is custom.

Socrates:: And what is custom but convention? When I utter a sound which I understand, and you know that I understand the meaning of the sound—this is what you are saying?

Cratylus:: Yes.

Socrates:: And if when I speak you know my meaning, there is an indication given by me to you?

Cratylus:: Yes.

Socrates:: This indication of my meaning may proceed from unlike as well as from like, for example, in the λ of σκληρότης. But if this is true, then you have made a convention with yourself, and the correctness of a name turns out to be convention, since letters which are unlike are indicative equally with those which are like, if they are sanctioned by custom and convention. And even supposing that you distinguish custom from convention ever so much, still you must say that the signification of words is given by custom and not by likeness, for custom may indicate by the unlike as well as by the like. But as we are agreed thus far, Cratylus, for I shall assume that your silence gives consent, then custom and convention must be supposed to contribute to the indication of our thoughts. For suppose we take the instance of number. How can you ever imagine, my good friend, that you will find names resembling every individual number, unless you allow that which you term convention and agreement to have authority in determining the correctness of names? I quite agree with you that words should as far as possible resemble things, but I fear that this dragging in of resemblance, as Hermogenes says, is a shabby thing, which has to be supplemented by the mechanical aid of convention with a view to correctness. For I believe that if we could always, or almost always, use likenesses, which are perfectly appropriate, this would be the most perfect state of language, as the opposite is the most imperfect. But let me ask you, what is the force of names, and what is the use of them?

Cratylus:: The use of names, Socrates, as I should imagine, is to inform. The simple truth is that he who knows names knows also the things which are expressed by them.

Socrates:: I suppose you mean to say, Cratylus, that as the name is, so also is the thing, and that he who knows the one will also know the other, because they are similars, and all similars fall under the same art or science, and therefore you would say that he who knows names will also know things.

Cratylus:: That is precisely what I mean.

Socrates:: But let us consider what is the nature of this information about things which, according to you, is given us by names. Is it the best sort of information? Or is there any other? What do you say?

Cratylus:: I believe that to be both the only and the best sort of information about them—there can be no other.

Socrates:: But do you believe that in the discovery of them he who discovers the names discovers also the things, or is this only the method of instruction, and is there some other method of inquiry and discovery?

Cratylus:: I certainly believe that the methods of inquiry and discovery are of the same nature as instruction.

Socrates:: Well, but do you not see, Cratylus, that he who follows names in the search after things, and analyzes their meaning, is in great danger of being deceived?

Cratylus:: How so?

Socrates:: Why clearly he who first gave names gave them according to his conception of the things which they signified—did he not?

Cratylus:: True.

Socrates:: And if his conception was erroneous, and he gave names according to his conception, in what position shall we who are his followers find ourselves? Shall we not be deceived by him?

Cratylus:: But, Socrates, am I not right in thinking that he must surely have known, or else, as I was saying, his names would not be names at all? And you have a clear proof that he has not missed the truth, and the proof is—that he is perfectly consistent. Did you ever observe in speaking that all the words which you utter have a common character and purpose?

Socrates:: But that, friend Cratylus, is no answer. For if he did begin in error, he may have forced the remainder into agreement with the original error and with himself; there would be nothing strange in this, any more than in geometric diagrams, which have often a slight and invisible flaw in the first part of the process, and are consistently mistaken in the long deductions which follow. And this is the reason why every man should expend his chief thought and attention on the consideration of his first principles—are they or are they not rightly laid down? And when he has duly sifted them, all the rest will follow. Now I should be astonished to find that names are really consistent. And here let us revert to our former discussion. Were we not saying that all things are in motion and progress and flux, and that this idea of motion is expressed by names? Do you not conceive that to be the meaning of them?

Cratylus:: Yes, that is assuredly their meaning, and the true meaning.

Socrates:: Let us revert to ἐπιστήμη (knowledge), and observe how ambiguous this word is, seeming rather to signify stopping the soul at things than going round with them, and therefore we should leave the beginning as at present, and not reject the ε, but make an insertion of an ι instead of an ε (not πιστήμη, but ἐπιιστήμη). Take another example. Βέβαιον (sure) is clearly the expression of station and position, and not of motion. Again, the word ἱστορία (inquiry) bears upon the face of it the stopping (ἱστάναι) of the stream, and the word πιστόν (faithful) certainly indicates cessation of motion; then, again, μνήμη (memory), as anyone may see, expresses rest in the soul, and not motion. Moreover, words such as ἁμορτία and σνμφορά, which have a bad sense, viewed in the light of their etymologies will be the same as σύνεσις and ἐπιστήμη and other words which have a good sense (cf. ὁμαρτεῖν, συνιέναι, ἕπεσθαι, συμφέρεσθαι). And much the same may be said of ἁμαθία and ἀκολασία, for ἁμαθία (ignorance) may be explained as ἡ ἅμα θεῶ ἰόντος πορεία (the progress of one who goes with God), and ἀκολασία (unrestraint) as ἡ ἀκολουθία τοῖς πράγμασιν (movement in company with things). Thus the names which in these instances we find to have the worst sense will turn out to be framed on the same principle as those which have the best. And anyone I believe who would take the trouble might find many other examples in which the giver of names indicates, not that things are in motion or progress, but that they are at rest, which is the opposite of motion.

Cratylus:: Yes, Socrates, but observe, the greater number exress motion.

Socrates:: What of that, Cratylus? Are we to count them like votes? And is correctness of names the voice of the majority? Are we to say of whichever sort there are most, those are the true ones?

Cratylus:: No, that is not reasonable.

Socrates:: Certainly not. But let us have done with this question and proceed to another, about which I should like to know whether you think with me. Were we not lately acknowledging that the first givers of names in states, both Hellenic and barbarous, were the legislators, and that the art which gave names was the art of the legislator?

Cratylus:: Quite true.

Socrates:: Tell me, then, did the first legislators, who were the givers of the first names, know or not know the things which they named?

Cratylus:: They must have known, Socrates.

Socrates:: Why, yes, friend Cratylus, they could hardly have been ignorant.

Cratylus:: I should say not.

Socrates:: Let us return to the point from which we digressed. You were saying, if you remember, that he who gave names must have known the things which he named. Are you still of that opinion?

Cratylus:: I am.

Socrates:: And would you say that the giver of the first names had also a knowledge of the things which he named?

Cratylus:: I should.

Socrates:: But how could he have learned or discovered things from names if the primitive names were not yet given? For, if we are correct in our view, the only way of learning and discovering things is either to discover names for ourselves or to learn them from others.

Cratylus:: I think that there is a good deal in what you say, Socrates.

Socrates:: But if things are only to be known through names, how can we suppose that the givers of names had knowledge, or were legislators, before there were names at all, and therefore before they could have known them?

Casting_Chr_4: I believe, Socrates, the true account of the matter to be that a power more than human gave things their first names, and that the names which are thus given are necessarily their true names.

Socrates:: Then how came the giver of the names, if he as an inspired being or god, to contradict himself? For were we not saying just now that he made some names expressive of rest and others of motion? Were we mistaken?

Cratylus:: But I suppose one of the two not to be names at all.

Casting_Chr_2: And which, then, did he make, my good friend—those which are expressive of rest, or those which are expressive of motion? This is a point which, as I said before, cannot be determined by counting them.

Cratylus:: No, not in that way, Socrates.

Socrates:: But if this is a battle of names, some of them asserting that they are like the truth, others contending that *they* are, how or by what criterion are we to decide between them? For there are no other names to which appeal can be made, but obviously recourse must be had to another standard which, without employing names, will make clear which of the two are right, and this must be a standard which shows the truth of things.

Cratylus:: I agree.

Socrates:: But if that is true, Cratylus, then I suppose that things may be known without names?

Cratylus:: Clearly.

Socrates:: But how would you expect to know them? What other way can there be of knowing them, except the true and natural way, through their affinities, when they are akin to each other, and through themselves? For that which is other and different from them must signify something other and different from them.

Cratylus:: What you are saying is, I think, true.

Socrates:: Well, but reflect. Have we not several times acknowledged that names rightly given are the likenesses and images of the things which they name?

Cratylus:: Yes.

Socrates:: Let us suppose that to any extent you please you can learn things through the medium of names, and suppose also that you can learn them from the things themselves. Which is likely to be the nobler and clearer way—to learn of the image, whether the image and the truth of which the image is the expression have been rightly conceived, or to learn of the truth whether the truth and the image of it have been duly executed?

Cratylus:: I should say that we must learn of the truth.

Socrates:: How real existence is to be studied or discovered is, I suspect, beyond you and me. But we may admit so much, that the knowledge of things is not to be derived from names. No, they must be studied and investigated in themselves.

Cratylus:: Clearly, Socrates.

Socrates:: There is another point. I should not like us to be imposed upon by the appearance of such a multitude of names, all tending in the same direction. I myself do not deny that the givers of names did really give them under the idea that all things were in motion and flux, which was their sincere but, I think, mistaken opinion. And having fallen into a kind of whirlpool themselves, they are carried round, and want to drag us in after them. There is a matter, master Cratylus, about which I often dream, and should like to ask your opinion. Tell me whether there is or is not any absolute beauty or good, or any other absolute existence.

Cratylus:: Certainly, Socrates, I think so.

Socrates:: Then let us seek the true beauty, not asking whether a face is fair, or anything of that sort, for all such things appear to be in a flux, but let us ask whether the true beauty is not always beautiful.

Cratylus:: Certainly.

Socrates:: And can we rightly speak of a beauty which is always passing away, and is first this and then that? Must not the same thing be born and retire and vanish while the word is in our mouths?

Cratylus:: Undoubtedly.

Socrates:: Then how can that be a real thing which is never in the same state? For obviously things which are the same cannot change while they remain the same, and if they are always the same and in the same state, and never depart from their original form, they can never change or be moved.

Cratylus:: Certainly they cannot.

Socrates:: Nor yet can they be known by anyone, for at the moment that the observer approaches, then they become other and of another nature, so that you cannot get any further in knowing their nature or state, for you cannot know that which has no state.

Cratylus:: True.

Socrates:: Nor can we reasonably say, Cratylus, that there is knowledge at all, if everything is in a state of transition and there is nothing abiding. For knowledge too cannot continue to be knowledge unless continuing always to abide and exist. But if the very nature of knowledge changes, at the time when the change occurs there will be no knowledge, and if the transition is always going on, there will always be no knowledge, and, according to this view, there will be no one to know and nothing to be known. But if that which knows and that which is known exist ever, and the beautiful and the good and every other thing also exist, then I do not think that they can resemble a process or flux, as we were just now supposing. Whether there is this eternal nature in things, or whether the truth is what Heraclitus and his followers and many others say, is a question hard to determine, and no man of sense will like to put himself or the education of his mind in the power of names. Neither will he so far trust names or the givers of names as to be confident in any knowledge which condemns himself and other existences to an unhealthy state of unreality; he will not believe that all things leak like a pot, or imagine that the world is a man who has a running at the nose. This may be true, Cratylus, but is also very likely to be untrue, and therefore I would not have you be too easily persuaded of it. Reflect well and like a man, and do not easily accept such a doctrine, for you are young and of an age to learn. And when you have found the truth, come and tell me.

Cratylus:: I will do as you say, though I can assure you, Socrates, that I have been considering the matter already, and the result of a great deal of trouble and consideration is that I incline to Heraclitus.

Socrates:: Then, another day, my friend, when you come back, you shall give me a lesson, but at present, go into the country, as you are intending, and Hermogenes shall set you on your way.

Cratylus:: Very good, Socrates. I hope, however, that you will continue to think about these things yourself.

# Cratylus

Translated by C. D. C. Reeve.

PERSONS OF THE DIALOGUE.

Hermogenes, Cratylus, Socrates.

---

Hermogenes:: Shall we let Socrates here join our discussion?

Cratylus:: If you like.

Hermogenes:: Cratylus says, Socrates, that there is a correctness of name for each thing, one that belongs to it by nature. A thing's name isn't whatever people agree to call it—some bit of their native language that applies to it—but there is a natural correctness of names, which is the same for everyone, Greek or foreigner. So, I ask him whether his own name is truly 'Cratylus'. He agrees that it is. "What about Socrates?" I say. "His name is 'Socrates'." "Does this also hold for everyone else? Is the name we call him his name?" "It certainly doesn't hold of you. Your name isn't 'Hermogenes', not even if everyone calls you by it." Eagerly, I ask him to tell me what he means. He responds sarcastically and makes nothing clear. He pretends to possess some private knowledge which would force me to agree with him and say the very things about names that he says himself, were he to express it in plain terms. So, if you can somehow interpret Cratylus' oracular utterances, I'd gladly listen. Though I'd really rather find out what you yourself have to say about the correctness of names, if that's all right with you.

Socrates:: Hermogenes, son of Hipponicus, there is an ancient proverb that "fine things are very difficult" to know about, and it certainly isn't easy to get to know about names. To be sure, if I'd attended Prodicus' fifty-drachma lecture course, which he himself advertises as an exhaustive treatment of the topic, there' be nothing to prevent you from learning the precise truth about the correctness of names straightaway. But as I've heard only the one-drachma course, I don't know the truth about it. Nonetheless, I am ready to investigate it along with you and Cratylus. As for his denying that your real name is 'Hermogenes', I suspect he's making fun of you. Perhaps he thinks you want to make money but fail every time you try. In any case, as I was saying, it's certainly difficult to know about these matters, so we'll have to conduct a joint investigation to see who is right, you or Cratylus.

Hermogenes:: Well, Socrates, I've often talked with Cratylus—and with lots of other people, for that matter—and no one is able to persuade me that the correctness of names is determined by anything besides convention and agreement. I believe that any name you give a thing is its correct name. If you change its name and give it another, the new one is as correct as the old. For example, when we give names to our domestic slaves, the new ones are as correct as the old. No name belongs to a particular thing by nature, but only because of the rules and usage of those who establish the usage and call it by that name. However, if I'm wrong about this, I'm ready to listen not just to Cratylus but to anyone, and to learn from him too.

Socrates:: Perhaps you're on to something, Hermogenes, let's see. Are you saying that whatever anyone decides to call a particular thing is its name?

Hermogenes:: I am.

Socrates:: Whether it is a private individual or a community that does so?

Hermogenes:: Yes.

Socrates:: What about this? Suppose I call one of the things that are— for instance, the one we now call 'man'— suppose I give that the name 'horse' and give the one we now call 'horse' the name 'man'. Will the same thing have the public name 'man' but the private name 'horse'? Is that what you mean?

Hermogenes:: Yes.

Socrates:: So whatever each person says is the name of something, for him, that is its name?

Hermogenes:: Yes.

Socrates:: And however many names someone says there are for each thing, it will really have that number at whatever time he says it?

Hermogenes:: Yes, Socrates, for I can't conceive of any other way in which names could be correct. I call a thing by the name I gave it; you call it by the different name you gave it. In the same way, I see that different communities have different names for the same things—Greeks differing from other Greeks, and Greeks from foreigners.

Socrates:: Let's see, Hermogenes, whether the same also seems to you to hold of the things that are. Is the being or essence of each of them something private for each person, as Protagoras tells us? He says that man is "the measure of all things," and that things are to me as they appear to me, and are to you as they appear to you. Do you agree, or do you believe that things have some fixed being or essence of their own?

Hermogenes:: There have been times, Socrates, when I have been so puzzled that I've been driven to take refuge in Protagoras' doctrine, even though I don't believe it at all.

Socrates:: What's that? Have you actually been driven to believe that there is no such thing as a bad man?

Hermogenes:: No, by god, I haven’t. Indeed, I’ve often found myself believing that there are very bad ones, and plenty of them.

Socrates:: What? Have you never believed that there are any who are very good?

Hermogenes:: Not many.

Socrates:: But you did believe that there were some good ones?

Hermogenes:: I did.

Socrates:: And what do you hold about such people? Or is it this: the very good are very wise, while the very bad are very foolish?

Hermogenes:: Yes, that’s what I believe.

Socrates:: But if Protagoras is telling the truth—if it is the Truth that things are for each person as he believes them to be, how is it possible for one person to be wise and another foolish?

Hermogenes:: It isn’t possible.

Socrates:: You strongly believe, it seems to me, that if wisdom exists, and foolishness likewise, then Protagoras cannot be telling the truth. After all, if what each person believes to be true is true for him, no one can truly be wiser than anyone else.

Hermogenes:: That’s right.

Socrates:: But you also reject Euthydemus’ doctrine that everything always has every attribute simultaneously. For if virtue and vice always belong to everything simultaneously, it follows once again that it is impossible for some people to be good and others to be bad.

Hermogenes:: That’s true.

Socrates:: But if neither is right, if it isn’t the case that everything always has every attribute simultaneously or that each thing has a being or essence privately for each person, then it is clear that things have some fixed being or essence of their own. They are not in relation to us and are not made to fluctuate by how they appear to us. They are by themselves, in relation to their own being or essence, which is theirs by nature.

Hermogenes:: I agree, Socrates.

Socrates:: And if things are of such a nature, doesn't the same hold of actions performed in relation to them? Or aren't actions included in some one class of the things that are?

Hermogenes:: Of course they are.

Socrates:: So an action's performance accords with the action's own nature, and not with what we believe. Suppose, for example, that we undertake to cut something. If we make the cut in whatever way we choose and with whatever tool we choose, we will not succeed in cutting. But if in each case we choose to cut in accord with the nature of cutting and being cut and with the natural tool for cutting, we'll succeed and cut correctly. If we try to cut contrary to nature, however, we'll be in error and accomplish nothing.

Hermogenes:: That's my view, at least.

Socrates:: So, again, if we undertake to burn something, our burning mustn't accord with every belief but with the correct one—that is to say, with the one that tells us how that thing burns and is burned naturally, and what the natural tool for burning it is?

Hermogenes:: That's right.

Socrates:: And the same holds of all other actions?

Hermogenes:: Certainly.

Socrates:: Now isn't speaking or saying one sort of action?

Hermogenes:: Yes.

Socrates:: Then will someone speak correctly if he speaks in whatever way he believes he should speak? Or isn't it rather the case that he will accomplish something and succeed in speaking if he says things in the natural way to say them, in the natural way for them to be said, and with the natural tool for saying them? But if he speaks in any other way he will be in error and accomplish nothing?

Hermogenes:: I believe so.

Socrates:: Tell me this. Is there something you call speaking the truth and something you call speaking a falsehood?

Hermogenes:: Indeed, there is.

Socrates:: Then some statements are true, while others are false?

Hermogenes:: Certainly.

Socrates:: And those that say of the things that are that they are, are true, while those that say of the things that are that they are not, are false?

Hermogenes:: Yes.

Socrates:: So it is possible to say both things that are and things that are not in a statement?

Hermogenes:: Certainly.

Socrates:: Is a whole true statement true but not its parts?

Hermogenes:: No, the parts are also true.

Socrates:: Are the large parts true but not the small ones, or are all of them true?

Hermogenes:: In my view, they are all true.

Socrates:: Is there a part of a statement that's smaller than a name?

Hermogenes:: No, it is the smallest.

Socrates:: In a true statement, is this smallest part something that’s said?

Hermogenes:: Yes.

Socrates:: And, on your view, this part is then true.

Hermogenes:: Yes.

Socrates:: And a part of a false statement is false?

Hermogenes:: That’s right.

Socrates:: So isn’t it possible to say a true or a false name, since true or false statements are possible?

Hermogenes:: Certainly.

Socrates:: Now using names is a part of saying; since it is by using names that people say things.

Hermogenes:: Certainly.

Socrates:: And if speaking or saying is a sort of action, one that is about things, isn’t using names also a sort of action?

Hermogenes:: Yes.

Socrates:: And didn’t we see that actions aren’t in relation to us but have a special nature of their own?

Hermogenes:: We did.

Socrates:: So if we are to be consistent with what we said previously, we cannot name things as we choose; rather, we must name them in the natural way for them to be named and with the natural tool for naming them. In that way we’ll accomplish something and succeed in naming, otherwise we won’t.

Hermogenes:: So it seems.

Socrates:: Again, what one has to cut, one must cut with something?

Hermogenes:: Yes.

Socrates:: And what one has to weave, one must weave with something? And what one has to drill, one must drill with something?

Hermogenes:: Certainly.

Socrates:: And what one has to name, one must name with something?

Hermogenes:: That’s right.

Socrates:: What must drilling be done with?

Hermogenes:: A drill.

Socrates:: Weaving?

Hermogenes:: A shuttle.

Socrates:: And naming?

Hermogenes:: A name.

Socrates:: Well done! So a name is also a sort of tool?

Hermogenes:: That’s right.

Socrates:: And suppose I ask, “What sort of tool is a shuttle?” Isn’t the answer, “One we weave with”?

Hermogenes:: Yes.

Socrates:: What do we do when we weave? Don’t we divide the warp and woof that are mixed together?

Hermogenes:: Yes.

Socrates:: Would you answer in the same way about drills and other tools?

Hermogenes:: Certainly.

Socrates:: And you'd also answer in the same way about names, since they are tools. What do we do when we name?

Hermogenes:: I don’t know what to answer.

Socrates:: Don’t we instruct each other, that is to say, divide things according to their natures?

Hermogenes:: Certainly.

Socrates:: So just as a shuttle is a tool for dividing warp and woof, a name is a tool for giving instruction, that is to say, for dividing being.

Hermogenes:: Yes.

Socrates:: Isn't a shuttle a weaver's tool?

Hermogenes:: Of course.

Socrates:: So a weaver will use shuttles well; and to use a shuttle well is to use it as a weaver does. By the same token, an instructor will use names well; and to use a name well is to use it as an instructor does.

Hermogenes:: Yes.

Socrates:: When a weaver uses a shuttle well, whose product is he using?

Hermogenes:: A carpenter's.

Socrates:: Is everyone a carpenter or only those who possess the craft of carpentry?

Hermogenes:: Only those who possess the craft.

Socrates:: And whose product does a driller use well when he uses a drill?

Hermogenes:: A blacksmith's.

Socrates:: And is everyone a blacksmith or only those who possess the craft?

Hermogenes:: Only those who possess the craft.

Socrates:: Good. So whose product does an instructor use when he uses a name?

Hermogenes:: I don't know.

Socrates:: Can you at least tell me this? Who or what provides us with the names we use?

Hermogenes:: I don't know that either.

Socrates:: Don't you think that rules provide us with them?

Hermogenes:: I suppose they do.

Socrates:: So, when an instructor uses a name, he's using the product of a rule-setter.

Hermogenes:: I believe he is.

Socrates:: Do you think that every man is a rule-setter or only the one who possesses the craft?

Hermogenes:: Only the one who possesses the craft.

Socrates:: It follows that it isn't every man who can give names, Hermogenes, but only a name-maker, and he, it seems, is a rule-setter—the kind of craftsman most rarely found among human beings.

Hermogenes:: I suppose so.

Socrates:: Come now, consider where a rule-setter looks in giving names. Use the previous discussion as your guide. Where does a carpenter look in making a shuttle? Isn't it to that sort of thing whose nature is to weave?

Hermogenes:: Certainly.

Socrates:: Suppose the shuttle breaks while he's making it. Will he make another looking to the broken one? Or will he look to the very form to which he looked in making the one he broke?

Hermogenes:: In my view, he will look to the form.

Socrates:: Then it would be absolutely right to call that what a shuttle itself is.

Hermogenes:: I suppose so.

Socrates:: Hence whenever he has to make a shuttle for weaving garments of any sort, whether light or heavy, linen or woolen, mustn't it possess the form of a shuttle? And mustn't he put into it the nature that naturally best suits it to perform its own work?

Hermogenes:: Yes.

Socrates:: And the same holds of all other tools. When a craftsman discovers the type of tool that is naturally suited for a given type of work, he must embody it in the material out of which he is making the tool. He mustn't make the tool in whatever way he happens to choose, but in the natural way. So it seems that a blacksmith must know how to embody in iron the type of drill naturally suited for each type of work.

Hermogenes:: Certainly.

Socrates:: And a carpenter must embody in wood the type of shuttle naturally suited for each type of weaving.

Hermogenes:: That's right.

Socrates:: Because it seems that there's a type of shuttle that's naturally suited to each type of weaving. And the same holds of tools in general.

Hermogenes:: Yes.

Socrates:: So mustn't a rule-setter also know how to embody in sounds and syllables the name naturally suited to each thing? And if he is to be an authentic giver of names, mustn't he, in making and giving each name, look to what a name itself is? And if different rule-setters do not make each name out of the same syllables, we mustn't forget that different blacksmiths, who are making the same tool for the same type of work, don't all make it out of the same iron. But as long as they give it the same form—even if that form is embodied in different iron—the tool will be correct, whether it is made in Greece or abroad. Isn't that so?

Hermogenes:: Certainly.

Socrates:: Don't you evaluate Greek and foreign rule-setters in the same way? Provided they give each thing the form of name suited to it, no matter what syllables it is embodied in, they are equally good rule-setters, whether they are in Greece or abroad.

Hermogenes:: Certainly.

Socrates:: Now, who is likely to know whether the appropriate form of shuttle is present in any given bit of wood? A carpenter who makes it or a weaver who uses it?

Hermogenes:: In all likelihood, Socrates, it is the one who uses it.

Socrates:: So who uses what a lyre-maker produces? Isn't he the one who would know best how to supervise the manufacture of lyres and would also know whether what has been made has been well made or not?

Hermogenes:: Certainly.

Socrates:: Who is that?

Hermogenes:: A lyre-player.

Socrates:: And who will supervise a ship-builder?

Hermogenes:: A ship's captain.

Socrates:: And who can best supervise the work of a rule-setter, whether here or abroad, and judge its products? Isn't it whoever will use them?

Hermogenes:: Yes.

Socrates:: And isn't that the person who knows how to ask questions?

Hermogenes:: Certainly.

Socrates:: And he also knows how to answer them?

Hermogenes:: Yes.

Socrates:: And what would you call someone who knows how to ask and answer questions? Wouldn't you call him a dialectician?

Hermogenes:: Yes, I would.

Socrates:: So it's the work of a carpenter to make a rudder. And if the rudder is to be a fine one, a ship-captain must supervise him.

Hermogenes:: Evidently.

Socrates:: But it’s the work of a rule-setter, it seems, to make a name. And if names are to be given well, a dialectician must supervise him.

Hermogenes:: That’s right.

Socrates:: It follows that the giving of names can’t be as inconsequential a matter as you think, Hermogenes, nor can it be the work of an inconsequential or chance person. So Cratylus is right in saying that things have natural names, and that not everyone is a craftsman of names, but only someone who looks to the natural name of each thing and is able to put its form into letters and syllables.

Hermogenes:: I don’t know how to oppose you, Socrates. It isn’t easy for me suddenly to change my opinion, though. I think you would be more likely to persuade me if you showed me just what this natural correctness of names you’re talking about consists in.

Socrates:: My dear Hermogenes, I don’t have a position on this. You have forgotten what I told you a while ago, namely that I didn’t know about names but that I would investigate them with you. And now that we are investigating them, you and I, at least this much is clearer than before, that names do possess some sort of natural correctness and that it isn’t every man who knows how to name things well. Isn’t that right?

Hermogenes:: Certainly.

Socrates:: So our next task is to try to discover what this correctness is, if indeed you want to know.

Hermogenes:: Of course I do.

Socrates:: Then investigate the matter.

Hermogenes:: How am I to do that?

Socrates:: The most correct way is together with people who already know, but you must pay them well and show gratitude besides—these are the sophists. Your brother Callias got his reputation for wisdom from them in return for a lot of money. So you had better beg and implore him to teach you what he learned from Protagoras about the correctness of names, since you haven't yet come into any money of your own.

Hermogenes:: But it would be absurd for me to beg for Protagoras' "Truth," Socrates, as if I desired the things contained in it and thought them worthwhile, when I totally reject them.

Socrates:: Well, if that doesn't suit you, you'll have to learn from Homer and the other poets.

Hermogenes:: And where does Homer say anything about names, Socrates, and what does he say?

Socrates:: In lots of places. The best and most important are the ones in which he distinguishes between the names humans call things and those the gods call them. Or don't you think that these passages tell us something remarkable about the correctness of names? Surely, the gods call things by their naturally correct names—or don't you think so?

Hermogenes:: I certainly know that if they call them by any names at all, it's by the correct ones. But what passages are you referring to?

Socrates:: Do you know where he says that the Trojan river that had single combat with Hephaestus is "called 'Xanthos' by the gods and 'Skamandros' by men"?

Hermogenes:: I certainly do.

Socrates:: And don't you think it's an awe-inspiring thing to know that the river is more correctly called 'Xanthos' than 'Skamandros'? Or consider, if you like, when he says about a certain bird that

*The gods call it ‘chalcis’ but men call it ‘cymindis’.*

Do you think it’s an inconsequential matter to learn that it is far more correct to call this bird ‘chalcis’ than to call it ‘cymindis’? What about all the similar things that Homer and the other poets tell us? For example, that it is more correct to call a certain hill ‘Murine’ than ‘Batieia’? But perhaps these examples are too hard for you and me to figure out. It is easier and more within human power, I think, to investigate the kind of correctness Homer ascribes to ‘Skamandrios’ and ‘Astyanax’, which he says are the names of Hector’s son. You know, of course, the lines to which I refer.

Hermogenes:: Certainly.

Socrates:: Which of the names given to the boy do you suppose Homer thought was more correct, ‘Astyanax’ or ‘Skamandrios’?

Hermogenes:: I really can’t say.

Socrates:: Look at it this way. If you were asked who gives names more correctly, those who are wiser or those who are more foolish, what would you answer?

Hermogenes:: That it is clearly those who are wiser.

Socrates:: And which class do you think is wiser on the whole, a city’s women or its men?

Hermogenes:: Its men.

Socrates:: Now you know, don’t you, that Homer tells us that Hector’s son was called ‘Astyanax’ by the men of Troy? But if the men called him ‘Astyanax’, isn’t it clear that ‘Skamandrios’ must be what the women called him?

Hermogenes:: Probably so.

Socrates:: And didn’t Homer also think that the Trojans were wiser than their women?

Hermogenes:: I suppose he did.

Socrates:: So mustn't he have thought that 'Astyanax' was a more correct name for the boy than 'Skamandrios'?

Hermogenes:: Evidently.

Socrates:: Well, let's investigate why it is more correct. Doesn't Homer himself suggest a very good explanation when he says

> He alone defended their city and long walls?

For because of this, you see, it seems correct to call the son of the defender 'Astyanax' or lord of the city (astu, anax) which, as Homer says, his father was defending.

Hermogenes:: That seems right to me.

Socrates:: It does? You understand it, Hermogenes? For I don't understand it yet myself.

Hermogenes:: Then I certainly don't.

Socrates:: But, my good friend, didn't Homer also give Hector his name?

Hermogenes:: What if he did?

Socrates:: Well, it seems to me that 'Hector' is more or less the same as 'Astyanax', since both names seem to be Greek. After all, 'lord' ('anax') and 'possessor' ('hektor') signify pretty much the same, since both are names for a king. Surely, a man possesses that of which he is lord, since it is clear that he controls, owns, and has it. But perhaps you think I'm talking nonsense, and that I'm wrong to suppose that I've found a clue to Homer's beliefs about the correctness of names.

Hermogenes:: No, I don't think you're wrong. You may well have found a clue.

Socrates:: At any rate, it seems to me that it is right to call a lion's offspring a 'lion' and a horse's offspring a 'horse'. I'm not talking about some monster other than a horse that happens to be born from a horse but one that is a natural offspring of its kind. If, contrary to nature, a horse gave birth to a calf, it should be called a ‘calf’, not a ‘colt’. And if something that isn’t a human offspring is born to a human, I don’t think it should be called a ‘human’. And the same applies to trees and all the rest. Don’t you agree?

Hermogenes:: I agree.

Socrates:: Good. But you had better watch out in case I trick you, for by the same argument any offspring of a king should be called a ‘king’. But it doesn’t matter whether the same thing is signified by the same syllables or by different ones. And if a letter is added or subtracted, that doesn’t matter either, so long as the being or essence of the thing is in control and is expressed in its name.

Hermogenes:: How do you mean?

Socrates:: It’s something fairly simple. You know that when we speak of the elements or letters of the alphabet, it is their names we utter, not the letters themselves, except in the case of these four e, u, o, and o. We make names for all the other vowels and consonants, as you know, by uttering additional letters together with them. But as long as we include the force or power of the letter, we may correctly call it by that name, and it will express it for us. Take ‘beta’, for example. The addition of ‘e’, T, and ‘a’ does no harm and doesn’t prevent the whole name from expressing the nature of that element or letter which the rule-setter wished to name, so well did he know how to give names to the letters.

Hermogenes:: I believe you’re right.

Socrates:: Doesn’t the same argument apply to ‘king’? For a king will probably be the son of a king, a good man the son of a good man, a fine man the son of a fine one, and so on. So, unless a monster is born, the offspring of a kind will be of the same kind and should be called by the same name. But because of variation in their syllables, names that are really the same seem different to the uninitiated. Similarly, a doctor's medicines, which have different colors and perfumes added to them, appear different to us, although they are really the same and appear the same to a doctor, who looks only to their power to cure and isn't disconcerted by the additives. Similarly, someone who knows about names looks to their force or power and isn't disconcerted if a letter is added, transposed, or subtracted, or even if the force a name possesses is embodied in different letters altogether. So, for example, in the names 'Hector' and 'Astyanax', which we were discussing just now, none of the letters is the same, except T, but they signify the same anyway. And what letters does 'Archepolis'— 'Ruler-of-a-city'—have in common with them? Yet, it expresses the same thing. Many other names signify simply king; others signify general, for example, 'Agis' ('Leader',) 'Polemarchus' ('War-lord',) 'Eupolemus' ('Good-warrior'); and still others signify doctor, for example, Tatrocles' ('Famous-healer') and 'Acesimbrotus' ('Healer-of-mortals'.) And we might perhaps find many others, which differ in their letters and syllables, but which have the same force or power when spoken. Is that plain to you or not?

Hermogenes:: Certainly.

Socrates:: Then those that are born according to nature should be given the same names as their fathers.

Hermogenes:: Yes.

Socrates:: What about the ones that are born contrary to nature, those that are some form of monster? For instance, when a good and pious man has an impious son, the latter shouldn't have his father's name but that of the kind to which he belongs, just as in our earlier example of a horse having a calf as offspring?

Hermogenes:: Yes.

Socrates:: Therefore the impious son of a pious father should be given the name of the kind to which he belongs.

Hermogenes:: That’s right.

Socrates:: Then he shouldn’t be called ‘Theophilus’ (‘God-beloved’) or ‘Mnesitheus’ (‘Mindful-of-god’,) or anything of that sort, but something that signifies the opposite, if indeed names are to be actually correct.

Hermogenes:: That’s absolutely right, Socrates.

Socrates:: Thus the name ‘Orestes’ (‘Mountain-man’) is surely correct, Hermogenes, whether it was given to him by chance or by some poet, who displayed in his name the brutality, savagery, and ruggedness of his nature.

Hermogenes:: It seems so, Socrates.

Socrates:: And his father’s name also seems to accord with nature.

Hermogenes:: It does.

Socrates:: Yes, for Agamemnon is someone who worked hard and persevered, bringing his plans to completion because of his virtue or excellence. The stay of his army in Troy and his perseverance there is a sign of this. And thus the name ‘Agamemnon’ signifies that this man is admirable (agastos) for holding his ground (epimone.) The name ‘Atreus’ also seems to be correct; for both his murder of Chrysippus and his cruelty to Thyestes were damaging and destructive (atera) to his virtue. However, the meaning of his name is somewhat distorted and obscure, so that it doesn’t express his nature to everyone. But to those who understand about names it adequately expresses what ‘Atreus’ means. For whether the name accords with his stubbornness (ateires,) or his boldness (atrestos,) or his destructiveness (ateros,) it is correctly given to him. I think Pelops also has a fitting name; for ‘Pelops’ signifies he who sees only what is near at hand (pelas, opsis.)

Hermogenes:: How is that?

Socrates:: Because, according to legend, he didn’t think about or foresee what the long-term consequences of murdering Myrtilus would be for his entire family, or all the misery that would overwhelm them. In his eagerness to win Hippodameia by any available means, he saw only what was ready to hand and on the spot—that is to say, what was nearby (pelas.) Everyone would agree, too, that Tantalus’ was given correctly and according to nature, if what’s said about its bearer is true.

Hermogenes:: What’s that?

Socrates:: They say that many terrible misfortunes happened to him in his life—the last of which was the total overthrow of his country—and that, in Hades, after his death, he had a stone suspended (talanteia) over his head, in wondrous harmony with his name. It’s exactly as if someone had wished to name him ‘Talantatos’ (‘Most-weighed-upon’) but had disguised the name and said Tantalus’ instead. In some such way, in any case, the chance of legend supplied him with this name. His father, who is said to have been Zeus, also seems to have had an altogether fine name given to him—but it isn’t easy to figure out. That’s because the name ‘Zeus’ is exactly like a phrase that we divide into two parts, ‘Zena’ and ‘Dia’, some of us using one of them and some the other. But these two names, reunited into one, express the nature of the god—which is just what we said a name should do. Certainly, no one is more the cause of life (zen,) whether for us or for anything else, than the ruler and king of all things. Thus ‘Zena’ and ‘Dia’ together correctly name the god that is always the cause of life (di hon zen) for all creatures. But, as I say, his name, which is really one, is divided in two, ‘Dia’ and ‘Zena’. When one hears that Zeus is the son of Cronus, one might find that offensive at first, and it might seem more reasonable to say that he is the offspring of a great intellect. But in fact Cronus' name signifies not a child (koros,) but the purity and clarity of his intellect or understanding. According to legend, he was the son of Uranus (Heaven,) whose name is also correctly given, for the sight of what is above is well called by the name 'ourania' ('heavenly')—looking at the things above (horosa ta and)—and astronomers say, Hermogenes, that that results in purity of intellect. If I could remember Hesiod's genealogy, and the even earlier ancestors of the gods he mentions, I wouldn't have stopped explaining the correctness of the names he gives them, until I had tested this wisdom which has suddenly come upon me— I do not know from where—to see whether or not it holds up till the end.

Hermogenes:: Indeed, Socrates, you do seem to me to be exactly like a prophet who has suddenly been inspired to deliver oracles.

Socrates:: Yes, Hermogenes, and I, for my part, mostly blame Euthyphro, of the deme of Prospalta, for its coming upon me. I was with him at dawn, lending an ear to his lengthy discussion. He must have been inspired, because it looks as though he has not only filled my ears with his superhuman wisdom but taken possession of my soul as well. So it seems to me that this is what we ought to do: Today, we'll use this wisdom and finish our examination of names, but tomorrow, if the rest of you agree, we'll exorcise it and purify ourselves, as soon as we've found someone—whether priest or wise man—who is clever at that kind of purification.

Hermogenes:: That's fine with me. I'd be very glad to hear what remains to be said about names.

Socrates:: Then that's what we must do. Since we now have some sort of outline to follow, which names do you want us to begin with, in order to find out whether names themselves will testify to us that they are not given by chance, but have some sort of correctness? The names that heroes and men are said to have might perhaps deceive us. After all, as we saw at the beginning, they are often given because they are the names of ancestors, and some of them are wholly inappropriate. Many, too, are given in the hope that they will prove appropriate, such as ‘Eutychides’ (‘Son-of-good-fortune’,) ‘Sosias’ (‘Savior’,) ‘Theophilus’ (‘God-beloved’,) and many others. In my view, we must leave such names aside. We are most likely to find correctly given names among those concerned with the things that by nature always are, since it is proper for their names to be given with the greatest care, and some may even be the work of a more than human power.

Hermogenes:: I think that’s sensible, Socrates.

Socrates:: So isn’t it right to begin by seeing why the name ‘theoi' (‘gods’) is itself one that the gods are correctly called?

Hermogenes:: It probably is.

Socrates:: I suspect something like this. It seems to me that the first inhabitants of Greece believed only in those gods in which many foreigners still believe today—the sun, moon, earth, stars, and sky. And, seeing that these were always moving or running, they gave them the name ‘theoi' because it was their nature to run (thein.) Later, when they learned about the other gods, they called them all by that name. Does that seem likely— or am I talking nonsense?

Hermogenes:: It’s very likely.

Socrates:: What shall we investigate next? Clearly, it’s daemons, then heroes, then humans, isn’t it?

Hermogenes:: Yes, daemons are next.

Socrates:: And what is the correct meaning of the name ‘daemons’, Hermogenes? See if you think there’s anything in what I’m about to say.

Hermogenes:: Say it, and I will.

Socrates:: Do you know what Hesiod says daemons are?

Hermogenes:: No, I don’t remember.

Socrates:: Do you remember that he speaks of a golden race, which was the first race of human beings to be born?

Hermogenes:: Yes, I remember that.

Socrates:: He says this about it:

> Since this race has been eclipsed by fate,
> They are called sacred daemons;
> They live on earth and are good,
> Warding off evil and guarding mortal men.

Hermogenes:: So what?

Socrates:: Well, I don’t think he’s saying that the golden race is by nature made of gold, but that it is good and fine. I consider it a proof of this that he calls us a race of iron.

Hermogenes:: That’s true.

Socrates:: So don’t you think that if someone who presently exists were good, Hesiod would say that he too belonged to the golden race?

Hermogenes:: He probably would.

Socrates:: Are good people any different from wise ones?

Hermogenes:: No, they aren’t.

Socrates:: It is principally because daemons are wise and knowing (daemones,) I think, that Hesiod says they are named ‘daemons’ (‘daimones’.) In our older Attic dialect, we actually find the word ‘daemones’. So, Hesiod and many other poets speak well when they say that when a good man dies, he has a great destiny and a great honor and becomes a ‘daemon’, which is a name given to him because it accords with wisdom. And I myself assert, indeed, that every good man, whether alive or dead, is daemonic, and is correctly called a ‘daemon’.

Hermogenes:: And I think that I completely agree with you, Socrates. But what about the name ‘hero’ (‘herds’)? What is it?

Socrates:: That one isn’t so hard to understand because the name has been little altered. It expresses the fact that heroes were born out of love (erds.)

Hermogenes:: How do you mean?

Socrates:: Don’t you know that the heroes are demigods?

Hermogenes:: So what?

Socrates:: So all of them sprang from the love of a god for a mortal woman or of a mortal man for a goddess. And if, as before, you investigate the matter by relying on old Attic, you will get a better understanding, since it will show you that the name ‘hero’ (‘herds’) is only a slightly altered form of the word ‘love’ (‘eros’)—the very thing from which the heroes sprang. And either this is the reason they were called ‘heroes’ or else because they were sophists, clever speech-makers (rhetores) and dialecticians, skilled questioners (erotan)—for ‘eirein’ is the same as ‘legein’ (‘to speak’.) And therefore, as we were saying just now, in the Attic dialect, the heroes turn out to be speech-makers and questioners. Hence the noble breed of heroes turns out be a race of speech-makers and sophists. That isn’t hard to understand. But can you tell me why members of the human race are called ‘humans’ (‘anthropoi’)? That’s much harder to understand.

Hermogenes:: How could I do that, Socrates? I wouldn’t strain myself to find it even if I could, because I think you’re much more likely to find it than I am.

Socrates:: You really do have faith in Euthyphro’s inspiration, it seems.

Hermogenes:: Clearly.

Socrates:: And you’re certainly right to have faith in it. Indeed, I seem to have had such a clever insight just now, that, if I’m not careful, I’ll be in danger of becoming altogether too wise before the day is out. So pay attention. First of all, we must bear in mind the following point about names: we often add letters or take them out and change the accents as well, thus swerving aside from what we want to name. For instance, take ‘Dii philos’ (‘Friend-to-Zeus’.) In order for us to have a name instead of a phrase, we took out the second and pronounced the second syllable with a grave accent instead of an acute (‘Diphilos’.) In other cases, we do the opposite, inserting letters and pronouncing a syllable with an acute accent instead of a grave.

Hermogenes:: That’s true.

Socrates:: Now, I think our name for human beings is a case of just this sort. It was a phrase but became a name. One letter—’a’—has been taken away and the accent on the final syllable has become a grave.

Hermogenes:: What do you mean?

Socrates:: The name ‘human’ signifies that the other animals do not investigate or reason about anything they see, nor do they observe anything closely. But a human being no sooner sees something—that is to say, ‘opope’—than he observes it closely and reasons about it. Hence human beings alone among the animals are correctly named ‘anthropos’—one who observes closely what he has seen (anathron ha opope.)

Hermogenes:: What comes next? May I tell you what I'd like to have explained?

Socrates:: Of course.

Hermogenes:: It seems to me to be next in order. We speak of the body and soul of a human being.

Socrates:: Certainly.

Hermogenes:: Then let's try to analyze their names as we did the previous ones.

Socrates:: Are you saying that we should investigate whether soul and then body are reasonably named?

Hermogenes:: Yes.

Socrates:: Speaking off the top of my head, I think that those who gave soul its name had something like this in mind. They thought that when the soul is present in the body, it causes it to live and gives it the power to breathe the air and be revitalized (anapsuchon,) and that when this revitalization fails, the body dies and is finished. It's for this reason, I think, that they called it 'soul' ('psuche.) But hold on a minute, if you don't mind, for I imagine that the followers of Euthyphro would despise this analysis and think it crude. But I think I glimpse one they will find more persuasive. Have a look and see whether it pleases you.

Hermogenes:: Tell it to me and I will.

Socrates:: When you consider the nature of every body, what, besides the soul, do you think sustains and supports it, so that it lives and moves about?

Hermogenes:: There isn't anything.

Socrates:: What about when you consider the nature of everything else? Don't you agree with Anaxagoras that it is ordered and sustained by mind or soul?

Hermogenes:: I do.

Socrates:: So a fine name to give this power, which supports and sustains (ochei kai echei) the whole of nature (phusis,) would be 'nature-sustainer' ('phuseche'.) This may also be pronounced more elegantly, 'psuche'.

Hermogenes:: Absolutely, and I also think this is a more scientific explanation than the other.

Socrates:: Yes, it is. Nevertheless, it sounds funny when it's named in the true way, with its actual name (i.e., 'phuseche'.)

Hermogenes:: What are we going to say about the next one?

Socrates:: Are you referring to the name 'body'?

Hermogenes:: Yes.

Socrates:: There's a lot to say, it seems to me—and if one distorted the name a little, there would be even more. Thus some people say that the body (soma) is the tomb (sema) of the soul, on the grounds that it is entombed in its present life, while others say that it is correctly called 'a sign' ('sema') because the soul signifies whatever it wants to signify by means of the body. I think it is most likely the followers of Orpheus who gave the body its name, with the idea that the soul is being punished for something, and that the body is an enclosure or prison in which the soul is securely kept (sozetai)—as the name 'soma' itself suggests—until the penalty is paid; for, on this view, not even a single letter of the word needs to be changed.

Hermogenes:: I think we've adequately examined these names, Socrates. But could we investigate the names of the other gods along the lines of your earlier discussion of 'Zeus', to see with what kind of correctness they have been given?

Socrates:: By Zeus, we certainly can, Hermogenes. The first and finest line of investigation, which as intelligent people we must acknowledge, is this, that we admit that we know nothing about the gods themselves or about the names they call themselves—although it is clear that they call themselves by true ones. The second best line on the correctness of names is to say, as is customary in our prayers, that we hope the gods are pleased by the names we give them, since we know no others. I think this is an excellent custom. So, if it's all right with you, let's begin our investigation by first announcing to the gods that we will not be investigating them—since we do not regard ourselves as worthy to conduct such an investigation—but rather human beings, and the beliefs they had in giving the gods their names. After all, there's no offense in doing that.

Hermogenes:: What you say seems reasonable to me, Socrates, so let's proceed as you suggest.

Socrates:: Shall we begin, as is customary, with Hestia?

Hermogenes:: All right.

Socrates:: What do you think the person who gave Hestia her name had in mind by naming her that?

Hermogenes:: That's no easy question to answer, in my opinion.

Socrates:: At any rate, Hermogenes, the first name-givers weren't ordinary people, but lofty thinkers and subtle reasoners.

Hermogenes:: What of it?

Socrates:: Well, it's obvious to me that it was people of this sort who gave things names, for even if one investigates names foreign to Attic Greek, it is equally easy to discover what they mean. In the case of what we in Attic call 'ousia' ('being',) for example, some call it 'essia' and others 'osia'. First, then, it is reasonable, according to the second of these names, to call the being or essence (ousia) of things 'Hestia'. Besides, we ourselves say that what partakes of being 'is' Restin',) so being is also correctly called 'Hestia' for this reason. We even seem to have called being 'essia' in ancient times. And, if one has sacrifices in mind, one will realize that the name-givers themselves understood matters in this way, for anyone who called the being or essence of all things ‘essia’ would naturally sacrifice to Hestia before all the other gods. On the other hand, those who use the name ‘osia’ seem to agree pretty much with Heraclitus’ doctrine that the things that are are all flowing and that nothing stands fast—for the cause and originator of them is then the pusher (iothoun,) and so is well named ‘osia’. But that’s enough for us to say about this, since we know nothing. After Hestia, it is right to investigate Rhea and Cronus, though we’ve already discussed the latter’s name. Now, maybe what I’m about to tell you is nonsense.

Hermogenes:: Why do you say that, Socrates?

Socrates:: Because I’ve got a whole swarm of wisdom in my mind!

Hermogenes:: What sort of wisdom?

Socrates:: It sounds completely absurd, yet it seems to me to have something very plausible about it.

Hermogenes:: How so?

Socrates:: I seem to see Heraclitus spouting some ancient bits of wisdom that Homer also tells us—wisdom as old as the days of Cronus and Rhea.

Hermogenes:: What are you referring to?

Socrates:: Heraclitus says somewhere that “everything gives way and nothing stands fast,” and, likening the things that are to the flowing (rhoe) of a river, he says that “you cannot step into the same river twice.”

Hermogenes:: So he does.

Socrates:: Well, then, don’t you think that whoever gave the names ‘Rhea’ and ‘Cronus’ to the ancestors of the other gods understood things in the same way as Heraclitus? Or do you think he gave them both the names of streams (rheumata) merely by chance? Similarly, Homer speaks of Ocean, origin of the gods, and their mother Tethys; I think

Hesiod says much the same. Orpheus, too, says somewhere that

> Fair-flowing Ocean was the first to marry,
> And he wedded his sister, the daughter of his mother.

See how they agree with each other, and how they all lean towards the doctrines of Heraclitus.

Hermogenes:: I think there's something in what you say, Socrates, but I don't understand what the name 'Tethys' means.

Socrates:: But it practically tells you itself that it is the slightly disguised name of a spring! After all, what is strained (diattomenon) and filtered (iethoumenon) is like a spring, and the name 'Tethys' is a compound of these two names.

Hermogenes:: That's elegant, Socrates.

Socrates:: Indeed, it is. But what comes next? We've already talked about Zeus.

Hermogenes:: Yes, we have.

Socrates:: So let's discuss his brothers, Posidon and Pluto (whether we call him 'Pluto' or by his other name.)

Hermogenes:: Certainly.

Socrates:: It seems to me that whoever first gave Posidon his name, gave it to him because he saw that the force of the waves stopped him from walking and prevented him from going any further, just like a shackle around his feet (desmos ton podon.) So he called this god, who is the ruler of the sea's power, 'Posidon', because his 'feet were shackled' ('posides-mon')—the 'e' was probably added for the sake of euphony. But perhaps this isn't what it says. Perhaps, instead of the 's' the name was originally pronounced with a double 'l', because many things are known (poll' eidos) to the god. Or maybe he was called 'The Shaker' ('ho seion',) because he shook (seiein) the earth, and the 'p' and" were added on. As for Pluto, he was given that name because it accords with his being the source of wealth (ploutos,) since wealth comes up from below the ground. It seems to me that most people call him by the name 'Pluto', because they are afraid of what they can't see (aeides,) and they assume that his other name, 'Hades', associates him with that.

Hermogenes:: And what do you think yourself, Socrates?

Socrates:: I think people have lots of mistaken opinions about the power of this god and are unduly afraid of him. They are afraid because once we are dead we remain in his realm forever. They are terrified because the soul goes there stripped of the body. But I think that all these things, together with the name and office of the god, point in the same direction.

Hermogenes:: How so?

Socrates:: I'll tell you how it looks to me. But first answer me this: Of the shackles that bind a living being and keep him in a place, which is stronger, force or desire?

Hermogenes:: Desire is far stronger, Socrates.

Socrates:: Don't you think then that many people would escape from Hades, if he didn't bind those who come to him with the strongest of shackles?

Hermogenes:: Clearly.

Socrates:: So, if he is to bind them with the strongest of shackles, rather than holding them by force, he must, it seems, bind them with some sort of desire.

Hermogenes:: Evidently.

Socrates:: Now, there are lots of desires, aren't there?

Hermogenes:: Yes.

Socrates:: So, if he is really going to hold them with the greatest shackles, he has to bind them with the greatest desire.

Hermogenes:: Yes.

Socrates:: Is any desire greater than the desire to associate with someone whose company one believes will make one a better man?

Hermogenes:: No, there certainly isn't, Socrates.

Socrates:: So let's say that it is for these reasons, Hermogenes, that hitherto no one has wished to come back here from there. The words Hades knows how to speak are so beautiful, it seems, that everyone— even the Sirens—has been overcome by his enchantments. On this account, therefore, this god is a perfect sophist, and a great benefactor to those who are with him. So great is the wealth that surrounds him there below, indeed, that he even sends many good things to us from it. This is how he got the name 'Pluto'. On the other hand, because he is unwilling to associate with human beings while they have their bodies, but converses with them only when their souls are purified of all the desires and evils of the body, doesn't he seem to you to be a philosopher? For hasn't he well understood that when people are free of their bodies he can bind them with the desire for virtue, but that while they feel the agitation and madness of the body not even the famous shackles of his father Cronus could keep them with him?

Hermogenes:: Probably so, Socrates.

Socrates:: It's much more likely then, Hermogenes, that Hades derives his name not from what cannot be seen (aeides,) but from the fact that he knows (eidenai) everything fine and beautiful, and that that is why the rule-setter called him 'Hades'.

Hermogenes:: All right. But what about Demeter, Hera, Apollo, Athena, Hephaestus, and all the other gods? What are we to say about them?

Socrates:: Demeter seems to have been so called because she gives (di-dousa) nourishment just like a mother (meter);

Hera is a loveable one (erate,) and, indeed, Zeus is said to have married her for love. But perhaps the rule-setter, being a lofty thinker, called her ‘Hera’ as a disguised name for air (aer,) putting the end of her name at the beginning—you’ll get the idea if you repeat the name ‘Hera’ over and over. As for ‘pherrephatta’: it seems that many people dread the names ‘Pherrephatta’ and ‘Apollo’ because they are ignorant about the correctness of names, for they change the first name to ‘Phersephone’, and then it seems terrifying to them. But really the name ‘Pherrephatta’ indicates that the goddess is wise—for since things are being swept along, wisdom is the power to grasp (ephaptomenon,) comprehend (epaphon,) and follow (epakolouthein) them. Thus it would be correct to call this goddess ‘Pherepapha’, or something like that, because of her wisdom, that is to say, her power to comprehend what is being swept along (epaphe tou pheromenou)—this is also the reason that Hades, since he is himself wise, associates with her. But people nowadays attach more importance to euphony than to truth, so they distort her name and call her ‘Pherrephatta’. And, as I said, the same thing has happened to Apollo. Many people are afraid of his name because they think it indicates something terrifying. Haven’t you noticed this?

Hermogenes:: I certainly have, and what you say is true.

Socrates:: In my view, however, the name is most beautifully suited to the power of the god.

Hermogenes:: How so?

Socrates:: I’ll try to say how it seems to me, at least. I think no single name could be more in keeping with the four powers of the god. It comprehends each of them, expressing his power in music, prophecy, medicine, and archery.

Hermogenes:: It’s a pretty remarkable name you’re talking about; so go ahead and explain it.

Socrates:: It's certainly a harmonious one. After all, it's the name of the god of music. To begin with, the purgations and purifications that doctors and prophets use, the fumigations with medicinal and magical drugs, and the various washings and sprinklings that are involved in these processes, all have the same effect, don't they, namely, to make a person pure in body and soul?

Hermogenes:: Certainly.

Socrates:: But isn't Apollo the purifying god who washes away (apolouon) such evil impurities and releases (apoluon) us from them?

Hermogenes:: Certainly.

Socrates:: Since he washes and releases and is a doctor for our evil impurities, he might correctly be called 'Apolouon' (The Washer'.) On the other hand, it may well be most correct to call him by the name the Thessalians use, since it accords with his prophecy, that is to say, with his single-mindedness (haploun) or truthfulness (these being the same thing,) for all the Thessalians call this god 'Aploun'. And since he always (aei) makes his shots (bolon,) because of his skill in archery, he is also 'Aeiballon' ('Always-shooting'.) To understand how his name accords with his musical powers, we have to understand that the letter 'a' often signifies togetherness (to homou,) as it does in 'akolouthos' ('follower' or 'attendant') and 'akoitis' ('bed-fellow', 'spouse', 'husband'.) In this case, it signifies moving together (homou polesis,) whether the moving together of the heavens around what we call the 'poles' ('poloi',) or the harmonious moving together in music, which we call 'being in concert' ('sumphonia'); for, as those who are clever in astronomy and music say, all these things move together simultaneously by a kind of harmony. Apollo is the god who directs the harmony, and makes all things move together (homopolon,) whether for gods or human beings. So, just as the names ‘akolouthos’ and ‘akoitis’ are derived from ‘homokolouthos’ and ‘homokoitis’ by replacing ‘homo’ with ‘a’, we called him ‘Apollo’, though he was really ‘Homopolon’ (‘the one who makes things move together’.) We inserted the second ‘l’ lest his name become an oppressive one. Even as it is, indeed, some people, who haven’t correctly investigated the force or power of his name, are afraid of it, because they suspect that it does signify some kind of destructiveness. But, as we said earlier, it really comprehends each of the powers of the god, who is a single-minded, always shooting washer, who makes things move together. As for the Muses and music and poetry in general, they seem to have derived their name from their eager desire (mosthai) to investigate and do philosophy. Leto is so-called because of being very gentle (pra(i)otetos) and willing (ethelemos) to do whatever is asked of her. Or perhaps her name derives from the one used by those who speak dialects other than Attic, many of whom call her ‘Letho’—apparently on account of the fact that her character isn’t rough but gentle and smooth (leion.) Artemis appears to have been so-called because of her soundness (artemes) and orderliness, and because of her desire for virginity (parthenia.) Or perhaps the one who gave her that name was calling her ‘an investigator of virtue’ (‘aretes histor’) or ‘a hater of sexual intercourse between men and women’ (‘aroton misesases’.) It is for some one of these reasons or for all of them that the one who gave this name to the goddess gave it to her.

Hermogenes:: What about ‘Dionysos’ and ‘Aphrodite’?

Socrates:: You’re asking great things of me, son of Hipponicus, because there is not only a serious way of explaining the names of these divinities but a playful one as well. You’ll have to ask others for the serious one, but there’s nothing to prevent us from going through the playful one—

even the gods love play. Dionysos, the giver of wine (ho didous ton oinon,) might playfully be called ‘Didoinusos’; while wine (oinos) would most justly be called ‘oionous’, since it makes most drinkers think they understood (oiesthai noun echein) when they don’t. As far as Aphrodite is concerned, there’s no point in contradicting Hesiod—we should agree with him that she is called ‘Aphrodite’ because she was born from foam (aphros)?

Hermogenes:: Being an Athenian, Socrates, you surely aren’t going to forget Athena, or Hephaestus and Ares either, for that matter.

Socrates:: Not likely.

Hermogenes:: No, indeed.

Socrates:: It isn’t hard to explain how Athena got her other name.

Hermogenes:: Which one?

Socrates:: ‘Pallas’—you know we call her that.

Hermogenes:: Of course.

Socrates:: In my view, we would be correct to think that this name derives from her dancing in arms and armor, for lifting oneself or anything else up, whether from the ground or in one’s hands, is called ‘shaking’ (‘pallein’) and ‘dancing’ or ‘being shaken’ (‘pallesthai’) and ‘being danced’.

Hermogenes:: Certainly.

Socrates:: She’s called ‘Pallas’ because of this.

Hermogenes:: And correctly so. But how do you explain her other name?

Socrates:: You mean ‘Athena’?

Hermogenes:: Yes.

Socrates:: That’s a much weightier issue, my friend. The ancients seem to have had the same opinion about Athena as do contemporary experts on Homer. Many of them say in their interpretations of the poet that he represents Athena as Understanding or Thought. The maker of names seems to think the same sort of thing about the goddess. Indeed, he speaks of her in still grander terms, saying she is the very mind of god (theou noesis,) as if she is 'ha theonoa'—using 'a' in the non-Attic style in place of 'ē' and deleting 'i' and 's'. But perhaps this isn't the explanation. Perhaps what he called her was 'Theonoe', because of her unparalleled knowledge of divine things (ta theia noousa.) Nor would we be far off the mark if we supposed that what he called her was 'Ethonoe', because he wanted to identify the goddess with her understanding character (he en toi ethei noesis.) Then he himself or others after him made the name more beautiful, as they thought, and called her 'Athenaa'.

Hermogenes:: What about Hephaestus? How do you explain him?

Socrates:: Are you asking me about the noble judge of light (phaeos histor)?

Hermogenes:: It seems so.

Socrates:: Isn't it clear to everyone then that he is 'Phaestus' with an 'e' added on?

Hermogenes:: It probably is—unless you happen to have yet another opinion on the matter. And you probably do.

Socrates:: Then to prevent me from giving it, ask me about Ares.

Hermogenes:: Consider yourself asked!

Socrates:: All right, if that's what you want. It is proper for a god who is in every way warlike to be called 'Ares', for 'Ares' accords with virility (arren) and courage (andreia,) or with a hard and unbending nature, the one that is called 'arratos'.

Hermogenes:: It certainly is.

Socrates:: Then for god’s sake let’s leave the subject of the gods, because it frightens me to talk about them. But ask me about anything else you like, “until we see what the horses” of Euthyphro “can do.”

Hermogenes:: I’ll do that, but there is still one god I want to ask you about, and that’s Hermes, since Cratylus says that I am no Hermogenes (Son-of-Hermes.) So let’s examine the name ‘Hermes’ and its meaning, to see whether there’s anything in what he says.

Socrates:: Well, the name ‘Hermes’ seems to have something to do with speech: he is an interpreter (hermeneus,) a messenger, a thief and a deceiver in words, a wheeler-dealer—and all these activities involve the power of speech. Now, as we mentioned before, ‘eirein’ means ‘to use words’, and the other part of the name says—as Homer often does—’emesato’ (‘he contrived’,) which means ‘to devise’. And it was out of these two words that the rule-setter established the name of the god who devised speech (legein) and words, since ‘eirein’ means the same as ‘legein’ (‘to speak’.) It’s just as if he had told us: “Humans, it would be right for you to call the god who has contrived speech (to eirein emesato) ‘Eirernes’.” But we, beautifying the name, as we suppose, call him ‘Hermes’ nowadays.

Hermogenes:: I’m certain that Cratylus was right when he said that I’m no Hermogenes then, since I’m no good at devising speeches.

Socrates:: But it is reasonable for Pan to be Hermes’ double-natured son.

Hermogenes:: How so?

Socrates:: You know speech signifies all things (to pan) and keeps them circulating and always going about, and that it has two forms—true and false?

Hermogenes:: Certainly.

Socrates:: Well, the true part is smooth and divine and dwells among the gods above, while the false part dwells below among the human masses, and is rough and goatish (tragikon); for it is here, in the tragic (tragikon) life, that one finds the vast majority of myths and falsehoods.

Hermogenes:: Certainly.

Socrates:: Therefore the one who expresses all things (pan) and keeps them always in circulation (aei polon) is correctly called 'Pan-the-goat-herd' ('Pan aipolos'.) The double-natured son of Hermes, he is smooth in his upper parts, and rough and goatish in the ones below. He is either speech itself or the brother of speech, since he is the son of Hermes. And it's not a bit surprising that a brother resembles his brother. But, as I said, let's leave the gods.

Hermogenes:: That sort of gods, Socrates, if that's what you want. But what keeps you from discussing these gods: the sun and moon, and stars, earth, aether, air, fire, water, and the seasons and the year?

Socrates:: That's a lot you're asking of me! All the same, if it will please you, I am willing.

Hermogenes:: Of course, it will.

Socrates:: Which one do you want me to take up first? Or, since you mentioned the sun (helios) first, shall we begin with it?

Hermogenes:: Certainly.

Socrates:: If we use the Doric form of the name, I think matters will become clearer, for the Dorians call the sun 'halios'. So 'halios' might accord with the fact that the sun collects (halizein) people together when it rises, or with the fact that it is always rolling (aei heilein ion) in its course around the earth, or with the fact that it seems to color (poikillei) the products of the earth, for 'poikillein' means the same as 'aiolein' ('to shift rapidly to and fro'.)

Hermogenes:: What about the moon (selene)?

Socrates:: The name certainly seems to put Anaxagoras in an awkward position.

Hermogenes:: Why is that?

Socrates:: It seems to reveal that his recent theory about the moon deriving its light from the sun is in fact quite old.

Hermogenes:: In what way?

Socrates:: Selas (bright light) and phos (light) are the same thing.

Hermogenes:: Yes.

Socrates:: Now, if what the Anaxagoreans say is true, the light of the moon (selene) is always both new (neon) and old (henon,) for they say that as the sun circles around the moon it always casts new light on it, but that the light from the previous month also remains there.

Hermogenes:: Certainly.

Socrates:: But many people call the moon ‘Selanaia’.

Hermogenes:: Yes, they do.

Socrates:: And, since its light is always both new and old (selas neon kai enon echei aei,) the right name to call it is ‘Selaenoneoaeia’, and this is the one that has been compressed into ‘Selanaia’.

Hermogenes:: And a dithyrambic name it is too, Socrates! But what have you to say about the month and the stars?

Socrates:: The correct name to call a month (meis) is ‘meies’ from ‘meious-thai' (‘to grow smaller’.) And the stars (astra) seem to get their name given to them from ‘astrape’ (‘lightning’,) for lightning is what causes the eyes to turn upward (anastrephei ta opa.) Hence, it should really be called ‘an-astrope’, but nowadays the name is beautified and it is called ‘astrape’.

Hermogenes:: What about fire and water?

Socrates:: I'm really puzzled about fire (pur.) So either Euthyphro's muse has abandoned me or this really is very hard. But notice the device I use in all such puzzling cases.

Hermogenes:: What is that?

Socrates:: I'll tell you. But first answer me this. Could you say in what way pur (fire) comes to be so called?

Hermogenes:: I certainly can't.

Socrates:: Here's what I suspect. I think that the Greeks, especially those who live abroad, have adopted many names from foreign tongues.

Hermogenes:: What of it?

Socrates:: Well, if someone were trying to discover whether these names had been reasonably given, and he treated them as belonging to the Greek language rather than the one they really come from, you know that he would be in a quandary.

Hermogenes:: He very probably would.

Socrates:: Now, look at 'fire' ('pur') and see whether it isn't a foreign name—for it certainly isn't easy to connect it with the Greek language. Besides, it's obvious that the Phrygrians use the same name slightly altered. And the same holds for 'water' ('hudor) and 'dog' ('kuon',) and lots of others.

Hermogenes:: So it does.

Socrates:: Consequently, though one might say something about these names, one mustn't push them too far. That, then, is how I get rid of 'fire' ('pur') and 'water' ('hudor'.) But what about air, Hermogenes? Is it called 'aer' because it raises (airei) things from the earth? Or because it is always flowing (aei rhea)? Or because wind (pneuma) arises from its flow? For the poets call the winds (pneumata) 'gales' (aetai',) don't they? So, perhaps a poet says 'aetorrous' ('gale flow') in place of 'pneumatorrous' ('wind flow',) thereby indicating that what he is talking about is air. As for aether, I'd explain it as follows: it is right to call it ‘aeitheer’, because it is always running and flowing (aei thei rheon) about the air. The earth (ge) is better signified by the name ‘gaia’; for gaia is correctly called a ‘mother’, as Homer tells us by using ‘gegaasi' for ‘to be born’. All right, what was to come next?

Hermogenes:: ‘Seasons’ (‘Horai’,) Socrates, and the two names for the year, ‘eniautos’ and ‘etos’.

Socrates:: If you want to know the probable truth about the name ‘horai' (‘seasons’,) you must look to the fact that it is spelled ‘horai' in old Attic. The seasons are rightly called ‘horai' (‘things that distinguish or mark off one thing from another’,) because they distinguish (horizein) the weathers of winter and summer, the winds, and the fruits of the earth. As for ‘eniautos’ and ‘etos’, they are actually one name. We saw earlier that Zeus’ name was divided in two—some called him ‘Zena’, some ‘Dia’ in the accusative. Well, exactly the same is true of the name of the year. It is the year by itself that brings the plants and animals of the earth to light, each in its proper season, and passes them in review within itself (en heautoi exetazei.) Hence, some people call it ‘etos’, because it passes things in review (etazei,) while others call it ‘eniautos’, because it does this within itself (en heautoi.) The whole phrase is ‘passing things in review within itself’ (‘en heautoi etazon’,) but this single phrase results in the year being called these two different names. Thus, the two names, ‘eniautos’ and ‘etos’, derive from a single phrase.

Hermogenes:: I say, Socrates, you are making great progress!

Socrates:: I think I’m driving my apparent wisdom pretty hard at present.

Hermogenes:: You certainly are.

Socrates:: You’ll be even more certain in a second.

Hermogenes:: Now that we’ve examined that sort of name, I'd next like to see with what correctness the names of the virtues are given. I mean ‘wisdom’ (‘phronesis’,) ‘comprehension’ (‘sunesis’,) ‘justice’ (‘dikaiosune’,) and all the other fine names of that sort.

Socrates:: That’s no inconsequential class of names you’re stirring up, Hermogenes, but, since I have put on the lion’s skin, I mustn’t lose heart. So, it seems I must investigate ‘wisdom’, ‘comprehension’, ‘judgment’ (‘gnome’,) ‘knowledge’ (‘episteme’,) and all those other fine names of which you speak.

Hermogenes:: We certainly mustn’t stop until we’ve done so.

Socrates:: By the dog, I think that’s a pretty good inspiration—what popped into my mind just now! Most of our wise men nowadays get so dizzy going around and around in their search for the nature of the things that are, that the things themselves appear to them to be turning around and moving every which way. Well, I think that the people who gave things their names in very ancient times are exactly like these wise men. They don’t blame this on their own internal condition, however, but on the nature of the things themselves, which they think are never stable or steadfast, but flowing and moving, full of every sort of motion and constant coming into being. I say this, because the names you just mentioned put me in mind of it.

Hermogenes:: How did they do that, Socrates?

Socrates:: Perhaps you didn’t notice that they are given on the assumption that the things they name are moving, flowing, and coming into being.

Hermogenes:: No, I didn’t think of that at all.

Socrates:: Well, to begin with, the first name we mentioned is undoubtedly like this.

Hermogenes:: What name was that?

Socrates:: 'Wisdom' ('phronesis'.) Wisdom is the understanding of motion (phoras noesis) and flow. Or it might be interpreted as taking delight in motion (phoras onesis.) In either case, it has to do with motion. If you want another example, the name 'judgment' ('gnome') expresses the fact that to judge is to examine or study whatever is begotten (gones nomesis); for 'studying' ('noman') and 'examining' ('skopein') are the same. And if you want yet another example, understanding (noesis) itself is the longing for the new (neou hesis.) But to say that the things that are are new is to signify that they are always coming into being. And such things are what the soul longs for, as the giver of the name, 'neoesis' expressed, for the ancient name wasn't 'noesis' but 'noesis', but an 'e' took the place of the double 'e'. Moderation (sophrosune) is the savior (soteria) of the wisdom (phronesis) we just looked at. 'Knowledge' ('episteme') indicates that a worthwhile soul follows (hepetai) the movement of things, neither falling behind nor running on ahead. So we ought to insert an 'e' in the name and spell it 'hepeisteme'. Comprehension (sunesis,) in turn, seems to be a kind of summing up (sullogismos,) and whenever one says 'comprehends' ('sunienai',) it's exactly as if one has said 'knows' ('epistasthai',) for 'sunienai' (literally, 'goes along with') means that the soul 'journeys together' with things. As for 'wisdom' ('sophia',) it signifies the grasp of motion. But it is rather obscure and non-Attic. Nonetheless, we must remember that the poets often say of something that begins to advance quickly that it "rushed" ("esuthe".) Indeed, there was a famous Spartan man named 'Sous', for this is what the Spartans call a rapid advance. 'Wisdom' signifies the grasping (epaphe) of this motion, on the assumption that the things that are are moving. The name ‘good’ (‘agathon’) is intended to signify everything in nature that is admirable (agaston.) The things that are are moving, but some are moving quickly, others slowly. So what moves quickly is not all there is, but the admirable part of it. Hence this name ‘tagathon’ (‘the good’) is applied to what is admirable (agaston) about the fast (thoon.)

It’s easy to figure out that ‘justice’ (‘dikaiosune’) is the name given to the comprehension of the just (dikaiou sunesis,) but the just itself is hard to understand. It seems that many people agree with one another about it up to a point, but beyond that they disagree. Those who think that the universe is in motion believe that most of it is of such a kind as to do nothing but give way, but that something penetrates all of it and generates everything that comes into being. This, they say, is the fastest and smallest thing of all; for if it were not the smallest, so that nothing could keep it out, or not the fastest, so that it could treat all other things as though they were standing still, it wouldn’t be able to travel through everything. However, since it is governor and penetrator (diaion) of everything else, it is rightly called ‘just’ (‘dikaion’)—the ‘k’-sound is added for the sake of euphony. As I was saying before, many people agree about the just up to this point. As for myself, Hermogenes, because I persisted at it, I learned all about the matter in secret—that this is the just and the cause, since that through which (di ho) a thing comes to be is the cause. Indeed, someone told me that it is correct to call this ‘Dia’ (‘Zeus’) for that reason. Even when I'd heard this, however, I persisted in gently asking, “If all this is true, my friend, what actually is the just?” Thereupon, they think I am asking too many questions and demanding the impossible, and they tell me that I have already learned enough. Then they try to satisfy me by having each tell me his own view. But they disagree with each other. One says that the just is the sun, since only the sun governs all of the things that are, penetrating (diaion) and burning (kaon) them. Well-satisfied, I tell this fine answer to one of the others, but he ridicules me by asking if I think nothing just ever happens in human affairs once the sun has set. So I persist, and ask him to tell me what he thinks the just is, and he says that it is fire {to pur)—but that isn't easy to understand. Another says that it isn't fire, but the heat itself that is in fire. Another says that all these explanations are ridiculous, and that the just is what Anaxagoras talks about, namely, mind; for he says that mind is self-ruling, mixes with nothing else, orders the things that are, and travels through everything. Thereupon, my friend, I am even more perplexed than when I set out to learn what the just is. However, the goal of our investigation was the name 'just', and it seems to have been given for the reasons we mentioned.

Hermogenes:: I think you really must have heard this from someone, Socrates, rather than making it up as you went along.

Socrates:: What about the other explanations I've mentioned?

Hermogenes:: I certainly don't think you heard those.

Socrates:: Listen, then, and perhaps I'll be able to deceive you into thinking that I haven't heard the remaining ones either. After justice what's left? I don't think we've discussed courage—but it's clear that injustice (adikia) is really nothing more than a hindering of that which penetrates (idiaion.) 'Courage' ('andreia') signifies that this virtue was given its name in battle. And if indeed the things that are are flowing, then a battle cannot be anything but an opposing flow. If we remove the "from 'andreia' to get 'anreia' ('flowing back',) the name itself indicates this fact. Of course, it is clear that courage doesn’t oppose every flow, but only the one that is contrary to justice; otherwise, courage wouldn’t be praiseworthy. Similarly, ‘male’ (‘arren’) and ‘man’ (‘aner’) indicate upward flow (and rhoe.) It seems to me that ‘gune’ (‘woman’) wants to be ‘gone’ (‘womb’,) that ‘thelus’ (‘female’) comes from ‘thele’ (‘nipple’,) and that a nipple (thele) is so-called, Hermogenes, because it makes things flourish (tethelenai) in just the way that watering makes plants flourish.

Hermogenes:: Probably so, Socrates.

Socrates:: Yes, ‘thallein’ itself seems to me to be like the sudden and rapid growth of the young, for the name-giver has imitated something like this in the name, which he put together from ‘theiri (‘to run’) and ‘hallesthai' (‘to jump’.) Notice how I go off course, when I get on the flat. But there are still plenty of names left that seem important.

Hermogenes:: That’s true.

Socrates:: And one of them is to see what the name ‘techne’ (‘craft’) means.

Hermogenes:: Certainly.

Socrates:: If you remove the T and insert an ‘o’ between the ‘ch’ and the ‘n’ and the ‘n’ and the ‘e’, doesn’t it signify the possession of understanding (hexis nou)?

Hermogenes:: Yes, Socrates, but getting it to do so is like trying to haul a boat up a very sticky ramp!

Socrates:: But then you know, Hermogenes, that the first names given to things have long since been covered over by those who wanted to dress them up, and that letters were added or subtracted to make them sound good in the mouth, resulting in distortions and ornamentation of every kind. You know, too, that time has had a share in this process. Take ‘katoptron (‘mirror’,) for example, don’t you think that the V is an absurd addition? In my view, this sort of thing is the work of people who think nothing of the truth, but only of the sounds their mouths make. Hence, they keep embellishing the first names, until finally a name is reached that no human being can understand. One example, among many others, is that they call the Sphinx by that name instead of 'Phix'.

Hermogenes:: That's right, Socrates.

Socrates:: And yet, if we can add whatever we like to names, or subtract whatever we like from them, it will be far too easy to fit any name to any thing.

Hermogenes:: That's true.

Socrates:: Yes, it is true. So, I think a wise supervisor, like yourself, will have to keep a close watch, to preserve balance and probability.

Hermogenes:: That's what I want to do.

Socrates:: And I want to do it along with you, Hermogenes, but don't demand too much precision, in case You enfeeble my strength.

Now that 'techne' is out of the way, I'm about to come to the summit of our inquiries. But first I'll investigate 'mechane' ('device'.) It seems to me that 'mechane' signifies great accomplishment (anein epi polu); for 'mekos' signifies some sort of greatness, and these two, 'mekos' and 'anein' make up the name 'mechane'. But, as I was saying just now, we must go on to the summit of our inquiries, and investigate the names 'arete' ('virtue') and 'kakia' ('vice'.) I don't yet understand the first of them, but the other seems clear enough, since it is in harmony with everything we said before. To the degree that things are in motion, all that is moving badly (kakos ion) should be called 'kakia', but the name for all such things is mostly given to a soul in which this bad movement in relation to things resides. It seems to me that the name 'deilia' ('cowardice',) which we haven't discussed, expresses what this bad movement is.—We ought to have discussed ‘deilia’ after ‘andreia’ (‘courage’,) but we passed it by, as I believe we have passed by lots of other names.—Now, ‘deilia’ signifies the soul’s being bound with a strong shackle (desmos,) for lian (too much) is a degree of strength. Therefore, ‘deilia’ signifies the strongest of the soul’s shackles.

Aporia (perplexity, inability to move on) is a vice of the same sort, and so, it seems, is everything else that hinders movement and motion. This makes it clear that the bad movement in question is a restrained or hindered motion, whose possession by a soul causes it to become filled with vice. And, if ‘kakia’ is the name of that sort of thing, ‘arete’ is the opposite. It signifies, first, lack of perplexity (euporia, ease of movement,) and, second, that the flow of a good soul is always unimpeded; for it seems that it is given this name ‘arete’ because it is unrestrained and unhindered and so is always flowing (aei rheon.) Thus it is correct to call it ‘aeirheite’, but this has been contracted, and it is called ‘arete’. Now, maybe you’ll say that I’m inventing things again, but I think that if what I just said about ‘kakia’ is correct, then so is what I said about the name ‘arete’.

Hermogenes:: What about ‘kakon’ (‘bad’,) which has been involved in many of the previous inquiries? What’s the meaning of it?

Socrates:: It’s a strange word, by god! At least, that’s what I think. And one that’s hard to interpret. So I’ll use the device I introduced earlier on it as well.

Hermogenes:: Which one?

Socrates:: That of attributing a foreign origin to it.

Hermogenes:: And you may well be correct. So suppose we leave these inquiries, and try to see what rationale there is for ‘kalon’ (‘fine’, ‘beautiful’) and ‘aischron’ (‘disgraceful’, ‘ugly’.)

Socrates:: The meaning of ‘aischron’ seems clear to me, and it is also in harmony with what we said before. It seems to me that the giver of names reviles everything that hinders or restrains the flowing of the things that are. In particular, he gave this name ‘aeischoroun’ to what always restrains their flowing (aei ischei ton rhoun.) But nowadays it is contracted and pronounced ‘aischron’.

Hermogenes:: What about ‘kalon’?

Socrates:: It’s harder to understand. Indeed, it is pronounced like this only because it sounds harmonious to shorten the ‘ou’ to ‘o’.

Hermogenes:: How so?

Socrates:: In my view, this name derives from a sort of thought (dianoia.)

Hermogenes:: What do you mean?

Socrates:: Tell me. What caused each of the things that are to be called by a name? Isn’t it whatever gave them their names?

Hermogenes:: Certainly.

Socrates:: And wasn’t it thought—whether divine or human or both— that did this?

Hermogenes:: Yes.

Socrates:: And isn’t what originally named them the same as what names (kaloun) them now, that is to say, thought?

Hermogenes:: Evidently.

Socrates:: Aren’t all the works performed by thought and understanding praiseworthy, while those that aren’t are blameworthy?

Hermogenes:: Certainly.

Socrates:: Now, medicine performs medical works and carpentry performs works of carpentry? Do you agree?

Hermogenes:: I do.

Socrates:: And to name things (kaloun) is to perform beautiful (kalon) works?

Hermogenes:: Necessarily.

Socrates:: And we say that it is thought that does this?

Hermogenes:: Certainly.

Socrates:: Therefore wisdom (phronesis) is correctly given the name 'kalon' ('beautiful',) since it performs the works that we say are beautiful and welcome as such.

Hermogenes:: Evidently.

Socrates:: What other such names still remain for us to examine?

Hermogenes:: Those related to the good and the beautiful, such as 'sum-pheron' ('advantageous',) 'lusiteloun' ('profitable',) 'ophelimon' ('beneficial',) 'kerdaleon' ('gainful',) and their opposites.

Socrates:: In light of the previous investigations, you should now be able to explain 'sumpheron' ('advantageous') for yourself, since it is obviously a close relative of 'episteme' ('knowledge'.) It expresses the fact that what is advantageous is nothing other than the movement (phora) of a soul in accord with the movement of things. The things that are done as a result of this movement are probably called 'sumphora' or 'sumpheronta' because they are being moved in harmony with things (sumperipheresthai.) But 'kerdaleon' ('gainful') derives from kerdos' ('gain'.) If you replace the "in 'kerdos' with a V, the name expresses its meaning clearly; it names the good, but in another way. Because the good penetrates everything, it has the power to regulate (kerannutai) everything, and the one who gave it its name named it after this power. But he put a “instead of the ‘n’ and pronounced it ‘kerdos’.

Hermogenes:: What about ‘lusiteloun’ (‘profitable’)?

Socrates:: I don’t think, Hermogenes, that he uses the name ‘lusiteloun’ to mean the profit that releases (apoluei) a capital sum for reinvestment, which is what retailers use it to mean. The namer-giver calls the good by that name because it is the fastest of the things that are, it doesn’t allow things to remain at rest, or permit their motion to stop, pause, or reach an end. Instead, it always does away with (luei) any attempt to let motion end, making it unceasing and immortal. In my view, it is for this reason that the good is said to be ‘lusiteloun’, because it does away with (luon) any end (telos) to motion. ‘Ophelimon’ (‘beneficial’) is a non-Attic name. Homer often uses it in the form ‘ophellein’, which derives from ‘auxein’ (‘to increase’) and ‘poiein’ (‘to make’.)

Hermogenes:: And what are we to say about their opposites?

Socrates:: Those that are mere negations don’t need any discussion, in my view.

Hermogenes:: Which ones are they?

Socrates:: ‘Asumpheron’ (‘disadvantageous’,) ‘anopheles’ (‘nonbeneficial’,) ‘alusiteles’ (‘unprofitable’,) and ‘akerdes’ (‘non-gainful’.)

Hermogenes:: It’s true, they don’t need discussion.

Socrates:: But ‘blaberon’ (‘harmful’) and ‘zemiodes’ (‘hurtful’) do.

Hermogenes:: Yes.

Socrates:: ‘Blaberon’ (‘harmful’) means that which is harming (blapton) the flow (rhoun.) ‘Blapton’, in turn, signifies wanting to grasp (boulomenon haptein.) But grasping is the same as shackling, and the name-giver always finds fault with that. Now what wants to grasp the flow (to boulomenon haptein rhoun) would be most correctly called ‘boulapteroun’, but this has been beautified, as it seems to me, and so it is called ‘blaberon’.

Hermogenes:: What intricate names you come up with, Socrates! When you uttered the name ‘boulapteroun’ just now, you looked just as if you were whistling the flute-prelude of the Hymn to Athena!

Socrates:: I’m not responsible for them, Hermogenes; the name-givers are.

Hermogenes:: That’s true. But what about ‘zemiodes’ (‘hurtful’)? What does it mean?

Socrates:: What does ‘zemiodes’ mean? See how right I was to say, Hermogenes, that people make huge changes in the meaning of names by adding or subtracting letters, and how even a very slight alteration of this sort can make a name signify the opposite of what it used to signify. ‘Deon’ (‘obligation’) is an example that has just occurred to me, and it reminds me of what I was about to say to you about ‘zemiodes’. Our fine modern language has obliterated the true meaning of these names by so twisting them around that they now mean the opposite of what they used to, whereas the ancient language expresses clearly what they mean.

Hermogenes:: What do you mean?

Socrates:: I’ll tell you. You know that our ancestors made great use of ‘i’ and” (especially the women, who are the best preservers of the ancient language.) But nowadays people change ‘i’ to ‘ē’ or ‘e’, which are supposed to sound more grandiose.

Hermogenes:: They do?

Socrates:: Yes. For example, people now call the day 'hemera', but in very ancient times they called it 'himera' or 'hemera'.

Hermogenes:: That's true.

Socrates:: You know then that only the ancient name expresses the name-giver's meaning clearly? People welcome the daylight that comes out of the darkness and long for (himeirousin) it, and that's why they named it 'himera'.

Hermogenes:: Evidently.

Socrates:: But nowadays the name is so dressed up that no one can understand what it means. Although there are some who think the day is called 'hemera' because it makes things gentle (hemera.)

Hermogenes:: So it seems.

Socrates:: Do you also know that the ancients called a yoke 'duogon' not 'zugon'?

Hermogenes:: Of course.

Socrates:: Now, 'zugon' expresses nothing clearly, but the name 'duogon', on the other hand, is quite rightly given to whatever binds two animals together so that they can pull a plough or cart (duoin agogen.) Nonetheless, nowadays 'zugon' it is. And there are plenty of other examples.

Hermogenes:: Evidently.

Socrates:: Similarly, 'deon' ('obligation',) when pronounced in this way, seems at first to signify the opposite of all the other names for the good. After all, even though an obligation is a kind of good, 'deon' plainly signifies a shackle (desmos) and obstacle to motion, and so is closely akin to 'blab-eron' ('harmful'.)

Hermogenes:: Yes, Socrates, it does plainly signify that.

Socrates:: But not if you use the ancient name, which is much more likely to have been correctly given than the present one. If you replace the ‘e’ with an ‘z’, as in the ancient name, it agrees with the earlier names of good things—for ‘dion’ (‘passing through’,) not ‘deon’, signifies a good, and is a term of praise. So the name-giver didn’t contradict himself, and ‘deon’ (‘obligation’) is plainly the same as ‘ophelimon’ (‘beneficial’,) ‘lusitel-oun’ (‘profitable’,) ‘kerdaleon’ (‘gainful’,) ‘agathon’ (‘good’,) ‘sumpheron’ (‘advantageous’,) and ‘euporon’ (‘lack of perplexity’,) which are different names signifying what orders and moves. This is always praised, while what restrains and shackles is found fault with. Likewise, in the case of ‘zemiodes’ (‘hurtful’,) if you replace the ‘z’ with a “, as in the ancient language, it will be plain to you that the name was given to what shackles motion (doun to ion,) since ‘demiddes’ derives from that.

Hermogenes:: What about ‘hedone’ (‘pleasure’,) ‘lupe’ (‘pain’,) and ‘epi-thumia’ (‘appetite’,) Socrates, and others like them?

Socrates:: I don’t think there is any great difficulty about them, Hermogenes. Hedone (pleasure) seems to have been given its name because it is an activity that tends towards enjoyment (he onesis,) but a “has been inserted and we call it ‘hedone’ instead of ‘heone’. ‘Lupe’ (‘pain’) seems to derive from the weakening (dialusis) the body suffers when in pain. ‘Ania’ (‘sorrow’) signifies what hinders (hienai) motion. ‘Algedon’ (‘distress’) seems to me to be a foreign name deriving from ‘algeinos’ (‘distressing’.) ‘Odune’ (‘grief’) seems to be named after the entering in (endusis) of pain. It is clear to everyone that pronouncing the name ‘achthedon’ (‘affliction’) is like giving motion a burden (achthos) to carry. Chara (joy) seems to have been so called because it is an outpouring (diachusis) or good movement of the soul’s flow (rhoe.) ‘Terpsis’ (‘delight’) comes from ‘terpnon’ (‘delightful’,) which, in turn, comes from that which glides (herpsis) through the soul like a breath (pnoe.) By rights it is called ‘herpnoun’, but over time its name has been changed to ‘terpnon’. Euphrosune (lightheartedness) needs no explanation, since it is clear to everyone that it derives its name from the movement of the soul that well accords (eu sumpheresthai) with that of things. By rights it is called ‘eupherosune’, but we call it ‘euphrosune’. Nor is there any difficulty about epithumia (‘appetite’,) for it is clear that its name derives from the power that opposes the spirited part of the soul (epi ton thumon iousa,) while ‘thumos’ (‘spirit’, ‘anger’) derives from the raging (thusis) and boiling of the soul. The name ‘himeros’ (‘desire’) derives from what most drives the soul’s flow. It flows with a rush (hiemenos rhei) and sets on (ephiemenos) things, thus violently dragging the soul because of the rush of its flow. And so, because it has all this power, it is called ‘himeros’. ‘Pothos’ (‘longing’,) on the other hand, signifies that it isn’t a desire (or flow) for what is present but for what is elsewhere (pou) or absent. So, when its object is absent, it is given the name ‘pothos’, and, when its object is present, it is called ‘himeros’. Eros (erotic love) is so called because it flows in from outside, that is to say, the flow doesn’t belong to the person who has it, but is introduced into him through his eyes. Because of this it was called ‘esros’ (‘influx’) in ancient times, when they used ‘o’ for ‘o’, but now that ‘o’ is changed to ‘o’, it is called ‘erds’. So, what other names do you think are left for us to examine?

Hermogenes:: What do you think about ‘doxa’ (‘opinion’) and the like?

Socrates:: ‘Doxa’ (‘opinion) either derives from the pursuit (dioxis) the soul engages in when it hunts for the knowledge of how things are, or it derives from the shooting of a bow (toxon.) But the latter is more likely. At any rate, ‘oiesis’ (‘thinking’) is in harmony with it. It seems to express the fact that thinking is the motion (oisis) of the soul towards every thing, towards how each of the things that are really is. In the same way, ‘boule’ (‘planning’) has to do with trying to hit (bole) some target, and ‘boulesthai' (‘wishing’) and ‘bouleuesthai' (‘deliberating’) signify aiming at something (ephiesthai.) All these names seem to go along with ‘doxa’ in that they’re all like ‘bole’, like trying to hit some target. Similarly, the opposite, ‘aboulia’ (‘lack of planning’,) seems to signify a failure to get something (atuchia,) as when someone fails to hit or get what he shot at, wished for, planned, or desired.

Hermogenes:: The pace of investigating seems to be quickening, Socrates!

Socrates:: That’s because I’m coming to the finishing post! But I still want to investigate ‘ananke’ (‘compulsion’) and ‘hekousion’ (‘voluntary’,) since they’re next. The name ‘hekousion’ expresses the fact that it signifies yielding and not resisting, but yielding, as I said before, to the motion (eikon toi ionti)—the one that comes into being in accord with our wish. ‘Anankaion’ (‘compulsory’) and ‘antitupnon’ (‘resistant’,) on the other hand, since they signify motion contrary to our wish, are associated with ‘error’ and ‘ignorance’. Indeed, saying ‘anankaion’ is like trying to get through a ravine (anke,) for ravines restrain motion, since they are rough-going, filled with bushes, and hard to get through. It’s probably for this reason that we use ‘anankaion’ in the way we do—because saying it is like trying to get through a ravine. Nonetheless, while my strength lasts, let’s not stop using it. Don’t you stop, either, but keep asking your questions.

Hermogenes:: Well, then, let me ask about the finest and most important names, ‘aletheia’ (‘truth’,) ‘pseudos’ (‘falsehood’,) ‘on’ (‘being’,) and—the subject of our present conversation—’onoma’ (‘name’,) and why it is so named.

Socrates:: Do you know what ‘maiesthai' means?

Hermogenes:: Yes, it means ‘to search’ (‘zetein’.)

Socrates:: Well, ‘onoma’ (‘name’) seems to be a compressed statement which says: “this is a being for which there is a search.” You can see this more easily in ‘onomaston’ (‘thing named’,) since it clearly says: “this is a being for which there is a search (on hou masma estin.)” ‘Aletheia’ (‘truth’) is like these others in being compressed, for the divine motion of being is called ‘aletheia’ because ‘aletheia’ is a compressed form of the phrase “a wandering that is divine (ale theia.)” ‘Pseudos’ (‘falsehood’) is the opposite of this motion, so that, once again, what is restrained or compelled to be inactive is reviled by the name-giver, and likened to people asleep (katheudousi)—but the meaning of the name is concealed by the addition of ‘ps’. ‘On’ (‘being’) or ‘ousia’ (‘being’) says the same as ‘alētheia’ once an ‘i’ is added, since it signifies going (ion.) ‘Ouk on’ (‘not being’,) in turn, is ‘ouk ion’ (‘not going’,) and indeed some people actually use that name for it.

Hermogenes:: I think you’ve hammered these into shape manfully, Socrates. But suppose someone were to ask you about the correctness of the names ‘ion’ (‘going’,) ‘rheon’ (‘flowing’,) and ‘doun’ (‘shackling’)…

Socrates:: “How should we answer him?” Is that what you were going to say?

Hermogenes:: Yes, exactly.

Socrates:: One way of giving the semblance of an answer has been suggested already.

Hermogenes:: What way is that?

Socrates:: To say that a name has a foreign origin when we don’t know what it signifies. Now, it may well be true that some of these names are foreign, but it is also possible that the basic or ‘first’ names are Greek, but not recoverable because they are so old. Names have been twisted in so many ways, indeed, that it wouldn't be surprising if the ancient Greek word was the same as the modern foreign one.

Hermogenes:: At any rate, it wouldn't be at all inappropriate for you to respond that way.

Socrates:: No, it probably wouldn't. Nevertheless, it seems to me that "once we're in the competition, we're allowed no excuses," but must investigate these names vigorously. We should remember this, however: if someone asks about the terms from which a name is formed, and then about the ones from which those terms are formed, and keeps on doing this indefinitely, the answerer must finally give up. Mustn't he?

Hermogenes:: That's my view, at any rate.

Socrates:: At what point would he be right to stop? Wouldn't it be when he reaches the names that are as it were the elements of all the other statements and names? For, if these are indeed elements, it cannot be right to suppose that they are composed out of other names. Consider 'agathos' ('good',) for example; we said it is composed out of 'agaston' ('admirable') and 'thoon' ('fast'.) And probably 'thoon' is composed out of other names, and those out of still other ones. But if we ever get hold of a name that isn't composed out of other names, we'll be right to say that at last we've reached an element, which cannot any longer be carried back to other names.

Hermogenes:: That seems right to me, at least.

Socrates:: And if the names you're asking about now turn out to be elements, won't we have to investigate their correctness in a different manner from the one we've been using so far?

Hermogenes:: Probably so.

Socrates:: It is certainly probable, Hermogenes. At any rate, it's obvious that all the earlier ones were resolved into these. So, if they are indeed elements, as they seem to me to be, join me again in investigating them, to ensure that I don’t talk nonsense about the correctness of the first names.

Hermogenes:: You have only to speak, and I will join in the investigation so far as I’m able.

Socrates:: I think you agree with me that there is only one kind of correctness in all names, primary as well as derivative, and that considered simply as names there is no difference between them.

Hermogenes:: Certainly.

Socrates:: Now, the correctness of every name we analyzed was intended to consist in its expressing the nature of one of the things that are.

Hermogenes:: Of course.

Socrates:: And this is no less true of primary names than derivative ones, if indeed they are names.

Hermogenes:: Certainly.

Socrates:: But it seems that the derivative ones were able to accomplish this by means of the primary ones.

Hermogenes:: Apparently.

Socrates:: And if the primary names are indeed names, they must make the things that are as clear as possible to us. But how can they do this when they aren’t based on other names? Answer me this: If we hadn’t a voice or a tongue, and wanted to express things to one another, wouldn’t we try to make signs by moving our hands, head, and the rest of our body, just as dumb people do at present?

Hermogenes:: What other choice would we have, Socrates?

Socrates:: So, if we wanted to express something light in weight or above us, I think we'd raise our hand towards the sky in imitation of the very nature of the thing. And if we wanted to express something heavy or below us, we'd move our hand towards the earth. And if we wanted to express a horse (or any other animal) galloping, you know that we'd make our bodies and our gestures as much like theirs as possible.

Hermogenes:: I think we'd have to.

Socrates:: Because the only way to express anything by means of our body is to have our body imitate whatever we want to express.

Hermogenes:: Yes.

Socrates:: So, if we want to express a particular fact by using our voice, tongue, and mouth, we will succeed in doing so, if we succeed in imitating it by means of them?

Hermogenes:: That must be right, I think.

Socrates:: It seems to follow that a name is a vocal imitation of what it imitates, and that someone who imitates something with his voice names what he imitates.

Hermogenes:: I think so.

Socrates:: Well, I don't. I don't think this is a fine thing to say at all.

Hermogenes:: Why not?

Socrates:: Because then we'd have to agree that those who imitate sheep, cocks, or other animals are naming the things they imitate.

Hermogenes:: That's true, we would.

Socrates:: And do you think that's a fine conclusion?

Hermogenes:: No, I don't. But then what sort of imitation is a name, Socrates?

Socrates:: In the first place, if we imitate things the way we imitate them in music, we won't be naming them, not even if the imitation in question is vocal. And the same holds if we imitate the things music imitates. What I mean is this:

each thing has a sound and a shape, and many of them have a color. Don’t they?

Hermogenes:: Certainly.

Socrates:: It doesn’t seem to be the craft of naming that’s concerned with imitating these qualities, however, but rather the crafts of music and painting. Isn’t that so?

Hermogenes:: Yes.

Socrates:: And what about this? Don’t you think that just as each thing has a color or some of those other qualities we mentioned, it also has a being or essence? Indeed, don’t color and sound each have a being or essence, just like every other thing that we say “is”?

Hermogenes:: Yes, I think they do.

Socrates:: So if someone were able to imitate in letters and syllables this being or essence that each thing has, wouldn’t he express what each thing itself is?

Hermogenes:: He certainly would.

Socrates:: And if you were to identify the person who is able to do this, in just the way that you said the first was a musician and the second a painter, what would you say he is?

Hermogenes:: I think he’s the namer, Socrates, the one we’ve been looking for from the beginning.

Socrates:: If that’s true, doesn’t it seem that we are now in a position to investigate each of the names you were asking about—’rhoe’ (‘flowing’,) ‘ienai' (‘going’,) and ‘schesis’ (‘restraining’)—to see whether or not he has grasped the being or essence of each of the things they signify by imitating its being or essence in the letters and syllables of its name. Isn’t that so?

Hermogenes:: Certainly.

Socrates:: Come, then, let’s see if these are the only primary names or if there are many others.

Hermogenes:: For my part, I think there are others.

Socrates:: Yes, there probably are. But how are we to divide off the ones with which the imitator begins his imitation? Since an imitation of a thing’s being or essence is made out of letters and syllables, wouldn’t it be most correct for us to divide off the letters or elements first, just as those who set to work on speech rhythms first divide off the forces or powers of the letters or elements, then those of syllables, and only then investigate rhythms themselves?

Hermogenes:: Yes.

Socrates:: So mustn’t we first divide off the vowels and then the others in accordance with their differences in kind, that is to say, the “consonants” and “mutes” (as I take it they’re called by specialists in these matters) and the semivowels, which are neither vowels nor mutes? And, as to the vowels themselves, mustn’t we also divide off those that differ in kind from one another? Then when we’ve also well divided off the things that are—the things to which we have to give names—if there are some things to which they can all be carried back, as names are to the letters, and from which we can see that they derive, and if different kinds of being are found among them, in just the way that there are among the letters—once we’ve done all this well, we’ll know how to apply each letter to what it resembles, whether one letter or a combination of many is to be applied to one thing. It’s just the same as it is with painters. When they want to produce a resemblance, they sometimes use only purple, sometimes another color, and sometimes—for example, when they want to paint human flesh or something of that sort—they mix many colors, employing the particular color, I suppose, that their particular subject demands. Similarly, we’ll apply letters to things, using one letter for one thing, when that's what seems to be required, or many letters together, to form what's called a syllable, or many syllables combined to form names and verbs. From names and verbs, in turn, we shall finally construct something important, beautiful, and whole. And just as the painter painted an animal, so—by means of the craft of naming or rhetoric or whatever it is—we shall construct sentences. Of course, I don't really mean we ourselves—I was carried away by the discussion. It was the ancients who combined things in this way. Our job—if indeed we are to examine all these things with scientific knowledge—is to divide where they put together, so as to see whether or not both the primary and derivative names are given in accord with nature. For, any other way of connecting names to things, Hermogenes, is inferior and unsystematic.

Hermogenes:: By god, Socrates, it probably is.

Socrates:: Well, then, do you think you could divide them in that way? I don't think I could.

Hermogenes:: Then it's even less likely that I could.

Socrates:: Shall we give up then? Or do you want us to do what we can, and try to see a little of what these names are like? Aren't we in a similar situation to the one we were in a while ago with the gods? We prefaced that discussion by saying that we were wholly ignorant of the truth, and were merely describing human beliefs about the gods. So, shouldn't we now say this to ourselves before we proceed: If anyone, whether ourselves or someone else, divides names properly, he will divide them in the way we have just described, but, given our present situation, we must follow the proverb and "do the best we can" to work at them? Do you agree or not?

Hermogenes:: Of course, I agree completely.

Socrates:: Perhaps it will seem absurd, Hermogenes, to think that things become clear by being imitated in letters and syllables, but it is absolutely unavoidable. For we have nothing better on which to base the truth of primary names. Unless you want us to behave like tragic poets, who introduce a deus ex machina whenever they're perplexed. For we, too, could escape our difficulties by saying that the primary names are correct because they were given by the gods. But is that the best account we can give? Or is it this one: that we got them from foreigners, who are more ancient than we are? Or this: that just as it is impossible to investigate foreign names, so it is impossible to investigate the primary ones because they are too ancient? Aren't all these merely the clever excuses of people who have no account to offer of how primary names are correctly given? And yet regardless of what kind of excuse one offers, if one doesn't know about the correctness of primary names, one cannot know about the correctness of derivative ones, which can only express something by means of those others about which one knows nothing. Clearly, then, anyone who claims to have a scientific understanding of derivative names must first and foremost be able to explain the primary ones with perfect clarity. Otherwise he can be certain that what he says about the others will be worthless. Or do you disagree?

Hermogenes:: No, Socrates, not in the least.

Socrates:: Well, my impressions about primary names seem to me to be entirely outrageous and absurd. Nonetheless, I'll share them with you, if you like. But if you have something better to offer, I hope you'll share it with me.

Hermogenes:: Have no fear, I will.

Socrates:: First off, V seems to me to be a tool for copying every sort of motion (kinesis.)—We haven't said why motion has this name, but it's clear that it means 'hesis' ('a going forth',) since in ancient times we used 'e' in place of 'e'. The first part comes from 'kiein', a non-Attic name equivalent to 'ienai' ('moving'.) So if you wanted to find an ancient name corresponding to the present 'kinesis', the correct answer would be 'hesis'. But nowadays, what with the non-Attic word 'kiein', the change from 'e' to 'e', and the insertion of 'n', we say 'kinesis', though it ought to be 'kieinesis'. 'Stasis' ('rest') is a beautified version of a name meaning the opposite of 'ienai' ('moving'.)—In any case, as I was saying, the letter V seemed to the name-giver to be a beautiful tool for copying motion, at any rate he often uses it for this purpose. He first uses this letter to imitate motion in the name 'rhein' ('flowing') and 'rhoe' ('flow") themselves. Then in 'tromos' ('trembling') and 'trechein' ('running',) and in such verbs as 'krouein' ('striking',) 'thrauein' ('crushing',) 'ereikein' ('rending',) 'thruptein' ('breaking',) 'kermatizein' ('crumbling',) 'rhumbein' ('whirling',) it is mostly 'r' he uses to imitate these motions. He saw, I suppose, that the tongue was most agitated and least at rest in pronouncing this letter, and that's probably why he used it in these names. He uses 'i', in turn, to imitate all the small things that can most easily penetrate everything. Hence, in 'ienai' ('moving') and 'hiesthai' ('hastening',) he uses 'i' to do the imitating. Similarly, he uses 'phi', 'psi', 's', and 'z' to do the imitating in such names as 'psuchron' ('chilling',) 'zeon' ('seething',) 'seiesthai' ('shaking',) and 'seismos' ('quaking',) because all these letters are pronounced with an expulsion of breath. Indeed, whenever the name-giver wants to imitate some sort of blowing or hard breathing (phusodes,) he almost always seems to employ them. He also seems to have thought that the compression and stopping of the power of the tongue involved in pronouncing 'd' and 't' made such names as 'desmos' ('shackling') and 'stasis' ('rest') appropriately imitative. And because he observed that the tongue glides most of all in pronouncing ‘l’, he uses it to produce a resemblance in ‘olisthanein’ (‘glide’) itself, and in such names as ‘leion’ (‘smooth’,) ‘liparon’ (‘sleek’,) ‘kollddes’ (‘viscous’,) and the like. But when he wants to imitate something cloying, he uses names, such as ‘glischron’ (‘gluey’,) ‘gluku’ (‘sweet’,) and ‘gloiodes’ (‘clammy’,) in which the gliding of the tongue is stopped by the power of the ‘g’. And because he saw that ‘n’ is sounded inwardly, he used it in ‘endon’ (‘within’) and ‘entos’ (‘inside’,) in order to make the letters copy the things. He put an ‘a’ in ‘mega’ (‘large’) and an ‘e’ in ‘mekos’ (‘length’) because these letters are both pronounced long. He wanted ‘o’ to signify roundness, so he mixed lots of it into the name ‘gongulon’ (‘round’.) In the same way, the rule-setter apparently used the other letters or elements as likenesses in order to make a sign or name for each of the things that are, and then compounded all the remaining names out of these, imitating the things they name. That, Hermogenes, is my view of what it means to say that names are correct—unless, of course, Cratylus disagrees.

Hermogenes:: Well, Socrates, as I said at the beginning, Cratylus confuses me a lot of the time. He says that there is such a thing as the correctness of names, but he never explains clearly what it is. Consequently, I’m never able to determine whether his lack of clarity is intentional or unintentional.

So tell me now, Cratylus, here in the presence of Socrates, do you agree with what he has been saying about names, or do you have something better to say? If you have, tell it to us, and either you’ll learn about your errors from Socrates or become our teacher.

Cratylus:: But, Hermogenes, do you really think that any subject can be taught or learned so quickly, not to mention one like this, which seems to be among the most important?

Hermogenes:: No, by god, I don’t. But I think that Hesiod is right in saying that if you can add even a little to a little, it’s worthwhile.

So, if you can add even a little more, don’t shrink from the labor, but assist Socrates—he deserves it—and assist me, too.

Socrates:: Yes, Cratylus, please do. As far as I’m concerned, nothing I’ve said is set in stone. I have simply been saying what seems right to me as a result of my investigations with Hermogenes. So, don’t hesitate to speak, and if your views are better than mine, I’ll gladly accept them. And it wouldn’t surprise me if they were better, for you’ve both investigated these matters for yourself and learned about them from others. So, if indeed you do happen to have something better to offer, you may sign me up as a student in your course on the correctness of names.

Cratylus:: Yes, Socrates, I have, as you say, occupied myself with these matters, and it’s possible that you might have something to learn from me. But I fear the opposite is altogether more likely. So much so, indeed, that it occurs to me to say to you what Achilles says to Ajax in the “Prayers”:

> Ajax, son of Telamon, seed of Zeus, lord of the people,
> All you have said to me seems spoken after my own mind.

The same is true of me where you’re concerned, Socrates: your oracular utterances—whether inspired by Euthyphro or by some other Muse who has long inhabited your own mind without your knowing about it—seem to be pretty much spoken after my own mind.

Socrates:: But, Cratylus, I have long been surprised at my own wisdom— and doubtful of it, too. That’s why I think it’s necessary to keep re-investigating whatever I say, since self-deception is the worst thing of all. How could it not be terrible, indeed, when the deceiver never deserts you even for an instant but is always right there with you? Therefore, I think we have to turn back frequently to what we've already said, in order to test it by looking at it "backwards and forwards simultaneously," as the aforementioned poet puts it. So, let's now see what we have said. We said that the correctness of a name consists in displaying the nature of the thing it names. And is that statement satisfactory?

Cratylus:: In my view, Socrates, it is entirely satisfactory.

Socrates:: So names are spoken in order to give instruction?

Cratylus:: Certainly.

Socrates:: Is there a craft for that and are there craftsmen who practice it?

Cratylus:: Certainly.

Socrates:: Who are they?

Cratylus:: As you said at the beginning, they're the rule-setters.

Socrates:: Is this craft attributed to human beings in the same way as other crafts or not? What I mean is this: aren't some painters better or worse than others?

Cratylus:: Certainly.

Socrates:: And the better painters produce finer products or paintings, while the others produce inferior ones? Similarly with builders—some build finer houses, others build inferior ones?

Cratylus:: Yes.

Socrates:: What about rule-setters? Do some of them produce finer products, others inferior ones?

Cratylus:: No, there I no longer agree with you.

Socrates:: So you don't think that some rules are better, others inferior?

Cratylus:: Certainly not.

Socrates:: Nor names either, it seems. Or do you think that some names have been better given, others worse?

Cratylus:: Certainly not.

Socrates:: So all names have been correctly given?

Cratylus:: Yes, as many of them as are names at all.

Socrates:: What about the case of Hermogenes, which we mentioned earlier? Has he not been given this name at all, unless he belongs to the family of Hermes? Or has he been given it, only not correctly?

Cratylus:: I think he hasn't been given it at all, Socrates. People take it to have been given to him, but it is really the name of someone else, namely, the very one who also has the nature.

Socrates:: What about when someone says that our friend here is Hermogenes? Is he speaking falsely or is he not even managing to do that much? Is it even possible to say that he is Hermogenes, if he isn't?

Cratylus:: What do you mean?

Socrates:: That false speaking is in every way impossible, for isn't that what you are trying to say? Certainly, many people do say it nowadays, Cratylus, and many have said it in the past as well.

Cratylus:: But, Socrates, how can anyone say the thing he says and not say something that is? Doesn't speaking falsely consist in not saying things that are?

Socrates:: Your argument is too subtle for me at my age. All the same, tell me this. Do you think it is possible to say something falsely, although not possible to speak it falsely?

Cratylus:: In my view, one can neither speak nor say anything falsely.

Socrates:: What about announcing something falsely or addressing someone falsely? For example, suppose you were in a foreign country and someone meeting you took your hand and said, “Greetings! Hermogenes, son of Smicrion, visitor from Athens,” would he be speaking, saying, announcing, or addressing these words not to you but to Hermogenes— or to no one?

Cratylus:: In my view, Socrates, he is not articulating them as he should.

Socrates:: Well, that’s a welcome answer. But are the words he articulates true or false, or partly true and partly false? If you tell me that, I’ll be satisfied.

Cratylus:: For my part, I'd say he’s just making noise and acting pointlessly, as if he were banging a brass pot.

Socrates:: Let’s see, Cratylus, if we can somehow come to terms with one another. You agree, don’t you, that it’s one thing to be a name and another to be the thing it names?

Cratylus:: Yes, I do.

Socrates:: And you also agree that a name is an imitation of a thing?

Cratylus:: Absolutely.

Socrates:: And that a painting is a different sort of imitation of a thing?

Cratylus:: Yes.

Socrates:: Well, perhaps what you’re saying is correct and I’m misunderstanding you, but can both of these imitations—both paintings and names—be assigned and applied to the things of which they are imitations, or not?

Cratylus:: They can.

Socrates:: Then consider this. Can we assign a likeness of a man to a man and that of a woman to a woman, and so on?

Cratylus:: Certainly.

Socrates:: What about the opposite? Can we assign the likeness of a man to a woman and that of a woman to a man?

Cratylus:: Yes, we can.

Socrates:: And are both these assignments correct, or only the first?

Cratylus:: Only the first.

Socrates:: That is to say, the one that assigns to each thing the painting or name that is appropriate to it or like it?

Cratylus:: That's my view, at least.

Socrates:: Since you and I are friends, we don't want to mince words, so here's what I think. I call the first kind of assignment correct, whether it's an assignment of a painting or a name, but if it's an assignment of a name, I call it both correct and true. And I call the other kind of assignment, the one that assigns and applies unlike imitations, incorrect, and, in the case of names, false as well.

Cratylus:: But it may be, Socrates, that it's possible to assign paintings incorrectly, but not names, which must always be correctly assigned.

Socrates:: What do you mean? What's the difference between them? Can't I step up to a man and say "This is your portrait," while showing him what happens to be his own likeness, or what happens to be the likeness of a woman? And by "show" I mean bring before the sense of sight.

Cratylus:: Certainly.

Socrates:: Well, then, can't I step up to the same man a second time and say, "This is your name"? Now, a name is an imitation, just as a painting or portrait is. So, can't I say to him, "This is your name," and after that put before his sense of hearing what happens to be an imitation of himself, saying “Man,” or what happens to be an imitation of a female of the human species, saying “Woman”? Don’t you think that all this is possible and sometimes occurs?

Cratylus:: I’m willing to go along with you, Socrates, and say that it occurs.

Socrates:: It’s good of you to do so, Cratylus, provided you really are willing, since then we don’t have to argue any further about the matter. So if some such assignments of names take place, we may call the first of them speaking truly and the second speaking falsely. But if that is so, it is sometimes possible to assign names incorrectly, to give them not to things they fit but to things they don’t fit. The same is true of verbs. But if verbs and names can be assigned in this way, the same must be true of statements, since statements are, I believe, a combination of names and verbs. What do you think, Cratylus?

Cratylus:: The same as you, since I think you’re right.

Socrates:: Further, primary names may be compared to paintings, and in paintings it’s possible to present all the appropriate colors and shapes, or not to present them all. Some may be left out, or too many included, or those included may be too large. Isn’t that so?

Cratylus:: It is.

Socrates:: So doesn’t someone who presents all of them, present a fine painting or likeness, while someone who adds some or leaves some out, though he still produces a painting or likeness, produces a bad one?

Cratylus:: Yes.

Socrates:: What about someone who imitates the being or essence of things in syllables and letters? According to this account, if he presents all the appropriate things, won’t the likeness—that is to say, the name— be a fine one? But if he happens to add a little or leave a little out, though he'll still have produced an image, it won't be fine? Doesn't it follow that some names are finely made, while others are made badly?

Cratylus:: Presumably.

Socrates:: So presumably one person will be a good craftsman of names and another a bad one?

Cratylus:: Yes.

Socrates:: And this craftsman is named a rule-setter.

Cratylus:: Yes.

Socrates:: By god, presumably some rule-setters are good and others bad then, especially if what we agreed to before is true, and they are just like other craftsmen.

Cratylus:: That's right. But you see, Socrates, when we assign 'b', and each of the other letters to names by using the craft of grammar, if we add, subtract, or transpose a letter, we don't simply write the name incorrectly, we don't write it at all, for it immediately becomes a different name, if any of those things happens.

Socrates:: That's not a good way for us to look at the matter, Cratylus.

Cratylus:: Why not?

Socrates:: What you say may well be true of numbers, which have to be a certain number or not be at all. For example, if you add anything to the number ten or subtract anything from it, it immediately becomes a different number, and the same is true of any other number you choose. But this isn't the sort of correctness that belongs to things with sensory qualities, such as images in general. Indeed, the opposite is true of them— an image cannot remain an image if it presents all the details of what it represents. See if I'm right. Would there be two things—Cratylus and an image of

Cratylus—in the following circumstances? Suppose some god didn't just represent your color and shape the way painters do, but made all the inner parts like yours, with the same warmth and softness, and put motion, soul, and wisdom like yours into them—in a word, suppose he made a duplicate of everything you have and put it beside you. Would there then be two Cratyluses or Cratylus and an image of Cratylus?

Cratylus:: It seems to me, Socrates, that there would be two Cratyluses.

Socrates:: So don't you see that we must look for some other kind of correctness in images and in the names we've been discussing, and not insist that if a detail is added to an image or omitted from it, it's no longer an image at all. Or haven't you noticed how far images are from having the same features as the things of which they are images?

Cratylus:: Yes, I have.

Socrates:: At any rate, Cratylus, names would have an absurd effect on the things they name, if they resembled them in every respect, since all of them would then be duplicated, and no one would be able to say which was the thing and which was the name.

Cratylus:: That's true.

Socrates:: Take courage then and admit that one name may be well-given while another isn't. Don't insist that it have all the letters and exactly resemble the thing it names, but allow that an inappropriate letter may be included. But if an inappropriate letter may be included in a name, an inappropriate name may be included in a phrase. And if an inappropriate name may be included in a phrase, a phrase which is inappropriate to the things may be employed in a statement. Things are still named and described when this happens, provided the phrases include the pattern of the things they're about. Remember that this is just what Hermogenes and I claimed earlier about the names of the elements.

Cratylus:: I remember.

Socrates:: Good. So even if a name doesn't include all the appropriate letters, it will still describe the thing if it includes its pattern—though it will describe the thing well, if it includes all the appropriate letters, and badly, if it includes few of them. I think we had better accept this, Cratylus, or else, like men lost on the streets of Aegina late at night, we, too, may incur the charge of truly seeming to be the sort of people who arrive at things later than they should. For if you deny it, you cannot agree that a name is correct if it expresses things by means of letters and syllables and you'll have to search for some other account of the correctness of names, since if you both deny it and accept this account of correctness, you'll contradict yourself.

Cratylus:: You seem to me to be speaking reasonably, Socrates, and I take what you've said as established.

Socrates:: Well, then, since we agree about that, let's consider the next point. If a name is well given, don't we say that it must have the appropriate letters?

Cratylus:: Yes.

Socrates:: And the appropriate letters are the ones that are like the things?

Cratylus:: Certainly.

Socrates:: Therefore that's the way that well-given names are given. But if a name isn't well given, it's probable that most of its letters are appropriate or like the thing it names, if indeed it is a likeness of it, but that some are inappropriate and prevent the name from being good or well given. Is that our view or is it something different?

Cratylus:: I don't suppose there's anything to be gained by continuing to quarrel, Socrates, but I'm not satisfied that something is a name if it isn't well given.

Socrates:: But you are satisfied that a name is a way of expressing a thing?

Cratylus:: I am.

Socrates:: And you think it's true that some names are composed out of more primitive ones, while others are primary?

Cratylus:: Yes, I do.

Socrates:: But if the primary names are to be ways of expressing things clearly, is there any better way of getting them to be such than by making each of them as much like the thing it is to express as possible? Or do you prefer the way proposed by Hermogenes and many others, who claim that names are conventional signs that express things to those who already knew the things before they established the conventions? Do you think that the correctness of names is conventional, so that it makes no difference whether we accept the present convention or adopt the opposite one, calling 'big' what we now call 'small', and 'small' what we now call 'big'? Which of these two ways of getting names to express things do you prefer?

Cratylus:: A name that expresses a thing by being like it is in every way superior, Socrates, to one that is given by chance.

Socrates:: That's right. But if a name is indeed to be like a thing, mustn't the letters or elements out of which primary names are composed be naturally like things? Let me explain by returning to our earlier analogy with painting. Could a painting ever be made like any of the things that are, if it were not composed of pigments that were by nature like the things that the art of painting imitates? Isn't that impossible?

Cratylus:: Yes, it's impossible.

Socrates:: Then by the same token can names ever be like anything unless the things they're composed out of have some kind of likeness to the things they imitate? And aren't they composed of letters or elements?

Cratylus:: Yes.

Socrates:: Now, consider what I said to Hermogenes earlier. Tell me, do you think I was right to say that V is like motion, moving, and hardness or not?

Cratylus:: You were right.

Socrates:: And is like smoothness, softness, and the other things we mentioned.

Cratylus:: Yes.

Socrates:: Yet you know that the very thing that we call 'sklerotes' ('hardness') is called 'skieroter' by the Eretrians?

Cratylus:: Certainly.

Socrates:: Then are both 'r' and 's' like the same thing, and does the name ending in 'r' express the same thing to them as the one ending in 's' does to us, or does one of them fail to express it?

Cratylus:: They both express it.

Socrates:: In so far as 'r' and 's' are alike, or in so far as they are unlike?

Cratylus:: In so far as they are alike.

Socrates:: Are they alike in all respects?

Cratylus:: They are presumably alike with respect to expressing motion, at any rate.

Socrates:: What about the 'l' in these names? Doesn't it express the opposite of hardness?

Cratylus:: Perhaps it is incorrectly included in them, Socrates. Maybe it's just like the examples you cited to Hermogenes a while ago in which you added or subtracted letters. You were correct to do so, in my view. So, too, in the present case perhaps we ought to replace 'l' with 'r'.

Socrates:: You have a point. But what about when someone says 'skleron' ('hard',) and pronounces it the way we do at present? Don't we understand him? Don't you yourself know what I mean by it?

Cratylus:: I do, but that's because of usage.

Socrates:: When you say 'usage', do you mean something other than convention? Do you mean something by 'usage' besides this: when I utter this name and mean hardness by it, you know that this is what I mean? Isn't that what you're saying?

Cratylus:: Yes.

Socrates:: And if when I utter a name, you know what I mean, doesn't that name become a way for me to express it to you?

Cratylus:: Yes.

Socrates:: Even though the name I utter is unlike the thing I mean— since 'l' is unlike hardness (to revert to your example.) But if that's right, surely you have entered into a convention with yourself, and the correctness of names has become a matter of convention for you, for isn't it the chance of usage and convention that makes both like and unlike letters express things? And even if usage is completely different from convention, still you must say that expressing something isn't a matter of likeness but of usage, since usage, it seems, enables both like and unlike names to express things. Since we agree on these points, Cratylus, for I take your silence as a sign of agreement, both convention and usage must contribute something to expressing what we mean when we speak. Consider numbers, Cratylus, since you want to have recourse to them. Where do you think you'll get names that are like each one of the numbers, if you don't allow this agreement and convention of yours to have some control over the correctness of names? I myself prefer the view that names should be as much like things as possible, but I fear that defending this view is like hauling a ship up a sticky ramp, as Hermogenes suggested, and that we have to make use of this worthless thing, convention, in the correctness of names. For probably the best possible way to speak consists in using names all (or most) of which are like the things they name (that is, are appropriate to them,) while the worst is to use the opposite kind of names. But let me next ask you this. What power do names have for us? What's the good of them?

Cratylus:: To give instruction, Socrates. After all, the simple truth is that anyone who knows a thing's name also knows the thing.

Socrates:: Perhaps you mean this, Cratylus, that when you know what a name is like, and it is like the thing it names, then you also know the thing, since it is like the name, and all like things fall under one and the same craft. Isn't that why you say that whoever knows a thing's name also knows the thing?

Cratylus:: Yes, you're absolutely right.

Socrates:: Then let's look at that way of giving instruction about the things that are. Is there also another one, but inferior to this, or is it the only one? What do you think?

Cratylus:: I think that it is the best and only way, and that there are no others.

Socrates:: Is it also the best way to discover the things that are? If one discovers something's name has one also discovered the thing it names? Or are names only a way of getting people to learn things, and must investigation and discovery be undertaken in some different way?

Cratylus:: They must certainly be undertaken in exactly the same way and by means of the same things.

Socrates:: But don't you see, Cratylus, that anyone who investigates things by taking names as his guides and looking into their meanings runs no small risk of being deceived?

Cratylus:: In what way?

Socrates:: It's clear that the first name-giver gave names to things based on his conception of what those things were like. Isn't that right?

Cratylus:: Yes.

Socrates:: And if his conception was incorrect and he gave names based on it, what do you suppose will happen to us if we take him as our guide? Won't we be deceived?

Cratylus:: But it wasn't that way, Socrates. The name-giver had to know the things he was naming. Otherwise, as I've been saying all along, his names wouldn't be names at all. And here's a powerful proof for you that the name-giver didn't miss the truth: His names are entirely consistent with one another. Or haven't you noticed that all the names you utter are based on the same assumption and have the same purpose?

Socrates:: But surely that's no defense, Cratylus. The name-giver might have made a mistake at the beginning and then forced the other names to be consistent with it. There would be nothing strange in that. Geometrical constructions often have a small unnoticed error at the beginning with which all the rest is perfectly consistent. That's why every man must think a lot about the first principles of any thing and investigate them thoroughly to see whether or not it's correct to assume them. For if they have been adequately examined, the subsequent steps will plainly follow from them. However, I'd be surprised if names are actually consistent with one another. So let’s review our earlier discussion. We said that names signify the being or essence of things to us on the assumption that all things are moving and flowing and being swept along. Isn’t that what you think names express?

Cratylus:: Absolutely. Moreover, I think they signify correctly.

Socrates:: Of those we discussed, let’s reconsider the name ‘episteme’ (‘knowledge’) first and see how ambiguous it is. It seems to signify that it stops (histesi) the movement of our soul towards (epi) things, rather than that it accompanies them in their movement, so that it’s more correct to pronounce the beginning of it as we now do than to insert an ‘e’ and get ‘hepeisteme’—or rather, to insert an instead of an ‘e’. Next, consider ‘bebaion’ (‘certain’,) which is an imitation of being based (basis) or resting (stasis,) not of motion. ‘Historia’ (‘inquiry’,) which is somewhat the same, signifies the stopping (histesi) of the flow (rhous.) ‘Piston’ (‘confidence’,) too, certainly signifies stopping (histan.) Next, anyone can see that ‘mneme’ (‘memory’) means a staying (mone) in the soul, not a motion. Or consider ‘hamartia’ (‘error’) and ‘sumphora’ (‘mishap’,) if you like. If we take names as our guides, they seem to signify the same as ‘sunesis’ (‘comprehension’) and ‘episteme’ (‘knowledge’) and other names of excellent things. Moreover, ‘amathia’ (‘ignorance’) and ‘akolasia’ (‘licentiousness’) also seem to be closely akin to them. For ‘amathia’ seems to mean the journey of someone who accompanies god (hama theoi ion,) and ‘akolasia’ seems precisely to mean movement guided by things (akolouthia tois pragmasin.) Thus names of what we consider to be the very worst things seem to be exactly like those of the very best. And if one took the trouble, I think one could find many other names from which one could conclude that the name-giver intended to signify not that things were moving and being swept along, but the opposite, that they were at rest.

Cratylus:: But observe, Socrates, that most of them signify motion.

Socrates:: What if they do, Cratylus? Are we to count names like votes and determine their correctness that way? If more names signify motion, does that make them the true ones?

Cratylus:: No, that's not a reasonable view.

Socrates:: It certainly isn't, Cratylus. So let's drop this topic, and return to the one that led us here. A little while ago, you said, if you remember, that the name-giver had to know the things he named. Do you still believe that or not?

Cratylus:: I still do.

Socrates:: Do you think that the giver of the first names also knew the things he named?

Cratylus:: Yes, he did know them.

Socrates:: What names did he learn or discover those things from? After all, the first names had not yet been given. Yet it's impossible, on our view, to learn or discover things except by learning their names from others or discovering them for ourselves?

Cratylus:: You have a point there, Socrates.

Socrates:: So, if things cannot be learned except from their names, how can we possibly claim that the name-givers or rule-setters had knowledge before any names had been given for them to know?

Cratylus:: I think the truest account of the matter, Socrates, is that a more than human power gave the first names to things, so that they are necessarily correct.

Socrates:: In your view then this name-giver contradicted himself, even though he's either a daemon or a god? Or do you think we were talking nonsense just now?

Cratylus:: But one of the two apparently contradictory groups of names that we distinguished aren't names at all.

Socrates:: Which one, Cratylus? Those which point to rest or those which point to motion? As we said just now, this cannot be settled by majority vote.

Cratylus:: No, that wouldn't be right, Socrates.

Socrates:: But since there's a civil war among names, with some claiming that they are like the truth and others claiming that they are, how then are we to judge between them, and what are we to start from? We can't start from other different names because there are none. No, it's clear we'll have to look for something other than names, something that will make plain to us without using names which of these two kinds of names are the true ones—that is to say, the ones that express the truth about the things that are.

Cratylus:: I think so, too.

Socrates:: But if that's right, Cratylus, then it seems it must be possible to learn about the things that are, independently of names.

Cratylus:: Evidently.

Socrates:: How else would you expect to learn about them? How else than in the most legitimate and natural way, namely, learning them through one another, if they are somehow akin, and through themselves? For something different, something that was other than they, wouldn't signify them, but something different, something other.

Cratylus:: That seems true to me.

Socrates:: But wait a minute! Haven’t we often agreed that if names are well given, they are like the things they name and so are likenesses of them?

Cratylus:: Yes.

Socrates:: So if it’s really the case that one can learn about things through names and that one can also learn about them through themselves, which would be the better and clearer way to learn about them? Is it better to learn from the likeness both whether it itself is a good likeness and also the truth it is a likeness of? Or is it better to learn from the truth both the truth itself and also whether the likeness of it is properly made?

Cratylus:: I think it is certainly better to learn from the truth.

Socrates:: How to learn and make discoveries about the things that are is probably too large a topic for you or me. But we should be content to have agreed that it is far better to investigate them and learn about them through themselves than to do so through their names.

Cratylus:: Evidently so, Socrates.

Socrates:: Still, let’s investigate one further issue so as to avoid being deceived by the fact that so many of these names seem to lean in the same direction—as we will be if, as seems to me to be the case, the name-givers really did give them in the belief that everything is always moving and flowing, and as it happens things aren’t really that way at all, but the name-givers themselves have fallen into a kind of vortex and are whirled around in it, dragging us with them. Consider, Cratylus, a question that I for my part often dream about: Are we or aren’t we to say that there is a beautiful itself, and a good itself, and the same for each one of the things that are?

Cratylus:: I think we are, Socrates.

Socrates:: Let's not investigate whether a particular face or something of that sort is beautiful then, or whether all such things seem to be flowing, but let's ask this instead: Are we to say that the beautiful itself is always such as it is?

Cratylus:: Absolutely.

Socrates:: But if it is always passing away, can we correctly say of it first that it is this, and then that it is such and such? Or, at the very instant we are speaking, isn't it inevitably and immediately becoming a different thing and altering and no longer being as it was?

Cratylus:: It is.

Socrates:: Then if it never stays the same, how can it be something? After all, if it ever stays the same, it clearly isn't changing—at least, not during that time; and if it always stays the same and is always the same thing, so that it never departs from its own form, how can it ever change or move?

Cratylus:: There's no way.

Socrates:: Then again it can't even be known by anyone. For at the very instant the knower-to-be approaches, what he is approaching is becoming a different thing, of a different character, so that he can't yet come to know either what sort of thing it is or what it is like—surely, no kind of knowledge is knowledge of what isn't in any way.

Cratylus:: That's right.

Socrates:: Indeed, it isn't even reasonable to say that there is such a thing as knowledge, Cratylus, if all things are passing on and none remain. For if that thing itself, knowledge, did not pass on from being knowledge, then knowledge would always remain, and there would be such a thing as knowledge. On the other hand, if the very form of knowledge passed on from being knowledge, the instant it passed on into a different form than that of knowledge, there would be no knowledge. And if it were always passing on, there would always be no knowledge. Hence, on this account, no one could know anything and nothing could be known either. But if there is always that which knows and that which is known, if there are such things as the beautiful, the good, and each one of the things that are, it doesn't appear to me that these things can be at all like flowings or motions, as we were saying just now they were. So whether I'm right about these things or whether the truth lies with Heraclitus and many others isn't an easy matter to investigate. But surely no one with any understanding will commit himself or the cultivation of his soul to names, or trust them and their givers to the point of firmly stating that he knows something—condemning both himself and the things that are to be totally unsound like leaky sinks—or believe that things are exactly like people with runny noses, or that all things are afflicted with colds and drip over everything. It's certainly possible that things are that way, Cratylus, but it is also possible that they are not. So you must investigate them courageously and thoroughly and not accept anything easily—you are still young and in your prime, after all. Then after you've investigated them, if you happen to discover the truth, you can share it with me.

Cratylus:: I'll do that. But I assure you, Socrates, that I have already investigated them and have taken a lot of trouble over the matter, and things seem to me to be very much more as Heraclitus says they are.

Socrates:: Instruct me about it another time, Cratylus, after you get back. But now go off into the country, as you were planning to do, and Hermogenes here will see you on your way.

Cratylus:: I'll do that, Socrates, but I hope that you will also continue to think about these matters yourself.

# The Cratylus.

Translated by Thomas Taylor.

THE PERSONS OF THE DIALOGUE.

HERMOGENES, CRATYLUS, SOCRATES.

Hermogenes:: Are you willing, then, that we should communicate this discourse to Socrates?

Cratylus:: If you think proper.

Hermogenes:: Cratylus here, Socrates, says, that there is a rectitude of names naturally subsisting in every thing; and that this is not a name which certain persons pronounce from custom, while they articulate a portion of their voice; but that there is a certain rectitude of names which is naturally the same both among Greeks and Barbarians. I ask him, therefore, whether Cratylus is his true name, or not. He confesses it is, I then inquire of him, what is the appellation belonging to Socrates? He replies, Socrates. In all other particulars, therefore, I say, is not that the name by which we call each? Yet, says he, your name is not Hermogenes, though all men should agree in calling you so. And upon my eagerly desiring to know the meaning of what he says, he does not declare any thing, but uses dissimulation towards me, feigning as if he was thinking about something on this subject, which if he should be willing to relate clearly, he would oblige me to agree with him in opinion, and to say the same as he does. If, therefore, you can by any means conjecture this divination of Cratylus, I shall very gladly hear you; or rather, if it is agreeable to you, I should much more gladly hear your opinion concerning the rectitude of names.

Socrates:: O Hermogenes, son of Hipponicus, according to the ancient proverb, beautiful things are difficult to be understood; and the discipline respecting names is no small affair. If, therefore, I had heard that demonstration of Prodicus, valued at fifty drachmas, which instructed the hearer in this very particular, as he himself says, nothing would hinder but that you might immediately know the truth respecting the rectitude of names: but I never have heard it; and am acquainted with nothing more than the circumstance about the drachmas. Hence I am unacquainted with the truth respecting these particulars; but am nevertheless prepared to investigate this affair, along with you and Cratylus. But as to his telling you, that your name is not in reality Hermogenes, I suspect that in this he derides you: for he thinks, perhaps, that you are covetous of wealth, and at the same time have not obtained your desire. But, as I just now said, the knowledge of these matters is difficult. However, placing the arguments in common, it is proper to consider, whether the truth is on your side, or on that of Cratylus.

Hermogenes:: But indeed, Socrates, though I have frequently disputed with Cratylus and many others, yet I cannot persuade myself, that there is any other rectitude of nomination, than what custom and mutual consent have established. For to me it appears, that the name which any one assigns to a thing, is a proper name; and that, if he should even change it for another, this name will be no less right than the first; just as we are accustomed to change the names of our servants. For I am of opinion, that no name is naturally inherent in any thing, but subsists only from the law and habit of those by whom it is instituted and called. But, if the case is other wise, I am prepared both to learn and hear, not only from Cratylus, but from any other person whatever.

Socrates:: Perhaps, Hermogenes, you say something to the purpose. Let us consider therefore. Is that by which any one calls any thing, the name of that thing?

Hermogenes:: To me it appears so.

Socrates:: And this, whether a private person calls it, or a city?

Hermogenes:: I think so.

Socrates:: What, then, if I should call anything in such a manner, as to denominate that an horse which we now call a man, and that a man which we now call a horse; would not the name man remain the same publicly, but the name horse privately; and again, privately the name man, and publicly the name horse? Would you not speak in this manner?

Hermogenes:: It appears so to me.

Socrates:: Tell me, then, do you call it any thing to speak true and false?

Hermogenes:: I do.

Socrates:: Therefore, one thing will be a true sentence, but another a false one. Will it not?

Hermogenes:: Entirely so.

Socrates:: Will not that sentence, then, which speaks of things as they are, be a true sentence; but that which speaks of them different from what they are, a false one?

Hermogenes:: Certainly.

Socrates:: Is not this, therefore, to speak of things which are, and which are not, by discourse.

Hermogenes:: Entirely so.

Socrates:: But with respect to a sentence which is true, is the whole true, but the parts of it not true?

Hermogenes:: The parts, also, are no otherwise than true.

Socrates:: But whether are the large parts true, and the small ones not? or, are all the parts true?

Hermogenes:: I think that all the parts are true.

Socrates:: Is there any part of what you say, smaller than a name?

Hermogenes:: There is not. But this is the smallest of all.

Socrates:: And does not this name belong to a true sentence?

Hermogenes:: Certainly.

Socrates:: And this, you say, is true.

Hermogenes:: I do.

Socrates:: But is not the part of a false sentence false?

Hermogenes:: I say it is.

Socrates:: It is permitted us, therefore, to call a name true and false, since we can call a sentence so.

Hermogenes:: How should it not be so?

Socrates:: Is that, therefore, which each person says the name of a thing is, the name of that thing?

Hermogenes:: Certainly.

Socrates:: Will there be as many names belonging to a thing, as any person assigns it; and at that time when he assigns them?

Hermogenes:: I have no other rectitude of name, Socrates, than this; that I may call a thing by one name, which I assign to it, and you by another, which you think proper to attribute to it. And after this manner, I see that in cities, the same things are assigned proper names, both among the Greeks with other Greeks, and among the Greeks with the Barbarians.

Socrates:: Let us see, Hermogenes, whether things appear to you to subsist in such a manner, with respect to the peculiar essence of each, as they did to Protagoras, who said that man was the measure of all things; so that things are, with respect to me, such as they appear to me; and that they are such to you, as they appear to you: or do some of these appear to you to possess a certain stability of essence?

Hermogenes:: Sometimes, Socrates, through doubting, I have been led to this, which Protagoras asserts; but yet this does not perfectly appear to me to be the case.

Socrates:: But what, was you never led to conclude that there is no such thing as a man perfectly evil?

Hermogenes:: Never, by Jupiter! But I have often been disposed to think, that there are some men profoundly wicked, and that the number of these is great.

Socrates:: But have you never yet seen men perfectly good?

Hermogenes:: Very few, indeed.

Socrates:: You have seen such then?

Hermogenes:: I have.

Socrates:: How, then, do you establish this? Is it thus: That those who are completely good, are completely prudent; and that the completely bad, are completely imprudent?

Hermogenes:: It appears so to me.

Socrates:: If, therefore, Protagoras speaks the truth, and this is the truth itself, for every thing to be such as it appears to every one, can some of us be prudent, and some of us imprudent?

Hermogenes:: By no means.

Socrates:: And this, as I think, appears perfectly evident to you, that, since there is such a thing as prudence and imprudence, Protagoras does not entirety speak the truth;

for one person will not in reality be more prudent than another, if that which appears to every one, is to every one true.

Hermogenes:: It is so.

Socrates:: But neither do I think you will agree with Euthydemus, that alt things subsist together with all, in a similar manner, and always; for thus things would not be good, and others evil, if virtue and vice were always and in a similar manner, inherent in all things.

Hermogenes:: You speak the truth.

Socrates:: If, therefore, neither all things subsist together similarly and always with all things, nor each thing is what it appears to each person, it is evident that there are certain things which possess a stability of essence, and this not from us, nor in consequence of being drawn upwards and downwards by us, through the power of imagination, but which subsist from themselves, according to the essence which naturally belongs to them.

Hermogenes:: This appears to me, Socrates, to be the case.

Socrates:: Will, therefore, the things themselves naturally subsist in this manner, but their actions not so? or are their actions, in like manner, one certain species of things?

Hermogenes:: They are perfectly so.

Socrates:: Actions therefore, also, are performed according to the nature which they possess, and not according to our opinion. As, for instance, if we should attempt to cut any thing, shall we say that each particular can be divided just as we please, and with what we please? or rather, shall we not say, that if we desire to cut any thing according to its natural capacity of receiving section, and likewise with that instrument which is natural for the purpose, we shall divide properly, effect something satisfactory, and act rightly? But that if we do this contrary to nature, we shall wander from the purpose, and perform nothing?

Hermogenes:: To me it appears so.

Socrates:: If therefore we should attempt to burn any thing, we ought not to burn it according to every opinion, but according to that which is right; and this is no other, than after that manner in which any thing is naturally adapted to burn and be burnt, and with, those materials which are proper on the occasion.

Hermogenes:: It is so.

Socrates:: Must we. not, therefore, proceed with other things" after the same manner?

Hermogenes:: Entirely so.

Socrates:: Is not to speak, therefore, one particular operation?

Hermogenes:: Certainly.

Socrates:: Whether, therefore, does he speak rightly, who speaks just as he thinks fit; or he, who speaks in such a manner as the nature of things requires him to speak, and themselves to be spoken of; and who thinks, that if he speaks of a thing with that which is accommodated to its nature, he shall effect something by speaking; but that, if he acts otherwise, he shall wander from the truth, and accomplish nothing to the purpose?

Hermogenes:: It appears to me, it will be just as you say.

Socrates:: Is not, therefore, the nomination of a thing, a certain part of speaking? For those who denominate things, deliver after a manner sentences.

Hermogenes:: Entirely so.

Socrates:: Is not the nomination of things, therefore, a certain action, since to speak is a certain action about things?

Hermogenes:: Certainly.

Socrates:: But it has appeared that actions do not subsist with respect to us, but that they have a certain proper nature of their own.

Hermogenes:: It has so.

Socrates:: It follows, therefore, that we must give names to things, in such a manner as their nature requires us to denominate, and them to be denominated, and by such means as are proper, and not just as we please, if we mean to assent to what we have before asserted. And thus we shall act and nominate in a satisfactory manner, but not by a contrary mode of conduct.

Hermogenes:: It appears so to me.

Socrates:: Come then, answer me. Must we not say, that a thing which ought to be cut, ought to be cut with something?

Hermogenes:: Certainly.

Socrates:: And that the thread, which ought to be separated in weaving, ought to be separated with something? And that the thing which ought to be perforated, ought to be perforated with something?

Hermogenes:: Entirely so.

Socrates:: And likewise that the thing which ought to be named, ought to be named with something?

Hermogenes:: It ought.

Socrates:: But with what are the threads separated in weaving?

Hermogenes:: With the shuttle.

Socrates:: And what is that with which a thing is denominated?

Hermogenes:: A name.

Socrates:: You speak well. And hence a name is a certain organ.

Hermogenes:: Entirely so.

Socrates:: If, therefore, I should inquire what sort of an instrument a shuttle is, would you not answer, that it is an instrument with which we separate the threads in weaving?

Hermogenes:: Certainly.

Socrates:: But what do we perform in weaving? Do we not separate the woof and the threads, which are confused together?

Hermogenes:: Certainly.

Socrates:: Would you not answer in the same manner concerning perforating, and other particulars?

Hermogenes:: Entirely so.

Socrates:: Can you in like manner declare concerning a name, what it is which we perform, whilst we denominate any thing with a name which is a certain instrument?

Hermogenes:: I cannot.

Socrates:: Do we teach one another any thing, and distinguish things according to their mode of subsistence?

Hermogenes:: Entirely so.

Socrates:: A name, therefore, is an instrument endued with a power of teaching, and distinguishing the essence of a thing, in the same manner as a shuttle with respect to the web.

Hermogenes:: Certainly.

Socrates:: But is not the shuttle textural?

Hermogenes:: How should it not?

Socrates:: The weaver therefore uses the shuttle in a proper manner, so far as concerns the art of weaving; but he who teaches employs a name beautifully, according to the proper method of teaching.

Hermogenes:: Certainly.

Socrates:: Through whose operation is it that the weaver acts properly when he uses the shuttle?

Hermogenes:: The carpenter's.

Socrates:: But is every one a carpenter, or he only who possesses art?

Hermogenes:: He who possesses art.

Socrates:: And whose work does the piercer properly use, when he uses the auger?

Hermogenes:: The blacksmith's.

Socrates:: Is every one therefore a blacksmith, or he only who possesses art?

Hermogenes:: He who possesses art.

Socrates:: But whose work does the teacher use when he employs a name?

Hermogenes:: I cannot tell.

Socrates:: Nor can you tell who delivered to us the names which we use?

Hermogenes:: I cannot.

Socrates:: Does it not appear to you that the law delivered these?

Hermogenes:: It does.

Socrates:: He who teaches, therefore, uses the work of the legislator when he uses a name.

Hermogenes:: It appears so to me.

Socrates:: But does every man appear to you to be a legislator, or he only who possesses art?

Hermogenes:: He who possesses art.

Socrates:: It is not the province, therefore, of every man, O Hermogenes, to establish a name, but of a certain artificer of names; and this, as it appears, is a legislator, who is the most rare of artificers among men.

Hermogenes:: It appears so.

Socrates:: But come, consider, what it is which the legislator beholds, when he establishes names; and make your survey from the instances above adduced. What is it which the carpenter looks to, when he makes a shuttle? Is it not to some such thing as is naturally adapted to the purposes of weaving?

Hermogenes:: Entirely so.

Socrates:: But if the shuttle should break during its fabrication, do you think the carpenter would make another, taking pattern by the broken one? or rather would he not look to that form, agreeably to which he endeavored to make the broken shuttle?

Hermogenes:: It appears to me that he would look to this in his fabrication.

Socrates:: Do we not, therefore, most justly call this form, the shuttle itself?

Hermogenes:: It appears so to me.

Socrates:: When, therefore, it is requisite to make shuttles, adapted for the purpose of weaving a slender garment, or one of a closer texture, or of thread or wool, or of any other kind whatever, it is necessary that all of them should possess the form of the shuttle; but that each should be applied to the work to which it is naturally accommodated, in the most becoming manner.

Hermogenes:: Certainly.

Socrates:: And the same reasoning takes place with respect to other instruments. For an instrument must be found out which is naturally adapted to the nature of each particular, and a substance must be assigned to it, from which the artificer will not produce just what he pleases, but that which is natural to the instrument with which he operates. For it is necessary to know, as it appears, that an auger ought to be composed of iron, in order to operate in each particular naturally.

Hermogenes:: Entirely so.

Socrates:: And that a shuttle should for this purpose be made of wood.

Hermogenes:: It is so.

Socrates:: For every shuttle, as it appears, is naturally adapted to every species of weaving; and other things in a similar manner.

Hermogenes:: Certainly.

Socrates:: It is necessary, therefore, excellent man, that the legislator should know how to place a name naturally, with respect to sounds and syllables; and that, looking towards that particular of which this is the name, he should frame and establish all names, if he is desirous of becoming the proper founder of names. But if the founder of names does not compose every name from the same syllables, we ought to take notice, that neither does every blacksmith use the same iron, when he fabricates the same instrument for the sake of the same thing; but that the instrument is properly composed, so long as they fabricate it according to the same idea, though from different sorts of iron, whether it is made here, or among the Barbarians;. Is not this the case?

Hermogenes:: Entirely so.

Socrates:: Will you not therefore be of opinion, that as long as a founder of names, both here and among the Barbarians, assigns a form of name accommodated to each, in any kind of syllables, that while this is the case, the founder of names here will not be worse than the founder in any other place?

Hermogenes:: Entirely so.

Socrates:: Who therefore is likely to know whether a convenient form of the shuttle is situated in every kind of wood? Does this belong to the artifice, of the shuttle, or to the weaver by whom it is used?

Hermogenes:: It is probable, Socrates, that he is more likely to know this, by whom the shuttle is used.

Socrates:: Who is it, then, that uses the work of the fabricator of the lyre? Is it not he who knows how to instruct the artificer of it in the best manner, and who is able to judge whether it is properly made or not?

Hermogenes:: Entirely so.

Socrates:: But who is this?

Hermogenes:: The lyrist.

Socrates:: And who is it that uses the work of the shipwright?

Hermogenes:: The pilot.

Socrates:: And who is he that knows whether the work of the founder of names is beautiful, or not; and who is able to judge concerning it when finished, both here and among the Barbarians? Must it not be the person who uses this work?

Hermogenes:: Certainly.

Socrates:: And is not this person, one who knows, how to interrogate?

Hermogenes:: Entirely so.

Socrates:: And likewise to answer?

Hermogenes:: Certainly.

Socrates:: But would you call him, who knows how to interrogate and answer any thing else, than one who is skilled in dialectic?

Hermogenes:: I should not.

Socrates:: It is the business, therefore, of the shipwright to make a rudder, according to the directions of the pilot, if he means to produce a good rudder.

Hermogenes:: It appears so.

Socrates:: And the legislator, as it seems, ought, in the establishing of names, to consult a man skilled in dialectic, if he means to found them in a beautiful manner.

Hermogenes:: He ought.

Socrates:: It appears, therefore, O Hermogenes, that the imposition of names is no despicable affair, as you think it is, nor the business of depraved men, or of any that may occur. And Cratylus speaks truly, when he says that names belong to things from nature, and that every one is not the artificer of names, but he alone who looks to that name which is naturally accommodated to any thing, and who is able to insert this form of a name in letters and syllables.

Hermogenes:: I have nothing proper to urge, Socrates, in contradiction of what you say. And, perhaps, it is not easy to be thus suddenly persuaded. But I think that I should be more easily persuaded by you, if you could show me what that is which you call a certain rectitude of name according to nature.

Socrates:: As to myself, O blessed Hermogenes, I say nothing; but I even almost forget what I said a short time since, that I had no knowledge in this affair, but that I would investigate it in conjunction with you. But now, in consequence of our mutual survey, thus much appears to us, in addition to our former conviction, that a name possesses some natural rectitude; and that every man does not know how to accommodate names to things, in a becoming manner. Is not this the case?

Hermogenes:: Entirely so.

Socrates:: After this, therefore, it is necessary to inquire, what the rectitude of name is, if you desire to know this.

Hermogenes:: But I do desire to know it.

Socrates:: Consider then.

Hermogenes:: But in what manner is it proper to consider?

Socrates:: The most proper mode of inquiry, my friend, must be obtained from those endued with science, offering them money for this purpose, and loading them with thanks: and these are the sophists, through whom your brother Callias, in consequence of having given them a great quantity of money, appears to be a wise man. But, since you have no authority in paternal matters, it is proper to supplicate your brother, and entreat him to show you that rectitude about things of this kind, which he has learned from Protagoras.

Hermogenes:: But this request of mine, Socrates, would be absurd, if, notwithstanding my entirely rejecting the truth of Protagoras, I should be pleased with assertions resulting from this truth, as things of any worth.

Socrates:: But if this does not please you, it is proper to derive our information from Homer, and the other poets.

Hermogenes:: And what does Homer say, Socrates, concerning names; and where?

Socrates:: Every where. But those are the greatest and most beautiful passages, in which he distinguishes between the names which are assigned to the same things by men, and those which are employed by the gods. Or do you not think that he speaks something in these, great and wonderful, concerning the rectitude of names? For it is evident that the gods call things according to that rectitude which names naturally possess. Or do you not think so?

Hermogenes:: I well know, that if the gods denominate any thing, they properly denominate it. But what are the passages you speak of?

Socrates:: Do you not know, that speaking of the Trojan river, which contested in a singular manner with Vulcan, he says.

> Xanthus its name with those of heavenly birth,
> But call's Scamander by the sons of earth?

Hermogenes:: I do.

Socrates:: But what then, do you not think that this is something venerable, to know in what respect it is more proper to call that river Xanthus, than Scamander? Likewise, if you are so disposed, take notice that he says, the same bird is called Chalcis by the gods, but Cymindis by men. And do you think this is a despicable piece of learning, to know how much more proper it is to call the same bird Chalcis than Cymindis, or Marines than Batik; and so in many other instances, which may be found both in this poet and others? But these things are, perhaps, beyond the ability of you and me to discover. But the names Scamandrius and Astyanax may, as it appears to me, be comprehended by human sagacity; and it may easily be seen, what kind of rectitude there is in these names, which, according to Homer, were given to the son of Hector. For you doubtless know the verses in which these names are contained.

Hermogenes:: Entirely so.

Socrates:: Which therefore of these names do you think Homer considered as more properly adapted to the boy, Astyanax or Scamandrius?

Hermogenes:: I cannot tell.

Socrates:: But consider the affair in this manner: if any one should ask you, which you thought would denominate things in the most proper manner, the more wise or the more unwise?

Hermogenes:: It is manifest that I should answer, the more wise.

Socrates:: Which therefore appears to you to be the more wise in cities, the women or the men, that I may speak of the whole genus?

Hermogenes:: The men.

Socrates:: Do you not therefore know that, according to Homer, the son of Hector was called by the men of Troy, Astyanax, but by the women, Scamandrius?

Hermogenes:: It appears that it was so.

Socrates:: Do you not think that Homer considered the Trojan men as wiser than the Trojan women?

Hermogenes:: I think he did.

Socrates:: He therefore thought that the name Astyanax was more proper for the boy than Scamandrius.

Hermogenes:: It appears so.

Socrates:: But let us consider the reason which he assigns for this denomination: for, says he;

> Astyanax the Trojans call's the boy.
> From his great father, the defense of Troy.

On this account, as it appears, it is proper to call the son of the savior of his country Astyanax, that is, the king of that city, which, as Homer says, his father preserved.

Hermogenes:: It appears so to me.

Socrates:: But why is this appellation more proper than that of Scamandrius? for I confess I am ignorant of the reason of this. Do you understand it?

Hermogenes:: By Jupiter, I do not.

Socrates:: But, excellent man, Homer also gave to Hector his name.

Hermogenes:: But why?

Socrates:: Because it appears to me that this name is something similar to Astyanax, and that these names were considered by the Greeks as having the same meaning; for *king* and Hector nearly signify the same, since both these names are royal. For whoever is a *king*, is also doubtless *a Hector*; since such a one evidently *rules over*, *possesses*, and *has*, that of which he is the king. Or do I appear to you to say nothing to the purpose, but deceive myself, in thinking, as through certain vestiges, to touch upon the opinion of Homer respecting the rectitude of names?

Hermogenes:: By no means, by Jupiter, but perhaps you in some degree apprehend his meaning.

Socrates:: For it is just, as it appears to me, to call the offspring of a lion, a lion, and the offspring of a horse, a horse. I do not say, that this ought to be the case when something monstrous is produced from a horse, and which is different from a horse; but only when the offspring is a natural production. For if the natural progeny of an ox should generate a horse, the offspring ought not to be called a calf, but a colt. [And if a horse, contrary to nature, should generate a calf, the offspring ought not to be called a colt, but a calf.] And again, if from a man an offspring not human should be produced, the progeny, I think, ought not to be called a man. And the same reasoning must take place respecting trees, and all other producing natures. Or does it not appear so to you?

Hermogenes:: It does.

Socrates:: You speak well: for take care that I do not fraudulently deceive you. For the same reason, therefore, the offspring of a king ought to be called a king. But it is of no consequence, though the same thing should be expressed in different syllables, or a letter should be added or taken away, as long as the essence of the thing possesses dominion, and manifests itself in the name.

Hermogenes:: What is this which you say?

Socrates:: Nothing complex. But, as you well know, we pronounce the name, of the elements, but not the elements themselves, four alone excepted, viz. ε̄ & ῡ, and ō & ω̄: and adding other letters, as well to the other vowels as to the non-vowels, we form names, which we afterwards enunciate. But, as long as we insert the apparent power of the element, it is proper to call the name that which is manifested to us by the element. As is evident, for instance, in the letter βητα: for here you see that the addition of the η̄ and the τ̄, and the ᾱ, does not hinder the nature of that element from being evinced by the whole name, agreeably to the intention of its founder; so well did he know how to give names to letters.

Hermogenes:: You appear to me to speak the truth.

Socrates:: Will not, therefore, the same reasoning take place respecting a king? For a king will be produced from a king, *good* from *good*, and *beauty* from *beauty*; and in the same manner with relation to every thing else, from every genus a progeny of the same kind will be produced, unless something monstrous is generated; and will be called by the same name. But it is possible to vary these names in such a manner by syllables, that, to ignorant men, the very same appellations will appear to be different from each other. Just as the medicines of physicians, when varied with colors or smells, appear to us to be different, though they are still the same; but to the physician, as one who considers the power of the medicines, they appear to be the same, nor is he at all astonished by the additions. In like manner, perhaps, he who is skilled in names speculates their power, and is not astonished, if at any time a letter should be added, or changed, or taken away; or that in other all-various letters, the same power of name should be found. As in the names Astyanax and Hector, which we have just spoken of, they do not possess any thing of the same letters, except the τ, and yet, at the same time, they signify the same thing. So likewise with respect to the name αρχεπολις, or a ruler of a city, what communication has it in letters with the two preceding names? and yet it has the same signification. And there are many other words which signify nothing else than a king; many which signify nothing else than the leader of an army, as, αγις, πολεμαρχος, ευπολεμος; and likewise many which imply a professor of medicine, as ιατροϰλης, and αϰεσιμϐροτος. And perhaps many other may be found, disagreeing indeed in syllables, and letters, but in power vocally emitting the same signification. Does this appear to you to be the case, or not?

Hermogenes:: Entirely so.

Socrates:: And that to things which subsist according to nature, the same names should be assigned?

Hermogenes:: Perfectly so.

Socrates:: But that, as often as generations take place contrary to nature, and by this means produce things in the form of monsters, as when from a good and pious man an impious man is generated, then the offspring ought not to be called by the name of his producer; just as we said before, that if a horse should generate the progeny of an ox, the offspring ought not to be called a horse, but an ox?

Hermogenes:: Entirely so.

Socrates:: When an impious man, therefore, is generated from one who is pious, the name of the genus to which he belongs must be assigned him.

Hermogenes:: It must so.

Socrates:: Such a son, therefore, ought not to be called either one who is a friend to divinity, or mindful of divinity, or any thing of this kind: but he should be called by that which signifies the contrary of all this, if names ought to possess any thing of rectitude.

Hermogenes:: This ought to be the case more than any thing, Socrates.

Socrates:: Just, Hermogenes, as the name Orestes appear, to be properly invented; whether a certain fortune assigned him this name, or some poet, evincing by this appellation his rustic nature, correspondent to an inhabitant of mountains.

Hermogenes:: So it appears, Socrates.

Socrates:: It appears also, that the name of his father subsists according to nature.

Hermogenes:: It does so.

Socrates:: For it seems that Agamemnon was one who considered that he ought to labor and patiently endure hardships, and obtain the end of his designs through virtue. But his stay before Troy, with so great an army, evinces his patient endurance. That this man, therefore, was wonderful, with respect to perseverance, is denoted by the name Agamemnon. Perhaps also Atreus is a proper denomination: for his slaughter of Chrysippus, and the cruelty which he exercised towards Thyestes, evince that he was pernicious and noxious. His surname, therefore, suffers a small degree of declination, and conceals its meaning; so that the nature of the man is not evident to every one; but to those who are skilful in names, the signification of Atreus is sufficiently manifest. For his name properly subsists throughout, according to the intrepid, inexorable, and noxious. It appears also to me, that the name given to Pelops was very properly assigned: for this name signifies one who sees things near at hand, and that he is worthy of such a denomination.

Hermogenes:: But how?

Socrates:: Because it is reported of this man, that in the slaughter of Myrtilus, he neither provided for any thing, nor could perceive afar off how great a calamity his whole race would be subject to from this circumstance; but he only regarded that which was just before him, and which then subsisted, that is, what was πελας, or near; and this when he desired, by all possible means, to receive Hippodamia in marriage. So that his name was derived from πελας near, and οψις sight. Every one also must think that the name given to Tantalus was properly and naturally assigned him, if what is related concerning him is true.

Hermogenes:: But what is that relation?

Socrates:: That, while he was yet living, many unfortunate and dire circumstances happened to him, and at last the whole of his country was subverted; and that, when he was dead, a stone was suspended over his head in Hades, these particulars, as it appears corresponding with his name in a wonderful and artless manner: For it is just as if any one should be willing to call him ταλαντατος, i.e. most miserable, but, at the same time, desirous to conceal this circumstance, should call him Tantalus instead of Talantatus. And it seems that the fortune of rumor caused him to receive this appellation. But it appears that the name of him who was called his father, is composed in an all-beautiful manner, though it is by no means easy to be understood: for in reality the name of Jupiter is, as it were, a sentence; but dividing it into two parts, some of us use one part, and some another, for some call him ζηνα, and some δια. And these parts collected into one, evince the nature of the god; which, as we have said, a name ought to effect: For there is no one who is more the cause of living, both to us and every thing else, than he who is the ruler and king of all things. It happens, therefore, that this god is rightly denominated, through whom life is present with all living beings; but the name, though one, is distributed, as I have said, into two parts, viz. into δια, and ζηνα. But he who suddenly hears that this god is the son of Saturn, may perhaps think it a reproachful assertion: For it is rational to believe that Jupiter is the offspring of a certain great dianoëtic power; for, when Saturn is called κορος it does not signify a boy, but the purity and incorruptible nature of his intellect. But, according to report, Saturn is the son of Heaven: and sight directed to things above is called by this names ουρανια, from beholding things situated on high. From whence, O Hermogenes, those who discourse on sublime affairs, say that a pure intellect is present with him, and that he is very properly denominated Heaven. Indeed, if I did but remember the genealogy of the gods, according to Hesiod, and the yet superior progenitors of these which he speaks of, I should not desist from showing you the rectitude of their appellations, until I had made trial of this wisdom, whether it produces any thing of consequence, or not; and whether those explanations which I have just now so suddenly delivered, though I know not from whence, are defective or true.

Hermogenes:: Indeed, Socrates, you really appear to me to pour forth oracles on a sudden, like those who are agitated by some inspiring god.

Socrates:: And I think indeed, O Hermogenes, that this wisdom happened to me through the means of Euthyphro, the son of Pontius: for I was with him in the morning, and listened to him with great attention. It seems therefore, that, being divinely inspired, he has not only filled my ears with divine wisdom, but that he has also arrested my very soul. It appears therefore to me, that we ought to act in such a manner as to make use of this wisdom today, and contemplate what yet remains concerning the rectitude of names. But tomorrow, if it is agreeable to you, we will lay it aside, and purify ourselves from it, finding out for this purpose one who is Hulled in expiating things of this kind, whether he is some one of the priests, or the sophists.

Hermogenes:: I assent to this; for I shall hear, with great pleasure, what remains of the discussion concerning names.

Socrates:: It is necessary to act in this manner. From whence then are you willing we should begin our speculation, since we have insisted upon a certain formula of operation; that we may know whether names themselves will testify for us, that they were not entirely fabricated from chance, but contain a certain rectitude of construction? The names, therefore, of heroes and men may perhaps deceive us: for many of these subsist according to the surnames of their ancestors, and sometimes have no correspondence with the persons, as we observed in the beginning of this disputation. But many are added, as tokens of renown, such as the prosperous, the savior, the friend of divinity, and a variety of others of this kind. It appears to me, therefore, that we ought to neglect the discussion of these: but it is probable that we shall particularly find names properly fabricated, about eternal and natural beings; for it is most becoming to study the position of names in these. But, perhaps, some of these are established by a power more divine than that of men.

Hermogenes:: You appear to me, Socrates, to speak excellently well.

Socrates:: Will it not therefore be just, to begin from the gods, considering the reason why they are properly denominated gods?

Hermogenes:: It will be proper.

Socrates:: I therefore conjecture as follows,—It appears to me that the most ancient of the Greeks, or the first inhabitants of Greece, considered those only as gods, which are esteemed such at present by many of the Barbarians; I mean, the sun and the moon, the earth, the stars, and the heavens. As they therefore perceived all these running round in a perpetual course, from this nature of running they called them gods; but afterwards, understanding that there were others besides these, they called all of them by the same name. Has what I say any similitude to truth, or not?

Hermogenes:: It possesses a perfect similitude.

Socrates:: What then shall we consider after this?

Hermogenes:: It is evident that we ought to speculate concerning dæmons, heroes, and men.

Socrates:: Concerning dæmons? And truly, Hermogenes, this is the proper method of proceeding. What then are we to understand by the name dæmon? see whether I say any thing to the purpose.

Hermogenes:: Only relate what it is.

Socrates:: Do you not know who those dæmons are which Hesiod speaks of?

Hermogenes:: I do not.

Socrates:: And are you ignorant that he says, the golden race of men was first generated?

Hermogenes:: This I know.

Socrates:: He says, therefore, concerning this, “that after this race was concealed by Fate, it produced dæmons, denominated holy, terrestrial, good, expellers of evil, and guardians of mortal men.”

Hermogenes:: But what then?

Socrates:: I think, indeed, that he calls it a golden race, not as naturally composed from gold, but as being beautiful and good: but I infer this, from his denominating our race an iron one.

Hermogenes:: You speak the truth.

Socrates:: Do you not therefore think, that if any one of the present times should appear to be good, Hesiod would say he belonged to the golden race?

Hermogenes:: It is probable he would.

Socrates:: But are the good any other than such as are prudent?

Hermogenes:: They are the prudent.

Socrates:: On this account therefore, as it appears to me, more than any other he calls them dæmons, because they were prudent and learned (δαημονες). And, in our ancient tongue, this very name is to be found. Hence both he, and many other poets, speak in a becoming manner, when they say that a good man after death will receive a mighty destiny and renown, and will become a dæmon, according to the surname of prudence. I therefore assert the same, that every good man is learned and skilful; that he is dæmoniacal, both while living and when dead; and that he is properly denominated a dæmon.

Hermogenes:: And I also, Socrates, seem to myself to agree with you perfectly in this particular. But what does the name hero signify?

Socrates:: This is by no means difficult to understand; for this name is very little different from its original, evincing that its generation is derived from love.

Hermogenes:: How is this?

Socrates:: Do you not know that heroes are demigods?

Hermogenes:: What then?

Socrates:: All of them were doubtless generated either from the love of a god towards a mortal maid, or from the love of a man towards a goddess. If, therefore, you consider this matter according to the ancient Attic tongue, you will more clearly understand the truth of this derivation: For it will be evident to you that the word hero is derived from love, with a trifling mutation for the sake of the name: or you may say, that this name is deduced from their being wise and rhetoricians, sagacious and skilled in dialectic, and sufficiently ready in interrogating; for ειρειν is the same as to speak. Hence, as we just now said in the Attic tongue, those who are called heroes will prove to be certain rhetoricians, interrogators, and lovers: so that the genus of rhetoricians and sophists is, in consequence of this, an heroic tribe. This, indeed, is not difficult to understand; but rather this respecting men is obscure, I mean, why they were called ανθρωποι, *men.* Can you tell the reason?

Hermogenes:: From whence, my worthy friend, should I be able? And, indeed, if I was by any means capable of making this discovery. I should not exert myself for this purpose, because I think you will more easily discover it than I shall.

Socrates:: You appear to me to rely on the inspiration of Euthyphro.

Hermogenes:: Evidently so.

Socrates:: And your confidence is proper: for I now seem to myself to understand in a knowing and an elegant manner; and I am afraid, if I do not take care, that I shall become today wiser than I ought. But consider what I say. For this, in the first place, ought to be understood concerning names, that we often add letters, and often take them away, while we compose names just as we please; and, besides this, often change the acute syllables. As when we say Δι φιλος, *a friend to Jove*: for, in order that this name may become instead of a verb to us, we take away the other ιωτα, and, instead of an acute middle syllable, we pronounce a grave one. But, on the contrary, in others we insert letters, and others again we enunciate with a graver accent.

Hermogenes:: You speak the truth.

Socrates:: This, therefore, as it appears to me, takes place in the name man: for a noun is generated from a verb, one letter, ᾱ, being taken away, and the end of the word becoming more grave.

Hermogenes:: How do you mean?

Socrates:: Thus. This name *man* signifies that other animals, endued with sight, neither consider, nor reason, nor contemplate; but man both sees, and at the same time contemplates and reasons upon that which he sees. Hence man alone, of all animals, is rightly denominated ανθρωπος, viz. *contemplating what he beholds*. But what shall we investigate after this? Shall it be that, the inquiry into which will be very pleasing to me?

Hermogenes:: By all means.

Socrates:: It appears then to me, that we ought, in the next place, to investigate concerning soul and body; for we call the composition of soul and body, man.

Hermogenes:: Without doubt.

Socrates:: Let us, then, endeavor to divide these in the same manner as the former subjects of our speculation. Will you not therefore say, that we should first of all consider the rectitude of this name *soul*, and afterwards of the name *body*?

Hermogenes:: Certainly.

Socrates:: That I may speak, then, what appears to me on a sudden, I think that those who assigned this name soul, understood some such thing as this, that whenever this nature is present with the body, it is the cause of its life, extending to, and refrigerating it with, the power of respiration; but that when the refrigerating power ceases, the body at the same time is dissolved and perishes: and from hence, as it appears to me, they called it soul (ψυχη). But, if you please, stop a little; for I seem to myself to perceive something more capable of producing persuasion than this, among the followers of Euthyphro: for, as it appears to me, they would despise this etymology, and consider it as absurd. But consider whether the following explanation will please you.

Hermogenes:: Only say what it is.

Socrates:: What other nature, except the soul, do you think gives life to the whole body, contains, carries, and enables it to walk about?

Hermogenes:: No other.

Socrates:: But what, do you not believe in the doctrine of Anaxagoras, that intellect and soul distribute into order, and contain the nature of every thing else?

Hermogenes:: I do.

Socrates:: It will be highly proper, therefore, to denominate that power which carries and contains nature, φυσεχην: but it may more elegantly be called ψυχη.

Hermogenes:: Entirely so.

Socrates:: And this latter appellation appears to me to be more agreeable to art than the former.

Hermogenes:: For it certainly is so.

Socrates:: But it would truly appear to be ridiculous, if it was named according to its composition.

Hermogenes:: But what shall we next consider after this?

Socrates:: Shall we speak concerning body?

Hermogenes:: By all means.

Socrates:: But this name appears to me to deviate in a certain small degree from its original: for, according to some, it is the *sepulcher* of the soul, which they consider as buried at present; and because whatever the soul signifies, it signifies by the body; so that on this account it is properly called σημα, a *sepulcher*. And indeed the followers of Orpheus appear to me to have established this name, principally because the soul suffers in body the punishment of its guilt, and is surrounded with this enclosure that it may preserve the image of a prison. They are of opinion, therefore, that the body should retain this appellation, σωμα, till the soul has absolved the punishment which is her due, and that no other letter ought to be added to the name.

Hermogenes:: But it appears to me, Socrates, that enough has been said concerning these particulars. But do you think we can speak about the names of the gods, in the same manner as we considered the name of Jupiter, and determine the rectitude of their denominations?

Socrates:: By Jupiter, Hermogenes, if we are endued with intellect, we shall confess that the most beautiful mode of conduct, on this occasion, is to acknowledge that we know nothing either concerning the gods, or the names by which they denominate themselves: For it is evident that they call themselves by true appellations. But the second mode of rectitude consists, I think, in calling the gods by those names which the law ordains us to invoke them by in prayer, whatever the names may be which they rejoice to hear; and that we should act thus, as knowing nothing more than this: for the method of invocation which the law appoints appears to me to be beautifully established. If you are willing, therefore, let us enter on this speculation, previously, as it were, declaring to the gods that we speculate nothing concerning their divinities, as we do not think ourselves equal to such an undertaking; but that we direct our attention to the opinion entertained by those men who first fabricated their names: for this will be the means of avoiding their indignation.

Hermogenes:: You appear to me, Socrates, to speak modestly: let us therefore act in this manner.

Socrates:: Ought we not, therefore, to begin from Vesta, according to law?

Hermogenes:: It is just that we should.

Socrates:: What then shall we say is to be understood by this name Ἑστια?

Hermogenes:: By Jupiter, I do not think it is easy to discover this.

Socrates:: It appears, indeed, excellent Hermogenes, that those who first established names were no despicable persons, but men who investigated sublime concerns, and were employed in continual meditation and study.

Hermogenes:: But what then?

Socrates:: It seems to me that the position of names was owing to some such men as these. And, indeed, if any one considers foreign names, he will not less discover the meaning of each. As with respect to this which we call ουσια, essence, there are some who call it εσια, and others again ωσια. In the first place, therefore, it is rational to call the essence of things Ἑστια, according to one of these names, εσια: and because we denominate that which participates of essence Ἑστια, *essence*, Vesta may, in consequence of this, be properly called Ἑστια: for our ancestors were accustomed to call ουσια, essence, εσια. Besides, if any one considers the business of sacrifice, he will be led to think that this was the opinion of those by whom sacrifices were ordained. For it was proper, that those who denominated the essence of all things Ἑστια (Vesta), should sacrifice to Vesta, before all the gods. But those who called *essence* ωσια, these nearly, according to the opinion of Heraclitus, considered all things as perpetually flowing, and that nothing had any permanent subsistence. The cause, therefore, and leader of things, with them, is impulse: and hence they very properly denominated this impelling cause ωσια. And thus much concerning the opinion of those who may be considered as knowing nothing. But, after Vesta, it is just to speculate concerning Rhea and Saturn, though we have discussed the name of Saturn already. But, perhaps, I say nothing to the purpose.

Hermogenes:: Why so, Socrates?

Socrates:: O excellent man, I perceive a certain hive of wisdom.

Hermogenes:: But of what kind is it?

Socrates:: It is almost ridiculous to mention it; and yet I think it is capable of producing a certain probability.

Hermogenes:: What probability is this?

Socrates:: I seem to myself to behold Heraclitus formerly asserting something wisely concerning Saturn and Rhea, and which Homer himself also asserts.

Hermogenes:: Explain your meaning.

Socrates:: Heraclitus then says, that all things subsist in a yielding condition, and that nothing abides; and assimilating things to the flowing of a river, he says, that you cannot merge yourself twice in the same stream.

Hermogenes:: He does so.

Socrates:: Does he, therefore, appear to you to conceive differently from Heraclitus, who places Rhea and Saturn among the progenitors of the other gods? And do you think that Heraclitus assigned both of them by chance, the names of streams of water? As, therefore, Homer calls Ocean the generation of the gods, and Tethys their mother, so I think the same is asserted by Hesiod. Likewise Orpheus says.

> In beauteous flowing marriage first combined.
> Ocean, who mingling with his sister Tethys join's.

Behold, therefore, how all these consent with each other in their doctrine, and how they all tend towards the opinion of Heraclitus!

Hermogenes:: You seem to me, Socrates, to say something to the purpose, but I do not understand what the name Tethys implies.

Socrates:: But this nearly implies the same, and signifies that it is the occult name of a fountain; for leaping forth, and straining through, represent the image of a fountain. But from both these names the name Tethys is composed.

Hermogenes:: This, Socrates, is an elegant explanation.

Socrates:: What then shall we next consider? Jupiter we have already spoken of.

Hermogenes:: Certainly.

Socrates:: Let us, therefore, speak of his brothers, Neptune and Pluto, and that other name by which Pluto is called.

Hermogenes:: By all means.

Socrates:: He, therefore, who first called Neptune ποσειεων, appears to me to have given him this name from the nature of the sea, restraining his course when he walks, and not permitting him to proceed any further, as if it became a bond to his feet. He, therefore, denominated the ruler of this power ποσειδων, as ποσιδεσμον οντα, viz. having a fettered foot. The ε̄ perhaps was added for the sake of elegance. But, perhaps, this was not the meaning of its founder, but two λλ were originally placed instead of σ̄; signifying that this god knows a multitude of things. And, perhaps, likewise he was denominated σειων, i.e. *shaking*, from σειειν, *to shake*, to which π and δ were added. But Pluto was to called from the donation of πλουτος, wealth, because riches are dug out of the bowels of the earth. But by the appellation αιδης, the multitude appear to me to conceive the same as αειδες, i.e. obscure and dark; and that, being terrified at this name, they call him Pluto.

Hermogenes:: But what is your opinion, Socrates, about this affair?

Socrates:: It appears to me, that men have abundantly erred concerning the power of this god, and that they are afraid of him without occasion; for their fear arises from hence; because, when any one of us dies, he abides for ever in Hades; and because the soul departs to this god, diverted of the body. But both the empire of this god, and his name, and every other particular respecting him, appear to me to tend to one and the same thing.

Hermogenes:: But how?

Socrates:: I will tell you how this affair appears to me. Answer me, therefore, Which of these is the stronger bond to an animal, so as to cause its detention, necessity, or desire?

Hermogenes:: Desire, Socrates, is by far the most prevalent.

Socrates:: Do you not think that many would fly from Hades, unless it held those who dwell there by the strongest bond?

Hermogenes:: Certainly.

Socrates:: It binds them, therefore, as it appears, by a certain desire; since it binds them with the greatest bond, and not with necessity.

Hermogenes:: It appears so.

Socrates:: Are there not, therefore, many desires?

Hermogenes:: Certainly.

Socrates:: It binds them, therefore, with the greatest of all desires, if it binds them with the greatest of bonds.

Hermogenes:: Certainly.

Socrates:: Is there then any greater desire, than that which is produced when any one, by associating with another, thinks that, through his means, he shall become a better man?

Hermogenes:: By Jupiter, Socrates, there is not any.

Socrates:: On this account, Hermogenes, we should say, that no one is willing to return from thence hither, not even the Syrens themselves; but that both they, and all others, are enchanted by the beautiful discourses of Pluto. And hence it follows that this god is a perfect sophist; that he greatly benefits those who dwell with him; and that he possesses such great affluence as enables him to supply us with those mighty advantages which we enjoy; and from hence he is called Pluto. But does he not also appear to you to be a philosopher, and one endued with excellent prudence and design, from his being unwilling to associate with men invested with bodies, but then only admits them to familiar converse with him, when their souls are purified from all the evils and desires which subsist about the body? for this divinity considered, that he should be able to detain souls, if he bound them with the desire belonging to virtue; but that, while they possess the consternation and furious insanity of body, even his father Saturn would not be able to detain them with him, in those bonds with which he is said to be bound.

Hermogenes:: You seem, Socrates, to speak something to the purpose.

Socrates:: We ought then, O Hermogenes, by no means to denominate αιδης from dark and invisible, but much rather from a knowledge of all beautiful things: and from hence this god was called by the fabricator of names αδης.

Hermogenes:: Be it so. But what shall we say concerning the names Ceres, Juno, Apollo, Minerva, Vulcan, Mars, and those of the other gods?

Socrates:: It appears that Ceres was so called from the donation of aliment, being, as it were, διδουσα μητηρ, or *a bestowing mother*. But Juno, from being *lovely*, on account of the love which Jupiter is said to have entertained for her. Perhaps also the founder of this name, speculating things on high, denominated the air ἡρα; and, for the sake of concealment, placed the beginning at the end. And this you will be convinced of, if you frequently pronounce the name of Juno. With respect to the names φερῥεφαττα, or

Proserpine, and Apollo, many are terrified at them, through unskillfulness as it appears in the rectitude of names. And indeed, changing the first of these names, they consider φεϱσεφονη; and this appears to them as something terrible and dire. But the other name, φεϱῥεφαττα, signifies that this goddess is wise: for that which is able to touch upon, handle, and pursue things which are borne along, will be wisdom. This goddess therefore may, with great propriety, be named φερεπαφα, or something of this kind, on account of her wisdom, and contact of that which is borne along: and hence the wise αιδης or Pluto, associates with her, because of these characteristics of her nature. But men of the present times neglect this name, valuing good pronunciation more than truth; and on this account they call her φερῥεφαττα. In like manner with respect to Apollo, many, as I said before, are terrified at this name of the god, as if it signified something dire. Or are you ignorant that this is the case?

Hermogenes:: I am not; and you speak the truth.

Socrates:: But this name, as it appears to me, is beautifully established, with respect to the power of the god.

Hermogenes:: But how?

Socrates:: I will endeavor to tell you what appears to me in this affair: for there is no other one name which can more harmonize with the four powers of this god, because it touches upon them all, and evinces, in a certain respect. his *harmonic*, *prophetic*, *medicinal*, and *arrow-darting skill*.

Hermogenes:: Tell me, then; for you seem to me to speak of this name, as something prodigious.

Socrates:: This name then is well harmonized as to its composition, as belonging to an harmonica god: for, in the first place, do not purgations and purifications, both according to medicine and prophecy, and likewise the operations of pharmacy, and the lustrations, warnings and sprinklings employed by the divining art, all tend to this one point, viz. the rendering man pure, both in body and soul?

Hermogenes:: Entirely so.

Socrates:: Will not then the purifying god, who washes and frees us from evils of this kind, be Apollo?

Hermogenes:: Perfectly so.

Socrates:: According, therefore, to the solutions and warnings which he affords, as being the physician of such-like things, he will be properly called απολυων or the liberator; but according to his prophetic power and truth, he may be most properly called ἁπλος, or simple, as he is denominated by the Thessalians; since simplicity is the same with truth: for all the Thessalians call this god the simple. But, on account of his perpetually prevailing might in the jaculation of arrows, he may be called αεὶ ϐαλλων, that is, perpetually darting. But with respect to his harmonic power, it is proper to take notice, that ᾱ often signifies the same as together, as in the words αϰολουθος, a follower, and αϰοιτις, a wife. So likewise in the name of this god, ᾱ and πολησις signify the revolution subsisting together with, and about the heavens, which they denominate the pole; and the harmony subsisting in song, which they call symphony. Because all these, according to the assertions of those who are skilled in music and astronomy, revolve together with a certain harmony. But this god presides over harmony, ομοπολων, i.e. converting all these together, both among gods and men. As, therefore, we call ομοϰελευθος, and ομοϰοιτις, i.e. going together, and lying together, αϰολουθος and αϰοιτις, changing ο into α, so likewise we denominate Apollo as ομοπολων, inserting at the same time another λ; because otherwise it would have been synonymous with a difficult name. And this many of the present time suspecting, through not rightly perceiving the power of this name, they are terrified at it, as if it signified a certain corruption. But in reality this name, as we just now observed, is so composed, that it touches upon all the powers of the god, viz. his simplicity, perpetual jaculation, purifying, and joint-revolving nature.—But the name of the Muses, and universally that of Music, was derived, as it seems, from μωσθαι, *to inquire*, and from investigation and philosophy. But λητω, i.e. Latona, was derived from the mildness of this goddess, because she is εθελημων, viz. willing to comply with the requests of her suppliants. Perhaps, too, they denominate her as a stranger; for many call her ληθω: and this name ληθω they seem to have assigned her, because her manners are not rough, but gentle and mild. But αϱτεμις, i.e. Diana, appears to Signify integrity and modesty, through her desire of virginity. Perhaps also the founder of her name so called her, as being skilful in virtue. And it is not likewise improbable, that, from her hating the copulation of man and woman, or through some one, or all of these, the institutor of her name thus denominated the goddess.

Hermogenes:: But what will you say concerning Dionysius and Venus?

Socrates:: You inquire about great things, O son of Hipponicus. But the mode of nomination, belonging to these divinities, is both serious and jocose. Ask therefore others about the serious mode; but nothing hinders us from relating the jocose: for these deities are lovers of jesting and sport. Dionysius, therefore, is the giver of wine, and may be jocosely called διδοινυσος. But οινος, wine, may be most justly denominated οιονους, because it is accustomed to deprive those of intellect; who possessed it before. But, with respect to Venus, it is not proper to contradict Hesiod, but to allow that she was called αφϱοδιτη, through her generation from αφρος, foam.

Hermogenes:: But, Socrates, as you are an Athenian, you ought not to neglect the investigation of Minerva, Vulcan, and Mars.

Socrates:: For such a neglect is, indeed, by no means becoming.

Hermogenes:: Certainly not.

Socrates:: One of the names of Minerva, therefore, it is by no means difficult to explain.

Hermogenes:: Which do you mean?

Socrates:: Do we not call her Pallas?

Hermogenes:: Certainly.

Socrates:: This name, therefore, we must consider as derived from leaping in armor; and in so doing, we shall, as it appears to me, think properly: for to elevate oneself, or something else, either from the earth or in the hands, is denominated by us to vibrate and be vibrated, and to dance and be made to dance.

Hermogenes:: Entirely so.

Socrates:: The goddess, therefore, is on this account called Pallas.

Hermogenes:: And very properly so. But how will you explain her other name?

Socrates:: Do you mean that of Athena?

Hermogenes:: I do.

Socrates:: This name, my friend, is of greater moment; for the ancients appear to have considered Athena in the same manner as those of the present day, who are skilled in the interpretation of Homer: for many of these explain the poet as Signifying, by Athena, intellect and the dianoëtic power. And he who instituted names seems to have understood some such thing as this about the goddess, or rather something yet greater, expressing, by this means, the intelligence of the goddess, as if he had said that she is ϑεονοη, or deific intelligence, employing after a foreign mode ᾱ instead of η̄, and taking away ι and σ. Though perhaps this was not the case, but he called her ϑεονοη, as understanding divine concerns in a manner superior to all others. Nor will it be foreign from the purpose to say that he was willing to call her ηθονοη, as being intelligence in manners. But either the original founder of this name, or certain persons who came after him, by producing it into something which they thought more beautiful, denominated her Athena.

Hermogenes:: But what will you say concerning Vulcan?

Socrates:: Do you inquire concerning the noble arbiter of light?

Hermogenes:: So it appears.

Socrates:: This divinity, therefore, being φαιστος, luminous, and attracting to himself a, is called ηφαιστος, or the arbiter of light.

Hermogenes:: It appears so, unless you think it requires some other explanation.

Socrates:: But, that it may not appear otherwise to me, inquire concerning Mars.

Hermogenes:: I inquire then.

Socrates:: If you please, then, the name of Mars shall be derived from το αρῥεν *masculine*, and το ανδρειον *bold*. But if you are willing that he should be called Mars, from his hard and inconvertible nature, the whole of which is denominated αρῥατον, this also will perfectly agree with the properties of the warlike god.

Hermogenes:: Entirely so.

Socrates:: Let us therefore dismiss our investigations concerning the names of the gods, as I am afraid to discourse about them. But urge me to any thing else you please, that you may see the quality of the horses of Euthyphro.

Hermogenes:: I will consent to what you say, if you will only suffer me to ask you concerning Hermes; for Cratylus says that I am not Hermogenes. Let us endeavor, then, to behold the meaning of the name Hermes, that we may know whether he says any thing to the purpose.

Socrates:: This name seems to pertain to discourse, and to imply that this god is an interpreter and a messenger, one who steals, and is fraudulent in discourse, and who meddles with merchandise: and the whole of this subsists about the power of discourse. As, therefore, we said before, το ειρειν is the use of speech: and of this Homer frequently says, εμησατο, i.e. he deliberated about it. This name, therefore, is composed both from to speak and to deliberate; just as if the institutor of the name had authoritatively addressed us as follows; “It is just, O men, that you should call that divinity, who makes speech the object of his care and deliberation, Ειρεμης.” But we of the present times, thinking to give elegance to the name, denominate him Ἑρμης, Hermes. But Iris likewise is so called, from το ειρειν, *to speak* because she is a messenger.

Hermogenes:: By Jupiter, then, Cratylus appears to me to have spoken well, in denying that I am Hermogenes; because I am by no means an excellent artist of discourse.

Socrates:: It is likewise probable, my friend, that Pan is the bipartite son of Hermes.

Hermogenes:: But why?

Socrates:: You know that speech signifies the all; that it circulates and rolls perpetually; and that it is two-fold, true and false.

Hermogenes:: Entirely so.

Socrates:: Is not, therefore, that which is true in speech, smooth and divine, and dwelling on high in the gods; but that which is false, a downward inhabitant, dwelling in the multitude of mankind, and, besides this, rough and tragic? For in speech of this kind, the greater part of fables, and the falsities about a tragic life, subsist.

Hermogenes:: Entirely so.

Socrates:: With great propriety, therefore, he who indicates every thing, and perpetually rolls, is παν αιπολος; the biform son of Hermes; who in his upper parts is smooth, but in his lower parts rough and goat-formed: and Pan is either speech, or the brother of speech, since he is the son of Hermes. But it is by no means wonderful that brother should be similar to brother. However, as I just now said, O blessed man! let us leave these investigations of the gods.

Hermogenes:: Gods of this kind, if you please, Socrates, we will omit; but what should hinder you from discussing the names of such divinities as the sun and moon, stars and earth, æther and air, fire and water, the seasons and the year?

Socrates:: You assign me an arduous talk; yet at the same time, if it will oblige you, I am willing to comply.

Hermogenes:: It will so, indeed.

Socrates:: What therefore do you wish we should first investigate? Or shall we, agreeably to the order in which you mentioned these, begin with the sun?

Hermogenes:: Entirely so.

Socrates:: It seems, then, that this would become more manifest, if any one should use the Doric appellation: for the Dorians call the sun αλιον. He will therefore be αλιον, from his collecting men into one, when he rises; and likewise, from his always revolving about the earth. To which we may add, that this name belongs to him, because he varies, in his circulation, the productions of the earth. But το ποικιλειν, and αιολειν, have one and the same meaning.

Hermogenes:: But what will you say of σεληνη, or the moon?

Socrates:: This name seems to press upon Anaxagoras.

Hermogenes:: Why?

Socrates:: Because it seems to manifest something of a more ancient date, which he lately revived, when he said that the moon derives her light from the sun.

Hermogenes:: But how?

Socrates:: Σελας is the same with φως, light.

Hermogenes:: Certainly.

Socrates:: But this light about the moon is perpetually νεον and εννον, *new* and *old*, if what the Anaxagoras say is true: for, perpetually revolving in a circle, it perpetually renews this light; but the light of the former month becomes old.

Hermogenes:: Entirely so.

Socrates:: But many call the moon σελαναιας.

Hermogenes:: They do so.

Socrates:: But, because it perpetually possesses new and old splendor, it may be more justly called σελαεννεοαεια; but is now concisely denominated σελαναια.

Hermogenes:: This name, Socrates, is dithyrambic. But what will you say of month and the stars?

Socrates:: Μειης, or month, may be properly so called, from μειουσθαι, *to be diminished*; but the stars appear to derive their appellation from αστραπη, *coruscation*. But αστραπη is denominated from ωπας αναστρεφει, i.e. converting to itself the sight; but now, for the sake of elegance, it is called αστραπη.

Hermogenes:: But what is your opinion concerning fire and water.

Socrates:: I am in doubt with respect to fire; and it appears, that either the Muse of Euthyphro deserts me, or that this word is most extremely difficult to explain. Behold then the artifice which I employ, in all such things as cause me to doubt.

Hermogenes:: What is it?

Socrates:: I will tell you. Answer me, therefore: Do you know on what account πυϱ, fire, is so called?

Hermogenes:: By Jupiter, I do not.

Socrates:: But consider what I suspect concerning it: for I think that the Greeks, especially such as dwelt under the dominion of the Barbarians, received many of their names from the Barbarians.

Hermogenes:: But what then?

Socrates:: If any one, therefore, should investigate the propriety of these names according to the Greek tongue, and not according to that language to which the name belongs, he would certainly be involved in doubt.

Hermogenes:: It is likely he would.

Socrates:: Consider then, whether this name, πυϱ, is not of Barbaric origin: For it is by no means easy to adapt this to the Greek tongue; and it is manifest that the Phrygians thus denominate fire, with a certain trifling deviation; as likewise that ὑδωϱ *water*, ϰυνας dogs, and many other names, are indebted to them for their origin.

Hermogenes:: They are so.

Socrates:: It is not proper, therefore, to use violence with these words, since no one can say any thing to the purpose about them. On this account, therefore, I shall reject the explanation of πυϱ fire, and ὑδωϱ water. But air, O Hermogenes, is so called, because it elevates things from the earth; or because it always flows; or because, from its flowing, spirit is produced: for the poets call spirits αηται, winds. Perhaps, therefore, it is called as if implying *a flowing spirit*, or *a flowing blast of wind*. But I consider æther as deriving its appellation from always running in a flowing progression, about the air; and on this account it may be called αειθεηϱ. But γη, or *earth*, will more plainly signify its meaning, if any one denominates it γαια. For γαια may be properly called γεννητειρα, *the producer*, as Homer says; for he calls γεγαασι, γεγενησθαι, or that which is produced in itself.

Hermogenes:: Let it be so.

Socrates:: What then remains for us to investigate after this?

Hermogenes:: The hours, Socrates, and the year.

Socrates:: But ωϱαι, that is, *the hours*, must be pronounced in the Attic tongue, as that which is more ancient, if you wish to know the probable meaning of this word. For they are ὡραι, on account of their bounding the winter and summer, as likewise winds and proper occasions subservient to the fruits of the earth. And hence, because they bound, ὁριζουσαι, they are most justly called ὡραι. But ενιαυτος and ετος, *the year*, appear to be one and the same: for that which, at stated periods, educes into light the productions of the earth, and explores them in itself, is the year. And as in the foregoing part of our discourse we gave a two-fold distribution to the name of Jupiter, and asserted that he was by some called ζηνα, and by others δια; so likewise, with respect to the year, it is called by some ενιαυτος, because *it explores* IN ITSELF; but ετος, because *it explores*. But the entire reason of its denomination is because it explores things in itself; so that two names are generated, ενιαυτος and ετος, from one reason.

Hermogenes:: But now, Socrates, you have certainly proceeded to a great length.

Socrates:: I seem, indeed, to have pursued wisdom to a considerable distance.

Hermogenes:: Entirely so.

Socrates:: Perhaps you will urge me still further.

Hermogenes:: But after this species of inquiry, I would most gladly contemplate the rectitude of those beautiful names concerning virtue, such as φρονησις *prudence*, συνεσις *consciousness*, δικαιοσυνη equity, and all the rest of this kind.

Socrates:: You raise up, my friend, no despicable genus of names. But however, since I have put on the lion's skin, I ought not to fly through fear, but to investigate prudence and intelligence, consideration and science, and all the other beautiful names which you speak of.

Hermogenes:: We ought by no means to desist till this is accomplished.

Socrates:: And indeed, by the dog, I seem to myself not to prophesy badly, about what I understand at present, that those ancient men who established names, experienced that which happens to many wise men of the present times; for, by their intense investigation concerning the manner in which things subsist, they became giddy, far beyond the rest of mankind, and afterwards, things themselves appeared to them to stagger and fluctuate. They did not however consider their inward giddiness as the cause of this opinion, but the outward natural fluctuation of things; for they imagined that nothing was stable and firm, but that all things flowed and were continually hurried along, and were full of all-various agitation and generation. I speak this, as what I conceive respecting the names which we have just now mentioned.

Hermogenes:: How is this, Socrates?

Socrates:: Perhaps you have not perceived that these names were established as belonging to things borne along, flowing, and in continual generation.

Hermogenes:: I do not entirely perceive this.

Socrates:: And, in the first place, the first name which we mentioned entirely pertains to something of this kind.

Hermogenes:: Which is that?

Socrates:: *Prudence*, or φρονησις: for it is the intelligence of local motion and fluxion. It may also imply the advantage of local motion; so that it is plainly conversant with agitation. But if you will, γνωμη, or consideration, perfectly signifies the inspection and agitation of begetting: for το νωμᾴν is the same as το σϰοπειν, to *speculate*. Again, νοησις, or intelligence, if you please, is του νεο εσις, or *the desire of that which is new*: but that things are new, signifies that they perpetually subsist in becoming to be. Hence, that the soul desires things of this kind, is indicated by him who established this name νεοεσις: For it was not at first called νεοεσις but two ε̄ ε̄ ought to be substituted instead of η̄ so as to produce νεοεσις. But temperance signifies the safety of that prudence which we have just now considered: and science, indeed, implies that the soul does not disdain to follow things hurried along with local motion; and that she neither leaves them behind, nor goes before them. On which, account, by inserting ε̄ it ought to be called επιστημενης. But συνεσις appears to be, as it were, a syllogism. And when συνιεναι is said to take place, the same things happens in every respect, as when any one is said ἐπιστασθαι, *to know*: for συνιεναι asserts that the soul follows along with things in their progressions; but wisdom signifies the touching upon local motion. This, however, is more obscure and foreign from us. But it is necessary to recollect from the poets, that when they wish to express any thing which accedes on a sudden, they say εσυθη, *it rushed forth*: and the name of a certain illustrious Lacedæmonian was Σους, i.e. one who rushes forward; for thus the Lacedæmonians denominate a swift impulse. Wisdom, therefore, signifies the contact of this local motion, as if things were continually agitated and hurried along. But το ἀγαθον, *the good*, signifies that which excites admiration, in the nature of every thing: for, since all things subsist in continual progression, in some swiftness, and in others slowness, prevails. Every thing, therefore, is not swift, but there is something in every thing which is *admirable*. Hence the name ταγαθον is the same with το ᾀγαστον, *the admirable*. But, with respect to the name equity, we may easily conjecture that it is derived from the intelligence of that which is just: but the signification of the *just itself*, is difficult to determine: For it appears that the multitude agree thus far ‘to what we have said, but that what follows is a subject of doubt. For, indeed, such as think that the universe subsists in progression, consider the greatest part of it to be of such a nature that it does nothing else than yield to impulsion; that, on this account, something pervades through every thing, from which all generated natures are produced; and that this pervading nature is the swiftest and most attenuated of all things: For it would not be able to pass through every thing, unless it was the most attenuated, so that nothing can stop its progression; and the swiftest, so that it may use other things as if in an abiding condition with respect to itself. Because, therefore, it governs all other things διαϊον, i.e. by pervading through them, it is properly called διϰαιον, receiving the power of the ϰ̄ for the sake of elegant enunciation. And thus far the multitude agree with us, concerning the meaning of το διϰαιον, *the just*. But I, O Hermogenes, as being assiduous in my inquiries about this affair, have investigated all these particulars, and have discovered in the απορρητα, or sacred mysteries, that *the just* is the same with *cause*. For that through which a thing is generated, is the cause of that thing: and a certain person said, that it was on this account properly denominated το διϰαιον. But, notwithstanding this information, I do not the less cease to inquire, O best of men, what the just is, if it is the same with cause. I seem, therefore, now to inquire further than is becoming, and to pass, as it is said, beyond the trench; for they will say that I have sufficiently interrogated and heard, and will endeavor, through being desirous to satisfy me, to give different solutions of the difficulty, and will no longer harmonize in their opinions. For a certain person says that the sun is the just, because the sun alone, by his pervading and heating power, governs all things. But when, rejoicing in this information, I related it to another person, as if I had heard something beautiful and excellent, he laughed at me when I told it him, and asked me if I thought that there was no longer any thing just in men after sunset? Upon my inquiring, therefore, what the just was, according to him, he said it was fire. But this is by no means easy to understand. But another person said, it was not fire, but the heat which subsisted in fire. Another again said, that all these opinions were ridiculous, but that the just was that intellect which Anaxagoras speaks of; for he said that this was an unrestrained governor, and that it was mingled with nothing, but that it adorned all things, pervading through all things. But in these explanations, my friend, I find myself exposed to greater doubts than before I endeavored to learn what justice is But, that we may return to that for the sake of which we entered on this disputation, this name appears to be attributed to equity, for the reasons which we have assigned.

Hermogenes:: You appear to me, Socrates, to have heard these particulars somewhere, and not to have fabricated them yourself.

Socrates:: But what do you say respecting my other explanations?

Hermogenes:: That this is not entirely the case with them.

Socrates:: Attentively hear then; for perhaps I may deceive you in what remains, by speaking as if I had not heard.—What then remains for us after equity? I think we have not yet discussed fortitude: for injustice is evidently a real hindrance to the pervading power; but fortitude signifies that it derived its appellation from contention, or battle. But contention in a thing, if it flows, is nothing else than a contrary fluxion. If any one, therefore, takes away the δ from this name ανδρια *fortitude*, the name ᾁνϱια, which remains, will interpret its employment. Hence it is evident that a fluxion, contrary to every fluxion, is not fortitude, but that only which flows contrary to *the just*; for otherwise fortitude would not be laudable. In like manner το αῤῥεν, that is, the male nature, and ᾳνηϱ *man*, are derived from a similar origin, that is, from ανω ῥοη, or a *flowing upwards*. But the name woman appears to me to imply *begetting*; and the name for the female nature seems to be so called from the pap or breast. But the pap or breast, O Hermogenes, seems to derive its appellation from causing to germinate and shoot forth, like things which are irrigated.

Hermogenes:: It appears so, Socrates.

Socrates:: But the word ϑαλλειν, to flourish, appears to me to represent the increase of youth, because it takes place swiftly and suddenly: and this is imitated by the founder of the name, who composed it from ϑειν to *run*, and αλλεσθαι *to leap*. But do you not perceive that I am borne, as it were, beyond my course, since I have met with words plain and easy? But many things yet remain, which appear to be worthy of investigation.

Hermogenes:: You speak the truth.

Socrates:: And one of these is, that we should consider the meaning of the word *art*.

Hermogenes:: Entirely so.

Socrates:: Does not the word τεχνη, then, signify εχονοη, or the habit of intellect, taking away for this purpose τ, and inserting ō between x and ν between ν and η?

Hermogenes:: And this in a very farfetched manner, Socrates.

Socrates:: But do you not know, blessed man! that such names as were first established, are now overwhelmed through the studious of tragic discourse; who, for the sake of elegant enunciation, add and take away letters; and who entirely pervert them, partly through ornament, and partly through time? For in the word κατοπτρω, a mirror, does not the addition of the appear to you absurd? But such alterations as these are, I think, made by those who care nothing for truth, but are solicitous about the elegant conformation of the mouth: so that these men, having added many things to the first names, at length rendered it impossible for any one to apprehend the meaning of a name; as in the name Sphynx, which they call σφιγγξ instead of σφιγξ, and so in many others.

Hermogenes:: This is indeed the case, Socrates.

Socrates:: Indeed, if it should be allowed for every one to add to, and take away from names, just as he pleased, this would certainly be a great license; and any one might adapt every name to every thing.

Hermogenes:: You speak the truth.

Socrates:: The truth indeed. But I think that you who are a wise president, ought to preserve and guard the moderate and the probable.

Hermogenes:: I wish I could.

Socrates:: And I also, O Hermogenes, wish the same in conjunction with you. But you should not, O dæmoniacal man, demand a discussion very exact, lest you perfectly exhaust my force: for I shall ascend to the summit of what I have said, when, after art, I have considered *artifice* or *skill*. For μηχανη, or *artifice*, seems to me to signify the completion of a thing in a very high degree. It is composed therefore from μηκος, length, and ανειν, to finish a thing completely. But, as I just now said, it is proper to ascend to the summit of our discourse, and to inquire the signification of the names virtue and vice.—One of these, therefore, I have not yet discovered but the others appears to me to be manifest, For it harmonizes with all that has been said before: for, in consequence of every thing subsisting in progression, whatever passes on badly will be *depravity*; but this, when it subsists in the soul, badly acceding to her concerns, then most eminently possesses the appellation of the whole of depravity. But it appears to me, that the faulty mode of progression is manifest in timidity, which we have not yet discussed; though it is proper to consider it, after fortitude. And we likewise seem to have omitted many other names. Timidity therefore signifies, *that the bond of the soul is strong*; for the word *vehement* implies a certain strength. And hence the most vehement and, greatest bond of the soul, will be timidity: just as *want* is an *evil*; and every thing as it appears, which is an impediment to passing on and progression.—*Passing on badly*, therefore, seems, to evince a detention and hindrance of progression: and when the soul is thus affected, she then becomes full of evil. But if the name vice is applicable to such things as these, the contrary of this will be virtue; Signifying, in the first place, facility of progression; and, in the next place, that the flowing of a good soul ought to be perpetually loosened and free. And hence, that which always flows unrestrained and without impediment, may, as it appears, very properly receive this denomination, ᾳειῤῥητη. Perhaps also, some one may call it αἱρετη, because this habit is the most eligible of all. Perhaps, too, you will say that I feign; but I assert, that if the preceding name vice is properly established, the same may be said of the name virtue.

Hermogenes:: But what is the meaning of το κακον, *evil*, through which you explained many things in the word *depravity*?

Socrates:: It appears to me, by Jupiter, to imply something prodigious, and difficult to collect. I introduce therefore to this also the artifice mentioned above.

Hermogenes:: What is that?

Socrates:: To assert that this name is something Barbaric.

Hermogenes:: And, in so doing, you appear to me to speak properly. But, if yow think fit, we will omit these, and endeavor to consider the rectitude of composition in the names, *the beautiful*, and *the base*.

Socrates:: *The base*, then, seems to me to evince its signification plainly, and to correspond with the preceding explanations: for he who established names appears to me, throughout, to have reviled that which hinders and detains the flowing of things; and that he now assigned the name ᾁεισχοῤῥουν to that which always detains a flowing progression. But, at present, they call it collectively αισχρον.

Hermogenes:: But what will you say concerning the *beautiful*?

Socrates:: This is more difficult to understand, though they say that the α this word, is produced only for the sake of harmony and length.

Hermogenes:: But how?

Socrates:: It appears that this appellation is the surname of the dianoëtic energy.

Hermogenes:: How do you prove this?

Socrates:: What do you think is the cause of the denomination of every thing? Is it not that which establishes names?

Hermogenes:: Entirely so.

Socrates:: Will not this cause, then, be the dianoëtic conception, either of gods, or men, or of both?

Hermogenes:: Certainly.

Socrates:: *To call things* therefore, and *the beautiful*, are the same with dianoëtic energy.

Hermogenes:: It appears so.

Socrates:: Are not, therefore, the operations of *intellect* and the dianoëtic power laudable; but such things as are not the result of their energies blamable?

Hermogenes:: Entirely so.

Socrates:: That which belongs to medicine, therefore, produces medical works; and that which belongs to the carpenter's art, carpentry works: or what is your opinion on the subject?

Hermogenes:: The same as yours.

Socrates:: Does not therefore the *beautiful* produce things beautiful?

Hermogenes:: It is necessary that it should.

Socrates:: But this as we have said, is dianoëtic energy.

Hermogenes:: Entirely so.

Socrates:: το ϰαλον, therefore, or *the beautiful*, will be properly the surname of *prudence*, which produces such things as, in consequence of acknowledging to be beautiful, we are delighted with.

Hermogenes:: It appears to be so.

Socrates:: What then remains for us to investigate, of such like names?

Hermogenes:: Whatever belongs to *the good* and *the beautiful*; such as the names signifying *things conducive*, *useful*, *profitable*, *lucrative*, and the contraries of these.

Socrates:: You may find then what το συμφεϱον, or *the conducive* is, from our foregoing speculations; for it appears to be a certain brother of science. For it evinces nothing else than the local motion of the soul, in conjunction with things; and that things resulting from hence should be called συμφεϱοντα and συμφοϱα, i.e. *conducive*, from συμπεριφεϱεσθαι, or *being borne along in conjunction.*

Hermogenes:: It appears so.

Socrates:: But the name *lucrative* (ϰεϱδαλεον) is derived from ϰερδος, gain. And if any one inserts a ν instead of a δ in this name, it will manifest its meaning: For it will thus, after another manner, become the name for *good*; since he who assigned it this name intended to express that power which it possesses, of becoming mingled with, and pervading through all things, and thus, by placing δ instead of ν he pronounced it ϰερδος.

Hermogenes:: But what will you say concerning λυσιτελουν, or the *useful*?

Socrates:: It appears, O Hermogenes! that this name was not established according to the meaning in which it is employed by inn-keepers, *because it frees from expense*; but because it is the swiftest of being, and, in consequence of this, does not suffer things to stand still, nor *lation*, by receiving an end of being borne along, to stop, and rest from its progression: but, on the contrary, it always departs from lation, as long as any end remains to be obtained, and renders it unceasing and immortal. And, on this account, it appears to me λυσιτελουν was called *the good*; for that which *dissolves the end* of lation was called λυσιτελουν. But ωφελιμον, or *the profitable*, is a foreign name; and Homer himself often uses τῳ οφελλειν. But this is the surname of *increasing* and *making*.

Hermogenes:: But what shall we say respecting the contraries of these?

Socrates:: There is no occasion, as it appears to me, to evolve such as are the negations of these.

Hermogenes:: But what are they?

Socrates:: The *non-conducive*, *useless*, *unprofitable*, and the *non-lucrative*.

Hermogenes:: You speak the truth.

Socrates:: But may we not inquire concerning ϐλαϐεϱον and ζημιωδες, the *noxious* and *pernicious*.

Hermogenes:: Certainly.

Socrates:: And το ϐλαϐεϱον, indeed, or *the noxious*, says that it is ϐλαπτον τον ῥουν. But ϐλαπτον signifies *that which wishes to bind*; and ἁπτειν, *to bind*, is the same as δεϊν: but this it blames in every respect. He, therefore, who wishes ἁπτειν ῥουν, i.e. *to bind that which flows*, will be most properly called ϐουλαπτερουν; but it appears to me, that, for the sake of elegance, it was denominated ϐλαϐερον.

Hermogenes:: A variety of names, Socrates, presents itself for your consideration; and you just now appeared to me to have founded a prelude on your pipe, as it were, of the melody belonging to Minerva, while you pronounced this name ϐουλαπτερουν.

Socrates:: I am not, Hermogenes, the cause of this, but he who founded the name.

Hermogenes:: You speak the truth; but what will you say about ζημιωδες, the pernicious?

Socrates:: I will tell you, Hermogenes, the meaning of this word; and do you behold how truly I shall explain it, by asserting that men, through adding and taking away letters, very much vary the meaning of names, so that sometimes a very small alteration causes a word to imply the very contrary of what it did before. As, for instance, in the word το δεον, *the becoming*, for I understood, and called to mind just now, in consequence of what I am about to say to you, that this beautiful word δεον is new to us, and induces us to enunciate το δεον and ζημιωδες contrary to their meaning, and by this means to obscure their signification: but the ancient name evinces the sense of both these words.

Hermogenes:: How is this?

Socrates:: I will tell you. You know that our ancestors very frequently used the, and ι δ that this was not less the case with such women as particularly preserved the ancient tongue. But now, instead of the ι, they perversely use either ε or η and ξ instead of δ, as being more magnificent.

Hermogenes:: But how?

Socrates:: Just as, for instance, the most ancient men called day ἱμερα, and some of them ἑμεϱα; but those of the present times ημεϱα.

Hermogenes:: This is indeed the case.

Socrates:: You know, therefore, that this ancient name only manifests the conceptions of its founder; for, because light emerges from darkness, and shines upon men rejoicing in and desiring its beams, they called day ἱμερα.

Hermogenes:: It appears so.

Socrates:: But as it is now celebrated in tragically performances, you can by no means understand what ἡμερα means; though some are of opinion that day is called ἡμεϱα, because it renders things ἡμερα, placid and gentle.

Hermogenes:: So it appears to me.

Socrates:: And you likewise know that the ancients called ζυγον, *a beam*, δυογον.

Hermogenes:: Entirely so.

Socrates:: And ζυγον, indeed, manifests nothing: but that which subsists for the sake of bringing two things together, so that they may be bound, is very, justly named δυογον. But it is now called ζυγον; and this is the case with a great variety of other particulars.

Hermogenes:: It appears so.

Socrates:: Hence then, the word δεον, when it is thus pronounced, signifies the contrary to all the names which belong to *the good.* For this name being a species of the good, appears to be a bond and impediment of local motion; as being the brother of βλαϐεϱον, the noxious.

Hermogenes:: And indeed, Socrates, it appears to be very much so.

Socrates:: But this will not be the case if you use the ancient name, which it is much more probable was properly founded than the present name. But you will agree with those ancient good men, if you substitute ι for ε; for διον, and not δεον, will signify that good which is celebrated by the institutor of names. And thus the founder of names will not contradict himself, but the names δεον, ωφελιμον, λυσιτελουν, αγαθον, συμφϱον, ευπορον, or *proceeding with facility*, will all of them appear to have the same meaning: for he meant to signify and celebrate, by different names, that which adorns and pervades through every part of the universe; and to reprobate that which detains and binds. And indeed, in the name ζημιωδες, if, according to the ancient tongue, you substitute δ for ζ, it will appear to you that this name was composed from δουντι το ιον, or binding that which is in progression, and was called δημιωδες.

Hermogenes:: But what will you say concerning pleasure, pain, desire, and such like names?

Socrates:: They do not appear to me to be very difficult, Hermogenes: for *pleasure* seems to be an action tending towards emolument, and on this account to have derived its appellation; but the δ was added, that it might be called ἡδονη, instead of ἡονη. But pain seems to have derived its appellation from the dissolution of the body, which the body experiences in this passion: and the name *sorrow* was so called from impeding the motion of progression: but the name αλγηδων, i.e. *torment*, appears to me to be foreign, and to be so called from αλγεινος, *troublesome*. Οδυνη, i.e. anxiety, was denominated from the ingress of pain.

Hermogenes:: It appears so.

Socrates:: But αχθηδων, grief, clearly signifies that it is a name assimilated to the slowness of lation: for αχθος is a burthen, and ιον, any thing in progression. Joy seems to have received its appellation from the diffusion and easy progression of the flowing of the soul; but τεϱψις, delight, was derived from τεϱπνος, the pleasant. But το τεϱπνον was so called, from being assimilated to the breathing of delight through the soul; it was therefore justly called ἑϱπνον, i.e. inspiring; but in the course of time, it came to be denominated τεϱπνον. But, with respect to ευφϱοσυνη, or hilarity, there is no occasion to explain the why of its denomination; for it is obvious to every one, that it was so called from ευ and συμφεϱεσθαι, that is, from the soul's being well borne along in conjunction with things. Hence it ought, injustice, to be denominated ευφερωσυνη; but, notwithstanding this, we call it ευφϱοσυνη. But neither is it difficult to discover the meaning of επιθυμια, *desire*: For it evinces a power proceeding to ϑυμος, *anger*. But ϑυμος, *anger*, derives its appellation from ϑυσεως, and ζεσεως, *raging* and *ardor*. And again, ιμεϱος, *amatory desire*, was so called from ῥῳ, or *a flowing which vehemently attracts the soul*; for because it flows *excited*, and *desiring the possession of things*, it strongly allures the soul through the incitement of its flowing. And hence, from the whole of this power, it is called ἱμερος. But ποθος, *desire*, was so called, from nullifying that it is not conversant with present material desire, and its effusive streams, like ιμερος, but with that which is elsewhere situated, and is absent. But, ερως, love, received its appellation from implying that it flows inwardly from an external source; and that this, flowing is not the property of him by whom it is possessed, but that it is adventitious through the eyes. And hence love was called by our ancestors εσρος, from εσρειν, to *flow inwardly*. But at present it is called εϱως, through the insertion of ω instead of ο. But what shall we consider after this?

Hermogenes:: What opinion, and such-like names, appear to you to signify.

Socrates:: Opinion, δοξα, was denominated from the *pursuing* which the soul employs in her progressive investigations concerning the nature of things, or else from *the darting of an arrow*; and this last appears to be the most likely derivation. Hence οιησις, *opinion*, harmonizes with δοξα; for it signifies the οισις, or ingress of the soul, in considering the οιον, or quality of a thing. Just as βουλη, counsel or deliberation, is so called from βολη, *hurling forth*: and ϐουλεσθαι, to be willing, signifies το εφιεσθαι, to desire, and βουλευεσθαι, *to consult*. For all these following δοξα, opinion, appear to be certain resemblances of ϐολη, *hurling forth*; just as the contrary of this αϐουλια, or *a want of counsel*, appears to be a misfortune, as neither hurling forth, nor obtaining that which it wishes for, about which it deliberates, and which is the object of its desire.

Hermogenes:: You seem to me, Socrates, to have introduced these particulars with great density of conception; let us therefore now, if it is pleasing to divinity, end the discussion. Yet I should wish you to explain the meaning of *necessity*, which is consequent to what we have already unfolded, and *that which is voluntary*.

Socrates:: To ἑϰουσιον, therefore, or *the voluntary*, signifies that which yields and does not resist, but as I may say ειϰον τῳ ιοντι, *yields to that which is in progression*; and thus evinces that this name subsists according to ϐουλησις *the will*. But το αναγϰαιον and αντιτυπον, i.e. *the necessary* and *the resisting*, since they are contrary to the will, must subsist about guilt and ignorance. But they are assimilated to a progression through a valley; because, on account of their being passed through with difficulty, and their rough and dense nature, like a place thick planted with trees, they impede progression. And hence, perhaps, necessity was denominated from an assimilation to a progression through a valley. But as long as our strength remains we ought not to desert it; do not therefore desist, but still interrogate me.

Hermogenes:: I ask you then about things the greatest and most beautiful, viz. *truth*, *falsehood*, and *being*; and why *name*, which is the subject of our present disputation, was so called?

Socrates:: What therefore do you call μαιεσθαι?

Hermogenes:: I call it ζητειν, *to inquire*.

Socrates:: It appears then that this word ονομα, a name, was composed from that discourse which asserts that ον, *being*, is that about which name inquires. But this will be more evident to you, in that which we call ονομαστον, or *capable of being named*; for in this it clearly appears that name is an inquiry about being. With respect to αληθεια, *truth*, this name seems to have been mingled, as well as many others; for this name appears to have received its composition from the divine lation of being, and therefore implies that it is ϑεια αλη, *a divine wandering*. But ψευδος, *falsehood*, signifies the contrary to lation. For here again the institutor of names blames that which detains and compels anything to rest. This name, however, is assimilated to those who are asleep; but the addition of the ψ conceals its meaning. But ον, *being*, and ουσια, *essence*, harmonize with truth, by receiving the addition of an ι; for then they will signify ιον, or that which is in progression.

And again, το ουκ ον, or non-being, is by some denominated ουκ ιον; that is, not proceeding.

Hermogenes:: You appear to me, Socrates, to have discussed these particulars in a very strenuous manner. But if any one should ask you, what rectitude of nomination there is in the words ιον, *proceeding*, ῥεον, *flowing*, and δουν, *binding*, would you be able to answer him or not?

Socrates:: I should perfectly so. And something just now occurred to me, by the mentioning of which I may appear to say something to the purpose.

Hermogenes:: What is it?

Socrates:: That, if we are ignorant of any thing, we should say, it is of Barbaric origin: for, perhaps, this is really the case with some names; and others are, perhaps, inscrutable on account of their antiquity. For, through names being every where wrested from their proper construction, it will be by no means wonderful, if the ancient tongue, when compared with the present, is in no respect different from a Barbaric language.

Hermogenes:: And, indeed, you say nothing foreign from the purpose.

Socrates:: I say that, indeed, which is probable; but yet the contest does not appear to me to admit of an excuse. Let us, however, endeavor to consider this affair, and make our inquiry, as follows: If any one should always investigate those words through which a name derives its subsistence, and again those words through which words are enunciated, and should do this without ceasing, would not he who answers such a one at length fail in his replies?

Hermogenes:: It appear so to me.

Socrates:: When, therefore, will he who fails to answer, justly fail? Will it not be when he arrives at those names which are, as it were, the elements both of other discourses and names? For these, if they have an elementary subsistence, can no longer be justly said to be composed from other names. Just as we said above, that το αγαθον was composed from αγαστος, admirable, and ϑοος, swift. But ϑοος, we may perhaps say, is composed from other words, and these last again from others: but if we ever apprehend that which is no longer composed from other names, we may justly say, that we have at length arrived at an element; and that we ought no longer to refer this to other names.

Hermogenes:: You seem to me to speak properly.

Socrates:: Are not the names, then, which are the subject of your present inquiry, elements? And is it not necessary that the rectitude of their formation should be considered in a manner different from that of others?

Hermogenes:: It is probable.

Socrates:: It is probable certainly, Hermogenes. All the former names, therefore, must: be reduced to these: and if this be the case, as it appears to me it is, consider again along with me, lest I should act like one delirious, while I am explaining what the rectitude of the first names ought to be.

Hermogenes:: Only do but speak; and I will endeavor to the utmost of my ability to speculate in conjunction with you.

Socrates:: I think then you will agree with me in this, that there is one certain rectitude of every name, as well of that which is first as of that which is last; and that none of these differ from one another, so far as they are names.

Hermogenes:: Entirely so.

Socrates:: But the rectitude of those names which we have just now discussed. consists in evincing the quality of every thing.

Hermogenes:: How should it be otherwise?

Socrates:: This property, then, ought no less to belong to prior than posterior names, if they have the proper requisites of names.

Hermogenes:: Entirely so.

Socrates:: But posterior names, as it appears, produce this through such as are prior.

Hermogenes:: It appears so.

Socrates:: Be it so then. But after what manner can first names, which have no others preceding them, be able, as much as possible, to unfold to us the nature of things, if they have the properties of names? But answer me this question: If we had neither voice nor tongue, and yet wished to manifest things to one another, should we not, like those who are at present mute, endeavor to signify our meaning by the hands, head, and other parts of the body?

Hermogenes:: How could it be otherwise, Socrates?

Socrates:: I think, therefore, that if we wished to signify that which is upwards and light, we should raise our hands towards the heavens, imitating the nature of the thing itself; but that if we wished to indicate things downwards and heavy, we should point with our hands to the earth. And again, if we were desirous of signifying a running horse, or any other animal, you know, that we should fashion the gestures and figures of our bodies, as near as possible, to a similitude of these things.

Hermogenes:: It appears to me, that it would necessarily be as you say.

Socrates:: In this manner then, I think, the manifestations of the body would take place; the body imitating, as it seems, that which it wishes to render apparent.

Hermogenes:: Certainly.

Socrates:: But since we wish to manifest a thing by our voice, tongue, and mouth, will not a manifestation of every thing then take place through these, when an imitation of any thing subsists through these?

Hermogenes:: It appears to me, that it must be necessarily so.

Socrates:: A name then, as it seems, is an imitation of voice, by which every one who imitates any thing, imitates and nominates through voice.

Hermogenes:: It appears so to me.

Socrates:: But, by Jupiter, my friend, I do not think that I have yet spoken in a becoming manner.

Hermogenes:: Why?

Socrates:: Because we must be compelled to confess, that those who imitate sheep and cocks, and other animals. give names to the things which they imitate.

Hermogenes:: You speak the truth.

Socrates:: But do you think this is becoming?

Hermogenes:: I do not. But what imitation, Socrates, will a name be?

Socrates:: In the first place, as it appears to me, it will not be such an intimation as that which takes place through music, although this imitation should be effected by the voice: nor, in the next place, though we should imitate the same things as music imitates, yet we should not appear to me to denominate things. But I reason thus:

Is there not a certain voice, figure, and color, in many things?

Hermogenes:: Entirely so.

Socrates:: It appears, therefore, that though any one should imitate these, yet the denominating art would not be conversant with these imitations: for these are partly musical, and partly the effects of painting. Is not this the case?

Hermogenes:: Certainly.

Socrates:: But what will you say to this? Do you not think that there is an essence belonging to every thing, as well as color, and such things as we just now mentioned? And, in the first place, is there not an essence belonging to color, and voice, and to every thing else, which is considered as deserving the appellation of being?

Hermogenes:: It appears so to me.

Socrates:: But what then? If any one is able to imitate the essence of every thing, by letters and syllables, must he not evince what every thing is?

Hermogenes:: Entirely so.

Socrates:: And how would you denominate him who is able to do this? For, with respect to the former characters, one you called musical, and the other conversant with painting. But how will you call this character?

Hermogenes:: This person, Socrates, appears to me to be that institutor of names which we formerly sought after.

Socrates:: If this then is true, as it appears to be, let us consider about those names which are the subjects of your inquiry, i.e. ῥοη, *flowing*, ιεναι, *to go*, σχεσις, *habitude*, whether, in the letters and syllables from which they are composed, they really imitate essence, or not.

Hermogenes:: By all means.

Socrates:: Come then, let us see whether these alone belong to the first names or many others besides these.

Hermogenes:: I think that this is the case with many others besides these.

Socrates:: And your opinion is probable. But what will the mode of division be, from whence the imitator will begin to imitate? Since then the imitation of essence subsists through letters and syllables, will it not be most proper to distribute in the first place the elements? just as those who are conversant with rhythms, in the first place, distribute the powers of the elements, and afterwards of the syllables; and thus at length begin to speculate the rhythms themselves, but never till this is accomplished.

Hermogenes:: Certainly.

Socrates:: In like manner, therefore, ought not we first of all to divide the vowels, and afterwards the rest according to species, both mutes and semi-vowels? For this is the language of those who are skilled in these matters. And again, ought we not after this to divide such as are capable of being sounded indeed, yet are not semi-vowels, and consider the different species of vowels, with reference to one another? And after we have properly distributed all these, it is again requisite to impose names, and to consider, if there are certain things into which both these may be referred as elements; and from which both these may be known; and whether species are contained in them after the same manner as in the elements. But all these particulars being contemplated in a becoming manner, it is proper to know how to introduce each according to similitude; whether one ought to be introduced to one, or many mingled together: just as painters, when they wish to produce a resemblance, sometimes only introduce a purple color, and sometimes any other paint: and sometimes again they mingle many colors together, as when they make preparations for the purpose of producing the likeness of a man, or any thing else of this kind; and this in such a manner, I think, as to give to every image the colors which it requires. In the same manner we should accommodate the elements of words to things, and one to one, wherever it appears to be necessary, and should fabricate symbols, which they call syllables. And again, combining these syllables together, from which nouns and verbs are composed, we should again from these nouns and verbs compose something beautiful and entire; that what the animal described by the painter's art was in the above instance, discourse may be in this; whether constructed by the onomastic, or rhetorical, or any other art. Or rather this ought not to be our employment, since we have already surpassed the bounds of our discourse; for, if this is the proper mode of composition, it was adopted by the ancients. But if we mean to speculate artificially, it is proper that, distinguishing all these, we should consider whether or not first and last names are established in a proper manner; for to connect them without adopting such a method would be erroneous, my dear Hermogenes, and improper.

Hermogenes:: Perhaps so, indeed, by Jupiter, Socrates.

Socrates:: What then? Do you believe that you can divide them in this manner? for I cannot.

Hermogenes:: There is much greater reason, then, that I should not be able to do this.

Socrates:: Let us give up the attempt then: or are you willing that we should undertake it to the best of our ability, though we are able to know but very little concerning such particulars? But as we said before respecting the gods, that, knowing nothing of the truth belonging to their names, we might conjecture the dogmas of men concerning them; so now, with regard to the present subject, we may proceed in its investigation, declaring that, if these particulars have been properly distributed, either by us or by any other, they ought, doubtless, to have been so divided. Now, therefore, as it is said, it is requisite that we should treat concerning them in the best manner we are able. Or, what is your opinion on the subject?

Hermogenes:: Perfectly agreeable to what you say.

Socrates:: It is ridiculous, I think, Hermogenes, that things should become manifest through imitation produced by letters and syllables: and yet it is necessary; for we have not any thing better than this, by means of which we may judge concerning the truth of the first names; unless, perhaps, as the composers of tragedies, when they are involved in any difficulty, fly to their machinery, introducing the gods, in order to free them from their embarrassment; so we shall be liberated from our perplexity, by asserting that the gods established the first names, and that on this account they are properly instituted. Will not such an assertion be our strongest defense? or that which declares we received them from certain Barbarians? For the Barbarians are more ancient than us. Or shall we say that, through antiquity, it is impossible to perceive their meaning, as is the case with Barbaric names? But all these solutions will only be so many plunderings, and very elegant evasions of those who are not willing to render a proper reason concerning the right imposition of the first names; though, indeed, he who is ignorant of the proper establishment of first names cannot possibly know such as are posterior; for the evidence of the latter must necessarily be derived from the former; and with these he is perfectly unacquainted. But it is evident, that he who professes a skill in posterior names ought to be able to explain such as are first, in the most eminent and pure manner, or, if this is not the case, to be well convinced that he trifles in his explanation of posterior names. Or does it appear otherwise to you?

Hermogenes:: No otherwise, Socrates.

Socrates:: My conceptions then, about the first names, appear to me very insolent and ridiculous. If you are willing, therefore, I will communicate them to you; and do you, in your turn, if you have any thing better to offer, impart it to me.

Hermogenes:: I will do so; but speak confidently.

Socrates:: In the first place, then, ρ appears to me to be as it were the organ of all motion, though we have not yet explained why motion is called ϰινησις. But it is evident that it implies ιεσις, *going*; for was not formerly used, but ε. But its origin is from ϰιειν, *to go*, which is a foreign name, and signifies ιεναι. If, therefore, any one could find out its ancient name, when transferred to our tongue, it might be very properly called ιεσις. But now from the foreign, name ϰιειν, and the change of the η, together with the interposition of the ν, it is called ϰινησις. It ought, however, to be called ϰιεινησις, or εισις. But στασις, or *abiding*, is the negation of ιεναι, *to go*; and for the sake of ornament is called στασις. The element, therefore, ρ, as I said, appeared to the institutor of names to be a beautiful instrument of motion, for the purpose of expressing a similitude to lation; and hence he every where employed it for this purpose. And in the first place, the words ῥειν and ῥοη, that is, to, flow, and flowing, imitate lation, or local motion, by this letter; and this resemblance is found, in the next place, in the words τρομος and τραχυς, i.e. trembling, and rough; also, in words of this kind, ϰρουειν, *to strike*; ϑραυειν, *to wound*; ερυϰειν, *to draw*; θρυπτειν, *to break*, ϰερματιζεν, *to* *cut into small pieces*; and ῥεμϐειν, *to roll round.* For all these very much represent motion through, the ρ̄. Not to mention that the tongue, in pronouncing this letter, is detained for the least space of time possible, and is agitated in the most eminent degree; and on this account it appears to me that this letter was employed in these words. But the institutor of names used the ι for the purpose of indicating all attenuated natures, and which eminently penetrate through all things. And hence this is imitated by the words ιεναι and ιεσθαι, *to go*, and *to proceed*, through the ι: just as through φ, ψ, σ, and ζ, because these letters are more inflated, the author of names indicated all such things as ψυχρον, *the cold*; ζεον, *the fervid*; σειοθαι, *to be shaken*; and universally σεισμον, concussion. And when he wished to imitate any thing very much inflated, he every where, for the most part, appears to have introduced such-like letters. But he seems to have thought that the power of compressing δ and τ, and the tongue’s action in adhering, were useful for the purpose of imitating the words δεσμος, *a bond*, and στασις, *abiding*. And because the tongue remarkably slides in pronouncing λ, the institutor of names perceiving this, and employing this letter in an assimilative way, he established the names λεια, *smooth*; ολισθαινειν, *to flip*; λιπαρον, *unctuous*; κολλωδες, *liquid*; and all other such-like words. But in consequence of the tongue sliding through λ, he employed the power of the γ, and thus imitated γλισχρον, *the slippery*; γλυκυ, *the sweet*; and γλοιωδες, *the viscous*. Perceiving likewise that the sound of the ν was inward, he denominated το ενδον, *the inward*, and τα εντος, *things inward*, that he might assimilate works to letters. But he assigned α to μεγαλον, *the great*, and η, to μηκος, *length*, because these letters are great. But in the construction of στρογγυλον, *round*, which requires the letter ο, he mingled ο abundantly. And in the same manner the legislator appears to have accommodated other letters and syllables to every thing which exists, fabricating a signature and name; and from these, in an assimilative manner, to have composed the other species of names. This, Hermogenes, appears to me to be the rectitude of names, unless Cratylus here asserts any thing else.

Hermogenes:: And, indeed, Socrates, Cratylus often finds me sufficient employment, as I said in the beginning, while he declares that there is a rectitude of names, but does not clearly inform me what it is; so that I cannot tell whether he is willingly or unwillingly thus obscure in his assertions. Now, therefore, Cratylus, speak before Socrates, and declare whether you are pleased with what Socrates has said respecting names, or whether you have any thing to say on the subject more excellent; and if you have, disclose it, that either you may learn from Socrates, or that you may teach both of us.

Cratylus:: But what, Hermogenes! Does it appear to you to be an easy matter to perceive and teach any thing so suddenly, and much more that which seems to be the greatest, among things which are the greatest?

Hermogenes:: To me, by Jupiter, it does not; but that assertion of Hesiod appears to me very beautiful, “that it is worth while to add a little to a little.” If, therefore, you are able to accomplish any thing, though but trifling, do not be weary, but extend your beneficence both to Socrates and me.

Socrates:: And, indeed, Cratylus, I do not confidently vindicate any thing which I have above asserted; but I have considered with Hermogenes what appeared to me to be the truth: so that on this account speak boldly, if you have any thing better to offer, as I am ready to receive it. Nor shall I be surprised if you produce something more beautiful on this subject; for you appear to me to have employed yourself in speculations of this kind, and to have been instructed in them by others. If, therefore, you shall assert any thing more excellent, you may set me down as one of your disciples about the rectitude of names.

Cratylus:: But, indeed, Socrates, as you say, I have made this the subject of my meditations, and perhaps I shall bring you over to be one of my disciples: and yet I am afraid that the very contrary of all this will take place: for, in a certain respect, I ought to say to you what Achilles said to Ajax upon the occasion of his embassy; but he thus speaks: “O Jove-born Telamonian Ajax, prince of the people, you have spoken all things agreeably to my opinion.” In like manner you, O Socrates, appear to have prophesied in conformity to my conceptions, whether you were inspired by Euthyphro, or whether some muse, who was latently inherent in you before, has now agitated you by her inspiring influence.

Socrates:: O worthy Cratylus, I myself have some time since wondered at my wisdom, and could not believe in its reality; and hence I think it is proper to examine what I have said: for to be deceived by oneself is the most dangerous of all things; for since the deceiver is not for the least moment of time absent, but is always present, how can it be otherwise than a dreadful circumstance? But it is necessary, as it seems, to turn ourselves frequently to the consideration of what we have before said, and to endeavor, according to the poet, “to look at the same time both before and behind.” And let us at present take a view of what we said. We said then, that rectitude of name was that which pointed out the quality of a thing. Shall we say that this definition is sufficient for the purpose?

Cratylus:: To me, Socrates, it appears to be very much so.

Socrates:: Names, then, are employed in discourse for the sake of teaching?

Cratylus:: Entirely so.

Socrates:: Shall we not therefore say, that this is an art, and that it has artificers?

Cratylus:: Perfectly so.

Socrates:: But who are they?

Cratylus:: Those legislators, or authors of names, which you spoke of at first.

Socrates:: Shall we then say, that this art subsists in men, like other arts, or not? But what I mean is this: Are not some painters more excellent than others?

Cratylus:: Entirely so.

Socrates:: Will not such as are more excellent produce more beautiful works, i.e. the representations of animals; but such as are inferior, the contrary, And will not this also be the case with builders, that some will fabricate more beautiful, and others more deformed houses?

Cratylus:: It will.

Socrates:: And with respect to legislators, will not some produce works more beautiful than others?

Cratylus:: It does not appear to me that they will.

Socrates:: It does not therefore appear to you, that some laws are better, and others worse?

Cratylus:: It certainly does not.

Socrates:: One name, therefore, does not seem to you to be better assigned than another?

Cratylus:: It does not.

Socrates:: All names, therefore, are properly established?

Cratylus:: Such indeed as are names.

Socrates:: But what then shall we say to this name of Hermogenes, which we spoke of before? Shall we say that this name was not rightly assigned him, unless something ἑρμου γενεσεως, of the generation of Mercury, belongs to him? Or that it was, indeed, assigned him, but improperly?

Cratylus:: It does not seem to me, Socrates, to have been assigned him in reality, but only in appearance; and I think that it is the name of some other person, who is endued with a nature correspondent to the name.

Socrates:: Will not he then be deceived, who says that he is Hermogenes? for he will no longer be the person whom he calls Hermogenes, if he is not Hermogenes.

Cratylus:: What is this which you say?

Socrates:: Is the efficacy of your assertion founded in the opinion, that it is impossible to speak any thing which is false? for this has been said, my dear Cratylus, by many formerly, and is the opinion of many at present.

Cratylus:: How is it possible, Socrates, that, when any one speaks about any thing, he should speak about that which is not? Or is not to speak of non-being, to speak of things which are false?

Socrates:: This discourse, my friend, is more elegant than my condition and age require. But at the same time inform me, whether it appears to you impossible to discourse about that which is false, but possible to pronounce it?

Cratylus:: It appears to me impossible even to pronounce it.

Socrates:: And are you of opinion likewise, that it is impossible to denominate it? As if, for instance, any one, on meeting you, should in an hospitable manner take you by the hand, and say, I am glad to see you, O Athenian guest, Hermogenes, son of Smicrion, would he not some way or other, by means of voice, express these words? And would it not be this Hermogenes, and not you, whom he thus denominated, or else no one?

Cratylus:: It appears to me, Socrates, that he would enunciate these words in vain.

Socrates:: Let it be so. But whether would he who pronounced these words, pronounce that which is true or false? Or would some of these words be true, and some false? for this last supposition will be sufficient.

Cratylus:: I should say, that he sounded these words, moving himself in vain, just as if any one should move brass by striking on it.

Socrates:: Come then, see, Cratylus, whether we agree in any respect. Do you not say that a name is one thing, and that of which it is the name another?

Cratylus:: I do.

Socrates:: And do you not acknowledge, that a name is a certain imitation of a thing?

Cratylus:: I acknowledge this the most of all things.

Socrates:: And will you not therefore confess that pictures are in a different manner imitations of certain things?

Cratylus:: Certainly.

Socrates:: But come, for perhaps I do not understand sufficiently what you say, through you perhaps speak properly. Can we distribute and introduce both these imitations, viz. the pictures and the names, to the things of which they are imitations? Or is this impossible?

Cratylus:: It is possible.

Socrates:: But consider this in the first place. Can any one attribute the image of a man to a man, and that of a woman to a woman; and so in other things?

Cratylus:: Entirely so.

Socrates:: And is it possible, on the contrary, to attribute the image of a man to a woman, and that of a woman to a man?

Cratylus:: This also is possible.

Socrates:: Are both these distributions therefore proper; or only one of them?

Cratylus:: Only one of them.

Socrates:: And this I think must be that which attributes to each, the peculiar and the similar?

Cratylus:: It appears so to me.

Socrates:: Lest therefore you and I, who are friends, should fall into verbal contention, take notice of what I say; for I, my friend, call such a distribution in both imitations (i.e. in the pictures and names) right; and in names not only right, but true: but I call the other attribution and introduction of the dissimilar, not right; and when it takes place in names, false.

Cratylus:: But consider, Socrates, whether it may not indeed happen in paintings, that an improper distribution may take place, but not in names; but that these must always be necessarily right.

Socrates:: What do you say? What does this differ from that? May not some one, on meeting a man, say to him, This is your picture, and show him perhaps by chance his proper image, or by chance the image of a woman? But I mean by *showing*, placing it before his eyes.

Cratylus:: Entirely so.

Socrates:: But what, may he not again, meeting with the same person, say to him, This is your name? for a name is an imitation, as well as a painting. But my meaning is this: May he not therefore say, This is your name? And after this, may he not present to his sense of hearing, perhaps, an imitation of what he is, and which asserts that he is a man; and perhaps an imitation of a female of the human species, and which asserts that he is a woman? Does it not appear to you, that this may be some time or other possible?

Cratylus:: I am willing to allow you, Socrates, that this may be so.

Socrates:: You do well, my friend, if the thing subsists in this manner; for neither is it proper at present to contest much about it. If, therefore, there is a distribution of this kind in names, we must confess that one of these wishes to call a thing according to truth, but the other falsely. And if this is the case, and it is possible to distribute names erroneously, and not to attribute things adapted to each, it will also be possible to err in words. And if words and names may be thus established, this must likewise necessarily be the case with sentences; for sentences are, I think, the composition of these. Or what is your opinion, Cratylus?

Cratylus:: The same as yours; for you appear to me to speak beautifully.

Socrates:: If, therefore, we assimilate first names to letters, the same things will take place as in pictures, in which it is possible to attribute all convenient colors and figures; and again, not to attribute all, but to leave some and add others, and this according to the more and the less. Will not this be the case?

Cratylus:: It will.

Socrates:: He then who attributes every thing proper, will produce beautiful letters and images; but he who adds or takes away, will indeed produce letters and images, but such as are defective?

Cratylus:: Certainly.

Socrates:: But will not he who imitates the essence of things through syllables and letters, according to the same reasoning, produce a beautiful image, when he attributes every thing in a convenient manner? And this beautiful image is a name. But if any one fails in the least circumstance, or sometimes makes an addition, does it not follow that he will, indeed, produce an image, but not a beautiful one? And so that some of the names will be beautifully fabricated, and others badly?

Cratylus:: Perhaps so.

Socrates:: Perhaps therefore the one will be a good, and the other a bad artificer of names?

Cratylus:: Certainly.

Socrates:: But was not the name which we assigned to this character that of legislator?

Cratylus:: Certainly.

Socrates:: Perhaps therefore, by Jupiter, as in other arts, one legislator will be good and another bad, if we only agree in what has been before asserted?

Cratylus:: It will be so. But do you perceive, Socrates, that when we attribute the letters and α, and β, each of the elements to names, according to the grammatical art, if we take away, add, or change any thing, a name indeed is described for us, yet not properly; or rather, it is by no means described, but becomes immediately something else, if it suffers any thing of this kind?

Socrates:: Let us thus consider this affair, Cratylus, lest we should not contemplate it in a becoming manner.

Cratylus:: But how?

Socrates:: Perhaps such things as ought necessarily either to be composed or not from a certain number, are subject to the property which you speak of; as ten things, or if you will any other number, if you take away or add any thing, immediately become some other number. But perhaps there is not the same rectitude of any certain quality and of every image, but a contrary one: for neither is it necessary to attribute to an image every thing belonging to that which it represents, in order to its becoming an image. But consider if I say any thing to the purpose. Would then these be two things, I mean Cratylus and the image of Cratylus, if any one of the gods should not only assimilate your color and figure, after the manner of painters, but should produce all such inward parts as you contain, and attribute the same softness and heat, the same motion, soul, and wisdom, as you possess; and, in one word, should fashion every thing else similar to the parts which you contain; whether in consequence of such a composition would one of these be Cratylus, and the other the image of Cratylus, or would there be two Cratyluses?

Cratylus:: It appears to me, Socrates, that there would be two.

Socrates:: Do you see then, my friend, that it is necessary to seek after another rectitude of an image than that which we just now spoke of; and that it does not necessarily follow, that if any thing is taken away or added, it will no longer be an image? Or do you not perceive how much images want, in order to possess the same things as their paradigms?

Cratylus:: I do.

Socrates:: Those particulars therefore of which names are names, would become ridiculous through names, if they were in every respect assimilated to them: for all things would become double; and the difference between a thing and its name could no longer be ascertained.

Cratylus:: You speak the truth.

Socrates:: You may therefore, generous man, confidently own that some names are properly composed, and others not so; nor will you be obliged to attribute every letter to a name, that it may be perfectly such as that of which it is the name: but you will sometimes suffer a letter which is not convenient to be introduced; and if a letter, you will likewise permit an unadapted name in a discourse; and if a name, you will suffer a sentence unadapted to things to be introduced in a discourse; and will at the same time acknowledge, that a thing may nevertheless be denominated and spoken of, as long as the name or sentence contains the effigies of the thing which is the subject of discourse; just as in the names of the elements, which, if you remember, I and Hermogenes just now discussed.

Cratylus:: I do remember.

Socrates:: It is well, therefore; for when this effigies is inherent, though every thing properly adapted may not be present, yet the representation may be said to subsist as it ought. But let us now, blessed man! cease our disputation, that we may not be exposed to danger, like those who travel late by night in Ægina; and that we may not, in a similar manner, appear to have arrived at the truth of things later than is becoming. Or at least seek after some other rectitude of name, and do not confess that a manifestation produced by letters and syllables is the name of a thing: for, if you admit both these assertions, you cannot be consistent with yourself.

Cratylus:: But you appear to me, Socrates, to speak in a very becoming manner, and, I lay down the position which you mention.

Socrates:: Since therefore we thus far agree, let us consider what remains. We say then, that in order to the beautiful position of a name, it ought to possess convenient letters?

Cratylus:: Certainly.

Socrates:: But it is proper that it should contain such as are similar to things?

Cratylus:: Entirely so.

Socrates:: Such then as are beautifully composed will be composed in this manner. But if any name is not rightly composed, it will perhaps, for the most part, consist of convenient and similar letters, since it is an image; but it will possess something unadapted, through which it is neither beautiful, nor beautifully established. Shall we speak in this manner, or otherwise?

Cratylus:: There is no such occasion, I think, Socrates, of contesting; though it does not please me to say, that a name has a subsistence, and yet is not beautifully composed.

Socrates:: Is this also unpleasing to you, that a name is the manifestation of a thing?

Cratylus:: It is not.

Socrates:: But do you think it is not beautifully said, that some names are composed from such as are first, and that others are themselves first names?

Cratylus:: I think, it is well said.

Socrates:: But if first names ought to be manifestations of certain things, can you mention any better method of accomplishing this, than their being so formed as to become, in the most eminent degree, such as the things which they render manifest? Or does the method which Hermogenes and many others speak of, please you better, that names are signatures, that they manifest by signatures, and that they are prescient of things? And, besides this, that rectitude of name subsists by compact; and that it is of no consequence whether any one composes them as they are at present composed, or the contrary; calling, for instance, that which is considered at present as small ο, great, and ω, ο? Which of these modes is most agreeable to you?

Cratylus:: It is wholly and universally, Socrates, better to evince by similitude that which any one wishes to evince, than by any other method.

Socrates:: You speak well. If, therefore, a name is similar to a thing, is it not necessary that the elements from which first names are composed should be naturally similar to things themselves? But my meaning is this: Could any one produce a picture, which we have just now said is the similitude of some particular thing, unless the colors from which the picture is composed were naturally similar to the things which the art of painting imitates? Is it not otherwise impossible?

Cratylus:: Impossible.

Socrates:: In a similar manner, therefore, names can never become similar to any thing, unless the things from which names are composed possess, in the first place, some similitude to the particulars of which names are the imitations. But the component parts of names are elements.

Cratylus:: Certainly.

Socrates:: You therefore now participate of the discourse which Hermogenes a little before received. Tell me, then, whether we appear to you to have determined in a becoming manner, or not, that the letter ρ is similar to local motion, to motion in general, and to hardness?

Cratylus:: In a becoming manner, in my opinion.

Socrates:: But the letter λ to the smooth and soft, and other things which we mentioned?

Cratylus:: Certainly.

Socrates:: Do you know therefore that the same word, i.e. hardness, is called by us σκληροτης, but by the Eretriensians σκληροτηϱ?

Cratylus:: Entirely so.

Socrates:: Whether, therefore, do both the ρ and the σ appear similar to the same thing; and does the termination of the ρ manifest the same thing to them, as the termination of the σ to us: or is nothing manifested by letters different from ours?

Cratylus:: The word evinces its meaning by both letters.

Socrates:: Is this accomplished, so far as ρ and σ are similars, or so far as they are not?

Cratylus:: So far as they are similars.

Socrates:: Are they, therefore, in every respect, similars?

Cratylus:: Perhaps they are so, for the purpose of manifesting lation.

Socrates:: But why does not the insertion of λ signify the contrary of hardness?

Cratylus:: Perhaps, Socrates, it is not properly inserted, just as in the names which you lately discussed with Hermogenes, taking away and adding letters where it was requisite. And you then appeared to me to act properly. And now, perhaps, ρ ought to be inserted instead of λ.

Socrates:: You speak well. Do we, therefore, according to our present manner of speaking, mutually understand nothing when any one pronounces the word σκληρον? And do you not understand what I now say?

Cratylus:: I do, my friend, through custom.

Socrates:: But when you say through custom, what else do you think you imply by this word, except compact? Or do you call custom any thing else than this, that when I pronounce this word, and understand by it hardness, you also know that this is what I understand. Is not this what you mean?

Cratylus:: Certainly.

Socrates:: If, then, you know this, when I pronounce it, something becomes manifest to you through me.

Cratylus:: Certainly.

Socrates:: But what I understand, I enunciate from that which is dissimilar? since λ is dissimilar to the σϰληροτης, which you pronounce. But if this is the case, what else can be the consequence, but that you accustom yourself to this, and that you derive rectitude of name through compact; since both similar and dissimilar letters manifest the same thing to you, through custom and compact? But if custom is very far from being compact, it will no longer be proper to say that similitude is a manifestation, but this ought to be asserted of custom: for this, as it appears, manifests both from the similar and the dissimilar. Since then, Cratylus, we allow the truth of these things (for I consider your silence as a signal of assent), it is necessary that compact and custom should contribute to the manifestation of what we understand and enunciate. For if, O best of men! you are willing to pass on to the consideration of number, from whence do you think you can be able to attribute similar names to each number, if you do not permit your consent and compact to possess some authority about the rectitude of names? The opinion, indeed, pleases me, which asserts that names should be as much as possible similar to things. But yet I am afraid, lest perhaps, as Hermogenes said, the attraction of this similitude should be very precarious, and we should be obliged, in this troublesome affair, to make use of compact, in order to obtain rectitude of names: since, perhaps, we shall then speak as much as possible in the most beautiful manner, when our speech is composed either entirely, or for the most part, from similars, that is, from things convenient; but in the most base manner, when the contrary takes place. But still further inform me, what power names possess with respect to us, and what beautiful effect we must assert they are able to produce.

Cratylus:: Names, Socrates, appear to me to teach, and that it is simply true, that he who knows names, knows also things.

Socrates:: Perhaps, Cratylus, your meaning is this: that when anyone knows the quality of a name (and it is of the same quality as a thing), he then also knows a thing, since it is similar to a name. But there is one art of all things which are similar to one another; and in consequence of this you appear to me to assert, that he who knows names, knows also things.

Cratylus:: You speak most truly.

Socrates:: But come, let us see what this mode of teaching things is, which you now speak of, and whether there is any other method, this at the same time being the best; or whether there is no other than this. Which do you think is the case?

Cratylus:: That there is no other method than this, but that this is the only one, and the best.

Socrates:: But whether do you think that the invention of things is the same as the invention of names, and the same as the discovery of those things, of which names are at present significant? Or do you think that it is necessary to seek and find according to another method, and that this should be learned?

Cratylus:: I think that we ought, above all things, to seek after and discover these things according to this method.

Socrates:: But let us consider, Cratylus, if any one, while seeking after things, follows after names, speculating the quality of each, do you perceive that there is no small danger of his being deceived?

Cratylus:: How?

Socrates:: Because, evidently, he who first established names fashioned them such as he thought things themselves were. Is it not so?

Cratylus:: Certainly.

Socrates:: If, therefore, he did not think rightly, but fashioned them agreeable to his conceptions, what must we think of those who were persuaded to follow him? Can it be any thing else, than that they must be deceived?

Cratylus:: But this is not the case, Socrates: but it is necessary that he who composed names must have known how to compose them; for otherwise, as I have before observed, names would never have existed. But you may derive the greatest conviction, that the inventor of names did not wander from the truth, by considering that, if he had conceived erroneously, all things would not have thus corresponded with his conceptions. Or, did you not perceive this, when you were saying that all names were composed according to the same conceptions, and tended to the same thing?

Socrates:: But this apology, my worthy Cratylus, is of no weight: for if the founder of names was deceived in the first instance, but compelled other things to this his first conception, and obliged them to harmonize with it; just as in diagrams, in which sometimes a very trifling and unapparent error taking place, all the remaining parts, which are very numerous, consent notwithstanding with each other: if this be the case, every one ought in the beginning of a thing to employ much discussion and diligent consideration, in order that he may know whether the principle is properly established, or not; for this being sufficiently examined, what remains will appear consequent to the principle. And yet I should wonder if names harmonized with each other. For let us again consider what we discussed before; in the course of which we asserted, that, in consequence of every thing *proceeding*, *hurrying along*, and *flowing*, names signified to us *essence*. Does this appear to you to be the case, or not?

Cratylus:: Very much so, and that they properly signify this.

Socrates:: Let us consider, then, repeating some of these. In the first place, then, this name επιστημη, *science*, is dubious, and seems rather to signify that it stops (ἱστησιν) our soul at certain things, than that it is borne along with them; and hence it is more proper to call its beginning as now, than by the ejection of ε, πιστημη, and to insert an ι instead of ε. In the next place, το βεϐαιον, *the firm*, is so called, because it is the imitation of a certain *basis* and *abiding*, but not of lation. Again, ἱστορια, history, signifies that it stops the flowing of things; and πιστον, *the credible*, implies that which produces perfect stability. Likewise μνημη, or *memory*, entirely indicates *a quiet abiding in the soul*, and not local motion. And, if you will, ἁμαρτια, *guilt*, and συμφορα, *calamity*, when these names are attentively considered, appear to be the same with συνεσις, *intelligence*, and επιστημη, *science*, and all the other names belonging to things of an excellent nature. But still further, αμαθια, and ακολασια, that is, *ignorance* and *intemperance*, will appear to be similar to these: for *ignorance* will signify the progression of one proceeding in conjunction with divinity; but intemperance will appear to be a perfect pursuit of things. And thus, those names which we consider as belonging to the basest of things, will appear to be most similar to the names of the most beautiful things. And I think that any one may discover many others of this kind, if he applies himself to the investigation; from which he may be led to think, that the institutor of names did not indicate things proceeding and borne along, but such as stably abide.

Cratylus:: And yet you see, Socrates, that he signified many things according to the conception of agitation and flowing.

Socrates:: What then shall we do, Cratylus? Shall we number names like suffrages? And does their rectitude consist in the same thing being signified by the most names?

Cratylus:: This is by no means proper.

Socrates:: Certainly not, my friend. But, omitting these particulars, let us consider whether you will agree with us in this, or not. Have we not already acknowledged, that those who instituted names in the several cities, both of Greeks and Barbarians, were legislators, and that the art, which is capable of accomplishing this, is legislative?

Cratylus:: Entirely so.

Socrates:: Tell me now, then, whether those who founded the first names knew the things to which they assigned names, or were ignorant of them?

Cratylus:: It appears to me, Socrates, that they were acquainted with them.

Socrates:: For, friend Cratylus, they could not accomplish this, while ignorant of things.

Cratylus:: It does not appear to me that they could.

Socrates:: Let us then return again from whence we have digressed: for you lately said, if you recollect, that he who established names must have previously known the things to which he assigned names. Are you, therefore, of this opinion at present, or not?

Cratylus:: I am.

Socrates:: Will you say, that he who established first names, established them in consequence of possessing knowledge?

Cratylus:: Yes.

Socrates:: From what names, then, did he either learn or find out things, since first names were not yet established? But have we not said, that it is impossible to learn and find out things any other way, than by learning or finding out ourselves the quality of names?

Cratylus:: You appear to me, Socrates, to say something to the purpose.

Socrates:: After what manner then, shall we say that they possessing knowledge established names? Shall we say, that founders of names existed prior to the establishment of names, and that they then possessed a knowledge of names, since it is impossible to learn things otherwise than by names?

Cratylus:: I think, Socrates, that the opinion about these particulars is most true, which asserts that a power greater than the human assigned the first names to things; in consequence of which they must of necessity be rightly established.

Socrates:: Do you think that he who established names, whether he was a certain dæmon, or a god, would establish things contrary to himself? Or do we appear to you, to have just now said nothing to the purpose?

Cratylus:: But the other sort of these were not names.

Socrates:: Which sort do you mean, best of men! those which lead to permanency, or those which lead to lation? For, as we just now said, this cannot be determined by their multitude.

Cratylus:: Your observation is indeed just, Socrates.

Socrates:: Since names then contest with each other, and, as well these as those, assert that they are similar to the truth, how shall we be able to determine in this affair? Or where shall we turn ourselves? For we cannot have recourse to other names different from these; for there are no others. But it is evident that certain other things, besides names, must be sought after, which may show us, without names, which of these are true; pointing out for this purpose the truth of things.

Cratylus:: It appears so to me.

Socrates:: It is possible, therefore, Cratylus, as it seems, to learn things without names, if what we have just now asserted is true.

Cratylus:: It appears so.

Socrates:: Through what else, then, do you expect to learn things? Can it be through any thing else than that which is proper and most just, and through their communion with each other, if they are in any respect mutually allied, and especially through themselves? For that which is different, and foreign from these, will signify something else, and not these.

Cratylus:: You appear to me to speak the truth.

Socrates:: But tell me, by Jupiter, have we not often confessed that names, which are properly established, are similar to the things of which they are the names, and are indeed the images of things?

Cratylus:: Certainly.

Socrates:: If then it is possible, in the most eminent degree, to learn things through names, and likewise through themselves, which will be the most excellent and the clearest discipline? Will it be possible to obtain this knowledge from an image, if it should be beautifully assimilated, and to perceive the truth, of which this is the image? Or rather, shall we be able from truth to obtain truth itself, and its image, if the image is but properly fabricated?

Cratylus:: It appears to me, that this must necessarily be obtained from truth.

Socrates:: After what manner, therefore, it is necessary to learn, or to find out things, is perhaps a degree of knowledge beyond what you and I are able to obtain. It will be sufficient, therefore, to acknowledge this, that things are not to be learned from names, but are much rather to be learned and discovered from themselves.

Cratylus:: It appears so, Socrates.

Socrates:: But still further, let us consider, lest this multitude of names tending to the same thing should deceive us, if, in reality, those by whom they were established considered all things as proceeding and flowing; for they appear to me to have held this opinion. But should this be the case, their opinion is however erroneous: for these men having fallen, as it were, into a certain vortex, are themselves confounded, and would willingly, by dragging us along, hurl us into the same whirlpool. For consider, O wonderful Cratylus! that which I often dream about, whether or not we should say that there is any such thing as the beautiful itself, and the good, and so of every thing else.

Cratylus:: It appears to me, Socrates, that there is.

Socrates:: Let us therefore consider this affair, not as if a certain countenance, or any thing of this kind, is beautiful; for all these appear to flow: but we ask, whether the beautiful itself does not always remain such as it is?

Cratylus:: It is necessary that it should.

Socrates:: Can it therefore be properly denominated, if it is always secretly flying away? And can it, in the first place, be said that it is, and, in the next place, that it is of such a particular nature? Or is it not necessary, in this case, that, while we are speaking about it, it should immediately become something else, secretly withdraw itself, nor be any longer such as it was?

Cratylus:: It is necessary.

Socrates:: How, then, can that be any thing, which never subsists in a similar manner? For If, at any time, it should subsist in a similar manner, in that time in which it is thus similarly effected, it is evident that it would suffer no mutation: but, if it always subsists in a similar manner, and is the same, how can it suffer mutation, or be moved, since it never departs from its idea?

Cratylus:: By no means.

Socrates:: But neither can it be known by any one; for, as soon as that which is endued with knowledge accedes to it, it becomes something different and various, so that it cannot be known what quality it possesses, or how it subsists: for no knowledge can know that which it knows, when the object of its knowledge has no manner of subsistence.

Cratylus:: It is as you say.

Socrates:: But neither, Cratylus, can there be any such thing as knowledge, if all things glide away, and nothing abides. For if knowledge itself does not fall from a subsistence, as knowledge, knowledge will perpetually abide, and will be always knowledge: but if the form itself of knowledge glides away, it will at the same time glide into something different from the form of knowledge, and will no longer be knowledge; but if it always glides away, it will always be something different from knowledge: and from hence it follows that neither knowledge, nor the object of knowledge, will have any subsistence. But if that which knows always is, then that which is known will always have a subsistence, together with the beautiful, the good, and every thing else which we are now speaking of; and none of these, as it appears to me, will be similar either to that which flows, or is borne along. But whether things of this kind subsist in this manner, or whether as the followers of Heraclitus and many others assert, it is by no means easy to perceive: nor is it very much the province of a man endued with intellect, to give himself up, and his own soul, to the study of names, believing in their reality, and consisting in their author, as one endued with knowledge: and thus, in consequence of possessing no sound knowledge, either concerning the founder of names, or things themselves, considering all things as flowing like earthen vessels, and viewing them similar to men diseased with a rheum, as if every thing subsisted according to flowing and distillation. Perhaps, therefore, Cratylus, this may be the case, and perhaps not. Hence it is proper to consider this affair in a very strenuous and diligent manner, since it is by no means easy to apprehend the truth: for as yet you are but a young man, and in the vigor of your age; and if you should discover any thing in the course of your inquiries, you ought to communicate it to me.

Cratylus:: I shall act in this manner. And I very well know, Socrates, that I am not at present without consideration; but, in consequence of speculating this affair, the truth seems to me to be much more on your side, than on that of Heraclitus.

Socrates:: Afterwards therefore, my friend, when you come hither again, instruct me: but now, agreeably to your determination, proceed to the field; and Hermogenes, here, will attend you.

Cratylus:: Be it so, Socrates: and do you also endeavor to think upon these things.

THE END OF THE CRATYLUS.

## Eryxias

Wednesday, April 1, 2020

Many years ago, during a conversation with some girl who had some aspirations, I mentioned to her that as far as imagination goes, one cannot imagine anything which did not involve the bodies ability to perceive. We can only imagine greater and less in terms of these. We can slice and dice our perceptions, but never imagine anything beyond them. For some time, she did not believe me, but after searching into herself, she came to a conclusion which seem to sadden her, that it is true.

Our body brings us every bit of data our body has to work with. Along this line, Plato crafted this dialog as was his style using the greatest contrast in regard to the perceptible and the intelligible in relation to human want.

In terms of binary recursion, which is all a mind can do, then one must come to understand this distinction in terms of the self and what it has to do with human behavior.

This inability to comprehend no more than greater and less in terms of the bodies needs was one of the things which helped me discern a hole in the mind of most people; what is greater and less in terms of the mind and human psychology? I eventually found the dialogs of Plato in my searches, and I was led by a question I posed to my apparent teacher in my dreams to the Bible. In both of these works I can see a mind which functions far above the normal intellect, so far, in fact, that most people are wholly unable to see it.

The fact that one can find so few translations of this work only testifies to people’s inability to comprehend what Plato was doing in his dialogs, teaching grammar as dialectic, thought in accordance with binary distinction as it relates to the whole of human behavior.

Intelligence allows one to quantify, to make things from, the relative streams of information gathered by our senses. We parse information using grammar systems. This is called indexing, memory mapping, memory addressing. All of this is done in order to recursively employ memory to our advantage.

# **Eryxias.**

Translated by George Burges, M. A.

or

on wealth.

PERSONS OF THE DIALOGUE.

Socrates, Eryxias, Critias, Erasistratus.

---

Socrates:: We happened to be taking a walk, myself and Eryxias, of the ward of Steiria, in the portico of Zeus, who presides over Freed-men, and there came to us Critias the son of Phæax, and the nephew of Erasistratus. Now Erasistratus happened at that time to be recently arrived from Sicily and those places; and on approaching near he said—

Erasistratus:: "Hail, Socrates."

Socrates:: And hail too thou. What then, can you tell us of any news from Sicily?

Erasistratus:: And very good too; but are you willing for us to sit down first? for I am tired from having walked yesterday from Megara.

Socrates:: Perfectly so, if it seems good to you.

Erasistratus:: What then of the events there do you wish to hear the first? Is it of the people there, themselves, what they are doing, or how they are affected towards this state of ours? For they appear to me to be in a case similar to wasps; for if any one excites the latter in any slight manner to anger, they become difficult to battle against, until one falls upon them and destroys them nest and all. So, I think, are the people of Syracuse. For unless, after entertaining angry feelings, one shall go thither with a very large fleet, it is not possible for them to come under our power; but by all these little doings they will be enraged the more, so as to become the most difficult of all to manage; and they have just now sent ambassadors, intending, as it seems to me, to deceive in some way the state.

Socrates:: During our conversation the ambassadors from Syracuse happened to pass by; when, pointing to one of them, Erasistratus observed—

Erasistratus:: That person, Socrates, is the most wealthy of the Siceliotes and Italiotes; and how should he not be, who has land without stint; so that it is easy for him, if one wished it, to cultivate a great deal of it; and it is of such a kind, that there is none other so good, at least amongst the Greeks; and he has still many things leading to wealth, chattels, and slaves, and horses, and gold and silver.

Socrates:: On seeing him excited, as if about to dilate upon the man's substance, I asked him—What kind of person, Erasistratus, does this man seem to be in Sicily?

Erasistratus:: This man both seems to be and is the most knavish of all the Siceliotes and Italiotes, by how much he is the wealthiest; so that, should you be willing to ask any Siceliote whom he thought to be the greatest rogue, not one would mention any other person than him.

Socrates:: Conceiving then that he was holding a conversation not upon trifling matters, but what seemed to be the greatest, namely, virtue and wealth, I asked him which would he say is the wealthier person, he, who happened to have two talents of silver, or he, who had a field worth two talents?

Erasistratus:: I think, the person who has the field.

Socrates:: By the same rule then, he, who happens to have garments, or bed-furniture, or other goods of greater value than are those, which the stranger possesses, would be the wealthier. To this he assented. Now, should any one give you the choice, which would you wish?

Erasistratus:: I would wish that which is the most valuable.

Socrates:: Would you not say so, as conceiving yourself to be more wealthy?

Erasistratus:: Just so.

Socrates:: For the present then he appears to be the wealthiest, who possesses things the most valuable.

Erasistratus:: Yes.

Socrates:: Would not then, persons in health be more wealthy than those who are ill? at least if health is a possession more valuable than the property of a person who is ill. For surely there is no one, who would not set a higher value on health, although he possessed only a little money, than on illness, although he possessed the property of the great king, through his conceiving, it is plain, that health is of greater value; for he would never prefer it, unless he considered it of greater value than property.

Erasistratus:: He would not.

Socrates:: If then any thing else seems to be of greater value than health, the person, who possesses that thing, would be the wealthiest.

Erasistratus:: Yes.

Socrates:: If then a person were to come to us and ask—Can you, Socrates, and Eryxias, and Erasistratus, tell me, what possession is the most valuable to man? Is it not that, by possessing which a person would deliberate the best on this point, how he could best transact his own affairs and those of his friends? What should we say is this?

Erasistratus:: To myself it appears, Socrates, that happiness is the thing of the greatest value to man.

Socrates:: And not wrongly so. But shall we consider those the most happy, who are the best to do?

Erasistratus:: To me those appear so.

Socrates:: Would not those then be the best to do, who err the least, in the case of themselves and the rest of mankind, and regulate affairs the most successfully?

Erasistratus:: By all means.

Socrates:: They then, who know what is evil and what is good, and what is to be done and what is not, would regulate affairs the most successfully, and err the least.

To this too he consented.

Now then, the same persons appear to be the wisest, and the best to do, and the happiest, and the wealthiest; if indeed wisdom is a possession of the greatest value.

Eryxias *taking up the* discourse, said:—

Eryxias:: Yes. But, of what advantage would food and drink, and if there is any thing else of this kind, be to a person, if he were wiser than Nestor, and yet did not happen to have the necessaries of life? How would his wisdom be a benefit? Or how could he be the wealthiest, when nothing prevents him from being poor, while he possesses no resources for the necessaries of life?

Socrates:: And he thought indeed he had said something extremely well.

But would the person, who possesses wisdom, suffer in this way, even if he were in want of these things? For if a person possessed the residence of Polytion, and the residence were full of gold and silver, would he be in want of nothing?

Eryxias:: Nay, there is nothing to prevent that person from immediately disposing of his property, and obtaining in return for it whatever he happens to want for his living, or money even; in exchange for which he will be able to procure them, and to have on the instant all things in plenty.

Socrates:: Provided, persons existing happen to be in want of his residence, more than of the wisdom of that person; since, if they were such as to value more the wisdom of the man, and what results from it, he would have much more to dispose of, if he happened to be in want of any thing, and wished to dispose both of it and the works resulting from it. Surely of the residence the use happens to be much and necessary; and great is the difference to a person in the case of things relating to life, as regards his living in a dwelling of this kind, or in a small and mean tenement; but of wisdom the use costs little, and slight is the difference for a person to be wise or untaught in questions of the greatest moment. And oh! that men should despise the one, and not be buyers of it! but that of cypress for their residence, and Pentelican marble, many should be in want, and willing to purchase! Now would not a person, if he were a clever pilot, or a skilful physician, and able to practise well and creditably his art, or any other of such kind of arts, be of greater value than any one whatever of those of the greatest possessions according to substance? and would not he, who is able to deliberate well both for himself and another, how he might do the best, be able to dispose of his skill, if he wished to do so?

On this Eryxias, taking up the discourse, and looking with his eyes under, as if he had been injuriously treated, observed—

Eryxias:: And would you, Socrates, if one must speak the truth of you, assert that you are wealthier than Callias, the son of Hipponicus? And yet you would acknowledge that you are not less taught than he is on matters of the greatest moment, but wiser rather; and still you are not on this account the wealthier.

Socrates:: For perhaps you imagine, Eryxias, that these arguments, which we are now discussing, are a sport, since the facts are not really so; but that they are like pebbles in the pebble-game, which if a person cleverly brings forward, he will be able to cause the opposite players to be beaten, so as not to have what they can bring forward against those movements. Perhaps then you imagine, that matters are thus without any reference to the rich; and that there are certain arguments in no respects either true or false, by detailing which, a person may get the better of his opponents, how that the wisest are likewise the wealthiest, and by saying these of such a kind of falsehood of persons saying true. And perhaps there is nothing wonderful in this; just as if two persons should be speaking about letters, one asserting that sigma σ begins the word Socrates, but the other alpha α, the argument of the party, who says that alpha α begins, should be superior to his, who says that sigma σ does.

And, looking round to the parties present, Eryxias observed, smiling at the same time, and blushing, as if he had not been present during what had been said before;

Eryxias:: I did not imagine, Socrates, that there was any need of arguments of that kind, by which a person would be able to persuade not one of those, who are present, nor be benefited by them. For who is there with any intellect, who would be persuaded that the richest are the wisest? but would rather be informed with greater delight, if it is necessary to talk about being wealthy, from whence it is honourable to be wealthy, and from whence disgraceful, and what it is to be wealthy, whether a good or an evil.

Socrates:: Be it so. Henceforth then we will be on our guard; and you do right in admonishing me. But why do not you yourself, since you have introduced the subject, endeavor to state whether it seems to you to be a good or an evil to be wealthy? especially since the previous arguments do not appear to have been spoken with reference to this point.

Eryxias:: To myself then for the present it seems that to be wealthy is a good.

Socrates:: But while he was still desirous to state something, Critias suddenly interrupted him by saying—

Critias:: Tell me, Eryxias, do you consider it a good to be wealthy?

Eryxias:: Yes, I do, by Zeus. For I should be mad if I did not; and I think there is not a single person, who would not say so too.

Critias:: And yet, I think too that there is not a single person, whom I could not cause to say with myself that to some men it is an evil to be wealthy. If then it were a good, it would not have appeared to some to be an evil.

Socrates:: Hereupon I said to them that—If ye happened to be at variance about this point, which of you two is speaking with the greater truth about horsemanship, how a person would ride the best, and had I myself happened to be skilled in horsemanship, I would have endeavored to cause you to cease from your differences in opinion; for I should have been ashamed had I not, if present, prevented, as far as I could, your being at variance; or if you had been at variance upon any other matter whatever, and were about to separate not at all, unless you agreed upon this, rather as enemies instead of being friends. But now, since you happen to be at variance upon an affair of this kind, of which there must needs be the use through the whole of life, and a great difference, whether we are to attend to it, as being beneficial or not; and this too as being a part not of trifling questions, but of those that are thought to be the greatest by the Greeks, since fathers recommend this as the first point to their children, as soon as they arrive at the age for reflecting upon what they ought; and they seem to consider from whence they shall become wealthy; so that should you possess anything you are worth something, but if not, nothing. If then this object is made so violently a serious pursuit, and you, who agree on other matters, differ upon this one of such great moment, and still in addition you are at variance on the question of wealth, not whether it is of a black colour or white, nor whether of a light weight or heavy, but whether it is an evil or a good, so as even to be arrayed to the extreme of enmity, should you be at variance about things evil and good, and this too, although you are friends as much as possible, and relations, I will not, as far as rests with myself, neglect you, while at variance with each other; but, if I were able myself, I would tell you how the case stands, and cause you to cease from your difference in opinion. But now, since I happen to be not able, and each of you thinks himself able to cause the other to agree with him, I am prepared to take a part in the discussion, as far as I can, in order that it may be agreed upon by you how the matter stands. Do you then, Critias, said I, endeavor to cause us to agree with you, as you have undertaken to do.

Critias:: I would, as I have begun, gladly ask Eryxias here, whether there seem to him to be men unjust and just.

Eryxias:: By Zeus, and very much so.

Critias:: Well then, to act unjustly seems it to you to be an evil or a good?

Eryxias:: To me at least an evil.

Critias:: Would a man, who commits adultery with his neighbours' wives by means of money, seem to you to act unjustly? and this too when the state and the laws forbid it.

Eryxias:: To me at least he would seem to act unjustly.

Critias:: Consequently, if the unjust man happens to be wealthy, and both able and willing to expend money, he would go astray; but if it were not his fortune to be rich, he would not have the means of expending, nor would he be able to accomplish what he wished, so that he would not even go astray. Hence it would be a greater benefit to the party to be not wealthy, since he would the less accomplish what he wished. Now he wished to do what was wrong. And again, would you say that to be ill is an evil or a good?

Eryxias:: I would say an evil.

Critias:: Well then, do there seem to you to be some men, who are without self-control?

Eryxias:: Yes, to me at least.

Critias:: If then it were better for a person of this kind for the sake of his health to abstain from food and drink, and the rest of things that are thought to be pleasant, while he is unable to do so through his want of self-control, it would be better for that person, that there should not be from whence he could procure those things for himself, rather than have a great superfluity in the necessaries of life; for thus there would not be the power for him to go astray, not even if he vehemently wished it.

Socrates:: So well and beautifully was Critias thought to have spoken, that had not Eryxias felt a respect for those, who were present, nothing would have prevented him from getting up and striking Critias; of so great a thing did he deem himself to have been deprived; since it was evident to him, that he had previously formed not a correct opinion on the subject of wealth. Perceiving then that Eryxias was in this state, and careful that abuse and opposition should not proceed too far, I remarked, that Prodicus, the wise man of Ceos, had, when detailing this very argument, seemed to those, who were present, to be such a trifler as to be unable to persuade a single person present that he was speaking what was true; and thereupon a lad very young and a clever talker, who was sitting by, laughed at and jeered him, and put him up, desirous to get at the reasons for what he was saying; and in truth he became in much higher repute amongst the auditors than Prodicus himself.

Erasistratus:: Might you have it in your power to tell us his reasons?

Socrates:: Completely so, if indeed I remember it. For it was, I think, something to this effect.

The lad asked him, in what way he conceived wealth to be an evil, and in what a good? when he taking up the discourse, observed—Just as you do likewise, that to persons beautiful in body and mind it is a good, and to such as know how to use it, to these likewise it is a good; but to the depraved and those who do not know, it is an evil. And all the rest of things, said he, are in this state. For of what kind are some of those, who make use of things, such to them it is necessary for the things to be; and prettily, said he, appears to have been put into verse the sentiment of Archilochus—

> As the actions are men meet with, so the thoughts are,
> which they frame.

Now then, said the lad, if any one should make me wise in that very wisdom, by which the good become wise men, it is necessary for him to make at the same time the rest of things good for me, without his troubling himself at all about those very things, because he has made me wise instead of being untaught; as if a person should make me now a grammarian, it is necessary for him to make the rest of things grammatical for me; and if a musician, musical; just as when he makes me good, it is necessary to have made things good at the same time for me. To the latter assertion Prodicus however did not assent; although he acknowledged the former. Does it seem to you, said he, that as it is the work of a man to make a dwelling, so it is to make things good? or is it necessary for things to continue to the end to be such, as they may have been at the commencement, whether evil or good? And Prodicus seemed to me to suspect to what point the argument was about to proceed in so very clever a manner; and, in order that he might not appear before all present to be confuted by the lad—for he thought it would be a thing of indifference for him to suffer this when alone—he said it was the work of a man. Does virtue, said the lad, seem to you a thing to be taught, or is it innate? To be taught, he replied, at least by me. Would not then, said he, a person appear to be silly, if he thought that, by praying to the gods, he should become a grammarian or a musician, or obtain any other science, which it is necessary for a person to obtain by either learning from another or discovering himself? To this too he assented. Do not you then, Prodicus, said the lad, when you pray to the gods to do well, and for good things to happen, pray at that time for nothing else but to become beautiful in body and mind; since to men beautiful in body and mind things likewise happen to be good, but bad to the depraved. If then virtue happens to be able to be taught, you would appear to be praying for nothing else than to be taught, what you do not know.

I said then to Prodicus, that he seemed to me to have suffered a thing of not a trifling kind, if he had happened to fail in this; at least if he conceived that, what we pray for from the gods, would take place even at the same time. For should you go in haste on each occasion to a city, and in your prayers ask of the gods to give good things, you nevertheless would not know whether they are able to give you what you happen to ask for, as you would do, if you were to go to the doors of a grammar-master, and beg of him to impart the knowledge of grammar, and to trouble himself about nothing else but the science, which you can receive on the instant, and by which you will be able to do the works of the grammar-master. On my saying this, Prodicus directed his course to the lad, as about to defend himself, and to make a display, as you have done just now, and taking it to heart should he appear to have prayed to the gods in vain. And thereupon the ruler of the Gymnasium advancing, bade him take himself away from the Gymnasium, as he was conversing upon subjects not suited to young persons; and if not suited, evidently wrong.

This account have I detailed for the sake of this, that you may see how situated are the persons engaged in philosophy. For if Prodicus had been present, and spoken thus, he would have appeared to those present to be so mad, as to be ejected even from the Gymnasium. But you seem to have now talked so extremely well, as not only to have persuaded those present, but to cause likewise the speaker on the opposite side to agree with you; and it is evident that, as in courts of law, if two persons happened to give the same evidence, one seeming to be correct in body and mind, but the other depraved in both, the judges would, on account of the testimony of the depraved character, be not at all convinced; but, as it might happen, do even the reverse; but if the person, who seemed to be correct in body and mind, had so stated alone, the statement would have seemed to be vehemently true. Perhaps then the parties are situated in some such manner with respect to yourself and Prodicus; and one they consider a sophist and a vain talker, but yourself a statesman and a man of much worth; and then they imagine that they ought not to look to the speech itself, but to the speakers, of what kind they may be.

Erasistratus:: But nevertheless, although you are speaking in ridicule, Socrates, it seems to myself at least, that Critias appears to say something well.

Socrates:: Nay, by Zeus, nothing whatever. But why, since you have conversed upon these matters well and beautifully, do you not finish what remains of your discourse? For there seems to me something still remaining of the inquiry, especially since this appears to be acknowledged, that wealth is to some a good, but to others an evil. There remains then to inquire what is wealth in the abstract. For if we do not know this first, we shall not be able to agree as to what portion is an evil, and what a good; and I am prepared, as far as I can, to make the inquiry with you. Let then the person, who asserts that to be wealthy is a good, say on this point how the case happens to be.

Erasistratus:: Nay, I do not, Socrates, define wealth in any way more cleverly than the rest of mankind. For this is to be wealthy, to possess much money. And I conceive that Critias here does not think that to be wealthy is any thing else.

Socrates:: Even thus, there will be something still left to consider, of what kind is the money, in order that you may not shortly afterwards appear to be at variance on this point again. For instance, you know that the Carthaginians make use of money of this kind. In a small skin there is bound up as much as is the weight of a stater at most. But what is so bound up within, no one knows, except those who make it up. They then deem it a legal tender, when a seal has been put upon it; and he, who possesses the greatest number of these skins, is thought to possess the most money, and to be the wealthiest. But if any one amongst us were in possession of such things to the greatest amount, he would be not a whit more wealthy, than if he possessed many pebbles from the mountain; but at Lacedæmon they deem a weight of iron a legal tender, and this when it is the useless part of iron; and he, who possesses a great weight of such kind of iron, is thought to be wealthy; but elsewhere its possession is worth nothing; while in Ethiopia they make use of engraved stones, of which a man of Laconia would not have the power to make any use. But amongst the nomad Scythians, if a person possessed the residence of Polytion, he would be thought to be not at all more wealthy, than if a person amongst us were the owner of the mountain Lycabettus. It is plain then that each of these things cannot be property; since some of those, who have possessed them, appear to have been not at all more wealthy on this account. But each of these, said I, exist in reality as property to some persons, and they who possess them are wealthy; but to others they are not property, nor are persons on this account more wealthy; just as the same things are neither honourable nor disgraceful to all, but different to different persons. If then we are willing to inquire why amongst the Scythians houses are not property, but are so with us; or why amongst the Carthaginians skins are so, but not with us; or why amongst the Lacedæmonians iron is property, but not with us, should we not discover the reason best in this way? For example, should any one at Athens possess a thousand talents-weight of the stones in the Market-place, of which we make no use, is it that he would be deemed to be wealthier on that account?

Erasistratus:: It appears not at least to me.

Socrates:: But if he possessed a thousand talents-weight of the stone called lychnite. we should say that he was very wealthy.

Erasistratus:: Very indeed.

Socrates:: Is it, on this account, because the latter is useful to us, but the former useless?

Erasistratus:: Yes.

Socrates:: Especially since amongst the Scythians houses are on this account not property to them, because they have no use for a house; nor would a Scythian put any value upon the most beautiful house for himself rather than a sheep-skin cloak; because the latter is useful to him, but the former useless. Again, on the other hand, we do not consider the money of Carthage as property. For there is not an article of those we are in want of, which we can carry off by it, as we can by silver; so that it would be useless to us.

Erasistratus:: It is likely.

Socrates:: Whatever things then happen to be useful to us, these are property; but whatever are useless, are not property.

Eryxias:: How is this, Socrates?

Socrates:: said Eryxias, taking up the discourse.

Eryxias:: Is there not what we make use of for conversing with each other, and for doing a hurt, and many other things? And would these be a property? And yet they appear to be useful.

Not even thus then has it appeared to us what is a property. For that it is necessary that a property, if it is about to exist at all, should be useful, is acknowledged nearly by all. But what is the kind of property, since it is not of every kind. Come then say, if we are to pursue the inquiry again in this way, would what we are in search of be discovered still better, by asking what is that, for which we make use of property, and for what has the possession of property been discovered, as drugs have for causing diseases to go away? for perhaps it would thus become more clear. Since then it seems a thing of necessity, that, whatever happens to be property, must be useful likewise, and that of things useful there is one kind, which we call property, it will still be left to inquire, for what need are the things, which are meet to be called property, useful? For all things are equally useful, of which we make use for any operation, just as all that have life are living things; of which living things one kind we call man. If then a person were to ask us—By what thing being removed out of the way shall we have no need of the physician's art, nor of its instruments? we should be able to say—If diseases were removed from our bodies, and did not exist at all, or if existing, were removed on the instant. Of sciences then the medical is, as it seems, that, which is useful for this purpose, to cause the removal of diseases. And if a person should again ask us—By the removal of what thing are we in no need of property, should we be able to tell? But if not, let us consider the matter thus. Come say, if a man could live without food and drink, and were neither hungry nor thirsty, is there a reason why he should want those very things, or silver, or any thing else, in order that he might obtain them?

Eryxias:: To myself at least it does not seem he would.

Socrates:: In the same manner then are the rest of things. For if we did not want the things, of which we are at present in want, for the care of the body, namely, both of warmth and of cold sometimes, and of the other things, of which the body being deficient is in want, that, which is called property, would be not used by us; at least if no one wanted at all any one of these things, for the sake of which we should wish to possess property, in order that we may possess what is sufficient for our desires, and the wants of the body, of which we may on each occasion stand in need. If then the possession of property is useful for this purpose, namely, the attention to the wants of the body, should this be taken away from the midst of us, we should not be in want of property, and property would perhaps not exist at all.

Eryxias:: It appears so.

Socrates:: It appears then, as is likely, that what are useful for this doing of things, are property. That such was property he acknowledged indeed; the reasoning nevertheless troubled him exceedingly.

But what are these kind of things? Shall we say that the same thing can be useful for the same operation at one time, but useless at another?

Eryxias:: I would not say so; but if we have any want of the same thing for the same operation, it seems to me it would be useful; but if not, not.

Socrates:: Hence, if we could work up a brazen image without fire, we should not be in want of fire for such an operation; and if we did not want it, it would not be useful to us. And the same reasoning applies to the rest of things.

Eryxias:: It appears so.

Socrates:: Of such things then as it is possible for a thing to exist without them, not one of them would appear to be useful, at least for that thing.

Eryxias:: It would not.

Socrates:: If then we should appear at any time able, without silver and gold, and the rest of such kind of things, which we do not use for the body, as we do food, and drink, and clothing, and bedding, and dwellings, to cause the wants of the body to cease, so that there is no longer a need of them, neither silver nor gold nor the rest of things would appear to be useful for it, if it were able to exist without them.

Eryxias:: They would not.

Socrates:: Nor would those things appear to be property, unless they were useful. But those things would be property, by which we are able to obtain what are useful.

Eryxias:: I could never, Socrates, be able to be persuaded of this, that gold and silver and the rest of things of that kind are not property. For of this I am strongly persuaded, that, as things without use are not property, so of things the most useful property is useful for it. Nevertheless I am not persuaded of this, that these things happen to be not useful to us; since by them we obtain the necessaries of life.

Socrates:: Come then say, how shall we speak of these things? Are there not certain persons, who teach music or letters, or any other science, who in return for such instruction obtain for themselves the necessaries of life by bargaining for a remuneration for such things?

Eryxias:: There are.

Socrates:: Would not then these persons by such science obtain for themselves the necessaries of life, by making an exchange for it, as we now do for gold and silver?

Eryxias:: I confess it.

Socrates:: If then they obtain by this act, what they make use of for living, this act would be useful for their living; for we have said that silver is useful on this account, that we are enabled by it to procure what is necessary for the body.

Eryxias:: It is so.

Socrates:: If then the sciences of things useful for it are these, sciences would appear to be property for the very same reason that gold and silver are.

Eryxias:: It is evident.

Socrates:: It is evident too that those, who possess these sciences, are rather wealthy. But we admitted a little before with so much difficulty the reasoning, whether they were the wealthiest. But from what has been just now admitted, this would of necessity happen, that the rather intelligent are rather wealthy. For should a person ask us—Do we think that a horse is a useful thing for every man? Would you not say that, to those who know how to use a horse, it would be a useful thing, but to those who do not know, not?

Eryxias:: I should say so.

Socrates:: Then, by the same rule a drug is not useful for every man, but only to him, who happens to know how to take it?

Eryxias:: I say so.

Socrates:: Are not then all the rest of things in a similar condition?

Eryxias:: It is likely.

Socrates:: Gold then and silver and the rest of things, which are thought to be property, would be useful to him alone, who happens to know how to use them.

Eryxias:: Just so.

Socrates:: Did it not seem before to be the part of persons superior both in body and mind to know where and how to make use of each of these things?

Eryxias:: I admit it.

Socrates:: To those men alone then, who are superior in body and mind, these things would be useful; since they alone know how to use them. If then they are useful to these alone, to these alone they would appear to be property. Is it so?

Eryxias:: It is likely.

Socrates:: Him too, who is unskilled in horsemanship, yet possesses horses that happen to be useless to him, should a person render skilful, would he not at the same time make him more wealthy, since he makes things to be useful to him which previously happened to be useless? For by imparting skill to the person he at the same time makes him wealthy likewise.

Eryxias:: It seems so.

Socrates:: And yet I think I could swear on behalf of Critias, that he is persuaded by none of these arguments.

Critias:: And truly so, by Zeus. For I should be mad if I were persuaded. But why have you not completed that part of the argument, how that gold and silver and the rest of things of that kind are not, although they seem to be, property? since I am very much delighted to hear those arguments, which you happen to be just now going through.

Socrates:: You appear to me, Critias, to be thus delighted at hearing me, as are such of the rhapsodists, as chaunt the verses of Homer; since not one of these arguments are thought by you to be true. Come then and say nevertheless, how shall we speak upon such matters? Would you not say that there are some things ever useful to house-builders for making a dwelling?

Critias:: So it seems at least to me.

Socrates:: Whether then shall we say that those things would be useful, which they make use of for house-building, namely, stones and bricks, and wood, and if there be any thing else of this kind? or that there are tools, with which they make the dwelling, and by which they obtain these things, namely, the wood and the stone, and again, the tools for them?

Critias:: To myself at least it seems, that all these the tools are useful for those the materials.

Socrates:: Hence, in the case of the rest of operations, not only are those things useful, which we make use of for each of the works, but those also, by which we obtain them, and without which they would not exist.

Critias:: It is entirely so.

Socrates:: Hence, both for those, who possess these the tools, and if there be any thing further up, and for those who possess these the materials and what is further up, so that at last they come to some infinite multitude, it is necessary for all these to appear useful for their operations.

Critias:: There is nothing, to prevent such from being the case.

Socrates:: Well then, if food and drink, and clothing, and the other things which a person is about to make use of for the body, were in his power, would he want in addition gold and silver, or any thing else, by which he could obtain what was in his power?

Critias:: It appears to me he would not.

Socrates:: Would it not then appear to us, that sometimes a person does not want any of those things, which relate to the needs of the body?

Critias:: Yes.

Socrates:: For he does not want them. Hence if they appeared to be useless for this operation, they could not, on the other hand, be deemed to appear useful. For it has been laid down, that it is not possible for things to be at one time useful, and at another useless, as regards the same operation.

Critias:: In this way at least, the same reasoning would hold good to both you and me.

Socrates:: For if these were at any time useful for this purpose, it never would happen for them to be on the other hand useless. But now to some operations of depraved doings, but to others of good.

Critias:: I should say so.

Socrates:: Is it not possible then for a depraved act to be useful for the working out of some good?

Critias:: It does not seem so to myself at least.

Socrates:: But good acts we should say are those, which a man does through virtue.

Critias:: I admit it.

Socrates:: Is it not possible for a person to learn some of the things, which are taught by conversation, although he were deprived of hearing, or any thing else?

Critias:: By Zeus, it does not seem so to me at least.

Socrates:: Hence, of the things useful for virtue hearing would appear to be one, if at least virtue is to be taught by hearing, and we make use of it for instruction.

Critias:: It appears so.

Socrates:: Hence, if medical art is able to cure a person diseased, even medical art would sometimes appear to be one of the things useful for virtue, if through it be furnished the power of hearing what relates to the thing to be taught.

Critias:: There is nothing to prevent it.

Socrates:: If then again we obtain medical science in return for property, even property would appear to be useful for virtue.

Critias:: Yes; for such it is.

Socrates:: Hence, again, in like manner, that would be useful, by which we could obtain property.

Critias:: Yes, all such by all means.

Socrates:: Now does it not seem to you that a person could from acts depraved and disgraceful obtain for himself silver, in return for which he might obtain medical science, or be able to hear, after being unable? and to use that very hearing for virtue, or any other things of that kind?

Critias:: To me at least it does seem very much so.

Socrates:: Would not then the depraved be useful for virtue?

Critias:: It would.

Socrates:: It is not necessary then for those things, by which we can obtain what is useful for each, to be themselves useful for the same. For things depraved would sometimes seem to be useful for a thing that is good. And they would be still more evident in this case. For if these are useful for each of those, without which they would not exist, unless these had existed previously, come say, how shall we speak of things of this kind? Is it possible for ignorance to be useful for science, or disease for health, or vice for virtue?

Critias:: I should say, not.

Socrates:: And yet we should agree in this, that it is impossible for science to be produced in him, in whom ignorance had not existed previously; or health, in him in whom disease had not existed; or virtue, in him in whom vice had not.

Critias:: The fact, is so, as it seems to me.

Socrates:: Hence it would not be necessary for those things to be useful, without which a thing is not able to exist. For otherwise ignorance would appear to be useful for science; and disease, for health; and vice, for virtue. Of these arguments too he was very hard of belief, unless all these things shall be property. And I, knowing him thoroughly, that it would be an equally hard task to convince him, as, according to the saying, to boil a stone, said—Let us bid a long farewell to these arguments; since we are unable to agree, whether the same things are useful, and a property, or not. But how shall we say on this question? Whether shall we consider a person happier and better, who is in want of the greatest number of things necessary for his body and living, or him, who is in want of the fewest and most trifling? Now this question would perhaps be viewed in the best manner, thus. Should one compare a person himself with himself, and consider which of his states is the better, whether, when he happens to be ill, or in health.

Critias:: But this at least, does not require any great consideration.

Socrates:: For perhaps, it is easy for every simpleton to know that the state of the person in health is better than that of the person ill. Well then, at what time do we happen to be in want of things more in number and variety? when we are ill, or in health?

Critias:: When we are ill.

Socrates:: When therefore we happen to be lying in the worst condition for ourselves, we then are greatly in the desire, and the want of the greatest number of things that relate to the pleasures of the body.

Critias:: It is so.

Socrates:: According to the same rule then, as a person is in the best condition for himself, when he is in want of the fewest of these things, so on the other hand, if there were two persons, one of whom happened to be greatly in the desire and want of many things, and the other of few things and moderately so, as for example things of this kind, such men as are dice-players, others wine-tipplers, and others of a voracious appetite, for all these happen to be nothing else than desires.

Critias:: Very much so.

Socrates:: Now all desires are nothing else than the want of some things.

Critias:: Nothing.

Socrates:: The persons then, who have suffered the most of these, are in a more depraved state than those, who have suffered things of this kind either not at all, or to the least extent. I consider then persons of this kind to be very depraved; and the more they are of this kind, the more depraved. It seems then to us that it is not possible for these things to be useful for this purpose, unless we happen to be in the Want of these things for this purpose.

Critias:: I admit it.

Socrates:: It is necessary then, if these are about to be useful to us for the care of the wants of the body, that we too should want them for this purpose.

Critias:: So it seems at least to me.

Socrates:: He then, to whom the greatest number of things useful for this purpose belongs, would appear to be in want of the greatest number for this purpose, since it is necessary for him to feel a want of all useful things.

Critias:: To me at least it seems to appear in this way.

Socrates:: It is necessary therefore, according to this reasoning, for those, to whom there happens to be much property, to be in much want of the things necessary for the care of the body. For the things useful for this purpose have appeared to be property; so that of necessity they, who should appear to us to be the wealthiest, are in the most depraved state, since they are in want of the greatest number of things of this kind.

# Eryxias.

Translated by Jowett 3rd ed.

*PERSONS OF THE DIALOGUE.*

Socrates. Erasistratus.
Eryxias. Critias.
Scene:—The portico of a temple of Zeus.

---

Socrates:: It happened by chance that Eryxias the Steirian was walking with me in the Portico of Zeus the Deliverer, when there came up to us Critias and Erasistratus, the latter the son of Phaeax, who was the nephew of Erasistratus. Now Erasistratus had just arrived from Sicily and that part of the world. As they approached, he said;

Erasistratus:: Hail, Socrates!

Socrates:: The same to you; have you any good news from Sicily to tell us?

Erasistratus:: Most excellent. But, if you please, let us first sit down; for I am tired with my yesterday's journey from Megara.

Socrates:: Gladly, if that is your desire.

Erasistratus:: What would you wish to hear first? What the Sicilians are doing, or how they are disposed towards our city? To my mind, they are very like wasps: so long as you only cause them a little annoyance they are quite unmanageable; you must destroy their nests if you wish to get the better of them. And in a similar way, the Syracusans, unless we set to work in earnest, and go against them with a great expedition, will never submit to our rule. The petty injuries which we at present inflict merely irritate them enough to make them utterly intractable. And now they have sent ambassadors to Athens, and intend, I suspect, to play us some trick.—

Socrates:: While we were talking, the Syracusan envoys chanced to go by, and Erasistratus, pointing to one of them, said to me;

Erasistratus:: That, Socrates, is the richest man in all Italy and Sicily. For who has larger estates or more land at his disposal to cultivate if he please? And they are of a quality, too, finer than any other land in Hellas. Moreover, he has all the things which go to make up wealth, slaves and horses innumerable, gold and silver without end.

Socrates:: I saw that he was inclined to expatiate on the riches of the man; so I asked him, Well, Erasistratus, and what sort of character does he bear in Sicily?

Erasistratus:: He is esteemed to be, and really is, the wickedest of all the Sicilians and Italians, and even more wicked than he is rich; indeed, if you were to ask any Sicilian whom he thought to be the worst and the richest of mankind, you would never hear any one else named.

Socrates:: I reflected that we were speaking, not of trivial matters, but about wealth and virtue, which are deemed to be of the greatest moment, and I asked Erasistratus whom he considered the wealthier,—he who was the possessor of a talent of silver or he who had a field worth two talents?

Erasistratus:: The owner of the field.

Socrates:: And on the same principle he who had robes and bedding and such things which are of greater value to him than to a stranger would be richer than the stranger?

Erasistratus:: True.

Socrates:: And if any one gave you a choice, which of these would you prefer?

Erasistratus:: That which was most valuable.

Socrates:: In which way do you think you would be the richer?

Erasistratus:: By choosing as I said.

Socrates:: And he appears to you to be the richest who has goods of the greatest value?

Erasistratus:: He does.

Socrates:: And are not the healthy richer than the sick, since health is a possession more valuable than riches to the sick? Surely there is no one who would not prefer to be poor and well, rather than to have all the King of Persia's wealth and to be ill. And this proves that men set health above wealth, else they would never choose the one in preference to the other.

Erasistratus:: True.

Socrates:: And if anything appeared to be more valuable than health, he would be the richest who possessed it?

Erasistratus:: He would.

Socrates:: Suppose that some one came to us at this moment and were to ask, Well, Socrates and Eryxias and Erasistratus, can you tell me what is of the greatest value to men? Is it not that of which the possession will best enable a man to advise how his own and his friends' affairs should be administered?—What will be our reply?

Erasistratus:: I should say, Socrates, that happiness was the most precious of human possessions.

Socrates:: Not a bad answer. But do we not deem those men who are most prosperous to be the happiest?

Erasistratus:: That is my opinion.

Socrates:: And are they not most prosperous who commit the fewest errors in respect either of themselves or of other men?

Erasistratus:: Certainly.

Socrates:: And they who know what is evil and what is good; what should be done and what should be left undone;—these behave the most wisely and make the fewest mistakes?

Erasistratus agreed to this.

Socrates:: Then the wisest and those who do best and the most fortunate and the richest would appear to be all one and the same, if wisdom is really the most valuable of our possessions?

Eryxias:: Yes, but what use would it be if a man had the wisdom of Nestor and wanted the necessaries of life, food and drink and clothes and the like? Where would be the advantage of wisdom then? Or how could he be the richest of men who might even have to go begging, because he had not wherewithal to live?

Socrates:: I thought that what Eryxias was saying had some weight, and I replied, Would the wise man really suffer in this way, if he were so ill-provided; whereas if he had the house of Polytion, and the house were full of gold and silver, he would lack nothing?

Eryxias:: Yes; for then he might dispose of his property and obtain in exchange what he needed, or he might sell it for money with which he could supply his wants and in a moment procure abundance of everything.

Socrates:: True, if he could find some one who preferred such a house to the wisdom of Nestor. But if there are persons who set great store by wisdom like Nestor's and the advantages accruing from it, to sell these, if he were so disposed, would be easier still. Or is a house a most useful and necessary possession, and does it make a great difference in the comfort of life to have a mansion like Polytion's instead of living in a shabby little cottage, whereas wisdom is of small use and it is of no importance whether a man is wise or ignorant about the highest matters? Or is wisdom despised of men and can find no buyers, although cypress wood and marble of Pentelicus are eagerly bought by numerous purchasers? Surely the prudent pilot or the skilful physician, or the artist of any kind who is proficient in his art, is more worth than the things which are especially reckoned among riches; and he who can advise well and prudently for himself and others is able also to sell the product of his art, if he so desire.

Eryxias looked askance, as if he had received some unfair treatment, and said;

Eryxias:: I believe, Socrates, that if you were forced to speak the truth, you would declare that you were richer than Callias the son of Hipponicus. And yet, although you claimed to be wiser about things of real importance, you would not any the more be richer than he.

Socrates:: I dare say, Eryxias, that you may regard these arguments of ours as a kind of game; you think that they have no relation to facts, but are like the pieces in the game of draughts which the player can move in such a way that his opponents are unable to make any countermove. And perhaps, too, as regards riches you are of opinion that while facts remain the same, there are arguments, no matter whether true or false, which enable the user of them to prove that the wisest and the richest are one and the same, although he is in the wrong and his opponents are in the right. There would be nothing strange in this; it would be as if two persons were to dispute about letters, one declaring that the word Socrates began with an S, the other that it began with an A, and the latter could gain the victory over the former.

Eryxias glanced at the audience, laughing and blushing at once, as if he had had nothing to do with what had just been said, and replied,—

Eryxias:: No, indeed, Socrates, I never supposed that our arguments should be of a kind which would never convince any one of those here present or be of advantage to them. For what man of sense could ever be persuaded that the wisest and the richest are the same? The truth is that we are discussing the subject of riches, and my notion is that we should argue respecting the honest and dishonest means of acquiring them, and, generally, whether they are a good thing or a bad.

Socrates:: Very good, and I am obliged to you for the hint: in future we will be more careful. But why do not you yourself, as you introduced the argument, and do not think that the former discussion touched the point at issue, tell us whether you consider riches to be a good or an evil?

Eryxias:: I am of opinion, that they are a good.

Socrates:: He was about to add something more, when Critias interrupted him:—

Critias:: Do you really suppose so, Eryxias?

Eryxias:: Certainly; I should be mad if I did not: and I do not fancy that you would find any one else of a contrary opinion.

Critias:: And I should say that there is no one whom I could not compel to admit that riches are bad for some men. But surely, if they were a good, they could not appear bad for any one?

Socrates:: Here I interposed and said to them: If you two were having an argument about equitation and what was the best way of riding, supposing that I knew the art myself, I should try to bring you to an agreement. For I should be ashamed if I were present and did not do what I could to prevent your difference. And I should do the same if you were quarrelling about any other art and were likely, unless you agreed on the point in dispute, to part as enemies instead of as friends. But now, when we are contending about a thing of which the usefulness continues during the whole of life, and it makes an enormous difference whether we are to regard it as beneficial or not,—a thing, too, which is esteemed of the highest importance by the Hellenes:—(for parents, as soon as their children are, as they think, come to years of discretion, urge them to consider how wealth may be acquired, since by riches the value of a man is judged):—When, I say, we are thus in earnest, and you, who agree in other respects, fall to disputing about a matter of such moment, that is, about wealth, and not merely whether it is black or white, light or heavy, but whether it is a good or an evil, whereby, although you are now the dearest of friends and kinsmen, the most bitter hatred may arise betwixt you, I must hinder your dissension to the best of my power. If I could, I would tell you the truth, and so put an end to the dispute; but as I cannot do this, and each of you supposes that you can bring the other to an agreement, I am prepared, as far as my capacity admits, to help you in solving the question. Please, therefore, Critias, try to make us accept the doctrines which you yourself entertain.

Critias:: I should like to follow up the argument, and will ask Eryxias whether he thinks that there are just and unjust men?

Eryxias:: Most decidedly.

Critias:: And does injustice seem to you an evil or a good?

Eryxias:: An evil.

Critias:: Do you consider that he who bribes his neighbour’s wife and commits adultery with her, acts justly or unjustly, and this although both the state and the laws forbid?

Eryxias:: Unjustly.

Critias:: And if the wicked man has wealth and is willing to spend it, he will carry out his evil purposes? whereas he who is short of means cannot do what he fain would, and therefore does not sin? In such a case, surely, it is better that a person should not be wealthy, if his poverty prevents the accomplishment of his desires, and his desires are evil? Or, again, should you call sickness a good or an evil?

Eryxias:: An evil.

Critias:: Well, and do you think that some men are intemperate?

Eryxias:: Yes.

Critias:: Then, if it is better for his health that the intemperate man should refrain from meat and drink and other pleasant things, but he cannot owing to his intemperance, will it not also be better that he should be too poor to gratify his lust rather than that he should have a superabundance of means? For thus he will not be able to sin, although he desire never so much.

Socrates:: Critias appeared to be arguing so admirably that Eryxias, if he had not been ashamed of the bystanders, would probably have got up and struck him. For he thought that he had been robbed of a great possession when it became obvious to him that he had been wrong in his former opinion about wealth. I observed his vexation, and feared that they would proceed to abuse and quarrelling: so I said,—I heard that very argument used in the Lyceum yesterday by a wise man, Prodicus of Ceos; but the audience thought that he was talking mere nonsense, and no one could be persuaded that he was speaking the truth. And when at last a certain talkative young gentleman came in, and, taking his seat, began to laugh and jeer at Prodicus, tormenting him and demanding an explanation of his argument, he gained the ear of the audience far more than Prodicus.

Erasistratus:: Can you repeat the discourse to us?

Socrates:: If I can only remember it, I will. The youth began by asking Prodicus, In what way did he think that riches were a good and in what an evil? Prodicus answered, as you did just now, that they were a good to good men and to those who knew in what way they should be employed, while to the bad and the ignorant they were an evil. The same is true, he went on to say, of all other things; men make them to be what they are themselves. The saying of Archilochus is true:—

> ‘Men’s thoughts correspond to the things which they meet with.’

Well, then, replied the youth, if any one makes me wise in that wisdom whereby good men become wise, he must also make everything else good to me. Not that he concerns himself at all with these other things, but he has converted my ignorance into wisdom. If, for example, a person teach me grammar or music, he will at the same time teach me all that relates to grammar or music, and so when he makes me good, he makes things good to me.

Prodicus did not altogether agree: still he consented to what was said.

And do you think, said the youth, that doing good things is like building a house,—the work of human agency; or do things remain what they were at first, good or bad, for all time?

Prodicus began to suspect, I fancy, the direction which the argument was likely to take, and did not wish to be put down by a mere stripling before all those present:—(if they two had been alone, he would not have minded):—so he answered, cleverly enough: I think that doing good things is a work of human agency.

And is virtue in your opinion, Prodicus, innate or acquired by instruction?

The latter, said Prodicus.

Then you would consider him a simpleton who supposed that he could obtain by praying to the Gods the knowledge of grammar or music or any other art, which he must either learn from another or find out for himself?

Prodicus agreed to this also.

And when you pray to the Gods that you may do well and receive good, you mean by your prayer nothing else than that you desire to become good and wise:—if, at least, things are good to the good and wise and evil to the evil. But in that case, if virtue is acquired by instruction, it would appear that you only pray to be taught what you do not know.

Hereupon I said to Prodicus that it was no misfortune to him if he had been proved to be in error in supposing that the Gods immediately granted to us whatever we asked:—if, I added, whenever you go up to the Acropolis you earnestly entreat the Gods to grant you good things, although you know not whether they can yield your request, it is as though you went to the doors of the grammarian and begged him, although you had never made a study of the art, to give you a knowledge of grammar which would enable you forthwith to do the business of a grammarian. While I was speaking, Prodicus was preparing to retaliate upon his youthful assailant, intending to employ the argument of which you have just made use; for he was annoyed to have it supposed that he offered a vain prayer to the Gods. But the master of the gymnasium came to him and begged him to leave because he was teaching the youths doctrines which were unsuited to them, and therefore bad for them.

I have told you this because I want you to understand how men are circumstanced in regard to philosophy. Had Prodicus been present and said what you have said, the audience would have thought him raving, and he would have been ejected from the gymnasium. But you have argued so excellently well that you have not only persuaded your hearers, but have brought your opponent to an agreement. For just as in the law courts, if two witnesses testify to the same fact, one of whom seems to be an honest fellow and the other a rogue, the testimony of the rogue often has the contrary effect on the judges' minds to what he intended, while the same evidence if given by the honest man at once strikes them as perfectly true. And probably the audience have something of the same feeling about yourself and Prodicus; they think him a Sophist and a braggart, and regard you as a gentleman of courtesy and worth. For they do not pay attention to the argument so much as to the character of the speaker.

Erasistratus:: But truly, Socrates, though you may be joking, Critias does seem to me to be saying something which is of weight.

Socrates:: I am in profound earnest, I assure you. But why, as you have begun your argument so prettily, do you not go on with the rest? There is still something lacking, now you have agreed that [wealth] is a good to some and an evil to others. It remains to enquire what constitutes wealth; for unless you know this, you cannot possibly come to an understanding as to whether it is a good or an evil. I am ready to assist you in the enquiry to the utmost of my power: but first let him who affirms that riches are a good, tell us what, in his opinion, is wealth.

Erasistratus:: Indeed, Socrates, I have no notion about wealth beyond that which men commonly have. I suppose that wealth is a quantity of money; and this, I imagine, would also be Critias' definition.

Socrates:: Then now we have to consider, What is money? Or else later on we shall be found to differ about the question. For instance, the Carthaginians use money of this sort. Something which is about the size of a stater is tied up in a small piece of leather: what it is, no one knows but the makers.

A seal is next set upon the leather, which then passes into circulation, and he who has the largest number of such pieces is esteemed the richest and best off. And yet if any one among us had a mass of such coins he would be no wealthier than if he had so many pebbles from the mountain. At Lacedaemon, again, they use iron by weight which has been rendered useless: and he who has the greatest mass of such iron is thought to be the richest, although elsewhere it has no value. In Ethiopia engraved stones are employed, of which a Lacedaemonian could make no use. Once more, among the Nomad Scythians a man who owned the house of Polytion would not be thought richer than one who possessed Mount Lycabettus among ourselves. And clearly those things cannot all be regarded as possessions; for in some cases the possessors would appear none the richer thereby: but, as I was saying, some one of them is thought in one place to be money, and the possessors of it are the wealthy, whereas in some other place it is not money, and the ownership of it does not confer wealth; just as the standard of morals varies, and what is honourable to some men is dishonourable to others. And if we wish to enquire why a house is valuable to us but not to the Scythians, or why the Carthaginians value leather which is worthless to us, or the Lacedaemonians find wealth in iron and we do not, can we not get an answer in some such way as this: Would an Athenian, who had a thousand talents weight of the stones which lie about in the Agora and which we do not employ for any purpose, be thought to be any the richer?

Erasistratus:: He certainly would not appear so to me.

Socrates:: But if he possessed a thousand talents weight of some precious stone, we should say that he was very rich?

Erasistratus:: Of course.

Socrates:: The reason is that the one is useless and the other useful?

Erasistratus:: Yes.

Socrates:: And in the same way among the Scythians a house has no value because they have no use for a house, nor would a Scythian set so much store on the finest house in the world as on a leather coat, because he could use the one and not the other. Or again, the Carthaginian coinage is not wealth in our eyes, for we could not employ it, as we can silver, to procure what we need, and therefore it is of no use to us.

Erasistratus:: True.

Socrates:: What is useful to us, then, is wealth, and what is useless to us is not wealth?

Eryxias:: But how do you mean, Socrates?

Socrates:: Interrupting, Eryxias said;

Eryxias:: Do we not employ in our intercourse with one another speech and violence and various other things? These are useful and yet they are not wealth.

Socrates:: Clearly we have not yet answered the question, What is wealth? That wealth must be useful, to be wealth at all,—thus much is acknowledged by every one. But what particular thing is wealth, if not all things? Let us pursue the argument in another way; and then we may perhaps find what we are seeking. What is the use of wealth, and for what purpose has the possession of riches been invented,—in the sense, I mean, in which drugs have been discovered for the cure of disease? Perhaps in this way we may throw some light on the question. It appears to be clear that whatever constitutes wealth must be useful, and that wealth is one class of useful things; and now we have to enquire, What is the use of those useful things which constitute wealth? For all things probably may be said to be useful which we use in production, just as all things which have life are animals, but there is a special kind of animal which we call 'man.' Now if any one were to ask us, What is that of which, if we were rid, we should not want medicine and the instruments of medicine, we might reply that this would be the case if disease were absent from our bodies and either never came to them at all or went away again as soon as it appeared; and we may therefore conclude that medicine is the science which is useful for getting rid of disease. But if we are further asked, What is that from which, if we were free, we should have no need of wealth? can we give an answer? If we have none, suppose that we restate the question thus:—If a man could live without food or drink, and yet suffer neither hunger nor thirst, would he want either money or anything else in order to supply his needs?

Eryxias:: He would not.

Socrates:: And does not this apply in other cases? If we did not want for the service of the body the things of which we now stand in need, and heat and cold and the other bodily sensations were unperceived by us, there would be no use in this so-called wealth, if no one, that is, had any necessity for those things which now make us wish for wealth in order that we may satisfy the desires and needs of the body in respect of our various wants. And therefore if the possession of wealth is useful in ministering to our bodily wants, and bodily wants were unknown to us, we should not need wealth, and possibly there would be no such thing as wealth.

Eryxias:: Clearly not.

Socrates:: Then our conclusion is, as would appear, that wealth is what is useful to this end?

Eryxias once more gave his assent, but the small argument considerably troubled him.

And what is your opinion about another question:—Would you say that the same thing can be at one time useful and at another useless for the production of the same result?

Eryxias:: I cannot say more than that if we require the same thing to produce the same result, then it seems to me to be useful; if not, not.

Socrates:: Then if without the aid of fire we could make a brazen statue, we should not want fire for that purpose; and if we did not want it, it would be useless to us? And the argument applies equally in other cases.

Eryxias:: Clearly.

Socrates:: And therefore conditions which are not required for the existence of a thing are not useful for the production of it?

Eryxias:: Of course not.

Socrates:: And if without gold or silver or anything else which we do not use directly for the body in the way that we do food and drink and bedding and houses,—if without these we could satisfy the wants of the body, they would be of no use to us for that purpose?

Eryxias:: They would not.

Socrates:: They would no longer be regarded as wealth, because they are useless, whereas that would be wealth which enabled us to obtain what was useful to us?

Eryxias:: O Socrates, you will never be able to persuade me that gold and silver and similar things are not wealth. But I am very strongly of opinion that things which are useless to us are not wealth, and that the money which is useful for this purpose is of the greatest use; not that these things are not useful towards life, if by them we can procure wealth.

Socrates:: And how would you answer another question? There are persons, are there not, who teach music and grammar and other arts for pay, and thus procure those things of which they stand in need?

Eryxias:: There are.

Socrates:: And these men by the arts which they profess, and in exchange for them, obtain the necessities of life just as we do by means of gold and silver?

Eryxias:: True.

Socrates:: Then if they procure by this means what they want for the purposes of life, that art will be useful towards life? For do we not say that silver is useful because it enables us to supply our bodily needs?

Eryxias:: We do.

Socrates:: Then if these arts are reckoned among things useful, the arts are wealth for the same reason as gold and silver are, for, clearly, the possession of them gives wealth. Yet a little while ago we found it difficult to accept the argument which proved that the wisest are the wealthiest. But now there seems no escape from this conclusion. Suppose that we are asked, ‘Is a horse useful to everybody?’ will not our reply be, ‘No, but only to those who know how to use a horse?’

Eryxias:: Certainly.

Socrates:: And so, too, physic is not useful to every one, but only to him who knows how to use it?

Eryxias:: True.

Socrates:: And the same is the case with everything else?

Eryxias:: Yes.

Socrates:: Then gold and silver and all the other elements which are supposed to make up wealth are only useful to the person who knows how to use them?

Eryxias:: Exactly.

Socrates:: And were we not saying before that it was the business of a good man and a gentleman to know where and how anything should be used?

Eryxias:: Yes.

Socrates:: The good and gentle, therefore, will alone have profit from these things, supposing at least that they know how to use them. But if so, to them only will they seem to be wealth. It appears, however, that where a person is ignorant of riding, and has horses which are useless to him, if some one teaches him that art, he makes him also richer, for what was before useless has now become useful to him, and in giving him knowledge he has also conferred riches upon him.

Eryxias:: That is the case.

Socrates:: Yet I dare be sworn that Critias will not be moved a whit by the argument.

Critias:: No, by heaven, I should be a madman if I were. But why do you not finish the argument which proves that gold and silver and other things which seem to be wealth are not real wealth? For I have been exceedingly delighted to hear the discourses which you have just been holding.

Socrates:: My argument, Critias, appears to have given you the same kind of pleasure which you might have derived from some rhapsode's recitation of Homer; for you do not believe a word of what has been said. But come now, give me an answer to this question. Are not certain things useful to the builder when he is building a house?

Critias:: They are.

Socrates:: And would you say that those things are useful which are employed in house building,—stones and bricks and beams and the like, and also the instruments with which the builder built the house, the beams and stones which they provided, and again the instruments by which these were obtained?

Critias:: It seems to me that they are all useful for building.

Socrates:: And is it not true of every art, that not only the materials but the instruments by which we procure them and without which the work could not go on, are useful for that art?

Critias:: Certainly.

Socrates:: And further, the instruments by which the instruments are procured, and so on, going back from stage to stage *ad infinitum*,—are not all these, in your opinion, necessary in order to carry out the work?

Critias:: We may fairly suppose such to be the case.

Socrates:: And if a man has food and drink and clothes and the other things which are useful to the body, would he need gold or silver or any other means by which he could procure that which he now has?

Critias:: I do not think so.

Socrates:: Then you consider that a man never wants any of these things for the use of the body?

Critias:: Certainly not.

Socrates:: And if they appear useless to this end, ought they not always to appear useless? For we have already laid down the principle that things cannot be at one time useful and at another time not, in the same process.

Critias:: But in that respect your argument and mine are the same. For you maintain if they are useful to a certain end, they can never become useless; whereas I say that in order to accomplish some results bad things are needed, and good for others.

Socrates:: But can a bad thing be used to carry out a good purpose?

Critias:: I should say not.

Socrates:: And we call those actions good which a man does for the sake of virtue?

Critias:: Yes.

Socrates:: But can a man learn any kind of knowledge which is imparted by word of mouth if he is wholly deprived of the sense of hearing?

Critias:: Certainly not, I think.

Socrates:: And will not hearing be useful for virtue, if virtue is taught by hearing and we use the sense of hearing in giving instruction?

Critias:: Yes.

Socrates:: And since medicine frees the sick man from his disease, that art too may sometimes appear useful in the acquisition of virtue, e.g. when hearing is procured by the aid of medicine.

Critias:: Very likely.

Socrates:: But if, again, we obtain by wealth the aid of medicine, shall we not regard wealth as useful for virtue?

Critias:: True.

Socrates:: And also the instruments by which wealth is procured?

Critias:: Certainly.

Socrates:: Then you think that a man may gain wealth by bad and disgraceful means, and, having obtained the aid of medicine which enables him to acquire the power of hearing, may use that very faculty for the acquisition of virtue?

Critias:: Yes, I do.

Socrates:: But can that which is evil be useful for virtue?

Critias:: No.

Socrates:: It is not therefore necessary that the means by which we obtain what is useful for a certain object should always be useful for the same object: for it seems that bad actions may sometimes serve good purposes? The matter will be still plainer if we look at it in this way:—If things are useful towards the several ends for which they exist, which ends would not come into existence without them, how would you regard them? Can ignorance, for instance, be useful for knowledge, or disease for health, or vice for virtue?

Critias:: Never.

Socrates:: And yet we have already agreed—have we not?—that there can be no knowledge where there has not previously been ignorance, nor health where there has not been disease, nor virtue where there has not been vice?

Critias:: I think that we have.

Socrates:: But then it would seem that the antecedents without which a thing cannot exist are not necessarily useful to it. Otherwise ignorance would appear useful for knowledge, disease for health, and vice for virtue.

Critias still showed great reluctance to accept any argument which went to prove that all these things were useless. I saw that it was as difficult to persuade him as (according to the proverb) it is to boil a stone, so I said: Let us bid 'good-bye' to the discussion, since we cannot agree whether these things are useful and a part of wealth or not. But what shall we say to another question: Which is the happier and better man,—he who requires the greatest quantity of necessaries for body and diet, or he who requires only the fewest and least? The answer will perhaps become more obvious if we suppose some one, comparing the man himself at different times, to consider whether his condition is better when he is sick or when he is well?

Critias:: That is not a question which needs much consideration.

Socrates:: Probably, I said, every one can understand that health is a better condition than disease. But when have we the greatest and the most various needs, when we are sick or when we are well?.

Critias:: When we are sick.

Socrates:: And when we are in the worst state we have the greatest and most especial need and desire of bodily pleasures?

Critias:: True.

Socrates:: And seeing that a man is best off when he is least in need of such things, does not the same reasoning apply to the case of any two persons, of whom one has many and great wants and desires, and the other few and moderate? For instance, some men are gamblers, some drunkards, and some gluttons: and gambling and the love of drink and greediness are all desires?

Critias:: Certainly.

Socrates:: But desires are only the lack of something: and those who have the greatest desires are in a worse condition than those who have none or very slight ones?

Critias:: Certainly I consider that those who have such wants are bad, and that the greater their wants the worse they are.

Socrates:: And do we think it possible that a thing should be useful for a purpose unless we have need of it for that purpose?

Critias:: No.

Socrates:: Then if these things are useful for supplying the needs of the body, we must want them for that purpose?

Critias:: That is my opinion.

Socrates:: And he to whom the greatest number of things are useful for his purpose, will also want the greatest number of means of accomplishing it, supposing that we necessarily feel the want of all useful things?

Critias:: It seems so.

Socrates:: The argument proves then that he who has great riches has likewise need of many things for the supply of the wants of the body; for wealth appears useful towards that end. And the richest must be in the worst condition, since they seem to be most in want of such things.

# Eryxias

Translated by Mark Joyal.

PERSONS OF THE DIALOGUE.

Socrates, Eryxias, Critias, Erasistratus.

---

Socrates:: I happened to be strolling about in the Stoa of Zeus the Liberator with Eryxias, from the deme Stiria, when Critias and Erasistratus, the nephew of Phaeax (Erasistratus' son), came up to us. Erasistratus, it turned out, was just recently back from Sicily and other places nearby. When he came to me he said;

Erasistratus:: "Greetings, Socrates."

Socrates:: "The same to you." "Well now, anything worth reporting to us from Sicily?"

Erasistratus:: "Certainly. But would you care to sit down first? I walked from Megara yesterday and now I'm exhausted."

Socrates:: "By all means, if that's what you want."

Erasistratus:: "What would you like to hear first about the situation over there? What the Sicilians are up to, or what attitude they're taking towards our city? Personally, I think that in their feelings towards us they're like wasps. If you stir them up and get them angry just a little at a time they become unmanageable; you have to drive them out by attacking their nest. That's what the Syracusans are like. Unless we make it our business to go to their city with a very large force, there's no chance they will ever submit to us. Half-measures can only make them angrier, and then they'll be extremely hard to deal with. In fact they've just now sent envoys to us, and I think they intend to trick our city somehow."

Socrates:: While we were talking the Syracusan envoys happened to pass by. Erasistratus pointed to one of them and said;

Erasistratus:: “That man over there, Socrates, is the wealthiest in all Sicily and Italy. He must be, since he has such an enormous amount of land at his disposal that he could easily farm a huge tract if he wanted to. This land of his is unlike any other, in Greece at any rate. And he also has plenty of the other things that make you wealthy—slaves, horses, gold, and silver.”

Socrates:: When I saw that he was getting ready to babble on about the man’s possessions, I asked him, “But, Erasistratus, what sort of reputation does he have in Sicily?”

Erasistratus:: “People think that he’s the wickedest of all the Sicilians and Italians, and he really is. He’s even more wicked than he is wealthy, so if you wanted to ask any Sicilian who he thinks is the wickedest man, and who is the wealthiest, everyone will say the same thing: he is.”

Socrates:: I thought that what Erasistratus was talking about was no small matter; on the contrary, it’s what people consider to be of the very highest importance, namely virtue and wealth. So I asked him, “Who’s wealthier, a man who has one talent of silver, or a man who has a field worth two talents?”

Erasistratus:: “The man with the field, I suppose.”

Socrates:: “By the same argument, if someone had clothes or blankets or other things worth yet more than our Sicilian fellow’s property, he would be wealthier.” Erasistratus agreed. “And if someone were to give you a choice between these two, which would you want?”

Erasistratus:: “I would choose the most valuable of them.”

Socrates:: “Do you think that choice would make you wealthier?”

Erasistratus:: “I do.”

Socrates:: “So as it stands we think that whoever possesses the most valuable things is the wealthiest person?”

Erasistratus:: “Yes.”

Socrates:: “Then healthy people would be wealthier than sick people, since health is a more valuable possession than the sick man’s property. Everyone, at any rate, would prefer to be healthy and possess little money than to be sick and possess the Great King’s fortune, since they obviously believe that health is more valuable. After all, nobody would ever choose in favor of health unless he thought it was preferable to wealth.”

Erasistratus:: “Of course not.”

Socrates:: “Again, if something else should seem more valuable than health, the one who possessed this would be the wealthiest person.”

Erasistratus:: “Yes.”

Socrates:: “And suppose someone were to come up to us now and ask, ‘Can you tell me, Socrates, Eryxias, and Erasistratus, what the most valuable possession for a person is? Is it the thing whose possession would enable him to make the best decisions about how he could most effectively manage both his own affairs and those of his friends?’ What would we say this thing is?”

Erasistratus:: “In my view, Socrates, prosperity is a person’s most valuable possession.”

Socrates:: “That’s not a bad answer at all. But would we consider the most prosperous people in the world to be the most successful?”

Erasistratus:: “Yes, I believe so.”

Socrates:: “And wouldn’t the most successful people be the ones who make the fewest errors in handling their own affairs and those of others, while doing the most things right?”

Erasistratus:: “Exactly.”

Socrates:: “So those who know what’s bad and what’s good, and what a person should and shouldn’t do, would have the greatest success and make the fewest errors?” Erasistratus accepted this too. “As it is, then, the same men are apparently the wisest, the most successful, the most prosperous, and the wealthiest, since it turns out that wisdom is the most valuable possession.”

Erasistratus:: “Yes.”

Socrates:: Eryxias interrupted:

Eryxias:: “But Socrates, how could it be any advantage to this person if he were wiser than Nestor but didn’t have the things he needed for day to day living—food, drink, clothing, and other things of that kind? What help could wisdom be? How could he be the wealthiest, since he might as well be a beggar if he has none of the basic necessities?”

Socrates:: I thought that Eryxias made a lot of sense, and answered, “But would this happen to the person who possessed wisdom but lacked these necessities? And if someone possessed the house of Poulytion, and it was full of gold and silver, would he need nothing?”

Eryxias:: “Why yes! He might very well sell his possessions at once and obtain in exchange whatever he actually needed for his day to day existence, or even spend hard currency, in exchange for which he could acquire those items and then have a good supply of everything right away.”

Socrates:: “True—provided that the other people actually wanted a house like Poulytion’s more than our friend’s wisdom. And yet if they were the sort of people who put greater stock in the man’s wisdom and what it produces, the wise man would be able to sell it much more easily, if it was the case that he needed and wanted to sell it and its products. Do people actually feel such a powerful compulsion to have the use of a house, and does it make such a great difference in a person’s life to live in a house like Poulytion’s rather than in a small and humble dwelling, while the use of wisdom has little value, and it doesn’t make much difference whether a person is wise or ignorant in things that really matter? Do people despise wisdom and refuse to pay for it, and are there many who need and want to purchase the cypress wood in Poulytion’s house and marble from Mt. Pentelicon? At any rate, if a person were a navigator or a doctor skilled at his profession, or were able to have a successful practice in some other profession along those lines, he would be valued more highly than every one of the greatest material possessions. And what about the person who can offer good advice about how to achieve success, both for himself and for someone else—wouldn’t he be able to sell this skill, if that’s what he wanted to do?”

Eryxias broke in, looking annoyed as though someone had done something wrong to him:

Eryxias:: “If you had to tell the truth, Socrates, would you really claim that you’re wealthier than Callias, the son of Hipponicus? I’m sure you'd agree that you’re no less intelligent in all the most important things, indeed wiser; but that hasn’t made you any wealthier.”

Socrates:: “Maybe, Eryxias, you think these arguments we’re now discussing are just a game, since, as you suppose, they have no reality, like pieces in backgammon which you can move to gain an advantage over your opponents so that they have no move they can make to counter yours. Now maybe with regard to wealth, too, you think that the true situation is no more one way than another, and that some arguments are of the same kind, no more true than false. If a person offered these arguments he could get the better of his opponents in claiming that the wisest are in our view also the wealthiest, even though what he was saying was false while his opponents were speaking the truth. Perhaps this isn't surprising; it's as if two men were talking about letters: one claims that the name 'Socrates' begins with an 'S,' the other that it begins with an 'A'; and the argument that the name begins with an 'A' proves stronger than the argument that it begins with an 'S'."

Eryxias cast a glance around at the people who were there, laughing and blushing as though he had not been present at the earliest discussions, and said:

Eryxias:: "Socrates, I thought that our arguments shouldn't be the kind that can't persuade any of the people here and provide some benefit to them. Who in his right mind could ever be persuaded that the wisest are the wealthiest? What we should be discussing, since we're talking about wealth, is under what conditions it's an admirable thing to be wealthy and under what conditions it's a disgraceful thing, and just what kind of thing wealth is, whether it's good or bad."

Socrates:: "All right, I'll be careful from now on; and thank you for your good advice. But since you're introducing the problem, why don't you venture to tell us yourself whether you consider it good or bad to be wealthy?— especially since you don't think that our earlier arguments dealt with this subject."

Eryxias:: "Well then, I think it's good to be wealthy."

Socrates:: He wanted to go on speaking, but Critias interrupted and said:

Critias:: "Tell me, Eryxias, do you consider it a good thing to be wealthy?"

Eryxias:: “I certainly do. I'd be crazy if I didn’t; and I’m sure the whole world would agree with me about this.”

Critias:: “But I also think I could convince everybody that for some people, being wealthy is a bad thing. Yet if it really were good, it wouldn’t appear bad to some of us.”

Socrates:: Then I said to them: “If the two of you couldn’t agree over who is the greater authority on expert horsemanship, and I happened to know about horses, I'd try to put a stop to your quarrel. After all, I'd be ashamed if I were there and didn’t do all I could to prevent your quarrelling; likewise if you couldn’t agree about anything else at all and were likely to go away as enemies instead of friends unless you came to an understanding. But as it is your disagreement is over something which you’re bound to deal with throughout your whole life, and it makes a big difference whether you should consider it useful or not. What’s more, the Greeks don’t think it’s any ordinary thing; they hold it in the highest regard—at any rate, that’s why the first thing that fathers advise their sons to consider, as soon as they think their sons have reached the age when they have their wits about them, is how they will become wealthy, since a man who has possessions is worth something, but one who doesn’t is worthless. Now if this is taken so seriously, and you see eye to eye on other things but differ over such an important matter—on top of that, not over whether wealth is black or white, or light or heavy, but whether it’s good or bad—that you actually become the worst of enemies if you argue over what’s good and what’s bad, even though you’re really the closest friends and relatives—well, as far as I can, I’m not going to ignore you while you’re carrying on your argument. If I could explain the situation to you and put a stop to your dispute, I would. But in fact, since I can’t do that, and since each of you thinks he can make the other agree with him, I’m ready to help you all I can to come to an agreement about wealth. So try to make us agree with you, Critias, as you had undertaken to do.”

Critias:: “As I intended, I'd like to ask Eryxias if he thinks there are just and unjust people.”

Eryxias:: “I most certainly do.”

Critias:: “Then do you think injustice is a good thing or a bad thing?”

Eryxias:: “A bad thing.”

Critias:: “Do you think a man would be behaving unjustly or not if he were to pay money to commit adultery with his neighbor’s wife, when in fact both the city and its laws forbid it?”

Eryxias:: “To my mind he would be acting unjustly.”

Critias:: “So if the unjust man who wanted to do this were wealthy and able to spend money on it, he would commit the crime. But if he weren’t wealthy and didn’t have the resources to spend, he simply wouldn’t be able to carry out what he wanted; and then there’ be no crime at all. It follows that this man would be better off if he weren’t wealthy, since he would have less chance of carrying out what he wanted when what he wanted was wrong.

“And here’s something else: would you say that being sick is bad or good?”

Eryxias:: “Bad.”

Critias:: “Now then, do you think that some people are weak-willed?”

Eryxias:: “Yes.”

Critias:: “Then if it were better for the weak-willed person’s health to stay away from food, drink, and the other things that people regard as pleasurable, but he wasn’t able to do this because of his weakness, would it be better for him if he didn’t have the means to acquire them, rather than if he had a superabundance of what he needed? For in that case he wouldn't have the opportunity to go wrong, no matter how much he wanted to."

Socrates:: I was thinking that Critias had conducted this conversation so effectively that if it weren't for the embarrassment Eryxias was feeling in front of everyone there, he might very well have stood up and hit Critias. Eryxias thought that something important had been taken from him, since it had become apparent to him that his earlier opinions about wealth were wrong. I realized that he was feeling like this and was worried that it might lead to insults and antagonism, so I said: "Just a couple of days ago this very argument was being used in the Lyceum by a wise man named Prodicus, from Ceos. The people who were there thought he was talking such nonsense that he couldn't convince any of them that he was speaking the truth. As a matter of fact a very outspoken young man came up and sat beside Prodicus. He began to laugh and jeer at him and provoke him; he wanted Prodicus to explain what he was saying. What's more, his standing among the audience was much higher than Prodicus'."

Erasistratus:: "Would you like to give us a report of the conversation?"

Socrates:: "By all means, provided I can remember it. I think it went something like this.

"The young man asked him in what respect he thought wealth was bad and in what respect good. Prodicus responded as you did just now: 'It's good for gentlemen, the people who know in what situations they should use their property; but it's bad for those who are wicked and ignorant. The situation is the same with everything else as well: the nature of the things people deal in inevitably reflects the people themselves. I think that Archilochus' poem said it well: "Men's thoughts are like the things they encounter."'

"'In that case,' the young man said, 'suppose someone were to make me skilled in the same thing that good men are skilled in. He's bound at the same time to make everything else good for me as well. Yet that wasn't the point of his efforts, since he was concentrating on the thing at which he has made me skilled rather than ignorant. It's as if someone now were to make me skilled in letters: he would necessarily make the other things that have to do with letters good for me; and likewise with music too. It's the same story when he makes me good: inevitably he's made the other things good for me too.'

"To these analogies Prodicus didn't offer his agreement, yet he went along with the young man's initial remark.

"'Do you think,' the young man said, 'that doing good things is just like building a house, that it's the work of human hands? Or do things have to go on being the very same as they were at the outset, whether bad or good?'

"Prodicus, I think, was now suspicious about where their argument was headed. So to avoid being defeated by the young man in full view of everyone who was there—though he thought it made no difference if this happened while they were alone—he gave a very shrewd response, that doing good things is the work of human hands.

"'Do you think,' the young man said, 'that excellence can be taught, or is it innate?'

"I believe it can be taught." Prodicus said.

"'Do you think a person would be foolish if he supposed that by praying to the gods he could become skilled in letters or music or could gain some other expertise, which he could only possess by learning from another person or by finding it out for himself?'

“‘Yes, I do.’

“‘So, Prodicus,' the young man said, ‘whenever you pray to the gods for success and good things, you’re praying on those occasions for nothing other than to become a gentleman, since it’s the case that things are actually good for gentlemen, but bad for mediocre people. But if excellence really can be taught, it would appear that you’re praying for nothing other than to be taught what you don’t know.’

“I told Prodicus that I thought he was under a serious delusion if it turned out that he was wrong in supposing that we receive from the gods what we pray for at the same time that we pray for it. ‘Although you sometimes hurry to the Acropolis and pray to the gods and beg them to give you good things, you don’t know that they can give you what you’re begging for. It’s the same as if you were to go to the doors of a schoolteacher and implore him to give you skill in letters without any effort on your part, so that after you had received it you too would immediately be able to do the work that a schoolteacher does.’

“While I was saying this Prodicus, annoyed that his prayers to the gods might appear useless, began to go after the young man in order to defend himself; he meant to offer the same arguments that you did a moment ago. But then the supervisor of the gymnasium came up and told him to leave. He thought that Prodicus’ discussions weren’t suitable for young ears, and if they weren’t suitable, they must be wicked.

Socrates:: “The reason I’ve recounted this is so that you may observe how people feel about philosophy. If Prodicus were here arguing as he was, you would all think he was so mad that he should even be expelled from the gymnasium, whereas just now you seem to have conducted your argument so extremely well, Critias, that you not only convinced everyone here but also made your opponent agree with you. It's clearly like the situation in lawcourts: if two people were to offer the same testimony—one with the reputation of a gentleman, the other of a wicked man—the jurors would remain unconvinced by the wicked man's testimony, but might possibly even do the opposite to what he wanted. But if the one who had the reputation of a gentleman were to say the same things, his words would be judged to be absolutely true. Perhaps the attitude your listeners have taken towards you and Prodicus is like this. They thought that Prodicus was a sophist and a charlatan, but they think you are an important man who is involved in the affairs of our city. They also believe that they should not concentrate on the argument itself but rather on the character of the people who are arguing."

Erasistratus:: "Why, Socrates, you may not be serious about what you're saying, but in my opinion Critias is clearly on to something important."

Socrates:: "Rest assured I'm absolutely serious. But since the two of you carried on your discussion so effectively, why not put the final touch on it as well? I think there's something left for you to investigate, since there seemed to be agreement at least on the point that wealth is good for some and bad for others. All that's left now is to examine what wealth itself is; unless you first determine this you won't even be able to reach an agreement on whether it's bad or good. I'm ready to give you as much help as I can to complete your investigation, so it's up to the one who claims that wealth is good to explain his position to us."

Erasistratus:: "My own opinion about wealth is no different from everyone else's: wealth is the possession of a lot of property. And I'm sure that Critias here also has the same opinion about wealth."

Socrates:: “In that case, then, you would still be left to consider what property is in order to avoid the appearance a bit later of arguing about this all over again. Let me illustrate this with the Carthaginians, who use the following kind of currency. In a small piece of leather something roughly the size of a stater is tied up, but no one knows what this is except the people who did the tying. Then when this is sealed they put it into circulation, and the person who has the largest number of these is considered to have the most property and to be the wealthiest. Yet if any Greek had a tremendous amount of this currency, he wouldn’t be any wealthier than if he had a lot of pebbles which he took from the hill. In Lacedaemon they put iron into circulation according to weight, and what’s more, the useless kind. The person who has a large weight of this kind of iron is considered wealthy, yet elsewhere such a possession is worthless. In Ethiopia they use engraved stones which a Lacedaemonian would find useless. And among the Scythian nomads anyone who possessed the house of Poulytion would be considered no wealthier than an owner of Mount Lycabettus would be considered by us.

“So clearly, each of these things cannot be property since some of the people who possess them seem no wealthier because of it. Yet each of them really is property for some people, and these people are wealthy because of their possession of it; but for others neither is it property nor does it make them wealthier. Likewise the same things are not beautiful and ugly to everybody, but rather different things strike different people in different ways.

“If, then, we should wish to investigate why it is that houses are not property in the eyes of the Scythians but they are to us, or why leather is property to the Carthaginians but not to us, or why iron is property to the Lacedaemonians but not to us, wouldn’t our findings be precisely like that? Let me elaborate. Suppose someone in Athens had a thousand talents in weight of the stones found in the marketplace. Since we have no use for these stones, is there any reason why we should consider him any wealthier because he has them?"

Erasistratus:: "Apparently not."

Socrates:: "But suppose he had the same weight of lychnite, would we say that he was in fact very wealthy?"

Erasistratus:: "Of course."

Socrates:: "Is it because the one thing is useful to us while the other is useless?"

Erasistratus:: "Yes."

Socrates:: "And that's also why among the Scythians houses are not property, because the Scythians have no use for a house; nor would a Scythian prefer the finest house over a heavy leather coat, since the one thing is useful to him while the other isn't. Again, we don't think that the Carthaginian coinage is property, since we couldn't possibly obtain from it what we need, as we do with silver; therefore it would be useless to us."

Erasistratus:: "Fair enough."

Socrates:: "It follows that everything that turns out to be useful to us is property, while everything useless is not."

In response to this Eryxias said:

Eryxias:: "How can that be, Socrates? When we're dealing with one another don't we engage in talking and looking and many other things? Would we consider these property? They do seem useful. But even so we haven't gained an impression of what property is. Everyone has pretty well agreed that something must be useful if it's going to be property, but since not all useful things are property, what kinds of useful things are?"

Socrates:: “What if we were to pursue the question again through a comparison with drugs, which were invented for ending illnesses? Would we have a better chance of finding what we’re looking for, namely, what it is that we treat as property and for what purpose the possession of property was invented? Possibly that approach would make it clearer to us. Now it appears that everything which is property must also be useful, and that what we call property is a species of these useful things. Therefore what we still have to do is consider for what use property is useful to use. For instance, all things which we use for work are useful, of course, just as all things that have life are animals, but of these animals we call one species man. Now suppose someone were to ask us what would have to be done away with so that we wouldn’t need medicine or medical instruments. Our response would be, if illnesses were removed from the body and didn’t occur at all, or if they were removed as soon as they did occur. Therefore it seems that medicine is the science which is useful for removing illnesses. “But if someone were then to ask us what would have to be removed so that we wouldn’t need property, would we have an answer? If we don’t, let’s start over again along these lines: if a person could live without food and drink, and not go hungry or thirsty, what need would he have of these things, or of money or anything else to provide himself with them?”

Eryxias:: “None, I suppose.”

Socrates:: “It’s the same with other things, too. If we had no need of the things that we presently require to take care of our bodies, heat and cold for instance, and everything else too which the body lacks but requires, then what passes for property would be useless to us, since no one would have any need at all of the things for whose sake we want property. The result for us would be satisfaction, as far as the persistent desires and needs of the body are concerned.

So if it’s to care for the body’s needs that the possession of property is useful, and if these needs were taken out of our way, we wouldn’t have any need for property, and property might not even exist at all.”

Eryxias:: “It looks like it.”

Socrates:: “Then the things which are useful for that business appear to us, I suppose, to be property.”

Eryxias agreed with this, but he was becoming seriously confused by the argument.

Socrates:: “What about this way of looking at it? Would we say that the same thing can be sometimes useful, but sometimes useless, for one specific purpose?”

Eryxias:: “No, I don’t think so. Instead, if we were to have any need of the thing for that one purpose, then I do think it’s useful, but if we don’t, then it isn’t.”

Socrates:: “So if we were able to make a gold statue without using fire, we wouldn’t have any need of fire for that purpose. And if we didn’t have any need of fire, it wouldn’t be useful to us either. The same argument applies to other things as well.”

Eryxias:: “It seems so.”

Socrates:: “And so it would appear that whatever isn’t needed when something is being done is also not useful to us in that particular case.”

Eryxias:: “That’s right.”

Socrates:: “Then if it should turn out one day that we were able to put an end to the body’s needs so that it no longer had any, and we could do this without silver, gold, and other things of that kind which we don’t actually use for the body (in the way that we use food, drink, clothing, blankets and houses), then it would appear that silver, gold, and other such things wouldn’t even be useful to us for this particular purpose, provided that the body's needs can one day be removed without using them."

Eryxias:: "You're right."

Socrates:: "Then it would appear that these things aren't property to us either if they aren't useful, though they would be things which enable us to obtain what is useful."

Eryxias:: "Socrates, I could never be convinced that gold, silver, and other things like them are not property, as you say. I'm certainly convinced that the things which are useless to us are not property, and that property ranks among the most useful things besides. But I'm not persuaded that these things are not actually useful to us for living, since we can obtain what we require by means of them."

Socrates:: "Come on then, what would we say to this? Are there any teachers of music, letters, or some other skill, who obtain what they require for themselves by receiving compensation in return for their teaching?"

Eryxias:: "There are."

Socrates:: "So it's with this skill of theirs that these people can obtain what they require, by receiving something in return for that skill in the same way that we receive things in return for gold and silver."

Eryxias:: "Yes."

Socrates:: "But if it's with this that they obtain what they use for living, then it would actually be useful in itself for living. We did say, didn't we, that property is useful because with it we're able to obtain what we require for the body?"

Eryxias:: "Yes we did."

Socrates:: "So if these skills are classified as useful for this purpose, then it appears they are property, for the same reason that gold and silver are property. It's clear too that those who possess these skills are wealthier. Yet a little earlier we were having a lot of trouble accepting the argument that these are the wealthiest people. Based on the agreement we've just reached, however, it would have to follow that the more skillful are sometimes wealthier. For instance, if someone were to ask us whether we thought a horse is useful to everybody, wouldn't you answer that it's useful to those who know how to use a horse, but not to those who don't?"

Eryxias:: "I would."

Socrates:: "And by the same argument medicine also isn't useful to everybody, but only to the person who knows how to use it?"

Eryxias:: "Yes."

Socrates:: "Is it the same with everything else too?"

Eryxias:: "Apparently."

Socrates:: "Then gold, silver, and the other things generally regarded as property would be useful only to the one who knows how they should be used?"

Eryxias:: "Right."

Socrates:: "Now weren't we under the impression earlier that it took a gentleman to know when and how to use each of these things?"

Eryxias:: "We were."

Socrates:: "Then these things would be useful only to gentlemen, since they're the ones who know how they should be used. But if these are useful only to them, then to them alone, it seems, would these things be property. It appears, moreover, that if someone were to take a person who knew nothing about riding a horse and who owned horses which were useless to him, and then made him knowledgeable about horses, he would have made him at the same time wealthier too, since he has taken what was previously useless to this man and made it useful. For by giving the man some knowledge he’s instantly made him wealthy.”

Eryxias:: “It seems so.”

Socrates:: “And yet I’m sure I could also swear on Critias’ behalf that he’s not convinced by any of these arguments.”

Critias:: “I’m certainly not. In fact I'd be crazy if I were. But go on and finish your argument that the things generally accepted as money—silver, gold, and other such things—are not property. You can’t imagine how much I admire these arguments of yours as I’m listening to you relate them right now.”

Socrates:: “I think, Critias, that you enjoy listening to me in the same way that you enjoy listening to the rhapsodes who sing Homer’s poems: you don’t think a word of it is true. But come on, what would we say to this? Would you say that some things are useful for house-builders when they are constructing a house?”

Critias:: “Yes, I think so.”

Socrates:: “Would we say that those things are useful which they use for this construction—stones, bricks, boards, and that kind of thing? Or are these things also useful, the tools they used to build the house and with which they provided themselves with the boards and the stones, and likewise the tools for these tools?”

Critias:: “I suppose that all the things involved in the operation are useful.”

Socrates:: “Isn’t this the case with all other activities? Not only are these things themselves useful which we use for each of our tasks, but also those by which we acquire these things and without which our work couldn’t be done?”

Critias:: “Exactly.”

Socrates:: “Then likewise the things with which these last things were made, and anything that came before them, and, again, the things with which these were made, and once more the things that preceded them, on and on endlessly—do all these things inevitably appear useful for the production of our work?”

Critias:: “Yes, that might well be the case.”

Socrates:: “Now what if a person possessed food, drink, clothing, and whatever else he’s likely to use for his body, would he have any additional need for gold, silver, or anything else with which to acquire them, seeing that he already possesses them?”

Critias:: “I doubt it.”

Socrates:: “Do you suppose a situation could occur when a man would need none of these things for the use of his body?”

Critias:: “No, I don’t.”

Socrates:: “Now if these things were to appear useless for this purpose, wouldn’t it follow that they can never appear useful? After all it was a basis of our discussion that things could not be sometimes useful, but sometimes useless, for one specific purpose.”

Critias:: “Well, in that respect, at least, our arguments may be in agreement: if these things should ever be useful for this purpose, they would never turn out also to be useless. As it is, for doing certain things…

Socrates:: …some for doing wicked things, others for doing good things?”

Critias:: “Yes, I would say so.”

Socrates:: “Can something wicked be useful for the purpose of doing something good?”

Critias:: “No, I don’t think so.”

Socrates:: “Would we say that those acts are good which a person performs virtuously?”

Critias:: “Yes.”

Socrates:: “Can a person learn anything which is taught orally, if he’s completely deprived of his ability to hear somebody else?”

Critias:: “No, by Zeus, I don’t think so.”

Socrates:: “So it would appear that hearing is to be classified as useful for virtue, since virtue can be taught through the sense of hearing and we make use of this sense for learning.”

Critias:: “Yes.”

Socrates:: “Since medicine can put an end to a person’s illness, it seems that sometimes medicine also may be classified as useful for virtue, if a person can acquire the sense of hearing through medicine.”

Critias:: “That may be so.”

Socrates:: “And again, if we were to obtain medicine in exchange for property, property would obviously be useful for virtue too.”

Critias:: “Yes, that’s quite true.”

Socrates:: “Likewise also the means by which we obtain the property?”

Critias:: “Absolutely.”

Socrates:: “Do you suppose that a person could obtain money by wicked and disgraceful means, and in return get hold of the medical knowledge by which he would be able to hear after having been unable to hear, and that he could make use of that same ability for excellence or for other things of a similar kind?”

Critias:: “I certainly think so.”

Socrates:: “Surely nothing wicked could be useful for virtue.”

Critias:: “No, it couldn’t.”

Socrates:: “Then those things by which we obtain what is useful for one purpose or another are not necessarily also useful for that same purpose. Otherwise bad things would sometimes appear to be useful for a good purpose. Perhaps this will make it clearer. If things are useful for one purpose or another, and this purpose couldn’t come into existence unless those things existed beforehand, tell me, what would you say about that? Can ignorance be useful for knowledge, or sickness for health, or wickedness for virtue?”

Critias:: “I don’t think so.”

Socrates:: “Yet on this we would agree, that knowledge can’t belong to a person if ignorance didn’t exist in him beforehand, that health can’t belong to him if sickness didn’t exist in him beforehand, and that excellence can’t belong to him if wickedness didn’t exist in him beforehand.”

Critias:: “Yes, I suppose we would.”

Socrates:: “Then it would appear that those things which are required for the creation of something else are not necessarily also useful for that thing. Otherwise it would seem that ignorance is useful for knowledge, sickness for health, and wickedness for virtue.”

Critias was finding it very hard to go along with these arguments, that not everything we had mentioned could be property. When I realized that it would be—as the saying goes—as easy to persuade him as it is to boil a stone, I said: “Let’s forget about those arguments, since we can’t agree whether or not useful things and property are the same. But what would we say about this? Would we consider a person to be more prosperous and better if his physical requirements and his requirements for day to day living were extremely numerous, or if they were as few and simple as possible? Maybe the best way to look at it would be to compare the person with himself by considering whether his condition is better when he is sick or when he is healthy.”

Critias:: “We certainly don’t have to consider that for very long.”

Socrates:: “No doubt it’s because everybody easily recognizes that the healthy person’s condition is superior to the sick person’s. Now then, in what circumstance would we have a greater need for all kinds of things, when we’re ill or when we’re healthy?”

Critias:: “When we’re ill.”

Socrates:: “So it’s when we’re in the worst condition that we have the most powerful and most numerous desires and needs, as far as physical pleasures are concerned?”

Critias:: “Yes.”

Socrates:: “And just as a person is in the best condition when he himself has the fewest requirements of that kind, can the same reasoning apply to two people, where one’s desires and needs are powerful and numerous, while the other’s are few and gentle? For example, consider anybody at all who is a gambler, or a drunkard, or else a glutton—all such conditions amount to nothing but desires.”

Critias:: “Exactly.”

Socrates:: “But all these desires are nothing but the need for something; and those who have the greatest needs are in a worse condition than those who have no needs at all or as few as possible.”

Critias:: “As far as I’m concerned, people like that are certainly in a very bad state; the more they need the worse off they are.”

Socrates:: “And so do we think that things can’t be useful for some purpose unless we need them for that purpose?”

Critias:: “That’s right.”

Socrates:: “Then if we suppose that these things are useful for taking care of the body’s needs, mustn’t we also require them for this purpose?”

Critias:: “I think so.”

Socrates:: “So the person who possesses the largest number of useful things for this purpose would also appear to require the largest number of things for this purpose, since he’s bound to require all the things that are useful.”

Critias:: “That’s how it seems to me.”

Socrates:: “According to this argument, at least, it appears that those who have a lot of property must also need many of the things required to take care of the body, since property was seen as useful for this purpose. So the wealthiest people would necessarily appear to us to be in the worst condition, since they are in need of the greatest number of these things.”

## Euthydemus

Duplicity of meaning. What do we mean? One might find it difficult to learn the intelligible high contrast in this dialog, but one will find it near the end of it. This dialog opens with two brothers, boasting to be the complete pancratiasts, or all around athletes. They are going to add to that distinction by claiming also to be the best athlete of the mind. Plato associates them at the end of the dialog as being the most influential men in society. So we have the best perceptible athletes for war and the best intelligible athletes for war being presented. And we have a distinction between what they say with their mouth and what is observed in their behavior. This whole thing then covers every endeavor of man, from ground-pounder to politician.

This dialog employs two brothers and concerns the duplicity of meaning; Plato employs all forms of duplicity to write this dialog. At the root of it is the duplicity between the perceptible and the intelligible. It is, as always, a grammar lesson.

One of the characteristics of common grammar is that it is highly elliptical. A noun is a container, which can contain many relative differences which must be parsed by mind. In short, a noun denotes just one thing, but if we parse it, we do that parsing in terms of relative differences, or verbs, i.e. we are converting a segment into a circle. Recent so called Venn Diagrammars can never figure out why they end up contradicting themselves. They start off by drawing a circle or something else, and then another inside it, or beside it, or again intersecting it, when in fact, this is wholly silly. They imagine that reasoning involves geographical location which is something only a simpleton would do. A true diagrammer realizes what they are doing, they are turning the one into the many, i.e. using a segment to construct a circle. This error in diagramming is traced all the way back to Aristotle, who was not the sharpest tool in the shed.

One makes the one into the many in geometry exactly as stated in geometry, by using a segment which can only be parsed in term of relative differences by using it to draw a circle. The circle, when denoting our abilities, would end up as some other figure, but then we are getting ahead of ourselves. We learn how to pair geometry to logic, step by step. Those who try to take a short cut to it do so because they simply cannot see where they are going to begin with.

We have to learn how to turn the one, as just one thing, into the many, both in logic and analogic. In this wise, one can view the straightedge as allowing us the ability to denote the one, while the compass gives us the ability to denote the many. When one is simple and just starting to learn, it is best to say simply straightedge and compass construction, but it should also be told to a student that during their learning they will come to see them not only as perceptible tools, but intelligibly as applying to the two elements of any thing at all, the one and the many. Thus, the perceptible is a given by which the intelligible is grown. This is how we learn. The perceptible is the seed of comprehension and it will grow proportional to one's intelligence but only if they cultivate it. We start learning how to farm using our own self.

A literate diagrammer would know geometry instead of scribbling. So called Venn Diagrams are a mental digression into childhood. As a definition determines inclusion and exclusion to a class, then if I draw a circle within a circle, the inner circle excludes the outer forming a logical contradiction. Can a member of a class exclude the class of which it is a member? Or, is one simply confused as to how to present the one and the many? And does a relative difference contain a boundary or does a boundary contain a relative difference? In the simple, a segment which is just one thing can never many. A circle is just one thing as the recursion of one's, each quite distinct. One thing and one set of things are both one, but not the same one. One is not different from itself and one's are not the same one. We learn this when we take, for example the digits from 0 to 9. They become differentiated when we add another place value. It is called counting. Counting and naming are synonyms in the intelligible. From 0 to 9 imagine a segment, but in adding place value, imagine it accomplished by a circle. Most people imagine numeric progression as being linear, when in fact, they should be considering it more often than not, as planer. There is more than one way to map it, but basically by induction and deduction, linear progression or geometric progression. I can imagine progression, in other words, not only by multiplication, but also by division. So, if I take my basic symbolic set, in any base, I can make a segment with it. By recursion, I might elect to draw a circle affording recursion of it in that manner.

As we only have two concepts to define any thing, two-dimensional geometry is wholly sufficient for mapping any number of so called dimensions, or binary measurements. Dimension simply means talking in binary, it is not some mystical, again, geometric location existing in the minds of a terminal idiot. One should not pay attention to those who float off into the bananosphere of their own choosing.

Grammar systems are methods of utilizing binary in standard formats as determined by binary recursion. When we get confused in terms of assertion and denial, which are binary, it is not the fault of the grammar, but the fault of those trying to be literate.

Wisdom and the conceit of wisdom is what is called in the knowledge of meaning.

## Euthydemus.

Translated by George Burges, M. A.

THE PERSONS OF THE DIALOGUE.

Crito, Socrates, Euthydemus, Dionysodorus,
Clinias, Ctesippus.

---

Crito:: Who was he, Socrates, with whom you were conversing yesterday in the Lyceum? where so great a crowd stood around you, that though I approached, desirous to hear, I could hear nothing clearly. However, leaning over I looked down, and it seemed to me that it was a stranger with whom you were conversing. Who was he?

Socrates:: About which of them, Crito, are you inquiring? for there was not one, but two.

Crito:: He whom I mean, sat the third from you on your right hand; but in the midst of you was a youth, the son of Axiochus, who appeared to me, Socrates, to have made a great progress, and does not differ much in age from our Critobulus; though that one is weazen-faced, but this one lanky but of a fair and engaging aspect.

Socrates:: This is Euthydemus, Crito, about whom you are inquiring: but he who sat by me, on my left hand, was his brother Dionysodorus, who also partook of the discourse.

Crito:: I know neither of them, Socrates.

Socrates:: They are some new wisdom-mongers, as it appears.

Crito:: Whence do they come; and what is their wisdom?

Socrates:: They are of a race some where hence, I think of Chius; but they migrated to Thurii, and having fled from thence, are dwelling for many years about these parts. But as to your inquiry respecting their wisdom, it is wonderful, Crito; they are indeed all-wise. Since even I have not hitherto known they were pancratiasts: for they are skilled in every kind of contest; not after the manner of the brother pancratiasts of Acarnania; for these are able to contend with their body alone; but those, in the first place, are most powerful in body, and excel in the contest, which consists in vanquishing all men. For they are very skilful themselves in contending with their weapons, and they know how to impart their skill to any other person who will pay them. In the next place they are most powerful in judicial contests, and are able both to contend themselves, and instruct others, to speak and write speeches suited for courts of justice. Formerly they were terrible in these things alone; but now they have put a finish to their pancratiastic art; for the kind of contest, which was left by them undone, they have now completed, so that no one is able to lift a hand against them; so skilful have they become in verbal contests, and in confuting whatever happens to be said, whether it be true or false. I have a mind therefore, Crito, to put myself under these men; for they say that in a short time they can make any other person whatever skilled in the very same things.

Crito:: But fear you not, Socrates, for your age, that you are already too old?

Socrates:: By no means, Crito, as I have a sufficient argument and consolation against fear. For these very men, so to say, have, though old, begun the study of this wisdom, which I am longing for, in the art of contending. For last year, or the year before last, they were not wise in the least. But of one thing only I am afraid, lest I should bring disgrace upon these strangers, as I do upon the harper Connus, the son of Metrobius, who teaches me even now to play on the harp, The boys, therefore, who are my school-fellows, on seeing me, laugh, and call Connus the teacher of old men. Lest therefore some one should reproach these strangers with the very same thing, and they, dreading this, should be unwilling to receive me, I have, Crito, persuaded other old men to go thither as my school-fellows; and here also I will endeavor to persuade others; and do you frequent the school with us. Perhaps too, as an allurement, we may bring your sons to them; for having a hankering after them, they will, I know, instruct even us.

Crito:: There is nothing to hinder us, Socrates, if it seems good to you. But first tell me what is the wisdom of these men, that I may know what it is we shall learn.

Socrates:: You shall quickly hear, since I cannot say that I did not attend to them; for I paid great attention, and very well remember what they said; and I will endeavor to relate the whole to you from the beginning. For, by some act of a god, I had seated myself alone in the Apodyterium where you saw me: and I had it just in my mind to rise up; but as I was rising up, there was the accustomed signal of my Genius. I therefore sat down again; and soon after those two, Euthydemus and Dionysodorus, entered, and with them many others, disciples, it seemed to me; and having entered, they sauntered about in the covered course of the gymnasium. But they had not yet gone two or three rounds, when Clinias entered, who you say, and say truly, has made a great progress. Behind him there were many others his lovers, and Ctesippus too, a youth of the district of Paganea, very beautiful and good naturally, except that he was saucy in consequence of his youth. Clinias, therefore, seeing me from the entrance sitting alone, came straight towards me, and sat down on my right hand, as you say. And Dionysodorus and Euthydemus perceiving him, at first stopped and conversed with each other, looking at us on this side and on that for I beheld them very attentively and then advancing, they sat down, Euthydemus by the youth, and the other Dionysodorus by me, on my left hand. The rest seated themselves just as each happened to do. These therefore I embraced, not having seen them for some time.

After this, I said to Clinias, These men, Euthydemus and Dionysodorus, O Clinias, are wise not in small but in great things. For they know every thing pertaining to war, and whatever he, who would be a good general, ought to know, the arrangement and management of encampments, and whatever is to be taught for engaging with weapons; and they know too how to render a person able to assist himself in courts of justice, when any one injures him. For thus speaking, however, I was held in contempt by them; and both therefore laughed, looking at each other.

Euthydemus:: We no longer engage in these matters as being serious, Socrates, but as of secondary moment.

Socrates:: And I being astonished said, Your serious studies must indeed be beautiful, if such great affairs are of secondary moment with you. Now by the gods inform me, what is this beautiful study of yours.

Euthydemus:: We think, Socrates, that we are able of all men to teach virtue in the best and quickest manner.

Socrates:: O Jupiter! what a mighty thing are you telling! From whence did you get this windfall? I had hitherto conceived of you, for the most part, as I just now said, that you were very skilful in this, to fight in arms; and this I have said respecting you. For when you first tarried here, I remember, you publicly boasted of this. But now, if in reality you possess this science, may you be propitious. For I invoke you, as if you were gods, entreating you to pardon what I have before said. But see, Euthydemus and Dionysodorus, if you have boasted truly: for it is by no means wonderful, from the magnitude of the boast, that a person should disbelieve.

Euthydemus:: Rest assured, Socrates, that it is so.

Socrates:: I therefore consider you much more blessed in this possession, than is the great king in his empire. But tell me thus much, whether you intend to exhibit this wisdom? or how have you determined?

Euthydemus:: We are here, Socrates, for this very purpose, as being about to exhibit and to teach, if any one is willing to learn.

Socrates:: But that all, who do not possess wisdom, will be willing to learn, I am a guarantee: first, I myself am willing, and next, Clinias here; and in addition to us, Ctesippus and all the rest here

—I pointed out to him the lovers of Clinias, who happened to be standing round us: for Ctesippus at that time was sitting at a distance from Clinias. And as it seemed to me, Euthydemus, while he was discoursing with me, did by his stooping forward darken Ctesippus’s view of Clinias, who was seated in the middle of us. Ctesippus therefore wishing to see his boy-love, and at the same time curious to hear, was the first to leap up, and stood directly opposite to me. Thus too the rest, when they saw him do so, stood around us, both the lovers of Clinias, and the friends of Euthydemus and Dionysodorus. I therefore, pointing them out to Euthydemus, informed him they were all ready to learn. And Ctesippus and the rest very readily assented; and all of them in common exhorted him to exhibit the power of his wisdom.

I therefore said, Do, Euthydemus and Dionysodorus, by all means gratify these persons, and exhibit your wisdom for my sake. Now to demonstrate the most of the things pertaining to this subject will, it is evident, be no small labor; but tell me this, whether you are able to make him alone a good man, who is already persuaded that he ought to be instructed by you, or him also, who is not yet persuaded, through his not believing that virtue is a thing to be learnt, or that you are the teachers of it. Come then, say, is it the business of the same art, to persuade a man thus affected, that virtue may be taught, and that you are the persons from whom one could learn it the best; or is it of another?

Dionysodorus:: It is the business, Socrates, of the very same art.

Socrates:: You therefore, Dionysodorus, can, the best of all men now existing, exhort to philosophy and the study of virtue.

Dionysodorus:: We think we can, Socrates.

Socrates:: Of other things put off, for another time the exhibition, but show us this now. Persuade this youth that he ought to philosophize, and study virtue; and gratify me, and all these here. For this has happened to him, that both I, and all these, are desirous for him to become the best of men. He is the son of Axiochus, who is descended from the Alcibiades of olden times, and the cousin of now-living Alcibiades; and his name is Clinias. But he is still young, and we have a fear about him, as is reasonable in the case of a youth, lest some one should anticipate us, and by turning his mind to some other pursuit, corrupt it. You are therefore come most opportunely; and, if it makes no difference to you, make a trial of the youth and converse with him before us.

When I had thus spoken nearly these very words, Euthydemus replied with courage, and even with confidence;

Euthydemus:: It makes no difference, Socrates, if the youth is but willing to answer.

Socrates:: Nay, he is accustomed to do this. For frequently do these coming ask many questions of, and discourse much with him, so that he is sufficiently bold to answer.

But how, O Crito, shall I narrate to you correctly what occurred after this? For it is no trifling labor to be able to take up and go through wisdom so boundless. So that I am compelled, as poets are, in beginning the tale, to invoke the Muses and Mnemosyne. Euthydemus, then, began, I think, after some such manner.

Euthydemus:: Whether, O Clinias, are the men who learn, the wise or the unwise?

Socrates:: But the youth, through the greatness of the question, blushed, and being at a loss, looked at me. And I, perceiving he was flurried, said, Cheer up, Clinias, and answer boldly whatever seems good to you; for perhaps you will be benefited to the greatest extent. Whereupon Dionysodorus, bending a little towards my ear, and with a smile on his countenance, said;

Dionysodorus:: I tell you beforehand, Socrates, that in whatever manner the youth may answer, he will be confuted.

Socrates:: While he was thus speaking, Clinias happened to give an answer, so that it was not possible for me to exhort the youth to be on his guard.

And he answered, that;

Clinias:: the wise are those who learn.

Euthydemus:: Do you call certain persons teachers, or not?

Socrates:: He admitted he did.

Euthydemus:: Are not then teachers the teachers of those that learn? As, for instance, a harper and a grammarian were the teachers of you and other boys, and you were their disciples.

Socrates:: He assented.

Euthydemus:: When you learned, therefore, you did not know what you were learning.

Clinias:: I did not.

Euthydemus:: Were you then wise, when you were ignorant of these things?

Clinias:: By no means.

Euthydemus:: If then you were not wise, you were ignorant?

Clinias:: Entirely.

Euthydemus:: You then, when learning what you did not know, learned them as being ignorant?

Socrates:: The youth nodded assent.

Euthydemus:: The ignorant therefore learn, O Clinias, and not the wise, as you think.

Socrates:: On his saying this, the followers of Dionysodorus and Euthydemus, just like a chorus on a signal given by the ballet-master, made a great uproar and laughed. And before the youth could recover his breath, Dionysodorus, taking him up, said well and cleverly

Dionysodorus:: But, Clinias, when the grammarian says any thing by word of mouth, are the boys who learn what he so gives out, the wise or the unwise?

Clinias:: The wise.

Dionysodorus:: The wise therefore learn, and not the ignorant; and you did not rightly just now answer Euthydemus.

Socrates:: On this, the admirers of these men laughed very loudly and made an uproar, struck with their wisdom; but the rest of us were amazed and remained silent. Euthydemus, therefore, perceiving our amazement, that we might yet still more wonder at him, did not let the lad go, but kept interrogating him; and, like skilful dancers, twisted his inquiries about the same thing in a double maze, and said;

Euthydemus:: Whether do learners learn what they know, or what they do not know?

Socrates:: And again Dionysodorus said to me in a whisper;

Dionysodorus:: This also, Socrates, is just such another question as the former.

Socrates:: O Jupiter, even the former question appeared to be honorable to you.

Dionysodorus:: We always ask, Socrates, such-like questions, from which there is no escape.

Socrates:: Hence you appear to me, to be in high repute amongst your disciples.

In the mean time Clinias gave an answer to Euthydemus, that

Clinias:: learners learn what they do not know.

Socrates:: And Euthydemus interrogated him in the same manner as before.

Euthydemus:: Do you not, know your letters?

Clinias:: I do.

Euthydemus:: Do you not then know all?

Socrates:: He acknowledged it.

Euthydemus:: When therefore any one recites any thing, does he not recite letters?

Socrates:: He confessed it.

Euthydemus:: Hence he recites, something of what you know, if you know all the letters.

Socrates:: This also he acknowledged.

Euthydemus:: What then, do you not learn that, which some one recites?

Socrates:: He assented.

Euthydemus:: But do you learn, not knowing your letters?

Clinias:: I do not, but I learn, having known them.

Euthydemus:: Do you not therefore learn what you know, if you know all the letters?

Socrates:: He acknowledged it.

Euthydemus:: Hence, you have not answered rightly.

Socrates:: This had been spoken not violently by Euthydemus, when Dionysodorus, taking up the discourse, as if it had been a ball, again aimed at the lad as at a mark, and said;

Dionysodorus:: Euthydemus is deceiving you, Clinias. For tell me, is it not to learn, to receive the science of that which any one learns?

Socrates:: Clinias assented.

Dionysodorus:: But, to know, is it any thing else than to possess science?

Socrates:: He acknowledged it was nothing else.

Dionysodorus:: To know not, then, is to not possess science.

Socrates:: He assented to this.

Dionysodorus:: Whether then are the receivers of a thing, they who possess it already, or they who do not possess it?

Clinias:: They who do not possess it.

Dionysodorus:: Have you not then confessed that they who do not know, are among those who do not possess?

Socrates:: he nodded assent.

Dionysodorus:: They that learn, then, belong to those that receive, and not to those that possess.

Socrates:: He granted it.

Dionysodorus:: They therefore, Clinias, learn, who know not; and not they who know.

Socrates:: After this Euthydemus rushed to the third, as it were, wrestler-fall, being about to throw down the youth. But I, seeing the lad just sinking, and wishing to give him a respite, lest he should exhibit cowardice before us, said, in order to console him;

Do not wonder, Clinias, if these discourses appear to you to be unusual. For perhaps you do not perceive what the two strangers are doing about you. They are doing the same, that persons do in the initiation of the Corybantes, when they make an enthronement for him whom they are about to initiate; for there takes place the leading out to dance and sports, as I think you would understand if you had been initiated in these mysteries. And now these do nothing else but dance, and, as it were, sportively leap round, as if after this they would initiate you. Now therefore think that you have heard the first part of the sacred rites of sophists. For, in the first place, as Prodicus says, it is necessary to learn the proper signification of words; which these strangers exhibit to you, because you have not perceived that men apply “to learn” to a thing of this kind, when any one, having at first no knowledge respecting a thing, afterwards receives the knowledge of it; and when any one, having this knowledge, does by this very knowledge look into the very same thing, either while being done or being said. But they rather call this “to comprehend” than “to learn;” although sometimes they call it “to learn.” But this, as they show, has lain hid from you, that the same word is applied to persons affected in a contrary manner, both to him who knows, and to him who does not know. Similar to this is that which was in the second question; in which they asked you, whether men learn what they know, or what they do not. These indeed are the playthings of learning. Hence I say that these men are playing with you. But I call these a plaything on this account; because, although some one may learn many, or even all such particulars as these, yet he would not in any respect know better how things exist. However, by the difference of words he may play with men, tripping up and overturning what they assert; just as they do, who, drawing away the stools from under those, who are going to sit down, are delighted and laugh, when they see him whom they have overturned lying on his back. Consider therefore what has happened to you from these men as fun. But what is to follow, it is clear, they will exhibit to you as serious concerns; and I will be their guide, that they may give what they promised me. For they said they would exhibit their exhortatory wisdom: but now, it appears to me, they have thought it was requisite first to play with you.

Thus far therefore, Euthydemus and Dionysodorus, let it have been made a sport by you; and there is perhaps enough of it. But in the next place exhort the lad, and show how he must pay attention to wisdom and virtue. But first I will point out to you how I understand the matter, and what I desire to hear concerning it. If, then, I shall appear to you to do this in a simple and ridiculous manner, do not laugh at me; for, through a desire of hearing your wisdom, I will venture for a time to speak before you off-hand. Endure therefore to hear me, both you and your disciples, without laughing: but do you, O son of Axiochus, answer me.

Do we not all then wish to do well? Or is this question one of the ridiculous, of which I was just now afraid? For surely it is stupid to ask questions of this kind; for who is there that does not wish to do well?

Clinias:: There is no one that does not.

Socrates:: Be it so.

But in the next place, since we wish to do well, in what manner shall we do well? Shall we say, if we have many good things? Or is this answer still more stupid than the former? for it is evident that this also must be the case.

He assented.

But come, what are the things, of those that exist, good for us? Or does it appear to be a thing neither difficult, nor belonging to a solemn person, to be at no loss in this? For every one will tell us that it is good to be rich; will they not?

Clinias:: Certainly.

Socrates:: And is it not also good to be in health, to be beautiful, and to be sufficiently furnished with other things pertaining to the body?

So it appeared to him.

But nobility also, power, and honors, in one’s own country are plainly good.

He admitted it.

What then, yet remains for us among things good? Is it to be temperate, just, and brave? Whether, by Jupiter, Clinias, do you think that we shall put down these things properly, if we consider them as good? or if we do not? for perhaps this may be disputed by some one. But how does it appear to you?

Clinias:: That they are good.

Socrates:: Be it so; but in what part of the chorus shall we place wisdom? among things good? or how say you?

Clinias:: Among things good.

Socrates:: But consider lest among things good we omit what is worthy of mention.

Clinias:: But, we appear to have omitted nothing.

Socrates:: However, I recollecting said, But, by Jupiter, we appear to have nearly omitted the greatest of things good.

Clinias:: What is that?

Socrates:: Felicity, Clinias; which all men, and even the very bad, say is the greatest good.

Clinias:: What you say is true.

Socrates:: And I again, correcting myself, said, We have nearly, both I and thou, son of Axiochus, rendered ourselves ridiculous to these strangers.

Clinias:: How so?

Socrates:: Because, having placed felicity in the things we before enumerated, we now again speak of it.

Clinias:: But why is this improper?

Socrates:: It is surely ridiculous to adduce that again, which was formerly proposed, and to say the same things twice.

Clinias:: How do you mean?

Socrates:: Wisdom, is certainly felicity: this even a boy knows.

And he indeed was astonished, so young and simple is he. And I, perceiving his astonishment, said;

Do you not know, Clinias, that as regards the felicity of flute-playing, flute-players are the most happy?

He admitted it.

Are not then, grammarians also most happy as regards the felicity of writing and reading?

Clinias:: Certainly.

Socrates:: But what, as regards the dangers of the sea, do you think that any one, so to say generally, are more happy than wise pilots?

Clinias:: Certainly not.

Socrates:: Again, With whom would you, when in the army, more readily share in danger and fortune? with a clever, or ignorant general?

Clinias:: With a wise one.

Socrates:: And under whom would you, when you are dangerously ill, more readily be? under a clever or ignorant physician?

Clinias:: Under a clever one.

Socrates:: Is it not therefore, because you think that you would do better, by acting with a wise person than an ignorant one?

He granted it.

Wisdom, then, every where renders men happy; for surely no one can ever err through wisdom; but through this he must act rightly, and obtain his end: for otherwise it would not be wisdom.

At length, I know not how, we summarily agreed that this was the case; that, to whom wisdom is present, to him nothing of felicity is wanting.

After we had agreed on this point, I again asked him, how with regard to us would be what had been previously admitted? For, we admitted that if many good things were present with us, we should be happy and do well.

He assented to this.

Should we then be happy through present good, if it did not benefit us, or if it did?

Clinias:: If it benefited us.

Socrates:: Would then any thing benefit us, if we only possessed it, but did not use it? As, for instance, if we possessed much food, but did not eat it; or drink, but did not drink it; could we be benefited at all?

Clinias:: Certainly not.

Socrates:: But if all artificers had every thing requisite prepared for them, each for his own work, but did not use them, when thus procured, would they do well through the possession merely, because they possessed every thing which an artificer ought to possess? Thus, if a carpenter had all kinds of instruments and wood prepared for him in sufficiency, but yet should fashion nothing, would he be benefited at all from the possession?

Clinias:: By no means.

Socrates:: But what, should any one possess wealth, and all such things as we now denominate good, and should not use them, would he be happy through the possession of these goods?

Clinias:: He certainly would not, Socrates.

Socrates:: It is necessary then, as it seems, that he, who is to be happy, should not only possess good things of this kind, but should likewise use them.

Clinias:: You speak truly.

Socrates:: Is not then, Clinias, the possession and the use of good sufficient to make any one happy?

Clinias:: It appears so to me.

Socrates:: Whether, if any one uses good things properly, or if he does not?

Clinias:: If he uses them properly.

Socrates:: You say correctly, for I think the evil is greater if a person uses any thing whatever not correctly, than if he lets it alone. For the former is wrong; but the latter is neither right nor wrong; or do we not say so?

He assented.

What then? In the workmanship and use of things pertaining to wood, is there any thing else that produces a right use than the science of a carpenter?

Clinias:: Certainly not.

Socrates:: So too, in the workmanship relating to vases, it is science which causes for them a right use.

He admitted it.

Whether then, with respect to the use of those goods which we first mentioned, wealth, health, and beauty, is it science, leading and directing properly action, which enables us to use every thing of this kind properly, or is it any thing else?

Clinias:: It is science.

Socrates:: Science, then, imparts to men in possession and action, not only happiness, but, as it seems, likewise the well-doing.

He confessed it.

Is there then, by Jupiter, any advantage to be derived from other possessions, without prudence and wisdom? Will a man be benefited, who, without intellect, possesses many things, and performs many actions? or, with intellect, possesses and performs a few? Consider it thus. Will he not, by doing less, err less? and erring less, will he not act less improperly? And acting less improperly, will he not be less miserable?

Clinias:: Entirely so.

Socrates:: Whether then will he perform fewer things being poor, than being rich?

Clinias:: Being poor.

Socrates:: And whether being weak or strong?

Clinias:: Being weak.

Socrates:: Whether also, being honored or dishonored?

Clinias:: Being dishonored.

Socrates:: And whether, being brave and temperate, will he do less, or being timid?

Clinias:: Being timid?

Socrates:: Will not then this happen if he is indolent rather than active?

He admitted it.

And if he is slow, rather than quick? and if he sees and hears dully, rather than quickly?

In every thing of this kind we agreed with each other.

And to crown all, it very nearly appears, Clinias, that, with respect to all the things which we first asserted to be good, the conclusion is not about this, that they are, taken by themselves, good naturally, but, as it seems, that they exist in this manner; that if ignorance guides them, they are greater evils than their contraries, by how much the more capable they are of ministering to that evil leader; but that if prudence and wisdom lead them, they are greater goods; but that taken by themselves, neither of them is of any worth.

Clinias:: It appears, to be as you say.

Socrates:: What then, from what has been said, takes place to us? Is it any thing else than this, that not one of the other things is either good or evil, but that of these, being two, wisdom is a good but ignorance an ill?

He assented.

Let us then, consider further, what still remains. Since we all of us are eager to be happy, and we appear to become such from using things, and from using them rightly, and science affords the correctness of use and felicity, it is requisite, as it seems, that every man should by all possible means endeavor to become most wise; or is it not so?

Clinias:: It is so.

Socrates:: And he ought to think that he receives this from his father, guardians, friends, and the rest, who profess themselves to be his lovers, much more than wealth; and to beg and pray strangers and fellow-citizens to impart wisdom, is in no respect base; nor is it reprehensible, Clinias, for the sake of this, to act the minister and slave to a lover and to every man, and to willingly serve him in any honorable service whatever, through an ardent desire of becoming wise. Or does it not appear so to you?

Clinias:: You appear, to me to speak very well.

Socrates:: If, Clinias, wisdom can indeed be taught, and does not exist of its own accord among men. For this is yet to be considered by us, and has not yet been assented to by me and you.

Clinias:: But to me, Socrates, it appears that it can be taught.

Socrates:: And I, being delighted, said, you speak beautifully, O best of men; and you have done well in liberating me from a long inquiry about this very thing, whether wisdom can, or cannot be taught. Now therefore since it appears to you that it can be taught, and that it is the only thing which can make a man happy and prosperous, would you say that any thing else is necessary than to philosophize? And have you a mind to do this?

Clinias:: Entirely so, Socrates, as much as possible.

Socrates:: And I, delighted to hear this, said, My pattern, O Dionysodorus and Euthydemus, of exhortatory discourses, such as I desired them to be, is of this kind, like a common person's perhaps, and stated at length with difficulty: but let whichever of you is willing, do this very thing according to art, and exhibit it to us. But if you are not willing to do this, show to the lad in order, from the point where I left off, whether he ought to get every science, or whether there is one, which, when he gets it, he will necessarily be a happy and good man; and what that science is. For, as I said in the beginning, it is of great consequence to us that this youth should become wise and good.

This then, Crito, did I say; and I paid very great attention to what followed, and considered after what manner they would handle the discourse, and whence they would begin, while they were exhorting the youth to study wisdom and virtue. Dionysodorus then, who was the elder of them, first began the conference; and all of us looked at him, as about to hear immediately some wonderful reasons; which indeed happened to us. For the man, Crito, commenced an admirable discourse, which it is proper for you to hear, as being an exhortation to virtue.

Dionysodorus:: Tell me, Socrates, and the rest of you, who express a desire for this youth to become wise, whether you are jesting when you make this assertion, or truly and seriously desire it?

Socrates:: It was then I perceived, that they thought we had been previously jesting, when we exhorted them to converse with the youth, and that on this account they too had been jesting, and had not been acting seriously by him. Perceiving this, I said still more strongly, that we were serious in a wonderful degree.

Dionysodorus:: See, Socrates that you do not hereafter deny what you now assert.

Socrates:: I have considered this: for I shall never deny it.

Dionysodorus:: What is it then? Say you that you wish him to become wise?

Socrates:: Certainly.

Dionysodorus:: But, is Clinias now wise or not?

Socrates:: He says, not yet at all, and he is no braggart.

Dionysodorus:: But do you, wish him to become wise, and not be unlearned?

Socrates:: We acknowledged it.

Dionysodorus:: Do you not then wish him to become what he is not; and to be no longer what he now is?

Socrates:: And I, on hearing this, was confused. But he, on my being confused, taking up the discourse, said,

Dionysodorus:: Since you wish him to be no longer what he now is, you wish, as it seems, for him to perish. And yet such friends and lovers would certainly be of much worth, who should consider it a thing of great moment for their boy-loves to perish.

Socrates:: Ctesippus on hearing this was indignant, on account of his love for the youth; and said;

Ctesippus:: O Thurian stranger, if it were not rather rude to say so, I would say, On your head be the evil; for knowing what do you falsely ascribe to me and the rest a thing of this kind, which I think it is unholy to assert, that I should be willing for this youth to perish.

Euthydemus:: But, does it appear to you, Ctesippus, that it is possible to speak falsely?

Ctesippus:: By Jupiter, it does, unless I am mad.

Euthydemus:: Whether, when a person is asserting a thing about which there is a discourse, or when not asserting it.

Ctesippus:: When asserting it.

Euthydemus:: If then he asserts it, he does not say any thing else of things existing than what he asserts?

Ctesippus:: For how should he do otherwise?

Euthydemus:: But of existing things that, of which he speaks, is one apart from the rest.

Ctesippus:: Certainly.

Euthydemus:: Does he then, when he speaks of that thing, not speak of that which has a being?

Ctesippus:: Yes.

Euthydemus:: But he who speaks of that which is, and of existing beings, speaks the truth; so that if Dionysodorus speaks of beings, he speaks the truth, and utters nothing false against you.

Ctesippus:: He does so; but he, who says this, does not speak, Euthydemus, of beings.

Euthydemus:: Are non-entities any thing else than things which are not?

Ctesippus:: They are not.

Euthydemus:: Therefore, non-entities are beings no where.

Ctesippus:: No where.

Euthydemus:: Is it possible then for any one to do any thing about non-entities, so as to make them to exist no where?

Ctesippus:: It does not appear to me, that he can.

Euthydemus:: What then? When orators speak to the people, do they nothing?

Ctesippus:: They do something.

Euthydemus:: If, then, they do something, do they not also make something?

Ctesippus:: Yes.

Euthydemus:: To speak, then, is to do and to make.

Socrates:: He assented.

Euthydemus:: But no one, speaks of non-entities: for he would make something; but you have acknowledged that no one can make non-entities: so that, according to your reasoning, no one can assert things which are false; but if Dionysodorus-speaks, he speaks things which are true, and he speaks of entities.

Ctesippus:: By Jupiter, it is so, Euthydemus. Yet he speaks of entities after a certain manner, though not as they subsist.

Dionysodorus:: How say you, Ctesippus? Are there some who speak of things as they are?

Ctesippus:: There are indeed; and these are men worthy and good, and who assert things which are true.

Dionysodorus:: What then? are not good things, well, and things evil, ill-conditioned?

Socrates:: He conceded.

Dionysodorus:: And do you not acknowledge that the worthy and the good speak of things as they are?

Ctesippus:: I do.

Dionysodorus:: The good therefore, Ctesippus, speak ill of evil things, if they speak of them as they are.

Ctesippus:: Truly, by Jupiter, they do very much so of bad men, for example; among whom, if you are persuaded by me, you will be careful not to be numbered, lest the good should speak ill of you; because you well know that the good speak ill of the bad.

Euthydemus:: Do they not also, speak in high terms of great men, and in warm terms of the fervent?

Ctesippus:: Very much so indeed; of cold men therefore they speak coldly, and assert that they converse frigidly.

Dionysodorus:: You are abusive, Ctesippus, you are abusive.

Ctesippus:: Not I, by Jupiter; for, Dionysodorus, I love you; but I admonish you as my companion, and I endeavor to persuade you, never in my presence to so rudely assert, that I wish for the destruction of those on whom I set a great value.

Socrates:: I then, since they seemed to me to conduct themselves in a rather rude manner towards each other, had some fun with Ctesippus, and said, It appears to me, Ctesippus, that we ought to receive from the strangers what they assert, if they are willing to give, and not to contend about a word. For if they can destroy men in such a manner, as to make them, from being wicked and senseless, good and wise, and this too whether they have discovered themselves, or learnt from some other person a corruption and destruction of this kind, so that having destroyed him who is wicked, they might afterwards exhibit him an honest man, if they know how to effect this, and it is evident that they do know; for they say that their newly discovered art does make men good after being wicked, we must therefore consent to this. Let them destroy the lad, and make him and all the rest of us wise. But if you young men are afraid, let the trial be made on me, as if I were a Carian; since, though an elderly man, I am prepared to run the risk; and I deliver myself up to this Dionysodorus, as Pelias did to Medea the Colchian woman. Let him destroy me, and, if he will, boil me, or do whatever else he pleases with me if he does but render me a good man. And Ctesippus said;

Ctesippus:: I also, Socrates, am prepared to deliver myself to these strangers, if they wish, for them to flay me more than they flay at present, provided my skin does not end in a bladder, like that of Marsyas, but in virtue. Dionysodorus indeed here thinks that I am angry with him. I am not, however, angry; but I contradict what I think he has not well said against me. But do not, my noble Dionysodorus, call contradiction reviling; for reviling is a different thing.

Dionysodorus:: Do you, Ctesippus, compose your discourse, as if contradiction existed?

Ctesippus:: Entirely, and very much so; or do you, Dionysodorus, think that there is not contradiction?

Dionysodorus:: You could not, prove that at any time, since you have heard no one contradicting another.

Ctesippus:: True; but let us now hear, whether I can prove it to you by Ctesippus contradicting Dionysodorus.

Dionysodorus:: Could you give a reason for this?

Ctesippus:: By all means.

Dionysodorus:: What then? are there words for each of the things that exist?

Ctesippus:: Certainly.

Dionysodorus:: Whether, then, as each thing is, or as it is not?

Ctesippus:: As it is.

Dionysodorus:: For if you remember, Ctesippus, we have just now shown that no one speaks of a thing as it is not. For no one is seen to speak of that which is not.

Ctesippus:: But why this? Do you and I contradict the less?

Dionysodorus:: Whether then, shall we contradict, if we both of us pronounce the word for the same thing, or shall we thus assert the same thing?

Socrates:: He admitted we should.

Dionysodorus:: But, when neither of us gives the word for that thing, shall we then contradict? Or, will it not follow, that thus neither will have made any mention at all of the thing?

Socrates:: And this too he granted.

Dionysodorus:: But, when I pronounce the word for that thing, and you for some other thing, do we then contradict each other? Or do I then speak of that thing, but you do not speak of it in any respect whatever? And how can he, who does not speak of a thing, contradict him who does?

Socrates:: And Ctesippus indeed was then silent. But I, wondering at the reasoning, said, How say you, Dionysodorus? For, though I have heard this reasoning often, and from many, yet I have always wondered at it. For Protagoras and others still more ancient have made much use of it. But to me it always appears to be wonderful, through its subverting the reasoning of others and itself too. I think, however, that I shall learn its truth the best from you. Is the reasoning then other than this, that it is not possible to assert things which are false? For this is the force of the argument. Is it not? And that the speaker asserts things which are true, or does not assert?

He admitted it.

Whether, then, is it not possible to assert things which are false, but possible to form a false opinion?

Dionysodorus:: It is not possible, to form even a false opinion.

Socrates:: There is then, no such thing as a false opinion at all.

Dionysodorus:: There is not.

Socrates:: Neither then is there ignorance, nor are there ignorant persons. Or would not this be ignorance, if there were the power to speak falsely of things?

Dionysodorus:: Certainly.

Socrates:: But, this is not possible.

Dionysodorus:: It is not.

Socrates:: Do you make this assertion, Dionysodorus, for the sake of talking, that you may say what is strange? or do you really think that no man is ignorant?

Dionysodorus:: Confute, the assertion.

Socrates:: Is it possible, according to your assertion, to confute when no man speaks falsely?

Euthydemus:: It is not.

Dionysodorus:: Neither did I, order you to confute. For how can any one order that, which does not exist?

Socrates:: O Euthydemus, I do not clearly understand these clever and coherent assertions; but I have somehow a muddled perception of them. Perhaps then I shall ask something rather unpleasant; but do you pardon me. See then. For if it is neither possible to speak falsely, nor to entertain a false opinion, nor to be ignorant, neither is it possible for any one to err, when he does any thing. For the doer cannot err in what he does. Do you not say so?

Euthydemus:: Just so.

Socrates:: This then, is the unpleasant question. For if we do not err, either acting, or speaking, or thinking, if this be the case, of what, by Jupiter, are ye come as the teachers? Did you not just now say, that you could, the best of all men, impart virtue to a person willing to learn?

Then said Dionysodorus, taking up the discourse;

Dionysodorus:: Are you such a crone, Socrates, as to remember now what we first said, and would even now remember any thing I said last year, yet do not know how to use what has been said at present?

Socrates:: For the words, are difficult to understand, and very reasonably so; for they are spoken by wise men; since it is very difficult to make use of the last words you are saying. For what do you mean, Dionysodorus, by the expression, “I know not how to use”? Does it not mean this, that I do not know how to confute it? Since, tell me, what other conception do you form of these words, “I do not know how to use the words.”

Dionysodorus:: But what you say, this is very difficult to use. Since answer.

Socrates:: What, before you have answered Dionysodorus?

Dionysodorus:: Will you not answer?

Socrates:: Is it just?

Dionysodorus:: It is certainly just.

Socrates:: For what reason? Or is it plain that it is for this; because you, a very wise person in words, have now come to us, and know when you ought to answer, and when not; and now you will not answer a jot, as knowing that you ought not.

Dionysodorus:: You are a babbler, and are careless in answering. But, my good man, be obedient and answer; since you acknowledge that I am a wise man.

Socrates:: I must yield then, and, as it seems, to necessity; for you are the ruler. Ask, then.

Dionysodorus:: Whether then do things that have a soul understand? or soul-less things also?

Socrates:: Those that have a soul.

Dionysodorus:: Do you know then, any word that has a soul?

Socrates:: Not I, by Jupiter.

Dionysodorus:: Why then did you just now ask me, what my word understood?

Socrates:: For what else, than because I have erred through my stupidity: or, did I not err, but rightly said this too, when I asserted that my words understood? Whether then will you say that I did err, or I did not? For if I have not erred, neither will you confute, although you are a wise man; nor have you the power to make use of my assertion; but if I have erred, neither thus do you speak rightly, in saying that it is not possible to err. And I say this not in opposition to what you asserted last year. But this discourse, O Dionysodorus and Euthydemus, seems to remain in the same state, and still, as of old, having thrown down others, to fall itself; nor for this not to happen has it been discovered even by your art, and this too so wonderful for the accuracy of reasoning.

Ctesippus:: You certainly say wonderful things, O men of Thurii or Chios, or from whatever place you are, and by whatever name you delight to be called; as you care not to talk wildly.

Socrates:: And I, fearing lest reviling should take place, again softened down Ctesippus, and said;

What I told Clinias just now, I say also, Ctesippus, to you, that you do not know the wisdom of these strangers how wonderful it is. They are, however, unwilling to exhibit it to us seriously; but are imitating Proteus the Egyptian sophist, and deceive us by their sorcery. Let us, therefore, imitate Menelaus, and not separate ourselves from the men, till they have thoroughly shown us on what point they are serious; for I think that something of theirs very beautiful will appear, when they begin to be serious; and let us beg and exhort and pray them to exhibit themselves thoroughly.

It seems then good to me to again point out in what manner I prayed them to appear to me; for I will endeavor, as far as I can, to go through all in order from where I then left off, that I may call them out to pity me; and that commiserating me on a tenter-hook and acting seriously, they may act seriously themselves. But do you, Clinias, enable me to recollect from what point we broke off. As I think, we broke off some where there, when we acknowledged at last that we ought to philosophize; did we not?

Ctesippus:: Yes.

Socrates:: But philosophy is a possession of knowledge; is it not so?

Ctesippus:: Yes.

Socrates:: By possessing then what knowledge, shall we rightly possess it? Is not this the simple fact, that it is by possessing that knowledge which will benefit us?

Ctesippus:: Certainly.

Socrates:: Would it then benefit us at all, if we knew to know by going about in what part of the earth the most gold had been dug?

Ctesippus:: Perhaps so.

Socrates:: But formerly, this was our decision, that we should gain nothing, even though, without labor, and without digging the earth, all the gold that exists should be ours. So that if we knew how to make the rocks of gold, even this knowledge would be nothing worth: for if we knew not how to use the gold, its possession would appear to be of no advantage. Or do you not remember?

Ctesippus:: I remember very well.

Socrates:: Nor, as it seems, will any advantage be derived from any other science, either relating to money matters or to medicine, or to any other, by which a person knows how to make any thing, but does not know how to use what he makes. Is it not so?

He assented.

Nor even if there were a science to make men immortal, without their knowing how to make use of such immortality, would there be, it seems, any advantage from it, if it is fair to infer any thing from what has been previously admitted.

In all these points we both agreed.

There is a need then, O handsome youth, of some science of such a kind, as that there may concur in it both the power to make, and the knowledge how to use that which one makes.

Ctesippus:: It appears so.

Socrates:: We are far then, it seems, from being skilful lyre-makers, or from possessing any knowledge of that kind; for there the art that makes is on one side, and on the other the art that uses, and there is a division about the same thing. For the lyre-making and the harp-making arts differ very much from each other. Is it not so?

He assented.

Nor shall we, it is plain, require the flute-making art: for this is another such-like art.

He was of that opinion.

But, by the gods, if we should learn the art of composing speeches, is this the art from the possession of which we should be happy?

Clinias, taking up the discourse, said;

Clinias:: I think not.

Socrates:: Of what proof, do you make use?

Clinias:: I see, some speech-makers, who do not know how to use their own speeches that they make themselves, just as lyre-makers do with their lyres; but here are others able to use the speeches which those have made, although unable to make speeches themselves. It is plain, then, that with respect to speeches, the art of making is separate from the art of using them.

Socrates:: You appear to me, to give a sufficient proof that the art of speechmakers is not that art, by the possession of which a person would be happy; and yet I thought that here would appear the science, of which for a long time we have been in search. For to me those very speech-makers, Clinias, appear to be vastly wise, when I am in their company; and this very art of theirs also appears to be something divine and elevated. This, however, is by no means wonderful. For it is a portion of the art of charming, and is but a little inferior to it; for the art of charming is that by which vipers, and phalangia, and scorpions, and other wild animals, and even diseases are charmed; but this happens to be the charming and soothing of judges, and of persons assembling at public meetings, and of other mobs. Or are you of a different opinion?

Clinias:: I am not; but it appears to me as you say.

Socrates:: Where then, shall we yet turn ourselves? to what art?

Clinias:: I do not well see the way.

Socrates:: But I think, that I have discovered the art.

Clinias:: What is it?

Socrates:: The art of a general, appears to me, more than any other, to be that, by possessing which a person would be happy.

Clinias:: It does not appear so to me.

Socrates:: Why not?

Clinias:: This is certainly a man-hunting art.

Socrates:: What then?

Clinias:: No part, of the hunting art itself extends beyond hunting and getting into the hand; but when persons have got into their hands what they have hunted, they are not able to use it; but hunters and fishermen assign it to cooks. But on the contrary, geometricians, astronomers, and those skilled in arithmetic for these also are of the hunting art for each of these do not make diagrams, but find out things existing. As then not knowing how to use them, but only to hunt for them, they deliver up their inventions for those to make a bad use of in dialectics such at least of them as are not very stupid.

Socrates:: Be it so, O most beautiful and most wise Clinias. But is such the case?

Clinias:: Certainly. And thus in the same manner, generals, when they have taken a city or camp, deliver it over to statesmen; for they know not how to use the things they have taken; just as, I think, the catchers of quails deliver them up to quail-feeders. If then, we are in want of that art which, whether making or hunting, knows itself how to use what it possesses, and is such an art as will render us happy, we must, instead of the general's seek out some other art.

Crito:: What say you, Socrates? Did that lad talk thus?

Socrates:: Do you not think he did, Crito?

Crito:: By Jupiter, I do not indeed. For I think if he had spoken thus, he would not have wanted either Euthydemus or any other man for his instruction.

Socrates:: But, by Jupiter, was it not Ctesippus that spoke thus? for I do not remember.

Crito:: What, Ctesippus?

Socrates:: This, however, I well know, that it was neither Euthydemus nor Dionysodorus who spoke thus. But, good Crito, was it not some divinity, who being present said these things? For I well know that I heard them.

Crito:: It is so, by Jupiter, Socrates; and to me it appears very much so indeed, to have been some divinity. But after this, did you still search out any art? And have you discovered or not that, for the sake of which you made the search?

Socrates:: Whence, blessed man, did we discover it? But we were altogether a subject of laughter, like children that run after larks; for we continually thought we should immediately catch each of the sciences, but they were always flying secretly away. Why therefore should I speak to you about the majority? But when we came to the regal art, and thoroughly considered whether it is that, which imparts and works out happiness, here falling, as it were, into a labyrinth, when we thought we were now at the end, we again turned round in our course, and appeared to be at the beginning of our inquiry, and we wanted just as much of the mark, as when we were first making the search.

Crito:: But how did this happen, Socrates, to you?

Socrates:: I will tell you. For the art of the statesman and that of the king it has been determined by us are the same.

Crito:: What then?

Socrates:: To this art then, as alone knowing how to make a proper use of things, have the general's art and the other arts determined to give dominion over those works of which they are the mere artisans. This then clearly appeared to us to be the art we were seeking, and the cause of good conduct in a city; and really, according to the Iambic verse of Æschylus, that it alone is seated in the stern of the city, directing, as by the rudder, all things, and commanding all persons to do all things useful.

Crito:: Does not this then appear to you to be well said respecting this art?

Socrates:: You shall judge, Crito, if you are willing to hear what after this happened to us. For we were considering again somehow thus. Does that regal art, which rules over all, effect any thing for us or nothing? We said to each other that it certainly will. For would not you too assert this, Crito?

Crito:: I would.

Socrates:: What then would you say is its effect? Just as if I should ask you, what effect does the physician's art produce in all the things over which it rules? Would you not say it is health?

Crito:: I should.

Socrates:: And what does agriculture, your art, effect in all the things over which it rules? Would you not say that it affords us food from the earth?

Crito:: I would.

Socrates:: And what does the regal art effect, while it commands every thing over which it rules? Perhaps you do not very well see your way.

Crito:: I do not, by Jupiter, Socrates.

Socrates:: Nor do we, Crito. But thus much at least you know, that if it is that art, which we are seeking, it ought to be useful.

Crito:: Certainly.

Socrates:: Ought it not, therefore, to impart to us a certain good?

Crito:: Necessarily so, Socrates.

Socrates:: But we have acknowledged to each other, I and Clinias, that good is nothing else than a certain science.

Crito:: Yes, you did say so.

Socrates:: The other works then, which one may say belong to the statesman's art but these would be many, for example, to make the citizens rich, free, and free from sedition do not they all appear to be neither evil nor good? But it is necessary for this art to make men wise, and to impart knowledge, if it is to be that, which benefits and renders men happy.

Crito:: It is so: and thus it was agreed upon by you, as you have narrated the discourse.

Socrates:: Does then the regal art make men wise and good?

Crito:: What prevents it, Socrates?

Socrates:: Does it then make all men so, and good in all respects? And is it the art which furnishes every science, that of the currier, of the carpenter, and all the other crafts?

Crito:: I think not, Socrates.

Socrates:: But what science does it furnish? To what purpose do we employ it? For of no works, either good or evil, ought it to be the artificer, but to impart no other science than itself. Let us then say what it is; to what purpose we should use it. Are you willing, Crito, we should say it is that, by which we make others good?

Crito:: Entirely so.

Socrates:: But in what will these be good, and to what purpose will they be useful? Or shall we still say that they will make others good, and that those others will make others so? However, they no where appear to us in what way they are good; because we have held in no honor the works, which are said to belong to the statesman's science. But in reality, there is, according to the proverb, Corinthus the son of Jupiter; and as I have said, we are still equally, or even more, wanting towards knowing what the science is, which will make us happy.

Crito:: By Jupiter, Socrates, you have come, it seems, to a great difficulty.

Socrates:: I myself then, Crito, since I had fallen into this difficulty, sent forth every kind of cry and entreated the strangers, and called upon them, as if they were the Dioscuri, to save us, both me and the lad, from the triple waves of the discourse; to be by all means serious, and seriously to show us what that science is, by the possession of which we may pass well through the remainder of life.

Crito:: And was then Euthydemus willing to show you any thing?

Socrates:: How not? And he began, my friend, the discourse very magnificently thus.

Euthydemus:: Whether, Socrates, shall I teach you this science about which you formerly were at a loss, or show you that you possess it?

Socrates:: O blessed man, are you able to effect this?

Euthydemus:: Certainly.

Socrates:: Show me, then, by Jupiter, that I possess it; for this is much easier than for a man so old to learn.

Euthydemus:: Come then, answer me. Is there any thing which you know?

Socrates:: Certainly; many things, but trifling.

Euthydemus:: It is sufficient. Does it then appear to you to be possible, that any thing which exists should not be what it is?

Socrates:: It does not, by Jupiter.

Euthydemus:: Did you not say that you knew something?

Socrates:: I did.

Euthydemus:: Are you not then knowing, if you know?

Socrates:: Certainly, in that very thing.

Euthydemus:: It makes no difference. But is it not necessary that you, being knowing, should know all things?

Socrates:: It is not, by Jupiter, since there are many other things which I do not know.

Euthydemus:: If then you do not know a thing, you are not knowing?

Socrates:: Of that thing, friend.

Euthydemus:: Are you not then, less knowing? But you just now said, that you were knowing; and thus you are the very same person that you are, and again not the same person, according to the same things, and at the same time.

Socrates:: Be it so, Euthydemus: for, according to the saying, "You rattle indeed very pretty." How then do I know that science which we were seeking? since it is impossible for the same thing to be and not to be. If I know one thing, do I know all things? For I cannot be knowing and not knowing at the same time. And since I know all things, do I possess that knowledge likewise? Is this then what you say? And is this that wise thing?

Euthydemus:: You are, Socrates, confuting yourself.

Socrates:: But what, Euthydemus, are you not suffering the very same thing? For whatever I may suffer together with you and Dionysodorus here, O beloved head, I shall not take much to heart. Tell me, do you not know some things, and know not others?

Dionysodorus:: By no means, Socrates.

Socrates:: How say you? Do you then know nothing?

Dionysodorus:: Certainly.

Socrates:: Do you then know all things, since you know any thing whatever?

Dionysodorus:: All things. And you too, if you know one thing, know all things.

Socrates:: O Jupiter! how wonderful and mighty a good you tell me has appeared. Do then all other men likewise know all things, or nothing?

Dionysodorus:: They surely, do not know some things, but do not know others; and are at the same time knowing, and not knowing.

Socrates:: But how is this?

Dionysodorus:: All men, know all things, if they know one thing.

Socrates:: O, by the gods! Dionysodorus, for it is now manifest to me that you are serious, though I with difficulty invoked you to be so, do you in reality know all things? For instance, the art of a carpenter and a cobbler?

Dionysodorus:: Certainly.

Socrates:: And are you also able to stitch shoes?

Dionysodorus:: I am, by Jupiter, and also to mend them.

Socrates:: Do you also know such things as these, the number of the stars and the sands?

Dionysodorus:: Perfectly so. Think you, we should not confess that we do?

Socrates:: And Ctesippus then, taking up the discourse, said;

Ctesippus:: By Jupiter, Dionysodorus, show me some proof of these things, that I may know that you are speaking the truth.

Dionysodorus:: What proof shall I show?

Ctesippus:: Do you know how many teeth Euthydemus has, and does Euthydemus know how many you have?

Dionysodorus:: Is it not enough, for you, to hear that we know all things?

Ctesippus:: By no means; but only tell us this one thing more, and show that you speak the truth. And if you tell how many teeth each of you have, and you appear on our counting them to have known this, we will then believe you in other things likewise.

Socrates:: They then, thinking they were mocked at, were unwilling to comply, but acknowledged they knew all things, while they were questioned on each point singly by Ctesippus. For there was nothing which Ctesippus did not ask them without concealment, and at last even if they knew the most indecent things. And they, confessing that they did know, advanced most bravely against the questions, like wild boars pressing on against the blow; so that I too, Crito, was at length compelled myself through my incredulity to ask Euthydemus, whether Dionysodorus knew also how to dance? and he said;

Euthydemus:: Perfectly so.

Socrates:: However, he surely does not know how to act the tumbler upon swords, and to be whirled on a wheel, being so old. Or, so far towards wisdom has he come?

Euthydemus:: There is nothing, which he does not know.

Socrates:: But whether, do you only now know all things, or have you always known them?

Euthydemus:: Always.

Socrates:: And when you were children, and as soon as you were born, did you know?

All things, said both of them together.

To us the thing appeared to be incredible.

Euthydemus:: Do you disbelieve, Socrates?

Socrates:: Except, that it is likely you are wise men.

Euthydemus:: But, if you are willing to give me answers, I will also show you, giving your assent to these wonderful things.

Socrates:: Indeed, I shall most gladly, be confuted on these points. For if I am wise, not knowing it, and you demonstrate this that I know all things, and have always known, what greater wind-fall than this could I find in all my life?

Euthydemus:: Answer then.

Socrates:: Ask me, as one that will answer.

Euthydemus:: Whether, then, Socrates, do you know any thing or not?

Socrates:: I do.

Euthydemus:: Do you then know by that thing, through which you are knowing, or by any thing else?

Socrates:: By that by which I am knowing: for I suppose you mean the soul. Or do you not mean it?

Euthydemus:: Are you not ashamed of yourself, Socrates? You ask a question when you are asked one.

Socrates:: Be it so; but what shall I do? For I will do as you bid me. But when I know not what it is you ask me, you nevertheless order me to answer and not to ask a question.

Euthydemus:: You, doubtless, understand what I say.

Socrates:: I do.

Euthydemus:: Now then answer to that which you do understand.

Socrates:: What then, if you ask a question, thinking in one way, and I understand it in another, and then I give an answer to it, is it enough for you, if I answer nothing to the purpose?

Euthydemus:: To me it would, but not to you, I think.

Socrates:: I will not, by Jupiter, answer, before I hear.

Euthydemus:: You will not answer, to what you may happen to understand, because you are a trifler, and more of a silly old man than is becoming.

Socrates:: And I then perceived he was annoyed at me for defining precisely what was said, as he was desirous to make me his prey by placing his words around me as a net. I recollected, therefore, that Connus was always annoyed at me, when I did not yield to him, and that afterwards he paid less attention to me, as one that was ignorant. But since I had determined to go as a scholar to those men, I thought I ought to yield, lest they should consider me a stupid fellow, and not receive me as a scholar. Hence I said, If it seems good for you to act thus, Euthydemus, let it be done: for perhaps in every respect you, who possess the art, know better how to converse than I do, who am an unskilled individual. Question me then again from the beginning.

Euthydemus:: Answer then again, whether you know what you know by something or not.

Socrates:: I do, by the soul.

Euthydemus:: Again, this man in his answer adds to the questions he is asked. For I did not ask by what you know, but if you know by any thing.

Socrates:: Again I said, I have answered more than was necessary, through my want of instruction; but pardon me. For I will now answer simply, that I know always by something, what I know.

Euthydemus:: But, whether do you always know by the same thing? Or is it at one time by this thing and at another time by another?

Socrates:: Always by this, when I know.

Euthydemus:: Again, will you not cease to speak beside the question?

Socrates:: But I fear, lest this "always" should trip us up.

Euthydemus:: It will not us; but, if at all, it will you. But answer me, Do you always know by this?

Socrates:: Always; since I must take away the "when."

Euthydemus:: You therefore always know by this. And always knowing, whether do you know some things by that, by which you know, and other things by something else? or do you know all things by that?

Socrates:: All things, which I know, by that.

Euthydemus:: This has come, the same by-answer.

Socrates:: I take away then, the words "which I know."

Euthydemus:: Take not away, even one word; for I make you no request. But answer me, Would you be able to know all things, unless you could know all things?

Socrates:: This would be a prodigy.

Euthydemus:: Add now, whatever you like; for you confess that you know all things.

Socrates:: I appear to have done so; since the expression, “the things which I know,” possess no power whatever; but I know all things.

Euthydemus:: Have you not then confessed that you always know by that thing by which you know? whether it be when you know, or in whatever way you please: for you have confessed that you know always, and all things at the same time. It is evident, therefore, that you knew when you was a boy, and when you was begotten, and when you was born; and even before you was born, and before heaven and earth were produced, you knew all things, if you always possessed knowledge; and you, by Jupiter, will know always, and all things, if I wish it.

Socrates:: And may you wish it, much-honored Euthydemus, if you speak the truth in reality. But I do not quite believe that you are sufficient for this, unless this your brother here, Dionysodorus, assist you with his counsel: and thus perhaps you would be sufficient.

But tell me, for in other things I cannot contend against you, men of such portentous wisdom, nor say that I do not know all things, since you assert it how, Euthydemus, shall I say that I know that good men are unjust? Come, tell me, do I know this, or do I not know it?

Euthydemus:: You certainly know it.

Socrates:: What, do I know?

Euthydemus:: That good men are not unjust.

Socrates:: This, I perfectly knew a long time ago. But I am not asking this; but where did I learn that good men are unjust?

Euthydemus:: No where.

Socrates:: I do not therefore, know it.

Euthydemus then said to Dionysodorus;

Euthydemus:: You are destroying the reasoning; and this man will appear to be not knowing, that he is at the same time both knowing and not knowing.

Socrates:: And Dionysodorus blushed.

But, Euthydemus, how say you? Does not your brother, who knows all things, appear to you to speak correctly?

Dionysodorus, hastily taking up the discourse, said;

Dionysodorus:: But am I the brother of Euthydemus?

Socrates:: Leave me alone, my good man, till Euthydemus shall have taught me how I know that good men are unjust; and do not begrudge me the lesson.

Dionysodorus:: You are flying away, Socrates, and are unwilling to answer.

Socrates:: And reasonably so: for I am inferior even to either one of you; so that I have a great need to fly from the two. For I am somehow far weaker than Hercules; who was not able to contend with the Hydra a sophist that did by her wisdom, if one head of the discourse was cut off, send up again many instead of one and at the same time with the Crab, a certain other sophist, who, as it appears to me, had come recently from the sea; and when it was annoying Hercules on the left hand by speaking to and biting him, he called upon Iolaus, the son of his brother, to aid him; and he gave him sufficient aid. But if my Iolaus, Patrocles, were to come, he would rather produce mischief.

Dionysodorus:: Answer then, since this tale has been sung by you, whether Iolaus was more the nephew of Hercules than of you.

Socrates:: It is then best for me, Dionysodorus, to answer you. For you will not desist of this I am pretty well certain from asking questions, and grudging me to learn, and hindering Euthydemus from teaching me that wise thing.

Dionysodorus:: Answer, however.

Socrates:: I will answer then, that Iolaus was the nephew of Hercules, but, as it appears to me, mine not at all. For my brother, Patrocles, was not his father; but Iphicles, who nearly resembles him in name, was the brother of Hercules.

Dionysodorus:: But is Patrocles, your brother?

Socrates:: Certainly; for he had the same mother, though not the same father with myself.

Dionysodorus:: He is then your brother, and not your brother.

Socrates:: He was not from the same father, O best of men: for his father was Chæredemus, but mine Sophroniscus.

Dionysodorus:: But, Sophroniscus was a father, and Chæredemus likewise.

Socrates:: Certainly; the former was my father, and the latter his.

Dionysodorus:: Was not then, Chæredemus different from a father?

Socrates:: From my father.

Dionysodorus:: Was he then said he a father, different from a father? Or are you the same thing as the stone?

Socrates:: I fear, lest under you I shall appear to be the same; but I do not think so myself.

Dionysodorus:: Are you then, different from the stone?

Socrates:: Different, certainly.

Dionysodorus:: Being then something different from a stone, you are not a stone: and being different from gold, you are not gold.

Socrates:: It is so.

Dionysodorus:: Will not Chæredemus then, since he is different from a father, be not a father?

Socrates:: It seems, he is not a father.

Euthydemus, taking up the discourse, said;

Euthydemus:: For certainly, if Chæredemus is a father, and Sophroniscus, on the contrary, being different from a father, is not a father, so that you, Socrates, are without a father.

Socrates:: Ctesippus, taking up the discourse, said;

Ctesippus:: Is not your father in the very same predicament? for he is different from my father.

Euthydemus:: Very far from it.

Ctesippus:: Is he then the same?

Euthydemus:: Yes, the same.

Ctesippus:: I would not wish this. But whether, Euthydemus, is he my father alone, or the father of other men likewise?

Euthydemus:: Of other men likewise. Or do you think that the same person, being a father, is not a father?

Ctesippus:: So I thought indeed.

Euthydemus:: But what? Do you think that a thing being gold is not gold? or a person being a man is not a man?

Ctesippus:: Say not so. According to the proverb, you do not, Euthydemus, join thread with thread. For you speak of a dreadful thing, if your father is the father of all.

Euthydemus:: But he is.

Ctesippus:: Whether of men, or of horses too? or of all other animals likewise?

Euthydemus:: Of all animals.

Ctesippus:: Is your mother too the mother of all?

Euthydemus:: Yes, the mother.

Ctesippus:: Your mother then, is the mother of sea-urchins.

Euthydemus:: And yours too.

Ctesippus:: Hence then you are the brother of gudgeons, and puppies, and little pigs.

Euthydemus:: And so are you.

Ctesippus:: And besides this, your father is a dog too.

Euthydemus:: And so is yours.

Dionysodorus:: But, if you would answer me, you would forthwith acknowledge these things. For tell me, have you a dog?

Ctesippus:: Yes, a very bad one.

Dionysodorus:: Has he then puppies?

Ctesippus:: He has indeed, others very much of the same kind as himself.

Dionysodorus:: Is not the dog then their father?

Ctesippus:: At least, I saw him having connection with a bitch.

Dionysodorus:: What then? Is he not your dog?

Ctesippus:: Certainly.

Dionysodorus:: Being a father then, is he not yours? So that the dog becomes your father, and you are the brother of puppies.

Socrates:: And Dionysodorus again, quickly taking up the discourse, that Ctesippus might not get a word in before him, said;

Dionysodorus:: Answer me still in a small matter. Do you strike this dog?

Socrates:: And Ctesippus said, laughing;

Ctesippus:: By the gods, I do; for I cannot strike you.

Dionysodorus:: You strike your father then.

Ctesippus:: Much more justly, should I strike your father, who, having endured what, has begotten such wise sons. But surely, Euthydemus, your father and the father of the puppies has enjoyed many good things from this your wisdom.

Euthydemus:: But neither is he in want of many good things, Ctesippus, nor are you.

Ctesippus:: Nor are you, Euthydemus.

Euthydemus:: Nor is any other man said he in want of them. For tell me, Ctesippus, whether you think it good for a sick man to drink a medicine, or does it appear to you to be not good, when it is requisite; or when any one is going to a battle, ought he rather to go armed, or unarmed?

Ctesippus:: To me, it appears; although I think that you are about to say some of your beautiful things.

Euthydemus:: You shall know the best; but answer me. For since you acknowledge that it is good for a man to drink medicine when it is requisite, is it not meet to drink as much as possible of this good, and will it not in this case be well there, if some one, bruising it, should mingle with it a cart-load of hellebore.

Ctesippus:: This would be very proper indeed, Euthydemus, if he who drank it were as large as the statue in Delphi.

Euthydemus:: As therefore, it is also good to have arms in battle, is it not meet to have a great number of shields and spears, since it is a good thing?

Ctesippus:: Very much so. But you are not of this opinion, Euthydemus; for you think that one shield and one spear are sufficient. Or do you not?

Euthydemus:: I do.

Ctesippus:: Would you, arm Geryones too and Briareus in this manner? But I thought you were more skilful than to do so, as being one who fights with a soldier's arms, and so too was this your friend.

Socrates:: And Euthydemus indeed was silent. But Dionysodorus asked, in reference to what had been before answered by Ctesippus;

Dionysodorus:: Does it not then appear to you to be good likewise to possess gold?

Ctesippus:: Certainly, and this too in plenty.

Dionysodorus:: What then, does it not appear to you to be a good thing to possess riches always, and every where?

Ctesippus:: Very much so.

Dionysodorus:: Do you not then acknowledge gold likewise to be a good thing?

Ctesippus:: I have acknowledged it.

Dionysodorus:: Is it not then meet to possess it always, and every where, and especially in one's self? And would not a man be most happy, if he had three talents of gold in his belly, a talent in his skull, and a stater of gold in each of his eyes?

Ctesippus:: They say indeed, Euthydemus, that those amongst the Scythians are the most happy and the best men, who have much gold in their own skulls, just as you lately spoke of the dog being your own father: and, what is still more wonderful, they say, that they drink out of their own golden skulls, and look within them, having their own head in their hands.

Euthydemus:: Whether, do the Scythians and other men see things which can be seen, or things which cannot be seen?

Ctesippus:: Things, surely, which can be seen.

Euthydemus:: Do you then do so likewise?

Ctesippus:: I do.

Euthydemus:: Do you then see our garments?

Ctesippus:: Yes.

Euthydemus:: Can then these things see?

Ctesippus:: Beyond all measure.

Euthydemus:: But what?

Ctesippus:: Nothing. But perhaps you think you do not see them, so facetious are you; but to me you appear, Euthydemus, not sleeping to be asleep, and, if it were possible for a man, when speaking, to say nothing, to do this likewise.

Dionysodorus:: Is it not then possible, for him who is silent to speak?

Ctesippus:: By no means.

Dionysodorus:: Is it also impossible for him, who speaks, to be silent?

Ctesippus:: Still less so.

Dionysodorus:: When therefore you speak of stones, and woods, and things of iron, do you not speak of things silent?

Ctesippus:: I do not, if I am walking in braziers' shops; but the pieces of iron are speaking, and make the greatest noise, if any one touches them. So that you know not that with all your wisdom you have said nothing. But further still, explain to me the other assertion, how it is possible for one who speaks to be silent.

Socrates:: And Ctesippus appeared to me to be in great agony on account of his boy-love.

Euthydemus:: When you are silent, are you not silent as to all things?

Ctesippus:: I am.

Euthydemus:: Are you not therefore silent as to things which speak, if things which speak are among the number of all things?

Ctesippus:: But what, are not all things silent?

Euthydemus:: Certainly not.

Ctesippus:: Do then, thou best of men, all things speak?

Euthydemus:: The speaking things do.

Ctesippus:: But, I do not ask this; but whether all things are silent, or speak?

Socrates:: Dionysodorus, hastily taking up the discourse, said;

Dionysodorus:: They do neither, and they do both. For I well knew, that you would not have any thing to say to this answer.

Socrates:: And Ctesippus, as was usual with him, laughing very loudly, said;

Ctesippus:: Your brother, Euthydemus, has put his argument on both sides, and he has perished and is vanquished.

Socrates:: Clinias was very much delighted and laughed; so that Ctesippus became ten times as great as he was before. But Ctesippus, as being very crafty, appeared to me to have heard these things on the sly from these very men. For such kind of wisdom is not now possessed by any other persons.

Socrates:: Why do you laugh, Clinias, at things so serious and beautiful?

Dionysodorus:: What, Socrates, have you ever seen a beautiful thing?

Socrates:: I have, and many such, Dionysodorus.

Dionysodorus:: Were they then, things different from the beautiful, or the same with the beautiful?

Socrates:: And I then became perfectly involved in doubt, and thought I had suffered justly for having grunted out a word.

They are different from the beautiful; but a certain beauty is present with each of them.

Dionysodorus:: If, then, an ox is present with you, are you an ox? and because I now am present with you, are you Dionysodorus?

Socrates:: Say words of good omen.

Dionysodorus:: But after what manner, if even one thing is present with another, will that which is different be different?

Socrates:: Are you then, in a difficulty respecting this? For I have just now endeavored to imitate the wisdom of the men, as being desirous of it.

Dionysodorus:: How should I not doubt, both I and all other men, of that which is not?

Socrates:: What do you say, Dionysodorus? Is not the beautiful, beautiful, and the base, base?

Dionysodorus:: Provided, it appears so to me.

Socrates:: Does it then appear so to you?

Dionysodorus:: Entirely so.

Socrates:: Is not likewise the same, same? and is not the different, different? For certainly the different is not the same. And I thought that not even a boy would doubt this, that the different is not different. But this, Dionysodorus, you have willingly passed by; since in other respects, like the artists, on whom it is incumbent to work out each part in detail, you seem to me to work out a discourse in a thoroughly beautiful manner.

Dionysodorus:: Do you know then, what is proper for each artist? In the first place, do you know to whom it belongs to work in copper?

Socrates:: I know that this belongs to copper-smiths.

Dionysodorus:: And to whom does it belong to fashion things in clay?

Socrates:: To a potter.

Dionysodorus:: And whose business is it to cut a throat, to flay, and, cutting off small pieces of flesh, to boil and roast them?

Socrates:: It is the business of a cook.

Dionysodorus:: If then, a man does things which are proper, does he not act rightly?

Socrates:: Perfectly.

Dionysodorus:: But it is proper, as you say, that a cook should cut a throat and flay. Have you assented to this or not?

Socrates:: I have assented; but pardon me.

Dionysodorus:: It is evident, then, that should any one cut the throat of the cook and chop him into small pieces, and boil and roast him, he would do what is proper; and should any one work like a brazier on the copper-smith himself, and like a potter on the potter, he too would do what is proper.

Socrates:: O Neptune, now you put the Colophon on your wisdom. Will it then ever be present with me, so as to become familiar tome?

Dionysodorus:: You will know it, Socrates, when it becomes familiar to you.

Socrates:: This, is evident, if you wish it.

Dionysodorus:: But what, do you think you know your own things?

Socrates:: Unless you say something else. For I must begin from you, and end with Euthydemus here.

Dionysodorus:: Do you then, consider those things yours, over which you have a power, and which you can use as you please, such as oxen and sheep? do you think that those are yours which it is lawful for you to sell, and to give away, and to sacrifice to whatever god you please; but that those, which are not so circumstanced, are not yours?

Socrates:: And I, for I knew that from the questions something beautiful would peep out, and at the same time I was desirous to hear as quickly as possible, said, It is perfectly so; things of this kind alone are mine.

Dionysodorus:: But what, do you not call those things animals, which possess a soul?

Socrates:: Yes.

Dionysodorus:: Do you acknowledge then, that those alone among animals are yours, to which you have the liberty of doing what I have just now mentioned?

Socrates:: I acknowledge it.

And he, pausing awhile, as if reflecting upon something of great consequence, said with an assumed gravity;

Dionysodorus:: Tell me, Socrates, is there with you a paternal Jupiter?

Socrates:: And I suspecting that the discourse would come to the place where it ended, endeavored to fly from a certain crafty turn, and now twisted myself, as if caught in a net; and I said, There is not, Dionysodorus.

Dionysodorus:: You are therefore a miserable man; nor are you an Athenian, since you have neither paternal gods, nor sacred rites, nor any thing else beautiful and good.

Socrates:: Hold, Dionysodorus; speak words of good omen, and do not instruct me harshly. For there are to me altars and sacred rites, both domestic and belonging to my country, and the rest of the things of this kind as appertain to the Athenians.

Dionysodorus:: Then, is there not a paternal Jupiter to the rest of the Athenians?

Socrates:: There is not. This appellation exists not to any one of the Ionians, nor to such as are colonized from this city, nor to us. But Apollo is our paternal god, through the race of Ion; and Jupiter is not called by us Paternal, but Herceus and Phratrius; and Minerva too is called Phratria.

Dionysodorus:: This is sufficient, said Dionysodorus; for you have, as it seems, Apollo, Jupiter, and Minerva.

Socrates:: Certainly.

Dionysodorus:: Will not these then, be your gods?

Socrates:: Progenitors, and masters.

Dionysodorus:: To you then, they will be so. Or have you not confessed that they are yours?

Socrates:: I have confessed it. For what could I do?

Dionysodorus:: Are not then, these gods animals likewise? For you have acknowledged that whatever have a soul are animals. Or have not those gods a soul?

Socrates:: They have.

Dionysodorus:: Are they not therefore also animals?

Socrates:: Animals.

Dionysodorus:: But of animals, you have acknowledged these to be yours, which you can give and sell, and sacrifice to any god you please.

Socrates:: I have acknowledged it. For there is no backing out, Euthydemus.

Dionysodorus:: Come then, and straightway tell me, since you acknowledge that Jupiter is yours and the other gods likewise, are you permitted to sell them, or give them, or to use them in any way you please, as you would do other animals?

Socrates:: I then, O Crito, as if struck down by the argument, lay speechless; but Ctesippus, coming as it were to the rescue;

Ctesippus:: Pyppax Hercules, a beautiful discourse!

Dionysodorus:: Whether is Hercules Pyppax, or Pyppax Hercules?

Ctesippus:: O Neptune, what words of wisdom! I retire; the men are unconquerable.

Socrates:: Here indeed, friend Crito, there was not one of those present who did not exceedingly praise the discourse; and the two men were almost stretched at their length, laughing, clapping, and exulting. For upon each and all of the things said previously in a very beautiful manner, the admirers alone of Euthydemus made an uproar; but here, almost the pillars in the Lyceum made a clattering in favor of the two men, and were delighted. I too felt disposed myself to acknowledge that I had never at any time seen men so wise; and being perfectly enslaved by their wisdom, I turned myself to praising and passing encomiums on them; and I said;

O blessed ye for your wondrous genius, who have so rapidly, and in a short time, accomplished a thing of such magnitude! Your arguments indeed, Euthydemus and Dionysodorus, contain many other beautiful things; but this is the most magnificent thing in them, that you care nothing for the mass of mankind, nor for persons of solemn mien, and who think themselves something, but only for those who are like yourselves. For I know well, that very few men similar to yourselves, would delight in these arguments; while the rest are so ignorant of them, that, I am sure, they would be more ashamed to confute others with such arguments, than to be confuted themselves. This too again is another popular and gentle character in your arguments, that when you say there is nothing either beautiful, or good, or white, or any thing else of this kind, and, in short, that one thing is not different from another, you in reality sew up the mouths of men, as indeed you assert you do; and not only the mouths of others, but ye would appear to sew up your own. Now this is a very gracious act, and removes whatever is oppressive in your arguments. The greatest thing however is, that these arguments subsist in such a manner, and have been discovered by you with such skill, that any one may learn them in a very short time. For I have perceived, by directing my attention to Ctesippus, how rapidly on the instant he has been able to imitate you. The wisdom then of your practice, with respect to its being rapidly imparted to another, is beautiful; but it is not adapted for discussion before men. But, if you will be persuaded by me, be careful not to speak before many, lest through their learning rapidly, they should give you no thanks for your instruction. But especially converse amongst yourselves alone: and if not, should you discourse in the presence of another, let it be before him alone, who gives you silver for what you say. The same advice, if you are wise, you will give to your disciples likewise, never to discourse with any man, except with you and themselves. For that which is rare, Euthydemus, is valuable; but water, although the best of things, as Pindar says, may be bought very cheap.

But lead on, and receive Clinias here and myself as your scholars on the sly.

Having, Crito, spoken these words and a few others, we departed. Consider therefore now, how you will accompany me to these men; for they say they are able to teach any one who is willing to give them money; and that they do not exclude any natural disposition or age; and, what is especially proper for you to hear, they say that an attention to moneymaking does not hinder any one from easily receiving their wisdom.

Crito:: In good truth, Socrates, I am desirous of hearing them, and would willingly learn something from them; although I almost appear to be one of those, not like to Euthydemus, but to those who, as you have just said, would more willingly be confuted by such arguments, than confute them. It seems however to me to be ridiculous to give you advice; nevertheless, I wish to relate to you what I have heard. Know then, that as I was taking a walk, a man came to me from among those that had left you, and thinking himself to be very wise, as being one of those who are skilled in speeches suited for courts of justice, said to me

Someone:: Crito, have you heard nothing of these wise men?

Crito:: By Jupiter, I have not. For, on account of the crowd, I was unable to stand close and hear.

Someone:: And yet, it was worth while to hear them.

Crito:: Why?

Someone:: Because you would have heard men discoursing, who are the wisest of all those who at present engage in such-like arguments.

Crito:: What then did they appear to you?

Someone:: What else, than that they are such as one will always hear from such-like triflers, who bestow unworthy attention on things of no worth.

Crito:: For so did he say in very words.

But certainly philosophy is an elegant thing.

Someone:: How, elegant, O blessed man! It is indeed a thing of no worth. But if you had been present just now, I think you would have been ashamed of your associate. He was so absurd, as willingly to put himself in the power of men, who pay no attention to what they say, but lay hold of every word. And these men, as I just now said, are among the best of those that exist at present. But indeed, Crito, both the thing itself, and the men who are conversant with it, are worthless and ridiculous.

Crito:: But to me, Socrates, neither he appears to blame the thing with justice, nor would any one else blame it. To be willing, however, to discourse with these men in the presence of many appears to me to be an act that may be justly blamed.

Socrates:: Wonderful, Crito, are the men of this kind. But I do not yet know what I am about to say. Of what class of men was he, who came to you, and blamed philosophy? Was he some pleader among those who are skilful in contending in courts of justice; or was he one of those who introduce men of this description, and a maker of the speeches with which orators contend?

Crito:: The least of all was he, by Jupiter, an orator; nor do I think that he ever ascended the platform in a court of justice; but they say that he is knowing in the thing itself, by Jupiter, and likewise that he is a person of power and composes powerful speeches.

Socrates:: I now understand; and I was myself just now about to speak of those men. For they are those, Crito, whom Prodicus says are on the confines of a philosopher and politician; and think themselves to be the wisest of all men; and in addition to their being such, they fancy they seem so to the many; so that none others but the persons engaged in philosophy are an impediment to their gaining a reputation amongst all. They think therefore, that if they can establish an opinion that philosophers are nothing worth, they shall, without a contest, carry off the prize of a reputation for wisdom amongst all mankind. For they consider themselves to be in reality most wise; but think that they are lessened by the followers of Euthydemus, when they are intercepted in their private discourses. And yet they very reasonably think themselves wise men: for to possess philosophy in moderation, and with moderation to engage in political concerns, is very much according to reason; for this is to partake of both, as far as is requisite, and to enjoy the fruits of wisdom, secure from dangers and contests.

Crito:: What then, do they appear to you, Socrates, to say any thing of consequence?

Socrates:: By no means.

Crito:: Yet the discourse of the men possesses a certain speciousness.

Socrates:: It has in reality, Crito, speciousness rather than truth. For it is not easy to persuade them, that in the case of men and all other things, which subsist between two certain things, and partake of both, such as are from good and evil, become better than the one, and worse than the other; but that such things as are from two goods, not tending to the same point, are worse than both, with respect to that, for which each of the things, of which they are composed, is useful; and that such things as are composed of two evils, not tending to the same, are in the middle, these taken alone are better than each of those things, in both of which they take a part. If then philosophy and political action are good, but each tends to something else, and these men, while they partake of both, are situated in the middle, they say nothing to the purpose; for they are viler than both. But if philosophy and political action are both good and bad, these men are better than some and worse than others. But if both are bad, they will thus assert something which is true; but otherwise, not at all. I do not therefore think they will acknowledge, either that both these are bad, or that the one is bad and the other good; but partaking of both, they are in reality inferior to both, with respect to the performing of either, with a view to which both political science and philosophy are worthy of regard; and though in reality they are the third, they endeavor to appear to be the first. It is requisite, therefore, to pardon their desire, and not to be indignant at them; but we should consider them to be such as they are: for it is requisite to be content with whatever man says any thing bordering on intellect, and who courageously labors in going through his task.

Crito:: And indeed, Socrates, I too, as I am always saying to you, am in a difficulty respecting my children, how I ought to treat them. The one indeed is still rather young, and little; but Critobulus is already an adult, and requires some one to be a benefit to him. When therefore I am associating with you, I feel disposed to think that it is madness to be, for the sake of children, so much concerned about many other things, such as marriage, that they may be born of a mother of high family, and about wealth, that they may become very rich, and yet to neglect their education. But when I look at any one of those, who profess to instruct men, I am amazed; and, to tell you the truth, every one of them appears to me, on reflection, to be unfit for the purpose; so that I know not how to give the youth a turn for philosophy.

Socrates:: Know you not, friend Crito, that in every pursuit, the bad are many and of no worth, but the good are few and worthy of all regard? For does not the art of the gymnast, that of the money-scrivener, that of the rhetorician, and that of the general, appear to you to be beautiful?

Crito:: To me in every respect.

Socrates:: What then, in each of these do you not see that the many are to be ridiculed with respect to each of their doings?

Crito:: Yes, by Jupiter; and you speak with great truth.

Socrates:: Would you then on this account avoid all those pursuits yourself, and not impose them on your son?

Crito:: This surely, Socrates, would not be just.

Socrates:: Do not then, Crito, do what you ought not; but bidding farewell to those who study philosophy, whether they are good or bad, examine the thing itself, well and properly; and if it appear to you to be a vile thing, turn aside every man from it, and not your sons only; but if it appear to you such as I think it is, boldly pursue and practise it, according to the saying, 'both you and your children'.

## Euthydemus.

Translated by Jowett 3rd ed.

PERSONS OF THE DIALOGUE.

SOCRATES, *who is the narrator of the Dialogue.*
CRITO.
CLEINIAS.
EUTHYDEMUS.
DIONYSODORUS.
CTESIPPUS.

Scene:—The Lyceum.

---

Crito:: Who was the person, Socrates, with whom you were talking yesterday at the Lyceum? There was such a crowd around you that I could not get within hearing, but I caught a sight of him over their heads, and I made out, as I thought, that he was a stranger with whom you were talking: who was he?

Socrates:: There were two, Crito; which of them do you mean?

Crito:: The one whom I mean was seated second from you on the right-hand side. In the middle was Cleinias the young son of Axiochus, who has wonderfully grown; he is only about the age of my own Critobulus, but he is much forwarder and very good-looking: the other is thin and looks younger than he is.

Socrates:: He whom you mean, Crito, is Euthydemus; and on my left hand there was his brother Dionysodorus, who also took part in the conversation.

Crito:: Neither of them are known to me, Socrates; they are a new importation of Sophists, as I should imagine. Of what country are they, and what is their line of wisdom?

Socrates:: As to their origin, I believe that they are natives of this part of the world, and have migrated from

Chios to Thurii; they were driven out of Thurii, and have been living for many years past in these regions. As to their wisdom, about which you ask, Crito, they are wonderful—consummate! I never knew what the true pancratiast was before; they are simply made up of fighting, not like the two Acarnanian brothers who fight with their bodies only, but this pair of heroes, besides being perfect in the use of their bodies, are invincible in every sort of warfare; for they are capital at fighting in armor, and will teach the art to any one who pays them; and also they are most skilful in legal warfare; they will plead themselves and teach others to speak and to compose speeches which will have an effect upon the courts. And this was only the beginning of their wisdom, but they have at last carried out the pancratiastic art to the very end, and have mastered the only mode of fighting which had been hitherto neglected by them; and now no one dares even to stand up against them: such is their skill in the war of words, that they can refute any proposition whether true or false. Now I am thinking, Crito, of placing myself in their hands; for they say that in a short time they can impart their skill to any one.

Crito:: But, Socrates, are you not too old? there may be reason to fear that.

Socrates:: Certainly not, Crito; as I will prove to you, for I have the consolation of knowing that they began this art of disputation which I covet, quite, as I may say, in old age; last year, or the year before, they had none of their new wisdom. I am only apprehensive that I may bring the two strangers into disrepute, as I have done Connus the son of Metrobius, the harp-player, who is still my music-master; for when the boys who go to him see me going with them, they laugh at me and call him grand papa's master. Now I should not like the strangers to experience similar treatment; the fear of ridicule may make them unwilling to receive me; and therefore, Crito, I shall try and persuade some old men to accompany me to them, as I persuaded them to go with me to Connus, and I hope that you will make one: and perhaps we had better take your sons as a bait; they will want to have them as pupils, and for the sake of them will be willing to receive us.

Crito:: I see no objection, Socrates, if you like; but first I wish that you would give me a description of their wisdom, that I may know beforehand what we are going to learn.

Socrates:: In less than no time you shall hear; for I cannot say that I did not attend—I paid great attention to them, and I remember and will endeavor to repeat the whole story. Providentially I was sitting alone in the dressing-room of the Lyceum where you saw me, and was about to depart; when I was getting up I recognized the familiar divine sign: so I sat down again, and in a little while the two brothers Euthydemus and Dionysodorus came in, and several others with them, whom I believe to be their disciples, and they walked about in the covered court; they had not taken more than two or three turns when Cleinias entered, who, as you truly say, is very much improved: he was followed by a host of lovers, one of whom was Ctesippus the Paeanian, a well-bred youth, but also having the wildness of youth. Cleinias saw me from the entrance as I was sitting alone, and at once came and sat down on the right hand of me, as you describe; and Dionysodorus and Euthydemus, when they saw him, at first stopped and talked with one another, now and then glancing at us, for I particularly watched them; and then Euthydemus came and sat down by the youth, and the other by me on the left hand; the rest anywhere. I saluted the brothers, whom I had not seen for a long time; and then I said to Cleinias: Here are two wise men, Euthydemus and Dionysodorus, Cleinias, wise not in a small but in a large way of wisdom, for they know all about war,—all that a good general ought to know about the array and command of an army, and the whole art of fighting in armor: and they know about law too, and can teach a man how to use the weapons of the courts when he is injured.

They heard me say this, but only despised me. I observed that they looked at one another, and both of them laughed; and then Euthydemus said:

Euthydemus:: Those, Socrates, are matters which we no longer pursue seriously; to us they are secondary occupations.

Socrates:: Indeed, if such occupations are regarded by you as secondary, what must the principal one be; tell me, I beseech you, what that noble study is?

Euthydemus:: The teaching of virtue, Socrates, is our principal occupation; and we believe that we can impart it better and quicker than any man.

Socrates:: My God! and where did you learn that? I always thought, as I was saying just now, that your chief accomplishment was the art of fighting in armor; and I used to say as much of you, for I remember that you professed this when you were here before. But now if you really have the other knowledge, O forgive me: I address you as I would superior beings, and ask you to pardon the impiety of my former expressions. But are you quite sure about this, Dionysodorus and Euthydemus? the promise is so vast, that a feeling of incredulity steals over me.

Euthydemus:: You may take our word, Socrates, for the fact.

Socrates:: Then I think you happier in having such a treasure than the great king is in the possession of his kingdom. And please to tell me whether you intend to exhibit your wisdom; or what will you do?

Euthydemus:: That is why we have come hither, Socrates; and our purpose is not only to exhibit, but also to teach any one who likes to learn.

Socrates:: But I can promise you, that every unvirtuous person will want to learn. I shall be the first; and there is the youth Cleinias, and Ctesippus: and here are several others, pointing to the lovers of Cleinias, who were beginning to gather round us. Now Ctesippus was sitting at some distance from Cleinias; and when Euthydemus leaned forward in talking with me, he was prevented from seeing Cleinias, who was between us; and so, partly because he wanted to look at his love, and also because he was interested, he jumped up and stood opposite to us: and all the other admirers of Cleinias, as well as the disciples of Euthydemus and Dionysodorus, followed his example. And these were the persons whom I showed to Euthydemus, telling him that they were all eager to learn: to which Ctesippus and all of them with one voice vehemently assented, and bid him exhibit the power of his wisdom. Then I said: O Euthydemus and Dionysodorus, I earnestly request you to do myself and the company the favor to exhibit. There may be some trouble in giving the whole exhibition; but tell me one thing,—can you make a good man of him only who is already convinced that he ought to learn of you, or of him also who is not convinced, either because he imagines that virtue is a thing which cannot be taught at all, or that you are not the teachers of it? Has your art power to persuade him, who is of the latter temper of mind, that virtue can be taught; and that you are the men from whom he will best learn it?

Dionysodorus:: Certainly, Socrates; our art will do both.

Socrates:: And you and your brother, Dionysodorus, of all men who are now living are the most likely to stimulate him to philosophy and to the study of virtue?

Dionysodorus:: Yes, Socrates, I rather think that we are.

Socrates:: Then I wish that you would be so good as to defer the other part of the exhibition, and only try to persuade the youth whom you see here that he ought to be a philosopher and study virtue. Exhibit that, and you will confer a great favor on me and on every one present; for the fact is I and all of us are extremely anxious that he should become truly good. His name is Cleinias, and he is the son of Axiochus, and grandson of the old Alcibiades, cousin of the Alcibiades that now is. He is quite young, and we are naturally afraid that some one may get the start of us, and turn his mind in a wrong direction, and he may be ruined. Your visit, therefore, is most happily timed; and I hope that you will make a trial of the young man, and converse with him in our presence, if you have no objection.

These were pretty nearly the expressions which I used; and Euthydemus, in a manly and at the same time encouraging tone, replied:

Euthydemus:: There can be no objection, Socrates, if the young man is only willing to answer questions.

Socrates:: He is quite accustomed to do so; for his friends often come and ask him questions and argue with him; and therefore he is quite at home in answering.

What followed, Crito, how can I rightly narrate? For not slight is the task of rehearsing infinite wisdom, and therefore, like the poets, I ought to commence my relation with an invocation to Memory and the Muses. Now Euthydemus, if I remember rightly, began nearly as follows:

Euthydemus:: O Cleinias, are those who learn the wise or the ignorant?

Socrates:: The youth, overpowered by the question, blushed, and in his perplexity looked at me for help; and I, knowing that he was disconcerted, said:

Take courage, Cleinias, and answer like a man whichever you think; for my belief is that you will derive the greatest benefit from their questions.

Dionysodorus:: Whichever he answers;

Socrates:: leaning forward so as to catch my ear, his face beaming with laughter;

Dionysodorus:: I prophesy that he will be refuted, Socrates.

Socrates:: While he was speaking to me, Cleinias gave his answer: and therefore I had no time to warn him of the predicament in which he was placed, and he answered that those who learned were the wise.

Euthydemus:: There are some whom you would call teachers, are there not?

Socrates:: The boy assented.

Euthydemus:: And they are the teachers of those who learn—the grammar-master and the lyre-master used to teach you and other boys; and you were the learners?

Clinias:: Yes.

Euthydemus:: And when you were learners you did not as yet know the things which you were learning?

Clinias:: No.

Euthydemus:: And were you wise then?

Clinias:: No, indeed.

Euthydemus:: But if you were not wise you were unlearned?

Clinias:: Certainly.

Euthydemus:: You then, learning what you did not know, were unlearned when you were learning?

Socrates:: The youth nodded assent.

Euthydemus:: Then the unlearned learn, and not the wise, Cleinias, as you imagine.

Socrates:: At these words the followers of Euthydemus, of whom I spoke, like a chorus at the bidding of their director, laughed and cheered. Then, before the youth had time to recover his breath, Dionysodorus cleverly took him in hand, and said:

Dionysodorus:: Yes, Cleinias; and when the grammar-master, dictated anything to you, were they the wise boys or the unlearned who learned the dictation?

Clinias:: The wise.

Dionysodorus:: Then after all the wise are the learners and not the unlearned; and your last answer to Euthydemus was wrong.

Socrates:: Then once more the admirers of the two heroes, in an ecstasy at their wisdom, gave vent to another peal of laughter, while the rest of us were silent and amazed. Euthydemus, observing this, determined to persevere with the youth; and in order to heighten the effect went on asking another similar question, which might be compared to the double turn of an expert dancer.

Euthydemus:: Do those who learn, learn what they know, or what they do not know?

Socrates:: Again Dionysodorus whispered to me:

Dionysodorus:: That, Socrates, is just another of the same sort.

Socrates:: Good heavens; and your last question was so good!

Dionysodorus:: Like all our other questions, Socrates,—inevitable.

Socrates:: I see the reason, why you are in such reputation among your disciples.

Meanwhile Cleinias had answered Euthydemus that those who learned learn what they do not know; and he put him through a series of questions the same as before.

Euthydemus:: Do you not know letters?

Socrates:: He assented.

Euthydemus:: All letters?

Clinias:: Yes.

Euthydemus:: But when the teacher dictates to you, does he not dictate letters?

Socrates:: To this also he assented.

Euthydemus:: Then if you know all letters, he dictates that which you know?

Socrates:: This again was admitted by him.

Euthydemus:: Then you do not learn that which he dictates; but he only who does not know letters learns?

Clinias:: Nay; but I do learn.

Euthydemus:: Then, you learn what you know, if you know all the letters?

Socrates:: He admitted that.

Euthydemus:: Then, you were wrong in your answer.

Socrates:: The word was hardly out of his mouth when Dionysodorus took up the argument, like a ball which he caught, and had another throw at the youth.

Dionysodorus:: Cleinias, Euthydemus is deceiving you. For tell me now, is not learning acquiring knowledge of that which one learns?

Socrates:: Cleinias assented.

Dionysodorus:: And knowing is having knowledge at the time?

Socrates:: He agreed.

Dionysodorus:: And not knowing is not having knowledge at the time?

Socrates:: He admitted that.

Dionysodorus:: And are those who acquire those who have or have not a thing?

Clinias:: Those who have not.

Dionysodorus:: And have you not admitted that those who do not know are of the number of those who have not?

Socrates:: He nodded assent.

Dionysodorus:: Then those who learn are of the class of those who acquire, and not of those who have?

Socrates:: He agreed.

Dionysodorus:: Then, Cleinias, those who do not know learn, and not those who know.

Socrates:: Euthydemus was proceeding to give the youth a third fall; but I knew that he was in deep water, and therefore, as I wanted to give him a respite lest he should be disheartened, I said to him consolingly:

You must not be surprised, Cleinias, at the singularity of their mode of speech: this I say because you may not understand what the two strangers are doing with you; they are only initiating you after the manner of the Corybantes in the mysteries; and this answers to the enthronement, which, if you have ever been initiated, is, as you will know, accompanied by dancing and sport; and now they are just prancing and dancing about you, and will next proceed to initiate you; imagine then that you have gone through the first part of the sophistical ritual, which, as Prodicus says, begins with initiation into the correct use of terms. The two foreign gentlemen, perceiving that you did not know, wanted to explain to you that the word 'to learn' has two meanings, and is used, first, in the sense of acquiring knowledge of some matter of which you previously have no knowledge, and also, when you have the knowledge, in the sense of reviewing this matter, whether something done or spoken by the light of this newly-acquired knowledge; the latter is generally called 'knowing' rather than 'learning' but the word 'learning' is also used; and you did not see, as they explained to you, that the term is employed of two opposite sorts of men, of those who know, and of those who do not know. There was a similar trick in the second question, when they asked you whether men learn what they know or what they do not know. These parts of learning are not serious, and therefore I say that the gentlemen are not serious, but are only playing with you. For if a man had all that sort of knowledge that ever was, he would not be at all the wiser; he would only be able to play with men, tripping them up and oversetting them with distinctions of words. He would be like a person who pulls away a stool from some one when he is about to sit down, and then laughs and makes merry at the sight of his friend overturned and laid on his back. And you must regard all that has hitherto passed between you and them as merely play. But in what is to follow I am certain that they will exhibit to you their serious purpose, and keep their promise (I will show them how); for they promised to give me a sample of the hortatory philosophy, but I suppose that they wanted to have a game with you first. And now, Euthydemus and Dionysodorus, I think that we have had enough of this. Will you let me see you explaining to the young man how he is to apply himself to the study of virtue and wisdom? And I will first show you what I conceive to be the nature of the task, and what sort of a discourse I desire to hear; and if I do this in a very inartistic and ridiculous manner, do not laugh at me, for I only venture to improvise before you because I am eager to hear your wisdom: and I must therefore ask you and your disciples to refrain from laughing. And now, O son of Axiochus, let me put a question to you:

Do not all men desire happiness? And yet, perhaps, this is one of those ridiculous questions which I am afraid to ask, and which ought not to be asked by a sensible man: for what human being is there who does not desire happiness?

Clinias:: There is no one, who does not.

Socrates:: Well, then, since we all of us desire happiness, how can we be happy?—that is the next question. Shall we not be happy if we have many good things? And this, perhaps, is even a more simple question than the first, for there can be no doubt of the answer.

He assented.

And what things do we esteem good? No solemn sage is required to tell us this, which may be easily answered; for every one will say that wealth is a good.

Clinias:: Certainly.

Socrates:: And are not health and beauty goods, and other personal gifts?

He agreed.

Can there be any doubt that good birth, and power, and honors in one’s own land, are goods?

He assented.

And what other goods are there? What do you say of temperance, justice, courage: do you not verily and indeed think, Cleinias, that we shall be more right in ranking them as goods than in not ranking them as goods? For a dispute might possibly arise about this. What then do you say?

Clinias:: They are goods.

Socrates:: Very well; and where in the company shall we find a place for wisdom—among the goods or not?

Clinias:: Among the goods.

Socrates:: And now, think whether we have left out any considerable goods.

Clinias:: I do not think that we have.

Socrates:: Upon recollection, indeed I am afraid that we have left out the greatest of them all.

Clinias:: What is that?

Socrates:: Fortune, Cleinias; which all, even the most foolish, admit to be the greatest of goods.

Clinias:: True.

Socrates:: On second thoughts, I added, how narrowly, O son of Axiochus, have you and I escaped making a laughing-stock of ourselves to the strangers.

Clinias:: Why do you say so?

Socrates:: Why, because we have already spoken of good-fortune, and are but repeating ourselves.

Clinias:: What do you mean?

Socrates:: I mean that there is something ridiculous in again putting forward good-fortune, which has a place in the list already, and saying the same thing twice over.

He asked what was the meaning of this, and I replied:

Surely wisdom is good-fortune; even a child may know that.

The simple-minded youth was amazed; and, observing his surprise, I said to him: Do you not know, Cleinias, that flute-players are most fortunate and successful in performing on the flute?

He assented.

And are not the scribes most fortunate in writing and reading letters?

Clinias:: Certainly.

Socrates:: Amid the dangers of the sea, again, are any more fortunate on the whole than wise pilots?

Clinias:: None, certainly.

Socrates:: And if you were engaged in war, in whose company would you rather take the risk—in company with a wise general, or with a foolish one?

Clinias:: With a wise one.

Socrates:: And if you were ill, whom would you rather have as a companion in a dangerous illness—a wise physician, or an ignorant one?

Clinias:: A wise one.

Socrates:: You think, that to act with a wise man is more fortunate than to act with an ignorant one?

He assented.

Then wisdom always makes men fortunate: for by wisdom no man would ever err, and therefore he must act rightly and succeed, or his wisdom would be wisdom no longer.

We contrived at last, somehow or other, to agree in a general conclusion, that he who had wisdom had no need of fortune. I then recalled to his mind the previous state of the question.

You remember, our making the admission that we should be happy and fortunate if many good things were present with us?

He assented.

And should we be happy by reason of the presence of good things, if they profited us not, or if they profited us?

Clinias:: If they profited us.

Socrates:: And would they profit us, if we only had them and did not use them? For example, if we had a great deal of food and did not eat, or a great deal of drink and did not drink, should we be profited?

Clinias:: Certainly not.

Socrates:: Or would an artisan, who had all the implements necessary for his work, and did not use them, be any the better for the possession of them? For example, would a carpenter be any the better for having all his tools and plenty of wood, if he never worked?

Clinias:: Certainly not.

Socrates:: And if a person had wealth and all the goods of which we were just now speaking, and did not use them, would he be happy because he possessed them?

Clinias:: No indeed, Socrates.

Socrates:: Then, a man who would be happy must not only have the good things, but he must also use them; there is no advantage in merely having them?

Clinias:: True.

Socrates:: Well, Cleinias, but if you have the use as well as the possession of good things, is that sufficient to confer happiness?

Clinias:: Yes, in my opinion.

Socrates:: And may a person use them either rightly or wrongly?

Clinias:: He must use them rightly.

Socrates:: That is quite true. And the wrong use of a thing is far worse than the non-use; for the one is an evil, and the other is neither a good nor an evil. You admit that?

He assented.

Now in the working and use of wood, is not that which gives the right use simply the knowledge of the carpenter?

Clinias:: Nothing else.

Socrates:: And surely, in the manufacture of vessels, knowledge is that which gives the right way of making them?

He agreed.

And in the use of the goods of which we spoke at first—wealth and health and beauty, is not knowledge that which directs us to the right use of them, and regulates our practice about them?

He assented.

Then in every possession and every use of a thing, knowledge is that which gives a man not only good-fortune but success?

He again assented.

And tell me, O tell me, what do possessions profit a man, if he have neither good sense nor wisdom? Would a man be better off, having and doing many things without wisdom, or a few things with wisdom? Look at the matter thus: If he did fewer things would he not make fewer mistakes? if he made fewer mistakes would he not have fewer misfortunes? and if he had fewer misfortunes would he not be less miserable?

Clinias:: Certainly.

Socrates:: And who would do least—a poor man or a rich man?

Clinias:: A poor man.

Socrates:: A weak man or a strong man?

Clinias:: A weak man.

Socrates:: A noble man or a mean man?

Clinias:: A mean man.

Socrates:: And a coward would do less than a courageous and temperate man?

Clinias:: Yes.

Socrates:: And an indolent man less than an active man?

He assented.

And a slow man less than a quick; and one who had dull perceptions of seeing and hearing less than one who had keen ones?

All this was mutually allowed by us.

Then, Cleinias, the sum of the matter appears to be that the goods of which we spoke before are not to be regarded as goods in themselves, but the degree of good and evil in them depends on whether they are or are not under the guidance of knowledge: under the guidance of ignorance, they are greater evils than their opposites, inasmuch as they are more able to minister to the evil principle which rules them; and when under the guidance of wisdom and prudence, they are greater goods: but in themselves they are nothing?

Clinias:: That, is obvious.

Socrates:: What then is the result of what has been said? Is not this the result—that other things are indifferent, and that wisdom is the only good, and ignorance the only evil?

He assented.

Let us consider a further point: Seeing that all men desire happiness, and happiness, as has been shown, is gained by a use, and a right use, of the things of life, and the right use of them, and good-fortune in the use of them, is given by knowledge,—the inference is that everybody ought by all means to try and make himself as wise as he can?

Clinias:: Yes.

Socrates:: And when a man thinks that he ought to obtain this treasure, far more than money, from a father or a guardian or a friend or a suitor, whether citizen or stranger—the eager desire and prayer to them that they would impart wisdom to you, is not at all dishonorable, Cleinias; nor is any one to be blamed for doing any honorable service or ministration to any man, whether a lover or not, if his aim is to get wisdom. Do you agree?

Clinias:: Yes, I quite agree, and think that you are right.

Socrates:: Yes, Cleinias, if only wisdom can be taught, and does not come to man spontaneously; for this is a point which has still to be considered, and is not yet agreed upon by you and me—

Clinias:: But I think, Socrates, that wisdom can be taught.

Socrates:: Best of men, I am delighted to hear you say so; and I am also grateful to you for having saved me from a long and tiresome investigation as to whether wisdom, can be taught or not. But now, as you think that wisdom can be taught, and that wisdom only can make a man happy and fortunate, will you not acknowledge that all of us ought to love wisdom, and you individually will try to love her?

Clinias:: Certainly, Socrates; I will do my best.

Socrates:: I was pleased at hearing this; and I turned to Dionysodorus and Euthydemus and said: That is an example, clumsy and tedious I admit, of the sort of exhortations which I would have you give; and I hope that one of you will set forth what I have been saying in a more artistic style: or at least take up the enquiry where I left off, and proceed to show the youth whether he should have all knowledge; or whether there is one sort of knowledge only which will make him good and happy, and what that is. For, as I was saying at first, the improvement of this young man in virtue and wisdom is a matter which we have very much at heart.

Thus I spoke, Crito, and was all attention to what was coming. I wanted to see how they would approach the question, and where they would start in their exhortation to the young man that he should practice wisdom and virtue. Dionysodorus, who was the elder, spoke first. Everybody's eyes were directed towards him, perceiving that something wonderful might shortly be expected. And certainly they were not far wrong; for the man, Crito, began a remarkable discourse well worth hearing, and wonderfully persuasive regarded as an exhortation to virtue.

Euthydemus:: Tell me, Socrates and the rest of you who say that you want this young man to become wise, are you in jest or in real earnest?

Socrates:: I was led by this to imagine that they fancied us to have been jesting when we asked them to converse with the youth, and that this made them jest and play, and being under this impression, I was the more decided in saying that we were in profound earnest. Dionysodorus said:

Dionysodorus:: Reflect, Socrates; you may have to deny your words.

Socrates:: I have reflected; and I shall never deny my words.

Dionysodorus:: Well, and so you say that you wish Cleinias to become wise?

Socrates:: Undoubtedly.

Dionysodorus:: And he is not wise as yet?

Socrates:: At least his modesty will not allow him to say that he is.

Dionysodorus:: You wish him, to become wise and not to be ignorant?

Socrates:: That we do.

Dionysodorus:: You wish him to be what he is not, and no longer to be what he is?

Socrates:: I was thrown into consternation at this.

Taking advantage of my consternation he added:

Dionysodorus:: You wish him no longer to be what he is, which can only mean that you wish him to perish. Pretty lovers and friends they must be who want their favorite not to be, or to perish!

Socrates:: When Ctesippus heard this he got very angry (as a lover well might) and said:

Ctesippus:: Stranger of Thurii—if politeness would allow me I should say, A plague upon you! What can make you tell such a lie about me and the others, which I hardly like to repeat, as that I wish Cleinias to perish?

Euthydemus:: And do you think, Ctesippus, that it is possible to tell a lie?

Ctesippus:: Yes; I should be mad to say anything else.

Euthydemus:: And in telling a lie, do you tell the thing of which you speak or not?

Ctesippus:: You tell the thing of which you speak.

Euthydemus:: And he who tells, tells that thing which he tells, and no other?

Ctesippus:: Yes.

Euthydemus:: And that is a distinct thing apart from other things?

Ctesippus:: Certainly.

Euthydemus:: And he who says that thing says that which is?

Ctesippus:: Yes.

Euthydemus:: And he who says that which is, says the truth. And therefore Dionysodorus, if he says that which is, says the truth of you and no lie.

Ctesippus:: Yes, Euthydemus; but in saying this, he says what is not.

Euthydemus:: And that which is not is not?

Ctesippus:: True.

Euthydemus:: And that which is not is nowhere?

Ctesippus:: Nowhere.

Euthydemus:: And can any one do anything about that which has no existence, or do to Cleinias that which is not and is nowhere?

Ctesippus:: I think not.

Euthydemus:: Well, but do rhetoricians, when they speak in the assembly, do nothing?

Ctesippus:: Nay, they do something.

Euthydemus:: And doing is making?

Ctesippus:: Yes.

Euthydemus:: And speaking is doing and making?

Socrates:: He agreed.

Euthydemus:: Then no one says that which is not, for in saying what is not he would be doing something; and you have already acknowledged that no one can do what is not. And therefore, upon your own showing, no one says what is false; but if Dionysodorus says anything, he says what is true and what is.

Ctesippus:: Yes, Euthydemus; but he speaks of things in a certain way and manner, and not as they really are.

Dionysodorus:: Why, Ctesippus, do you mean to say that any one speaks of things as they are?

Ctesippus:: Yes,—all gentlemen and truth-speaking persons.

Dionysodorus:: And are not good things good, and evil things evil?

Socrates:: He assented.

Dionysodorus:: And you say that gentlemen speak of things as they are?

Ctesippus:: Yes.

Dionysodorus:: Then the good speak evil of evil things, if they speak of them as they are?

Clinias:: Yes, indeed; and they speak evil of evil men. And if I may give you a piece of advice, you had better take care that they do not speak evil of you, since I can tell you that the good speak evil of the evil.

Dionysodorus:: And do they speak great things of the great and warm things of the warm?

Ctesippus:: To be sure they do; and they speak coldly of the insipid and cold dialectician.

Dionysodorus:: You are abusive, Ctesippus, you are abusive!

Ctesippus:: Indeed, I am not, Dionysodorus; for I love you and am giving you friendly advice, and, if I could, would persuade you not like a boor to say in my presence that I desire my beloved, whom I value above all men, to perish.

Socrates:: I saw that they were getting exasperated with one another, so I made a joke with him and said: O Ctesippus, I think that we must allow the strangers to use language in their own way, and not quarrel with them about words, but be thankful for what they give us. If they know how to destroy men in such a way as to make good and sensible men out of bad and foolish ones—whether this is a discovery of their own, or whether they have learned from some one else this new sort of death and destruction which enables them to get rid of a bad man and turn him into a good one—if they know this (and they do know this—at any rate they said just now that this was the secret of their newly-discovered art)—let them, in their phraseology, destroy the youth and make him wise, and all of us with him. But if you young men do not like to trust yourselves with them, then *fiat experimentum in corpore senis*; I will be the Carian on whom they shall operate. And here I offer my old person to Dionysodorus; he may put me into the pot, like Medea the Colchian, kill me, boil me, if he will only make me good.

Ctesippus:: And I, Socrates, am ready to commit myself to the strangers; they may skin me alive, if they please (and I am pretty well skinned by them already), if only my skin is made at last, not like that of Marsyas, into a leathern bottle, but into a piece of virtue. And here is Dionysodorus fancying that I am angry with him, when really I am not angry at all; I do but contradict him when I think that he is speaking improperly to me: and you must not confound abuse and contradiction, O illustrious Dionysodorus; for they are quite different things.

Dionysodorus:: Contradiction! Why, there never was such a thing.

Ctesippus:: Certainly there is; there can be no question of that. Do you, Dionysodorus, maintain that there is not?

Dionysodorus:: You will never prove to me, that you have heard any one contradicting any one else.

Ctesippus:: Indeed; then now you may hear me contradicting Dionysodorus.

Dionysodorus:: Are you prepared to make that good?

Ctesippus:: Certainly.

Dionysodorus:: Well, have not all things words expressive of them?

Ctesippus:: Yes.

Dionysodorus:: Of their existence or of their non-existence?

Ctesippus:: Of their existence.

Dionysodorus:: Yes, Ctesippus, and we just now proved, as you may remember, that no man could affirm a negative; for no one could affirm that which is not.

Ctesippus:: And what does that signify? you and I may contradict all the same for that.

Dionysodorus:: But can we contradict one another, when both of us are describing the same thing? Then we must surely be speaking the same thing?

Socrates:: He assented.

Dionysodorus:: Or when neither of us is speaking of the same thing? For then neither of us says a word about the thing at all?

Socrates:: He granted that proposition also.

Dionysodorus:: But when I describe something and you describe another thing, or I say something and you say nothing—is there any contradiction? How can he who speaks contradict him who speaks not?

Socrates:: Here Ctesippus was silent; and I in my astonishment said:

What do you mean, Dionysodorus? I have often heard, and have been amazed to hear, this thesis of yours, which is maintained and employed by the disciples of Protagoras, and others before them, and which to me appears to be quite wonderful, and suicidal as well as destructive, and I think that I am most likely to hear the truth about it from you. The dictum is that there is no such thing as falsehood; a man must either say what is true or say nothing. Is not that your position?

He assented.

But if he cannot speak falsely, may he not think falsely?

Dionysodorus:: No, he cannot.

Socrates:: Then there is no such thing as false opinion?

Dionysodorus:: No.

Socrates:: Then there is no such thing as ignorance, or men who are ignorant; for is not ignorance, if there be such a thing, a mistake of fact?

Dionysodorus:: Certainly.

Socrates:: And that is impossible?

Dionysodorus:: Impossible.

Socrates:: Are you saying this as a paradox, Dionysodorus; or do you seriously maintain no man to be ignorant?

Dionysodorus:: Refute me.

Socrates:: But how can I refute you, if, as you say, to tell a falsehood is impossible?

Euthydemus:: Very true.

Dionysodorus:: Neither did I tell you just now to refute me; for how can I tell you to do that which is not?

Socrates:: O Euthydemus, I have but a dull conception of these subtleties and excellent devices of wisdom; I am afraid that I hardly understand them, and you must forgive me therefore if I ask a very stupid question: if there be no falsehood or false opinion or ignorance, there can be no such thing as erroneous action, for a man cannot fail of acting as he is acting—that is what you mean?

Euthydemus:: Yes.

Socrates:: And now, I will ask my stupid question: If there is no such thing as error in deed, word, or thought, then what, in the name of goodness, do you come hither to teach? And were you not just now saying that you could teach virtue best of all men, to any one who was willing to learn?

Dionysodorus:: And are you such an old fool, Socrates, that you bring up now what I said at first—and if I had said anything last year, I suppose that you would bring that up too—but are non-plussed at the words which I have just uttered?

Socrates:: Why, they are not easy to answer; for they are the words of wise men: and indeed I know not what to make of this word 'non-plussed' which you used last: what do you mean by it, Dionysodorus? You must mean that I cannot refute your argument. Tell me if the words have any other sense.

Dionysodorus:: No, they mean what you say. And now answer.

Socrates:: What, before you, Dionysodorus?

Dionysodorus:: Answer.

Socrates:: And is that fair?

Dionysodorus:: Yes, quite fair.

Socrates:: Upon what principle? I can only suppose that you are a very wise man who comes to us in the character of a great logician, and who knows when to answer and when not to answer—and now you will not open your mouth at all, because you know that you ought not.

Dionysodorus:: You prate, instead of answering. But if, my good sir, you admit that I am wise, answer as I tell you.

Socrates:: I suppose that I must obey, for you are master. Put the question.

Dionysodorus:: Are the things which have sense alive or lifeless?

Socrates:: They are alive.

Dionysodorus:: And do you know of any word which is alive?

Socrates:: I cannot say that I do.

Dionysodorus:: Then why did you ask me what sense my words had?

Socrates:: Why, because I was stupid and made a mistake. And yet, perhaps, I was right after all in saying that words have a sense;—what do you say, wise man? If I was not in error, even you will not refute me, and all your wisdom will be non-plussed; but if I did fall into error, then again you are wrong in saying that there is no error,—and this remark was made by you not quite a year ago. I am inclined to think, however, Dionysodorus and Euthydemus, that this argument lies where it was and is not very likely to advance: even your skill in the subtleties of logic, which is really amazing, has not found out the way of throwing another and not falling yourself, now any more than of old.

Ctesippus:: Men of Chios, Thurii, or however and whatever you call yourselves, I wonder at you, for you seem to have no objection to talking nonsense.

Socrates:: Fearing that there would be high words, I again endeavored to soothe Ctesippus, and said to him: To you, Ctesippus, I must repeat what I said before to Cleinias—that you do not understand the ways of these philosophers from abroad. They are not serious, but, like the Egyptian wizard, Proteus, they take different forms and deceive us by their enchantments: and let us, like Menelaus, refuse to let them go until they show themselves to us in earnest. When they begin to be in earnest their full beauty will appear: let us then beg and entreat and beseech them to shine forth. And I think that I had better once more exhibit the form in which I pray to behold them; it might be a guide to them. I will go on therefore where I left off, as well as I can, in the hope that I may touch their hearts and move them to pity, and that when they see me deeply serious and interested, they also may be serious. You, Cleinias, shall remind me at what point we left off. Did we not agree that philosophy should be studied? and was not that our conclusion?

Clinias:: Yes.

Socrates:: And philosophy is the acquisition of knowledge?

Clinias:: Yes.

Socrates:: And what knowledge ought we to acquire? May we not answer with absolute truth—A knowledge which will do us good?

Clinias:: Certainly.

Socrates:: And should we be any the better if we went about having a knowledge of the places where most gold was hidden in the earth?

Clinias:: Perhaps we should.

Socrates:: But have we not already proved, that we should be none the better off, even if without trouble and digging all the gold which there is in the earth were ours? And if we knew how to convert stones into gold, the knowledge would be of no value to us, unless we also knew how to use the gold? Do you not remember?

Clinias:: I quite remember.

Socrates:: Nor would any other knowledge, whether of money-making, or of medicine, or of any other art which knows only how to make a thing, and not to use it when made, be of any good to us. Am I not right?

He agreed.

And if there were a knowledge which was able to make men immortal, without giving them the knowledge of the way to use the immortality, neither would there be any use in that, if we may argue from the analogy of the previous instances?

To all this he agreed.

Then, my dear boy, the knowledge which we want is one that uses as well as makes?

Clinias:: True.

Socrates:: And our desire is not to be skilful lyre-makers, or artists of that sort—far otherwise; for with them the art which makes is one, and the art which uses is another. Although they have to do with the same, they are divided: for the art which makes and the art which plays on the lyre differ widely from one another. Am I not right?

He agreed.

And clearly we do not want the art of the flute-maker; this is only another of the same sort?

He assented.

But suppose, that we were to learn the art of making speeches—would that be the art which would make us happy?

Clinias:: I should say, no.

Socrates:: And why should you say so?

Clinias:: I see, that there are some composers of speeches who do not know how to use the speeches which they make, just as the makers of lyres do not know how to use the lyres; and also some who are of themselves unable to compose speeches, but are able to use the speeches which the others make for them; and this proves that the art of making speeches is not the same as the art of using them.

Socrates:: Yes; and I take your words to be a sufficient proof that the art of making speeches is not one which will make a man happy. And yet I did think that the art which we have so long been seeking might be discovered in that direction; for the composers of speeches, whenever I meet them, always appear to me to be very extraordinary men, Cleinias, and their art is lofty and divine, and no wonder. For their art is a part of the great art of enchantment, and hardly, if at all, inferior to it: and whereas the art of the enchanter is a mode of charming snakes and spiders and scorpions, and other monsters and pests, this art of theirs acts upon dicasts and ecclesiasts and bodies of men, for the charming and pacifying of them. Do you agree with me?

Clinias:: Yes, I think that you are quite right.

Socrates:: Whither then shall we go, and to what art shall we have recourse?

Clinias:: I do not see my way.

Socrates:: But I think that I do.

Clinias:: And what is your notion?

Socrates:: I think that the art of the general is above all others the one of which the possession is most likely to make a man happy.

Clinias:: I do not think so.

Socrates:: Why not?

Clinias:: The art of the general is surely an art of hunting mankind.

Socrates:: What of that?

Clinias:: Why, no art of hunting extends beyond hunting and capturing; and when the prey is taken the huntsman or fisherman cannot use it; but they hand it over to the cook, and the geometricians and astronomers and calculators (who all belong to the hunting class, for they do not make their diagrams, but only find out that which was previously contained in them)—they, I say, not being able to use but only to catch their prey, hand over their inventions to the dialectician to be applied by him, if they have any sense in them.

Socrates:: Good, fairest and wisest Cleinias. And is this true?

Clinias:: Certainly; just as a general when he takes a city or a camp hands over his new acquisition to the statesman, for he does not know how to use them himself; or as the quail-taker transfers the quails to the keeper of them. If we are looking for the art which is to make us blessed, and which is able to use that which it makes or takes, the art of the general is not the one, and some other must be found.

Crito:: And do you mean, Socrates, that the youngster said all this?

Socrates:: Are you incredulous, Crito?

Crito:: Indeed, I am; for if he did say so, then in my opinion he needs neither Euthydemus nor any one else to be his instructor.

Socrates:: Perhaps I may have forgotten, and Ctesippus was the real answerer.

Crito:: Ctesippus! nonsense.

Socrates:: All I know is that I heard these words, and that they were not spoken either by Euthydemus or Dionysodorus. I dare say, my good Crito, that they may have been spoken by some superior person: that I heard them I am certain.

Crito:: Yes, indeed, Socrates, by some one a good deal superior, as I should be disposed to think. But did you carry the search any further, and did you find the art which you were seeking?

Socrates:: Find! my dear sir, no indeed. And we cut a poor figure; we were like children after larks, always on the point of catching the art, which was always getting away from us. But why should I repeat the whole story? At last we came to the kingly art, and enquired whether that gave and caused happiness, and then we got into a labyrinth, and when we thought we were at the end, came out again at the beginning, having still to seek as much as ever.

Crito:: How did that happen, Socrates?

Socrates:: I will tell you; the kingly art was identified by us with the political.

Crito:: Well, and what came of that?

Socrates:: To this royal or political art all the arts, including the art of the general, seemed to render up the supremacy, that being the only one which knew how to use what they produce. Here obviously was the very art which we were seeking—the art which is the source of good government, and which may be described, in the language of Aeschylus, as alone sitting at the helm of the vessel of state, piloting and governing all things, and utilizing them.

Crito:: And were you not right, Socrates?

Socrates:: You shall judge, Crito, if you are willing to hear what followed; for we resumed the enquiry, and a question of this sort was asked: Does the kingly art, having this supreme authority, do anything for us? To be sure, was the answer. And would not you, Crito, say the same?

Crito:: Yes, I should.

Socrates:: And what would you say that the kingly art does? If medicine were supposed to have supreme authority over the subordinate arts, and I were to ask you a similar question about that, you would say—it produces health?

Crito:: I should.

Socrates:: And what of your own art of husbandry, supposing that to have supreme authority over the subject arts—what does that do? Does it not supply us with the fruits of the earth?

Crito:: Yes.

Socrates:: And what does the kingly art do when invested with supreme power? Perhaps you may not be ready with an answer?

Crito:: Indeed I am not, Socrates.

Socrates:: No more were we, Crito. But at any rate you know that if this is the art which we were seeking, it ought to be useful.

Crito:: Certainly.

Socrates:: And surely it ought to do us some good?

Crito:: Certainly, Socrates.

Socrates:: And Cleinias and I had arrived at the conclusion that knowledge of some kind is the only good.

Crito:: Yes, that was what you were saying.

Socrates:: All the other results of politics, and they are many, as for example, wealth, freedom, tranquility, were neither good nor evil in themselves; but the political science ought to make us wise, and impart knowledge to us, if that is the science which is likely to do us good, and make us happy.

Crito:: Yes; that was the conclusion at which you had arrived, according to your report of the conversation.

Socrates:: And does the kingly art make men wise and good?

Crito:: Why not, Socrates?

Socrates:: What, all men, and in every respect? and teach them all the arts,—carpentering, and cobbling, and the rest of them?

Crito:: I think not, Socrates.

Socrates:: But then what is this knowledge, and what are we to do with it? For it is not the source of any works which are neither good nor evil, and gives no knowledge, but the knowledge of itself; what then can it be, and what are we to do with it? Shall we say, Crito, that it is the knowledge by which we are to make other men good?

Crito:: By all means.

Socrates:: And in what will they be good and useful? Shall we repeat that they will make others good, and that these others will make others again, without ever determining in what they are to be good; for we have put aside the results of politics, as they are called. This is the old, old song over again; and we are just as far as ever, if not farther, from the knowledge of the art or science of happiness.

Crito:: Indeed, Socrates, you do appear to have got into a great perplexity.

Socrates:: Thereupon, Crito, seeing that I was on the point of shipwreck, I lifted up my voice, and earnestly entreated and called upon the strangers to save me and the youth from the whirlpool of the argument; they were our Castor and Pollux, and they should be serious, and show us in sober earnest what that knowledge was which would enable us to pass the rest of our lives in happiness.

Crito:: And did Euthydemus show you this knowledge?

Socrates:: Yes, indeed; he proceeded in a lofty strain to the following effect:

Euthydemus:: Would you rather, Socrates, that I should show you this knowledge about which you have been doubting, or shall I prove that you already have it?

Socrates:: What, are you blessed with such a power as this?

Euthydemus:: Indeed I am.

Socrates:: Then I would much rather that you should prove me to have such a knowledge; at my time of life that will be more agreeable than having to learn.

Euthydemus:: Then tell me, do you know anything?

Socrates:: Yes, I know many things, but not anything of much importance.

Euthydemus:: That will do: And would you admit that anything is what it is, and at the same time is not what it is?

Socrates:: Certainly not.

Euthydemus:: And did you not say that you knew something?

Socrates:: I did.

Euthydemus:: If you know, you are knowing.

Socrates:: Certainly, of the knowledge which I have.

Euthydemus:: That makes no difference and must you not, if you are knowing, know all things?

Socrates:: Certainly not, for there are many other things which I do not know.

Euthydemus:: And if you do not know, you are not knowing.

Socrates:: Yes, friend, of that which I do not know.

Euthydemus:: Still you are not knowing, and you said just now that you were knowing; and therefore you are and are not at the same time, and in reference to the same things.

Socrates:: A pretty clatter, as men say, Euthydemus, this of yours! and will you explain how I possess that knowledge for which we were seeking? Do you mean to say that the same thing cannot be and also not be; and therefore, since I know one thing, that I know all, for I cannot be knowing and not knowing at the same time, and if I know all things, then I must have the knowledge for which we are seeking—May I assume this to be your ingenious notion?

Euthydemus:: Out of your own mouth, Socrates, you are convicted.

Socrates:: Well, but, Euthydemus, has that never happened to you? for if I am only in the same case with you and our beloved Dionysodorus, I cannot complain. Tell me, then, you two, do you not know some things, and not know others?

Dionysodorus:: Certainly not, Socrates.

Socrates:: What do you mean; do you know nothing?

Dionysodorus:: Nay, we do know something.

Socrates:: Then, you know all things, if you know anything?

Dionysodorus:: Yes, all things; and that is as true of you as of us.

Socrates:: O, indeed, what a wonderful thing, and what a great blessing! And do all other men know all things or nothing?

Dionysodorus:: Certainly; they cannot know some things, and not know others, and be at the same time knowing and not knowing.

Socrates:: Then what is the inference?

Dionysodorus:: They all know all things, if they know one thing.

Socrates:: O heavens, Dionysodorus, I see now that you are in earnest; hardly have I got you to that point. And do you really and truly know all things, including carpentering and leather-cutting?

Dionysodorus:: Certainly.

Socrates:: And do you know stitching?

Dionysodorus:: Yes, by the gods, we do, and cobbling, too.

Socrates:: And do you know things such as the numbers of the stars and of the sand?

Dionysodorus:: Certainly; did you think we should say *No* to that?

Socrates:: Ctesippus interrupting:

Ctesippus:: By Zeus, I only wish that you would give me some proof which would enable me to know whether you speak truly.

Dionysodorus:: What proof shall I give you?

Ctesippus:: Will you tell me how many teeth Euthydemus has? and Euthydemus shall tell how many teeth you have.

Dionysodorus:: Will you not take our word that we know all things?

Ctesippus:: Certainly not: You must further tell us this one thing, and then we shall know that you are speaking the truth; if you tell us the number, and we count them, and you are found to be right, we will believe the rest.

Socrates:: They fancied that Ctesippus was making game of them, and they refused, and they would only say, in answer to each of his questions, that they knew all things. For at last Ctesippus began to throw off all restraint; no question in fact was too bad for him; he would ask them if they knew the foulest things, and they, like wild boars, came rushing on his blows, and fearlessly replied that they did. At last, Crito, I too was carried away by my incredulity, and asked Euthydemus whether Dionysodorus could dance.

Euthydemus:: Certainly.

Socrates:: And can he vault among swords, and turn upon a wheel, at his age? has he got to such a height of skill as that?

Euthydemus:: He can do anything.

Socrates:: And did you always know this?

Euthydemus:: Always.

Socrates:: When you were children, and at your birth?

They both said that they did. This we could not believe.

Euthydemus:: You are incredulous, Socrates.

Socrates:: Yes, and I might well be incredulous, if I did not know you to be wise men.

Euthydemus:: But if you will answer, I will make you confess to similar marvels.

Socrates:: Well, there is nothing that I should like better than to be self-convicted of this, for if I am really a wise man, which I never knew before, and you will prove to me that I know and have always known all things, nothing in life would be a greater gain to me.

Euthydemus:: Answer then.

Socrates:: Ask, and I will answer.

Euthydemus:: Do you know something, Socrates, or nothing?

Socrates:: Something.

Euthydemus:: And do you know with what you know, or with something else?

Socrates:: With what I know; and I suppose that you mean with my soul?

Euthydemus:: Are you not ashamed, Socrates, of asking a question when you are asked one?

Socrates:: Well; but then what am I to do? for I will do whatever you bid; when I do not know what you are asking, you tell me to answer nevertheless, and not to ask again.

Euthydemus:: Why, you surely have some notion of my meaning.

Socrates:: Yes.

Euthydemus:: Well, then, answer according to your notion of my meaning.

Socrates:: Yes; but if the question which you ask in one sense is understood and answered by me in another, will that please you—if I answer what is not to the point?

Euthydemus:: That will please me very well; but will not please you equally well, as I imagine.

Socrates:: I certainly will not answer unless I understand you.

Euthydemus:: You will not answer, according to your view of the meaning, because you will be prating, and are an ancient.

Socrates:: Now I saw that he was getting angry with me for drawing distinctions, when he wanted to catch me in his springes of words. And I remembered that Connus was always angry with me when I opposed him, and then he neglected me, because he thought that I was stupid; and as

I was intending to go to Euthydemus as a pupil, I reflected that I had better let him have his way, as he might think me a blockhead, and refuse to take me. So I said: You are a far better dialectician than myself, Euthydemus, for I have never made a profession of the art, and therefore do as you say; ask your questions once more, and I will answer.

Euthydemus:: Answer then, again, whether you know what you know with something, or with nothing.

Socrates:: Yes; I know with my soul.

Euthydemus:: The man will answer more than the question; for I did not ask you, with what you know, but whether you know with something.

Socrates:: Through ignorance I have answered too much, but I hope that you will forgive me. And now I will answer simply that I always know what I know with something.

Euthydemus:: And is that something always the same, or sometimes one thing, and sometimes another thing?

Socrates:: Always, when I know, I know with this.

Euthydemus:: Will you not cease adding to your answers?

Socrates:: My fear is that this word 'always' may get us into trouble.

Euthydemus:: You, perhaps, but certainly not us. And now answer: Do you always know with this?

Socrates:: Always; since I am required to withdraw the words 'when I know.'

Euthydemus:: You always know with this, or, always knowing, do you know some things with this, and some things with something else, or do you know all things with this?

Socrates:: All that I know, I know with this.

Euthydemus:: There again, Socrates, the addition is superfluous.

Socrates:: Well, then, I will take away the words ‘that I know’

Euthydemus:: Nay, take nothing away; I desire no favors of you; but let me ask: Would you be able to know all things, if you did not know all things?

Socrates:: Quite impossible.

Euthydemus:: And now, you may add on whatever you like, for you confess that you know all things.

Socrates:: I suppose that is true, if my qualification implied in the words ‘that I know’ is not allowed to stand; and so I do know all things.

Euthydemus:: And have you not admitted that you always know all things with that which you know, whether you make the addition of ‘when you know them’ or not? for you have acknowledged that you have always and at once known all things, that is to say, when you were a child, and at your birth, and when you were growing up, and before you were born, and before the heaven and earth existed, you knew all things, if you always know them; and I swear that you shall always continue to know all things, if I am of the mind to make you.

Socrates:: But I hope that you will be of that mind, reverend Euthydemus, if you are really speaking the truth, and yet I a little doubt your power to make good your words unless you have the help of your brother Dionysodorus; then you may do it. Tell me now, both of you, for although in the main I cannot doubt that I really do know all things, when I am told so by men of your prodigious wisdom—how can I say that I know such things, Euthydemus, as that the good are unjust; come, do I know that or not?

Euthydemus:: Certainly, you know that.

Socrates:: What do I know?

Euthydemus:: That the good are not unjust.

Socrates:: Quite true; and that I have always known; but the question is, where did I learn that the good are unjust?

Dionysodorus:: Nowhere.

Socrates:: Then, I do not know this.

Euthydemus:: You are ruining the argument!

Socrates:: Said Euthydemus to Dionysodorus;

Euthydemus:: He will be proved not to know, and then after all he will be knowing and not knowing at the same time.

Socrates:: Dionysodorus blushed. I turned to the other, and said;

What do you think, Euthydemus? Does not your omniscient brother appear to you to have made a mistake?

Dionysodorus:: What; am I the brother of Euthydemus?

Socrates:: Please not to interrupt, my good friend, or prevent Euthydemus from proving to me that I know the good to be unjust; such a lesson you might at least allow me to learn.

Dionysodorus:: You are running away, Socrates, and refusing to answer.

Socrates:: No wonder, for I am not a match for one of you, and *a fortiori* I must run away from two. I am no Heracles; and even Heracles could not fight against the Hydra, who was a she-Sophist, and had the wit to shoot up many new heads when one of them was cut off; especially when he saw a second monster of a sea-crab, who was also a Sophist, and appeared to have newly arrived from a sea-voyage, bearing down upon him from the left, opening his mouth and biting. When the monster was growing troublesome he called Iolaus, his nephew, to his help, who ably succored him; but if my Iolaus, who is my brother Patrocles [the statuary], were to come, he would only make a bad business worse.

Dionysodorus:: And now that you have delivered yourself of this strain, will you inform me whether Iolaus was the nephew of Heracles any more than he is yours?

Socrates:: I suppose that I had best answer you, Dionysodorus, for you will insist on asking—that I pretty well know—out of envy, in order to prevent me from learning the wisdom of Euthydemus.

Dionysodorus:: Then answer me.

Socrates:: Well then, I can only reply that Iolaus was not my nephew at all, but the nephew of Heracles; and his father was not my brother Patrocles, but Iphicles, who has a name rather like his, and was the brother of Heracles.

Dionysodorus:: And is Patrocles, your brother?

Socrates:: Yes, he is my half-brother, the son of my mother, but not of my father.

Dionysodorus:: Then he is and is not your brother.

Socrates:: Not by the same father, my good man, for Chaeredemus was his father, and mine was Sophroniscus.

Dionysodorus:: And was Sophroniscus a father, and Chaeredemus also?

Socrates:: Yes; the former was my father, and the latter his.

Dionysodorus:: Then, Chaeredemus is not a father.

Socrates:: He is not my father.

Dionysodorus:: But can a father be other than a father? or are you the same as a stone?

Socrates:: I certainly do not think that I am a stone, though I am afraid that you may prove me to be one.

Dionysodorus:: Are you not other than a stone?

Socrates:: I am.

Dionysodorus:: And being other than a stone, you are not a stone; and being other than gold, you are not gold?

Socrates:: Very true.

Dionysodorus:: And so Chaeredemus, being other than a father, is not a father?

Socrates:: I suppose that he is not a father.

Euthydemus, taking up the argument, said;

Euthydemus:: For if Chaeredemus is a father, then Sophroniscus, being other than a father, is not a father; and you, Socrates, are without a father.

Socrates:: Ctesippus, here taking up the argument, said:

Ctesippus:: And is not your father in the same case, for he is other than my father?

Euthydemus:: Assuredly not.

Ctesippus:: Then he is the same?

Euthydemus:: He is the same.

Ctesippus:: I cannot say that I like the connection; but is he only my father, Euthydemus, or is he the father of all other men?

Euthydemus:: Of all other men. Do you suppose the same person to be a father and not a father?

Ctesippus:: Certainly, I did so imagine.

Euthydemus:: And do you suppose that gold is not gold, or that a man is not a man?

Ctesippus:: They are not '*in pari materia*' Euthydemus, and you had better take care, for it is monstrous to suppose that your father is the father of all.

Euthydemus:: But he is.

Ctesippus:: What, of men only, or of horses and of all other animals?

Euthydemus:: Of all.

Ctesippus:: And your mother, too, is the mother of all?

Euthydemus:: Yes, our mother too.

Ctesippus:: Yes; and your mother has a progeny of sea-urchins then?

Euthydemus:: Yes; and yours.

Ctesippus:: And gudgeons and puppies and pigs are your brothers?

Euthydemus:: And yours too.

Ctesippus:: And your papa is a dog?

Euthydemus:: And so is yours.

Dionysodorus:: If you will answer my questions, I will soon extract the same admissions from you, Ctesippus. You say that you have a dog.

Ctesippus:: Yes, a villain of a one.

Dionysodorus:: And he has puppies?

Ctesippus:: Yes, and they are very like himself.

Dionysodorus:: And the dog is the father of them?

Ctesippus:: Yes, I certainly saw him and the mother of the puppies come together.

Dionysodorus:: And is he not yours?

Ctesippus:: To be sure he is.

Dionysodorus:: Then he is a father, and he is yours; ergo, he is your father, and the puppies are your brothers.

Socrates:: Dionysodorus, quickly interposing, in order that Ctesippus might not get in his word, said;

Dionysodorus:: Let me ask you one little question more: You beat this dog?

Socrates:: Laughing, Ctesippus said;

Ctesippus:: Indeed I do; and I only wish that I could beat you instead of him.

Dionysodorus:: Then you beat your father.

Ctesippus:: I should have far more reason to beat yours; what could he have been thinking of when he begat such wise sons? much good has this father of you and your brethren the puppies got out of this wisdom of yours.

Dionysodorus:: But neither he nor you, Ctesippus, have any need of much good.

Ctesippus:: And have you no need, Euthydemus?

Euthydemus:: Neither I nor any other man; for tell me now, Ctesippus, if you think it good or evil for a man who is sick to drink medicine when he wants it; or to go to war armed rather than unarmed.

Ctesippus:: Good, I say. And yet I know that I am going to be caught in one of your charming puzzles.

Euthydemus:: That, you will discover, if you answer; since you admit medicine to be good for a man to drink, when wanted, must it not be good for him to drink as much as possible; when he takes his medicine, a cartload of hellebore will not be too much for him?

Ctesippus:: Quite so, Euthydemus, that is to say, if he who drinks is as big as the statue of Delphi.

Euthydemus:: And seeing that in war to have arms is a good thing, he ought to have as many spears and shields as possible?

Ctesippus:: Very true; and do you think, Euthydemus, that he ought to have one shield only, and one spear?

Euthydemus:: I do.

Ctesippus:: And would you arm Geryon and Briareus in that way? Considering that you and your companion fight in armor, I thought that you would have known better….

Socrates:: Here Euthydemus held his peace, but Dionysodorus returned to the previous answer of Ctesippus and said:—

Dionysodorus:: Do you not think that the possession of gold is a good thing?

Ctesippus:: Yes, and the more the better.

Dionysodorus:: And to have money everywhere and always is a good?

Ctesippus:: Certainly, a great good.

Dionysodorus:: And you admit gold to be a good?

Ctesippus:: Certainly.

Dionysodorus:: And ought not a man then to have gold everywhere and always, and as much as possible in himself, and may he not be deemed the happiest of men who has three talents of gold in his belly, and a talent in his pate, and a stater of gold in either eye?

Ctesippus:: Yes, Euthydemus; and the Scythians reckon those who have gold in their own skulls to be the happiest and bravest of men (that is only another instance of your manner of speaking about the dog and father), and what is still more extraordinary, they drink out of their own skulls gilt, and see the inside of them, and hold their own head in their hands.

Euthydemus:: And do the Scythians and others see that which has the quality of vision, or that which has not?

Ctesippus:: That which has the quality of vision clearly.

Euthydemus:: And you also see that which has the quality of vision?

Ctesippus:: Yes, I do.

Euthydemus:: Then do you see our garments?

Ctesippus:: Yes.

Euthydemus:: Then our garments have the quality of vision.

Ctesippus:: They can see to any extent.

Euthydemus:: What can they see?

Ctesippus:: Nothing; but you, my sweet man, may perhaps imagine that they do not see; and certainly, Euthydemus, you do seem to me to have been caught napping when you were not asleep, and that if it be possible to speak and say nothing—you are doing so.

Socrates:: Dionysodorus said;

Dionysodorus:: And may there not be a silence of the speaker?

Ctesippus:: Impossible.

Dionysodorus:: Or a speaking of the silent?

Ctesippus:: That is still more impossible.

Dionysodorus:: But when you speak of stones, wood, iron bars, do you not speak of the silent?

Ctesippus:: Not when I pass a smithy; for then the iron bars make a tremendous noise and outcry if they are touched: so that here your wisdom is strangely mistaken; please, however, to tell me how you can be silent when speaking

Socrates:: (I thought that Ctesippus was put upon his mettle because Cleinias was present).

Euthydemus:: When you are silent is there not a silence of all things?

Ctesippus:: Yes.

Euthydemus:: But if speaking things are included in all things, then the speaking are silent.

Ctesippus:: What; then all things are not silent?

Euthydemus:: Certainly not.

Ctesippus:: Then, my good friend, do they all speak?

Euthydemus:: Yes; those which speak.

Ctesippus:: Nay, but the question which I ask is whether all things are silent or speak?

Socrates:: Dionysodorus quickly interposing:—

Dionysodorus:: Neither and both; I am sure that you will be ‘non-plussed’ at that answer.

Socrates:: Here Ctesippus, as his manner was, burst into a roar of laughter; he said;

Ctesippus:: That brother of yours, Euthydemus, has got into a dilemma; all is over with him.

Socrates:: This delighted Cleinias, whose laughter made Ctesippus ten times as uproarious; but I cannot help thinking that the rogue must have picked up this answer from them; for there has been no wisdom like theirs in our time.

Socrates:: Why do you laugh, Cleinias, at such solemn and beautiful things?

Dionysodorus:: Why, Socrates, did you ever see a beautiful thing?

Socrates:: Yes, Dionysodorus, I have seen many.

Dionysodorus:: Were they other than the beautiful, or the same as the beautiful?

Socrates:: Now I was in a great quandary at having to answer this question, and I thought that I was rightly served for having opened my mouth at all:

They are not the same as absolute beauty, but they have beauty present with each of them.

Dionysodorus:: And are you an ox because an ox is present with you, or are you Dionysodorus, because Dionysodorus is present with you?

Socrates:: God forbid.

Dionysodorus:: But how, by reason of one thing being present with another, will one thing be another?

Socrates:: Is that your difficulty? For I was beginning to imitate their skill, on which my heart was set.

Dionysodorus:: Of course, I and all the world are in a difficulty about the non-existent.

Socrates:: What do you mean, Dionysodorus? Is not the honorable honorable and the base base?

Dionysodorus:: That, is as I please.

Socrates:: And do you please?

Dionysodorus:: Yes.

Socrates:: And you will admit that the same is the same, and the other other; for surely the other is not the same; I should imagine that even a child will hardly deny the other to be other. But I think, Dionysodorus, that you must have intentionally missed the last question; for in general you and your brother seem to me to be good workmen in your own department, and to do the dialectician's business excellently well.

Dionysodorus:: What is the business of a good workman? tell me, in the first place, whose business is hammering?

Socrates:: The smith's.

Dionysodorus:: And whose the making of pots?

Socrates:: The potter's.

Dionysodorus:: And who has to kill and skin and mince and boil and roast?

Socrates:: The cook.

Dionysodorus:: And if a man does his business he does rightly?

Socrates:: Certainly.

Dionysodorus:: And the business of the cook is to cut up and skin; you have admitted that?

Socrates:: Yes, I have admitted that, but you must not be too hard upon me.

Dionysodorus:: Then if some one were to kill, mince, boil, roast the cook, he would do his business, and if he were to hammer the smith, and make a pot of the potter, he would do their business.

Socrates:: Poseidon, this is the crown of wisdom; can I ever hope to have such wisdom of my own?

Dionysodorus:: And would you be able, Socrates, to recognize this wisdom when it has become your own?

Socrates:: Certainly, if you will allow me.

Dionysodorus:: What, do you think that you know what is your own?

Socrates:: Yes, I do, subject to your correction; for you are the bottom, and Euthydemus is the top, of all my wisdom.

Dionysodorus:: Is not that which you would deem your own, that which you have in your own power, and which you are able to use as you would desire, for example, an ox or a sheep—would you not think that which you could sell and give and sacrifice to any god whom you pleased, to be your own, and that which you could not give or sell or sacrifice you would think not to be in your own power?

Socrates:: Yes, I said (for I was certain that something good would come out of the questions, which I was impatient to hear); yes, such things, and such things only are mine.

Dionysodorus:: Yes, and you would mean by animals living beings?

Socrates:: Yes.

Dionysodorus:: You agree then, that those animals only are yours with which you have the power to do all these things which I was just naming?

Socrates:: I agree.

Then, after a pause, in which he seemed to be lost in the contemplation of something great, he said:

Dionysodorus:: Tell me, Socrates, have you an ancestral Zeus?

Socrates:: Here, anticipating the final move, like a person caught in a net, who gives a desperate twist that he may get away:

No, Dionysodorus, I have not.

Dionysodorus:: What a miserable man you must be then; you are not an Athenian at all if you have no ancestral gods or temples, or any other mark of gentility.

Socrates:: Nay, Dionysodorus, do not be rough; good words, if you please; in the way of religion I have altars and temples, domestic and ancestral, and all that other Athenians have.

Dionysodorus:: And have not other Athenians, an ancestral Zeus?

Socrates:: That name, is not to be found among the Ionians, whether colonists or citizens of Athens; an ancestral Apollo there is, who is the father of Ion, and a family Zeus, and a Zeus guardian of the phratry, and an Athene guardian of the phratry. But the name of ancestral Zeus is unknown to us.

Dionysodorus:: No matter, for you admit that you have Apollo, Zeus, and Athene.

Socrates:: Certainly.

Dionysodorus:: And they are your gods.

Socrates:: Yes, my lords and ancestors.

Dionysodorus:: At any rate they are yours, did you not admit that?

Socrates:: I did; what is going to happen to me?

Dionysodorus:: And are not these gods animals? for you admit that all things which have life are animals; and have not these gods life?

Socrates:: They have life.

Dionysodorus:: Then are they not animals?

Socrates:: They are animals.

Dionysodorus:: And you admitted that of animals those are yours which you could give away or sell or offer in sacrifice, as you pleased?

Socrates:: I did admit that, Euthydemus, and I have no way of escape.

Euthydemus:: Well then, if you admit that Zeus and the other gods are yours, can you sell them or give them away or do what you will with them, as you would with other animals?

Socrates:: At this I was quite struck dumb, Crito, and lay prostrate. Ctesippus came to the rescue.

Ctesippus:: Bravo, Heracles, brave words.

Dionysodorus:: Bravo Heracles, or is Heracles a Bravo?

Ctesippus:: Poseidon, what awful distinctions. I will have no more of them; the pair are invincible.

Socrates:: Then, my dear Crito, there was universal applause of the speakers and their words, and what with laughing and clapping of hands and rejoicings the two men were quite overpowered; for hitherto their partisans only had cheered at each successive hit, but now the whole company shouted with delight until the columns of the Lyceum returned the sound, seeming to sympathize in their joy. To such a pitch was I affected myself, that I made a speech, in which I acknowledged that I had never seen the like of their wisdom; I was their devoted servant, and fell to praising and admiring of them. What marvelous dexterity of wit, enabled you to acquire this great perfection in such a short time? There is much, indeed, to admire in your words, Euthydemus and Dionysodorus, but there is nothing that I admire more than your magnanimous disregard of any opinion—whether of the many, or of the grave and reverend seigniors—you regard only those who are like yourselves. And I do verily believe that there are few who are like you, and who would approve of such arguments; the majority of mankind are so ignorant of their value, that they would be more ashamed of employing them in the refutation of others than of being refuted by them. I must further express my approval of your kind and public-spirited denial of all differences, whether of good and evil, white or black, or any other; the result of which is that, as you say, every mouth is sewn up, not excepting your own, which graciously follows the example of others; and thus all ground of offence is taken away. But what appears to me to be more than all is, that this art and invention of yours has been so admirably contrived by you, that in a very short time it can be imparted to any one. I observed that Ctesippus learned to imitate you in no time. Now this quickness of attainment is an excellent thing; but at the same time I would advise you not to have any more public entertainments; there is a danger that men may undervalue an art which they have so easy an opportunity of acquiring; the exhibition would be best of all, if the discussion were confined to your two selves; but if there must be an audience, let him only be present who is willing to pay a handsome fee;—you should be careful of this;—and if you are wise, you will also bid your disciples discourse with no man but you and themselves. For only what is rare is valuable; and ‘water’ which, as Pindar says, is the ‘best of all things’ is also the cheapest. And now I have only to request that you will receive Cleinias and me among your pupils.

Such was the discussion, Crito: and after a few more words had passed between us we went away. I hope that you will come to them with me, since they say that they are able to teach any one who will give them money; no age or want of capacity is an impediment. And I must repeat one thing which they said, for your especial benefit,—that the learning of their art did not at all interfere with the business of money-making.

Crito:: Truly, Socrates, though I am curious and ready to learn, yet I fear that I am not like-minded with Euthydemus, but one of the other sort, who, as you were saying, would rather be refuted by such arguments than use them in refutation of others. And though I may appear ridiculous in venturing to advise you, I think that you may as well hear what was said to me by a man of very considerable pretensions—he was a professor of legal oratory—who came away from you while I was walking up and down.

Someone:: ‘Crito, are you giving no attention to these wise men?’

Crito:: ‘No, indeed I could not get within hearing of them—there was such a crowd.’

Someone:: ‘You would have heard something worth hearing if you had.’

Crito:: ‘What was that?’

Someone:: ‘You would have heard the greatest masters of the art of rhetoric discoursing.’

Crito:: ‘And what did you think of them?’

Someone:: ‘What did I think of them?’—‘theirs was the sort of discourse which anybody might hear from men who were playing the fool, and making much ado about nothing.’

Crito:: That was the expression which he used.

‘Surely,’ I said, ‘philosophy is a charming thing.’

Someone:: ‘Charming! what simplicity! philosophy is naught; and I think that if you had been present you would have been ashamed of your friend—his conduct was so very strange in placing himself at the mercy of men who care not what they say, and fasten upon every word. And these, as I was telling you, are supposed to be the most eminent professors of their time. But the truth is, Crito, that the study itself and the men themselves are utterly mean and ridiculous.’

Crito:: Now censure of the pursuit, Socrates, whether coming from him or from others, appears to me to be undeserved; but as to the impropriety of holding a public discussion with such men, there, I confess that, in my opinion, he was in the right.

Socrates:: O Crito, they are marvelous men; but what was I going to say? First of all let me know;—What manner of man was he who came up to you and censured philosophy; was he an orator who himself practices in the courts, or an instructor of orators, who makes the speeches with which they do battle?

Crito:: He was certainly not an orator, and I doubt whether he had ever been into court; but they say that he knows the business, and is a clever man, and composes wonderful speeches.

Socrates:: Now I understand, Crito; he is one of an amphibious class, whom I was on the point of mentioning—one of those whom Prodicus describes as on the border-ground between philosophers and statesmen—they think that they are the wisest of all men, and that they are generally esteemed the wisest; nothing but the rivalry of the philosophers stands in their way; and they are of the opinion that if they can prove the philosophers to be good for nothing, no one will dispute their title to the palm of wisdom, for that they are themselves really the wisest, although they are apt to be mauled by Euthydemus and his friends, when they get hold of them in conversation. This opinion which they entertain of their own wisdom is very natural; for they have a certain amount of philosophy, and a certain amount of political wisdom; there is reason in what they say, for they argue that they have just enough of both, and so they keep out of the way of all risks and conflicts and reap the fruits of their wisdom.

Crito:: What do you say of them, Socrates? There is certainly something specious in that notion of theirs.

Socrates:: Yes, Crito, there is more speciousness than truth; they cannot be made to understand the nature of intermediates. For all persons or things, which are intermediate between two other things, and participate in both of them—if one of these two things is good and the other evil, are better than the one and worse than the other; but if they are in a mean between two good things which do not tend to the same end, they fall short of either of their component elements in the attainment of their ends. Only in the case when the two component elements which do not tend to the same end are evil is the participant better than either. Now, if philosophy and political action are both good, but tend to different ends, and they participate in both, and are in a mean between them, then they are talking nonsense, for they are worse than either; or, if the one be good and the other evil, they are better than the one and worse than the other; only on the supposition that they are both evil could there be any truth in what they say. I do not think that they will admit that their two pursuits are either wholly or partly evil; but the truth is, that these philosopher-politicians who aim at both fall short of both in the attainment of their respective ends, and are really third, although they would like to stand first. There is no need, however, to be angry at this ambition of theirs—which may be forgiven; for every man ought to be loved who says and manfully pursues and works out anything which is at all like wisdom: at the same time we shall do well to see them as they really are.

Crito:: I have often told you, Socrates, that I am in a constant difficulty about my two sons. What am I to do with them? There is no hurry about the younger one, who is only a child; but the other, Critobulus, is getting on, and needs some one who will improve him. I cannot help thinking, when I hear you talk, that there is a sort of madness in many of our anxieties about our children:—in the first place, about marrying a wife of good family to be the mother of them, and then about heaping up money for them—and yet taking no care about their education. But then again, when I contemplate any of those who pretend to educate others, I am amazed. To me, if I am to confess the truth, they all seem to be such outrageous beings: so that I do not know how I can advise the youth to study philosophy.

Socrates:: Dear Crito, do you not know that in every profession the inferior sort are numerous and good for nothing, and the good are few and beyond all price: for example, are not gymnastic and rhetoric and money-making and the art of the general, noble arts?

Crito:: Certainly they are, in my judgment.

Socrates:: Well, and do you not see that in each of these arts the many are ridiculous performers?

Crito:: Yes, indeed, that is very true.

Socrates:: And will you on this account shun all these pursuits yourself and refuse to allow them to your son?

Crito:: That would not be reasonable, Socrates.

Socrates:: Do you then be reasonable, Crito, and do not mind whether the teachers of philosophy are good or bad, but think only of philosophy herself. Try and examine her well and truly, and if she be evil seek to turn away all men from her, and not your sons only; but if she be what I believe that she is, then follow her and serve her, you and your house, as the saying is, and be of good cheer.

## Euthydemus.

Translated by W. H. D. Rouse.

THE PERSONS OF THE DIALOGUE.

Crito, Socrates, Euthydemus, Dionysodorus,
Clinias, Ctesippus.

Crito:: Who was it, Socrates, you were talking to yesterday in the Lyceum? There was such a great crowd about you people that I myself, wanting to hear, could not get any nearer or hear anything clearly; however I stretched up and had a look over, and I thought it was a stranger you were talking to. Who was it?

Socrates:: Which do you mean, Crito? There were two of them, not one.

Crito:: The one I mean was sitting third from you on your right, and between you was Axiochus' boy. I thought he had grown quite a lot, Socrates, almost as big as our own Critobulus; but Critobulus is thinnish, and this boy is well-grown and handsome and good-looking.

Socrates:: Euthydemus is the man you ask about, Crito, and the one sitting on my left next to me was his brother Dionysodorus. This man is a partner in the talks.

Crito:: I don't know either of them, Socrates. These are new men again, I suppose Sophists. Where do they come from? And what is their line?

Socrates:: They come from somewhere in these parts, I think, from Chios, and went away and joined the colony at Thurii, but they were turned out and they have spent a good many years since then in this part of the world. You ask their line—it will surprise you, Crito—they simply take every line, they are regular know-alls. I never knew till now what all-round athletes were! These two are quite all-champions! They surpass the two Acamanian brothers, those all-round athletes, for those could do nothing but fight with their bodies. But these! First of all they are first-rate in fighting with their bodies and battling with all comers—they are themselves masters at fighting in armor, and can make anyone else expert who would pay their fee. Next, in the battle of the law courts they are champions; they can compete themselves and teach others to speak, and they can compose speeches suitable to deliver in court. Well, hitherto this was all they were clever at, but now they have put the finishing touch on their all-round virtuosity, for they have now mastered the only battle left to them, so that no one will dare so much as to put up his hands against them—they have become so skillful in wordy warfare that they can confute with equal success anything which anyone says, whether false or true! So now, my dear Crito, I have it in mind to become their pupil, for they say that in quite a short time they would make anyone else as skillful as they are.

Crito:: I say, Socrates! Aren't you afraid, at your time of life, that you are too old?

Socrates:: Not the least, my dear Crito, I have proof and encouragement enough to make me quite fearless. The two men themselves were what you might call old men before they started at this science, disputation, which I want to acquire; last year or the year before they had not yet got it. The only thing I really do fear is that I may bring discredit on the two strangers, as on poor Connus, Metrobius' son the harpist, who is now still trying to teach me to play the harp; the boys, my school-fellows, look on and laugh at me and call Connus 'old Gaffer-Teacher'! Someone may taunt the two strangers with the same nickname, and quite likely they might refuse me as a pupil for fear of it. But anyhow, my dear Crito, I have persuaded a few other ancients to come with me to learn at Connus', and I will try to do the same here. What about you—will you be my school-fellow? We will bring your sons with us as a bait. I am sure they will teach us too, because they will want the boys.

Crito:: I'm willing, Socrates, if you wish it. But tell me first what their science is, and then I shall know what we are to learn.

Socrates:: I can do that at once. I can't pretend that I did not pay attention for I certainly did, and I remember it well and will try to tell you the whole story from the beginning.

—I happened providentially to be sitting in the place where you saw me, alone in the undressing room, and had just thought it was time to get up; but as I was getting up, I had my usual divine presentiment.

So I sat down again, and soon after in came these two, Euthydemus and Dionysodorus, and others with them—a number of pupils I think. The two men came in, and walked round in the cloisters. They had hardly gone round two or three times when Clinias also came in, the one you say has grown so much, and you are quite right; behind him were a great many of his admirers, and among them Ctesippus, from Paeania, a fine handsome young man but rather wild as young men are. Clinias saw me from the entrance, sitting alone, so he came straight to me and sat beside me on my right, just as you say. When Dionysodorus and Euthydemus caught sight of him, first they stood and talked to each other for a time, throwing glance after glance at us—for I watched them carefully—then they came up, and one, Euthydemus, sat down beside the boy, the other by me on my left, and the rest as each happened.

—I said good day to the two, as it was some time since I had seen them; after that I said to Clinias, These two men, Clinias, Euthydemus and Dionysodorus, are men of wisdom, and no small wisdom indeed. They know everything about war, as much as is needed for becoming a general, all about tactics, and how to lead an army, and how to fight in full armor, and moreover they can make a man able to defend himself in the law courts if he is wronged.

They turned up their noses at this; they looked at each other and laughed, and Euthydemus said;

Euthydemus:: We don't trouble about those things now, Socrates, we treat them just as side shows.

Socrates:: That surprised me, and I replied;

Your main show must be a fine one, if such great subjects as those have come to be side shows. Tell me what this fine show is, in heaven's name!

Euthydemus:: Virtue, Socrates! We believe we can impart it—no one in the world so well or so quickly!

Socrates:: O God! What an achievement! Where did you find this godsend? As I said just now, I thought of you two especially as skillful at fighting in full armor, and that is what I said of you; for when you first stayed in this town, I remember this was what you professed. Well, if you now truly have this knowledge, O be gracious!—for I humbly address you as gods, and I pray your pardon for what I said before. But do think, Euthydemus and Dionysodorus—are you quite sure this is the truth? One cannot help feeling doubtful at such a portentous announcement.

Euthydemus:: Be assured, Socrates, that this is true.

Socrates:: Then I felicitate you on your possession, much more than I would congratulate the Great King on his empire! Let me ask you if you have it in mind to demonstrate this wisdom? Or what do you mean to do?

Euthydemus:: That’s the very reason why we are here, Socrates, to demonstrate and to teach, if anyone is willing to learn.

Socrates:: I will go bail that all those who have not got it will be willing! First myself, then Clinias here, and no doubt Ctesippus and these others, pointing at the admirers of Clinias—they were all standing around us by this time. For Ctesippus was sitting, so I thought, a good way off from Clinias, but what happened was that Euthydemus as he talked to me, leaning forward, hid Clinias, who was between us, from Ctesippus; so Ctesippus wishing to watch his dear boy and also greedy to hear, had jumped up and came and stood right in front of us; the others seeing him did the same and gathered round us, both the admirers of Clinias and the companions of Euthydemus and Dionysodorus. These I pointed to when I said all were ready to learn, and Ctesippus eagerly said yes and so did the others, and they all asked the two brothers to demonstrate the power of their wisdom to all the company.

—So I said, My friends Euthydemus and Dionysodorus, I beg you, do all you can to oblige these people, and for my sake also do demonstrate. A great task, if you take it as a complete whole. But please tell me one thing—can you make a man a good man only if he is already convinced that he must learn from you, or can you do it also to one who is not yet convinced, through doubting that the thing, virtue, can be learned at all or that you two can teach it? If you please, for a man in that condition, is it the work of the same art to convince him both that virtue is teachable and that you here are the people from whom one could best learn it? Or are these two different arts?

Dionysodorus:: No, no, Socrates, it is the same art—our art.

Socrates:: So you, Dionysodorus, would be the best people in the world to incline a man toward philosophy and the practice of virtue?

Dionysodorus:: Yes, Socrates, we think so.

Socrates:: Very well, leave the rest of the demonstration for another time, and just demonstrate this one thing. Persuade this young man that he must love wisdom and practice virtue, and you will oblige me and all these. For the truth about this boy is that both I myself and all these anxiously desire that he should become as good as a man can be. This is the son of Axiochus and the grandson of the famous Alcibiades, and cousin of the present Alcibiades; his name is Clinias. He is young, and we are afraid for him, as for other young men, that someone may get in first and turn his mind in some other direction, and ruin him. You have come, then, most fortunately. If you do not mind, please make trial of the lad, and talk with him before us.

—When I had spoken, almost in these very words, Euthydemus answered bravely and boldly, Oh, we don't mind, Socrates, if the young man is only willing to answer.

Why, he is quite used to that, These people here are always coming and talking with him and asking all sorts of questions, so he is not at all shy in answering.

—What followed, Crito, how could I describe properly? It is not a small business to recall and repeat wisdom ineffably great! So I must begin my description as the poets do, by invoking the Muses and Memory herself!

Well, Euthydemus began something like this, I think.

Euthydemus:: Now Clinias, which of mankind are the learners, the wise or the ignorant?

Socrates:: This was a large question; so the boy blushed, and looked at me in doubt. Seeing that he was troubled I said, My dear Clinias, cheer up and answer like a man, whichever you think, for perhaps it will do you a deal of good.

Just then, Dionysodorus leaned over me, and whispered in my ear, smiling all over his face;

Dionysodorus:: Now look here, Socrates, I prophesy that whichever the lad answers, he will be refuted!

Socrates:: While he spoke, Clinias made his answer, so I had no chance to warn the boy to take care, and he answered that the wise were the learners.

And Euthydemus said;

Euthydemus:: There are people you call teachers, aren't there?

Socrates:: He agreed.

Euthydemus:: The teachers are teachers of master and the grammar master boys, and you were learners?

Clinias:: Yes.

Euthydemus:: Of course at the time when the learners; for example, the music were teachers of you and the other you were learning, you did not yet know the things you were learning?

Clinias:: No.

Euthydemus:: Then you were wise when you did not know these things?

Clinias:: Certainly not.

Euthydemus:: If not wise, then ignorant?

Clinias:: Yes.

Euthydemus:: So you boys, while learning what you did not know, were ignorant and were learning?

Socrates:: The boy nodded.

Euthydemus:: So the ignorant learn, my dear Clinias, not the wise as you suppose.

Socrates:: When he said this, it was like conductor and chorus—he signaled, and they all cheered and laughed, I mean Dionysodorus and Euthydemus and their followers. Then before the boy could take one good breath, Dionysodorus took over and said;

Dionysodorus:: What happened, my dear Clinias, when the grammar man dictated to you? Which of the boys learned the things dictated, wise or ignorant?

Clinias:: The wise ones.

Dionysodorus:: Then the wise ones learn and not the ignorant, and you answered wrong just now to my brother.

Socrates:: Then indeed the two men's admirers laughed loud and long, applauding their wisdom, but all the rest of us were dumb-struck and had nothing to say. Euthydemus noticed that we were dumb-struck and wanted us to admire him more; so he would not let the boy alone, but went on asking, doubling and twisting around the same question like a clever dancer. He said;

Euthydemus:: Do the learners learn what they know, or what they don't know?

Socrates:: And Dionysodorus whispered softly to me again;

Dionysodorus:: Here's another, Socrates, just like the first.

Socrates:: Good heavens, really I thought that first one of yours a fine question!

Dionysodorus:: All our questions are like that, Socrates—no escape!

Socrates:: Now, I can see why you have such a reputation among your pupils!

Meanwhile Clinias answered Euthydemus that the learners learned what they did not know, and he went on in the same way as before :

Euthydemus:: Very well; do you not know your letters?

Clinias:: Yes.

Euthydemus:: All of them, eh?

Socrates:: He agreed.

Euthydemus:: And when a teacher dictates anything, does he not dictate letters?

Socrates:: He agreed.

Euthydemus:: Then he dictates a bit of what you know, if you know them all?

Socrates:: He agreed to this too.

Euthydemus:: Very well, *you* do not learn what someone dictates, but only the one who does not know letters learns them? Eh?

Clinias:: No, no, I do learn them.

Euthydemus:: Then you learn what you know, since you know all the letters.

Socrates:: He agreed.

Euthydemus:: Then you did not answer right.

Socrates:: The word had scarcely come out of his mouth, when Dionysodorus caught it like a ball and aimed it again at the boy, saying;

Dionysodorus:: Euthydemus is cheating you, my dear Clinias. Just tell me, is not learning getting knowledge of whatever one learns?

Socrates:: Clinias agreed.

Dionysodorus:: But to know is surely to have knowledge of something already?

Clinias:: Yes.

Dionysodorus:: Then not to know is not yet to have knowledge?

Socrates:: He agreed with this.

Dionysodorus:: Well, are those who get anything, those who have it already, or those who have not?

Clinias:: Those who have not.

Dionysodorus:: Have you not agreed that those who do not know belong also to this class, those who have not?

Socrates:: He nodded.

Dionysodorus:: And the learners are of the class who get, not those who have?

Clinias:: Yes.

Dionysodorus:: Then those who do not know, learn, not those who do.

Socrates:: Now Euthydemus was getting ready to give the young man the third fall in this wrestling match, but I saw the boy was out of his depth, and hoped to give him time to rest that he might not let us down; so I said, to encourage him, My dear Clinias, do not be surprised if the arguments appear strange to you. Perhaps you do not understand what our visitors are doing with you. They are doing the same as the Corybantes do in their initiations, when the one to be initiated is being enthroned. There is dancing and play there also, as you know if you have been initiated; and now these are only dancing round you in play, meaning to initiate you afterward. So consider now that you are hearing the beginnings of the sophistic ritual. For you must learn first of all, as Prodicus says, the right use of words; and this is just what the two visitors are showing to you, because you did not know that people use the word *learn* in two senses—first, when one has no knowledge at the beginning about something, and then afterward gets the knowledge, and second, when one already having the knowledge uses this knowledge to examine this same thing done or spoken. The second is called understanding rather than learning, but sometimes it is also called learning. But you missed this, as these show it; they hold the same word as applying to people in opposite senses, to one who knows and one who does not. It was much the same in the second question, in which they asked you whether people learn what they know or what they don't. Well, all this is just a little game of learning, and so I say they are playing with you; I call it a game, because if one learned many such things or even all of them, one would be no nearer knowing what the things really are, but would be able to play with people because of the different sense of the words, tripping them up and turning them upside down, just as someone pulls a stool away when someone else is going to sit down, and then people roar with joy when they see him lying on his back. So you must consider that all this was a game on the part of these gentlemen, but I feel sure, Clinias, that from now on this distinguished pair will show you serious things, and I will give them a lead as to what they promised me to provide. You remember they said they would demonstrate their skill in drawing you on, but so far I suppose they thought it better to begin by playing with you.

Then, my dear Euthydemus and Dionysodorus, let your play end here—perhaps we have had enough—but now please demonstrate by attracting the boy and showing him how he must practice wisdom and virtue.

But first I will show to you what my notion of it is, and the sort of thing I should like to hear. If you think I am clumsy and ridiculous in doing this, don't laugh at me; I am only eager to listen to your wisdom, and so I will be daring enough to make a rough sketch before you. Put up with me then, and listen without laughing, both you and your pupils. And as for you, Master Clinias, answer.

—Do we all wish to do well in the world? Or perhaps this is one of the questions which I feared you might laugh at, for it is foolish, no doubt, even to ask such things. Who in the world does not wish to do well?

Clinias:: Not a single one.

Socrates:: Very well. Next then, since we all wish to do well, how could we do well? If we had plenty of good things, eh? Perhaps that is a sillier question than the other. For it is clear, I suppose, that that is true?

—He agreed.

Very well, which shall we say are good for us, of all the things there are? This is an easy question, I think; it needs no solemn person to supply an answer, for everyone would tell us that to be rich is good. What do you say?

Clinias:: Yes indeed.

Socrates:: Also to be healthy, and to be handsome, and to have enough of all the other bodily blessings.

—He thought so too.

Again, good birth and power and honor in your own country, these are clearly good?

—He agreed.

Then what good things are left to us? What is it to be temperate and upright and brave? What do you think, in heaven's name, Clinias—if we put these among the good things, shall we be right, or not? For perhaps someone might quarrel with this. What do you think?

Clinias:: They are good.

Socrates:: Very well, where shall we put wisdom in our parade? Among the good things, or where do you say?

Clinias:: Among the good things.

Socrates:: Take care now that we leave out none of the good things worth mentioning.

Clinias:: Oh no, I think there is nothing left out.

Socrates:: Suddenly I remembered one, and said, Upon my word, we are nearly leaving out the greatest good of all!

Clinias:: What is that?

Socrates:: Good fortune, Clinias, which everyone says is the greatest good of all; even the commonest fools say that.

Clinias:: Quite true.

Socrates:: Then I thought again for a moment, and said, We have almost made ourselves ridiculous before these visitors, you and I, my dear young gentleman!

Clinias:: What's the matter now?

Socrates:: Because we put good fortune among the first lot, and now here we are talking about the same again!

Clinias:: Well, what is the matter then?

Socrates:: It is ridiculous, I suppose, when something has been lying before us all this time, to lay it before us again and to say the same things twice!

Clinias:: How do you mean?

Socrates:: Wisdom, I suppose, is good fortune; even a child would know that.

—He was astonished, so young and simple he still is. Seeing him wondering I said, Why, Clinias, consider for example doing well with pipe music, don't you think the pipers have the best fortune?

Clinias:: Yes.

Socrates:: And in the writing and reading of letters the grammar men?

Clinias:: Certainly.

Socrates:: Consider the dangers of the sea. Surely you don’t think that anyone has better fortune than wise pilots, as a general rule?

Clinias:: Of course not.

Socrates:: Well then, on a campaign, which would you like better to share danger and fortune with, a wise captain or an ignorant one?

Clinias:: A wise one.

Socrates:: And if you were ill, which would you prefer to run risks with, a wise physician or an ignorant one?

Clinias:: A wise one.

Socrates:: Don’t you think, then, that it would be better fortune to do anything along with a wise man, than with an ignorant one?

—He agreed.

Then wisdom everywhere makes men to have good fortune. For wisdom, I suppose, could never make a mistake, but must always do right and have right fortune, or else it would not be wisdom any longer.

We came to an agreement in the end somehow or other, to sum up thus : when wisdom is present, whoever has it needs no more good fortune than that. And when we had come to this agreement, I asked him how our former admissions would stand now. We agreed, that if we had plenty of good things, we should be happy and do well.

Clinias:: Yes.

Socrates:: Then should we be happy because of the good things we had, if they gave us benefit, or if they did not?

Clinias:: If they gave us benefit.

Socrates:: And would a thing give benefit, if we only had it but did not use it? For example, if we had plenty of food, but ate nothing, and plenty of drink, but drank nothing, should we get any benefit?

Clinias:: No, none.

Socrates:: And all the craftsmen, now, if each of them had everything ready that was necessary for his work, but used nothing, would these do well just because of having, because they had all the things which the craftsman must have? A carpenter, for instance, if he had provided all his tools and wood enough but did no carpentering, would he get any benefit from just having?

Clinias:: None at all.

Socrates:: Again, if a man were possessed of wealth and all the good things we named lately, but if he did not use them, would he be happy just because he possessed the good things?

Clinias:: Not at all.

Socrates:: Then it is necessary, as it seems, that the one who is to be happy must not only get possession of such good things, but also must use them, or else there is no benefit from having them.

Clinias:: Quite true.

Socrates:: Very well then, Clinias, is that enough now to make a man happy, both to possess the good things and to use them?

Clinias:: I think so.

Socrates:: Is that if he uses them aright, or is it the same if he uses them wrongly?

Clinias:: If he uses them right.

Socrates:: Quite so. It is more harmful, I should think, if one uses anything wrongly than if one leaves it alone—the first is bad; the second is neither bad nor good. Don’t you agree?

—He did.

Very well, in the working and the use of woodwork, that which produces the right use is just simply knowledge of carpentry, don't you think so?

Clinias:: It is just that.

Socrates:: Moreover knowledge, I suppose, is what produces right use of equipment?

—He agreed.

Well then, what about the use of the good things which we mentioned at first—wealth and health and good looks—for using all such things right, was knowledge the guide which directed the action, or was it something else?

Clinias:: Knowledge.

Socrates:: Then not only good fortune but good doing, as it seems, is provided by knowledge for mankind in every getting and doing.

—He agreed.

Then in God's name, does any benefit come from the other possessions, without intelligence and wisdom? Could a man get benefit, possessing plenty and doing much, if he had no sense—would he not benefit more by doing little with sense? Just consider. If he did less he would make fewer mistakes, if he made fewer mistakes he would do less badly, if he did less badly he would be less miserable?

Clinias:: Certainly.

Socrates:: Which would be more likely to do less, a poor man or a rich man?

Clinias:: A poor man.

Socrates:: A weak man or a strong man?

Clinias:: A weak man.

Socrates:: A man in high place or in low place?

Clinias:: Low place.

Socrates:: Would a brave and temperate man do less, or a coward?

Clinias:: A coward.

Socrates:: So also an idle rather than an active man?

—He agreed.

And a slow man rather than a quick one, shortsighted and hard of hearing rather than sharp?

In all such comparisons we agreed.

Then to sum up, my dear Clinias, the truth is that in all those things which we said at first were good, the question is not how they are in themselves naturally good, but this is the point, it seems. If ignorance leads them, they are greater evils than their opposites, inasmuch as they are more able to serve the leader which is evil; but if intelligence leads, and wisdom, they are greater goods, while in themselves neither kind is worth anything at all.

Clinias:: It seems to be so, as you say.

Socrates:: Then what follows from what has been said? That none of the things is either good or bad, except these two, and of these wisdom is good, and ignorance bad.

—He agreed.

Then let us consider what remains. Since we all desire to be happy, and we have been shown to be happy by using things and using them aright, and rightness and good fortune were provided by knowledge, what seems to be necessary, you see, is that every man in every way shall try to become as wise as possible. Is not that correct?

Clinias:: Yes.

Socrates:: And I suppose we think that he should get this from his father much rather than wealth, and from guardians and friends and especially from those who profess to be lovers, native or foreign; he should beg and beseech them to give him some wisdom. For wisdom's sake, Clinias, there is no disgrace, no reproach, in being servant and slave to a lover and to anyone, for a man willing to give honorable service in the passion to become wise. Don't you think so?

Clinias:: I think you are quite right.

Socrates:: Yes, Clinias, if only wisdom can be taught, if only it is not something that comes to men of itself—for that is a point we have not considered, that has not yet been agreed between me and you.

Clinias:: Well, Socrates, I think wisdom can be taught.

Socrates:: I was delighted, and replied.

Well said, admirable boy! I am much obliged to you for sparing me from a long inquiry on just that question, whether wisdom can or cannot be taught. Now, then, since you think it can, and that wisdom alone in the wide world makes a man happy and fortunate, don't you say it is necessary to love wisdom, and don't you mean to do it yourself?

Clinias:: That I do, Socrates, as hard as ever I can!

Socrates:: I was glad to hear it. And I said, There's my specimen, my dear Dionysodorus and Euthydemus, of the sort of thing I wish words of attraction to be; it is clumsy perhaps, and too long, and tedious. Now then let either of you who wishes demonstrate the same thing for us, doing it neatly like an artist. Or if you do not care to do that, then begin where I left off, and show the boy in due order whether he must get every knowledge, or if there is one single knowledge which he must get to be happy and a good man, and what this is. For as I said at the beginning, it would really mean a great deal to us that this young man should become wise and good.

That is what I said, Crito, and I paid particular attention to what should follow, and I watched how they would tackle the argument, and where they would begin, in trying to encourage the young man to practice wisdom and virtue. So Dionysodorus, the elder brother, began first, and we all watched him expecting to hear something wonderful there and then. As indeed we did, Crito, for it was a wonderful argument which the man was beginning, and it is worth your while to hear what sort of encouragement to virtue it was.

Dionysodorus:: Tell me, Socrates, and all you gentlemen here who say you desire that this young man should become wise, whether you are jesting in saying this, or do you truly and seriously desire it?

Socrates:: This made me suppose that they thought we were jesting before, when we asked them to converse with the young man, and that this was the reason why they jested and did not take it seriously. So I told them still more earnestly that we were really serious about it.

—Then Dionysodorus said;

Dionysodorus:: Take care, Socrates : you may have to deny what you say now.

Socrates:: I have taken care, I shall never deny it.

Dionysodorus:: Very well. You say you want him to become wise.

Socrates:: Most certainly.

Dionysodorus:: But now, is Clinias wise or not?

Socrates:: He says, not yet.  He’s no boaster, you know.

Dionysodorus:: And you people, want him to become wise, and not to be a dunce?

Socrates:: —We agreed.

Dionysodorus:: Then you wish him to become one that he is not, and no longer to be one that he is.

Socrates:: I was troubled when I heard this, and he, seeing me troubled, took me up :

Dionysodorus:: One further word. Since you want him no longer to be one that he is now, you want him to be destroyed, it seems! Indeed, precious friends and lovers they must be who would give a great deal to have their darlings done away with!

Socrates:: Ctesippus flew into a rage for his pet when he heard this, and said, Mr. Thurian Visitor, if it weren't too rude I would say, Same be done to you! How could you let yourself tell such a lie about me and the rest of us, something to my mind not decent to repeat, that I would wish this young gentleman to be done away with!

Euthydemus:: My dear Ctesippus, do you really think it is possible to tell a lie?

Ctesippus:: Yes, by heaven, or else I am out of my senses.

Euthydemus:: In making the statement objected to, or not in making it?

Ctesippus:: In making it.

Euthydemus:: In that case, *if* he states it, is he not telling another of the *facts,* differing from what he actually says?

Ctesippus:: How could he?

Euthydemus:: Clearly what he tells is an extra one of the facts, distinct from his other facts.

Ctesippus:: *Quite* so!

Euthydemus:: Therefore in stating *that,* he is stating the extra fact?

Ctesippus:: Yes.

Euthydemus:: Now then, he who states this fact and the other facts is telling the truth; so Dionysodorus, since he states the facts, tells the truth and tells no lie about you.

Ctesippus:: Yes, but he that makes *these* statements, Euthydemus, is not stating the facts—is not saying the things that are.

Socrates:: Then Euthydemus went on;

Euthydemus:: Surely the things that are not, are not?

Ctesippus:: They are not.

Euthydemus:: Surely the things that are not can only be nowhere?

Ctesippus:: Nowhere.

Euthydemus:: Is it possible then that anyone, I don't care who he is, could *do* something about these things that are not, so as to *make* them to *be* the things that are nowhere?

Ctesippus:: I don't think so.

Euthydemus:: Very well. When the orators speak in public, do they do nothing?

Ctesippus:: Oh yes, they do something.

Euthydemus:: Then if they do, they also make?

Ctesippus:: Yes.

Euthydemus:: Then to speak is both to do and to make?

Socrates:: He agreed.

Euthydemus:: Then, no one ever says the things that are not—for he would at once make them something, and you have admitted that no one can make that which is not—so according to what you say, no one tells lies, but since Dionysodorus says it, he says the truth and the things that are.

Ctesippus:: Right, on my word, only he says the things that are in a certain way, but not as they really are.

Dionysodorus:: What, Ctesippus! Are there indeed people who say things as they are?

Ctesippus:: Certainly there are, all gentlemen and those who *speak the truth.*

*Dionysodorus::* Very well, are not good things well, and bad things ill?

Socrates:: He agreed.

Dionysodorus:: You agree that gentlemen speak as things are?

Ctesippus:: I do.

Dionysodorus:: Then, Ctesippus, gentlemen speak ill of things ill, since they speak as things are.

Ctesippus:: Yes, upon my word, very much so at least of rude men; you will take care not to be one yourself, if you will listen to me, or the good men may speak ill of *you.* You can be sure that the good speak ill of the ill!

Dionysodorus:: And do they speak bigly of the big, and hotly of the hot?

Ctesippus:: That they do, at least they speak flatly of the flat, like your discussion.

Dionysodorus:: Vulgar abuse, Ctesippus, vulgar abuse.

Ctesippus:: Not a bit of it, Dionysodorus, since I am fond of you, but I am warning you as a friend, and I am trying to persuade you never to say, so rudely to my face, that I want these to be done away with, whom I value most!

Socrates:: As I saw they were getting rather wild with each other, I began to make game of Ctesippus and said, My dear Ctesippus, I think we ought to accept from our visitors what they tell us, if they are kind enough to do us this favor, and we should not quarrel over a word. If they understand how to destroy men so as to make good and sensible ones out of bad and foolish ones, whether this be their own invention, or they learned from someone else a kind of death or destruction, such that they can destroy a bad one and produce a good one instead : if they understand this—and it is clear they do understand it; at least they said that their art newly discovered was to make good men out of bad—let us give them leave : let them destroy the lad and make him sensible, and all the rest of us too! But if you young ones are afraid, make the experiment on me, as your Carian slave; I am only an old man, so I am ready to run the risk, and I deliver myself to Dionysodorus here as if he were Medea of Colchis. Let him destroy me, boil me too if he likes, only let him turn me out good.

Then Ctesippus said;

Ctesippus:: I'm quite ready, myself, Socrates, to let our visitors take me on, and if they like they may flay me even worse than they do now, so long as my skin shall not end as a leather bottle, like that of Marsyas, but in virtue. You see Dionysodorus here thinks I am angry with him; but I'm not angry, I am only speaking against what I think he is not speaking nicely to me. Look here, Dionysodorus, be generous, don't say that to speak against you is vulgar abuse; that is something quite different, vulgar abuse!

Dionysodorus:: Do you think there is such a thing as 'speaking against' one, Ctesippus, when you say that?

Ctesippus:: Why yes, of course, very much so; do you think there is not, my dear Dionysodorus?

Dionysodorus:: Anyway, you could not show that you had ever heard anyone 'speaking against' anyone else.

Ctesippus:: Indeed? On the contrary, let us hear now whether I can show you Ctesippus speaking against Dionysodorus.

Dionysodorus:: And would you undertake to prove that?

Ctesippus:: Certainly.

Dionysodorus:: Well then, are there words describing each of the things that are?

Ctesippus:: Certainly.

Dionysodorus:: As each thing is, then, or as it is not?

Ctesippus:: As it is.

Dionysodorus:: Yes, for if you remember, Ctesippus, we showed just now that no one speaks of anything as it is not, for it was made clear that no one speaks what is not.

Ctesippus:: Well, what then? Are you and I speaking against each other any the less?

Dionysodorus:: Then should we be speaking against each other when we both spoke describing the same thing, or should we not in that case be saying the same things?

Socrates:: He admitted it.

Dionysodorus:: But when neither of us speaks the word describing the thing, should we then be speaking against each other? Surely in this case neither of us would be thinking of the thing at all?

Socrates:: He admitted this too.

Dionysodorus:: On the other hand, when I speak the word describing the thing, and you describing something else, are we speaking against each other then? Or am I describing the thing, and you saying nothing about it at all? And how could he that says nothing be speaking against him that is speaking?

Socrates:: Ctesippus was silent, but I was astonished at the whole argument, and said, What do you mean, Dionysodorus? I confess that I have heard this argument from many, and however often I hear it I am always astonished; even Protagoras and his people used it with vigor, and others before them. It was always a wonder to me how it confounded everyone else, and indeed confounded itself—however, I think I shall hear the truth of it best from you. Is it really impossible to tell a lie? For this is what the argument means. Is it? Come, must one tell the truth or say nothing?

—He agreed.

Then is it impossible to tell a lie, but possible to have a false opinion?

Dionysodorus:: Not even that.

Socrates:: Then there is no such thing at all as a false opinion.

Dionysodorus:: No.

Socrates:: And no ignorance, or ignorant people? Would not ignorance, if it did exist, be this—being deceived about things?

Dionysodorus:: Certainly.

Socrates:: But that is not possible.

Dionysodorus:: No.

Socrates:: Are you speaking just for the sake of speaking, Dionysodorus, only to say something odd and strange, or do you really think that no one in the world is ignorant?

Dionysodorus:: Just you refute me.

Socrates:: Is there such a thing as refute, to use your own argument, if no one speaks falsely?

Euthydemus:: There is not.

Socrates:: And so, it seems Dionysodorus did not this moment bid me refute?

Euthydemus:: No, for how could anyone bid what is not? Do you?

Socrates:: My dear Euthydemus, I fear I do not quite understand these clever things and admirable things but my mind is somewhat dense about them, so perhaps I am going to speak like a common or vulgar man, but please forgive me. Look here, if it is impossible to be false, or to think falsely, or to be ignorant, then is it not impossible to make a mistake when one does anything? For in doing, one cannot make a mistake in what one does—is not that what you say?

Euthydemus:: Certainly.

Socrates:: Then here is my common or vulgar question. For if we make no mistake either in doing or in speaking or in thinking, then what in God’s name do you come here to teach, if that is so? Did you not say just now that you could impart virtue better than all the world to one who wanted to learn?

—Here Dionysodorus broke in.

Dionysodorus:: Are you such an old dotard, Socrates, that you remind us now what we said at first, and if I said something last year you will remember that now, but you don’t know what to do with what is being said at the present moment?

Socrates:: Because what is being said now is very difficult—naturally, since it is said by very wise men—indeed this last thing is wholly difficult to deal with, as you say. For what do you mean, Dionysodorus, when you say I don’t know what to do with it? Isn’t it clear you mean that *I* can’t refute it? Just tell me, what else is the sense of the phrase, ‘I don’t know what to do’ with what is said?

Dionysodorus:: But as to what *you* say, that is not very difficult to do with. Just answer me.

Socrates:: Before *you* answer *me?*

Dionysodorus:: Won't you answer?

Socrates:: Is that fair?

Dionysodorus:: Quite fair.

Socrates:: On what reasoning? Is not this your reasoning—that you visit us as one all-wise about words, and you know when you are bound to answer and when not, and now you will not answer anything since you perceive that you are not bound?

Dionysodorus:: You just chatter, without troubling to answer. Come, my good man, do as I say and answer, since you yourself admit that I am wise.

Socrates:: Then I must do as you say, and I can't help it, as it seems, for you are master. Ask away.

Dionysodorus:: Is there soul in things which have sense, when they have sense? Or have also the soulless things sense?

Socrates:: Only the things with soul.

Dionysodorus:: Then do you know any phrase which has soul?

Socrates:: No indeed.

Dionysodorus:: Then why did you ask me just now what sense my phrase had?

Socrates:: Oh, it was simply a mistake I made through my stupidity —or perhaps it was not a mistake, and I was right in saying that phrases have sense. Do you say it was a mistake or not? For if it was not a mistake, then you will not refute me although you are wise, and you do not know what to do with my saying; and if it was a mistake, then you do not say right when you declare it is impossible to make a mistake. I am not now speaking of things you said last year. It seems really, my dear Dionysodorus and

Euthydemus, that our present talk is getting us no further, and is still so to speak the old ‘knockdown and tumble down,’ and even your skill has not yet found out how to keep it from that, wonderful though it is for exactitude in speaking.

—Then Ctesippus said;

Ctesippus:: Truly amazing things you do say, honorable gentlemen of Thurii or Chios, or whence or however you like to get your names—you don’t seem to mind what nonsense you babble!

Socrates:: I was afraid of another bout of rudeness and tried again to calm Ctesippus by saying, My dear Ctesippus, what I said to Clinias a moment ago I say now to you, that you do not know how astonishing is the depth of our visitors’ wisdom, only they are not willing to demonstrate it in earnest; they are doing conjuring tricks with us like Proteus, the Egyptian Sophist. So let us follow the example of Menelaus, and not let go of the men until they make clear to us their real serious shape, for I believe that something very fine will appear when they begin to be in earnest. Come, let us pray and beseech them to show themselves. I really think the best thing is for me once more to give them a lead myself, and show them in what shape I beg them to reveal themselves. I will proceed from where I formerly left off, and I will try to follow up what comes next as well as I can, in the hope that I may bring them out, and they may pity my earnest attempt and be themselves in earnest.

—Now then, Clinias, it is your turn. Remind me where we left off. I think it was hereabout. We agreed in the end, didn’t we, that one must love wisdom? What do you say?

Clinias:: Yes.

Socrates:: And to love wisdom is to get knowledge? Is that right?

Clinias:: Yes.

Socrates:: What knowledge then should we do right to get? Is not the answer simply the knowledge that shall benefit us?

Clinias:: Certainly.

Socrates:: Would it benefit us at all, if we knew how to go about the country and recognize where in the earth the greatest quantity of gold is buried?

Clinias:: Perhaps.

Socrates:: But before that, we had proved that we should gain nothing, even if we got all the gold offhand without digging; so that even if we knew how to turn all the stones into gold, the knowledge would be worth nothing to us; for unless we know also how to use the gold, we saw there was no benefit in it. Don't you remember?

Clinias:: Oh yes, I remember.

Socrates:: In the same way, it seems, there is no benefit in any other knowledge, of business or of physic for example, or anything else which knows how to make something but not how to use what it makes. Is not that so?

Clinias:: Yes.

Socrates:: Even if there is a knowledge how to make men immortal, without the knowledge how to use immortality even this seems to bring no benefit, if we are to judge from our former admissions.

—We both agreed about that.

Then, my charming boy, we need such a knowledge as combines both how to make something and how to use what is made.

Clinias:: It appears so.

Socrates:: Then we must be nothing at all like those who make harps, for instance; we do not want to become masters of knowledge like that; for there the making art is one thing, the using art quite another, and each art deals separately with the harp. For the arts of harp making and harp playing are very different. Is not that so?

Clinias:: Yes.

Socrates:: Nor do we want pipe making, clearly; this is another like that.

—He agreed.

Well, if we should learn the art of speechmaking, tell me in heaven's name, is this the art which when got will make us happy?

Clinias:: No, I don't think so.

Socrates:: What's your evidence?

Clinias:: I see certain speechmakers who do not know how to use the speeches which they make themselves, like harp makers with their harps; but here also there are others able to use the speeches which the others have made, some who are themselves unable to make the speeches. It is clear then that, in speeches also, making is one art and using another.

Socrates:: I think you give proof enough, that the art of the speechmakers is not that which if anyone gets he would be happy. However, I did think that somewhere about here would appear the knowledge which we have been seeking so long. For indeed the men who make the speeches, when I meet them, do seem to me to be superwise, Clinias, and their very art seems to be something divine and lofty. However, that is nothing to wonder at, for it is a portion of the art of enchanters, but falls short a little. For the enchanter's art is the charming of adders and tarantulas and scorpions and other vermin and pests, but this is really the charming and persuasion of juries and parliaments and any sort of crowds. Don’t you think it is like that?

Clinias:: Yes, clearly that is just what it is like.

Socrates:: Then where are we to turn to now? What art is there?

Clinias:: I’m sure I can’t say.

Socrates:: Why! I think I have found it myself!

Clinias:: What art?

Socrates:: The general’s art! That seems to be most certainly the art, which he who gets will be happy!

Clinias:: I do not think so.

Socrates:: Why not?

Clinias:: This art seems to me a sort of hunting men.

Socrates:: What then?

Clinias:: No art of hunting, goes further than to hunt and to capture; but when they have captured what they hunted, they cannot use it; huntsmen and fishermen hand over to the cooks. Geometers and astronomers and calculators—for these are a sort of hunters too, since they are not mere makers of diagrams, but they try to find out the real meanings—so because they do not know how to use them, but only how to hunt, they hand over their discoveries, I take it, to the dialecticians to use up, at least all of them hand over who are not quite without sense.

Socrates:: Good, good. O Clinias, most beautiful boy, most wise reasoner! Is that really so?

Clinias:: Certainly it is so! And the same with the generals. As soon as they have hunted a city or an army. they hand it over to the politicians—for they do not know themselves how to use their captures—just as quail hunters hand over to the quail keepers. If, therefore, went on Clinias, we need that art, which will itself know how to use what it got by making or hunting, and will be such as to make us blessed, then we must seek some other art, instead of the general's.

Crito:: What do you say, Socrates? That young boy said all that?

Socrates:: Don't you think so, Crito?

Crito:: Not a bit of it! I think that if he said it, he did not need Euthydemus or anyone else to educate him!

Socrates:: Heaven preserve us, my dear man, I wonder if Ctesippus was the one who said it! That memory of mine!

Crito:: Ctesippus? Surely not!

Socrates:: Well, I am sure of one thing, it was neither Euthydemus nor Dionysodorus who said that. Good God, Crito! Can it be that some higher power was there and uttered the words! I heard them, I am sure of it.

Crito:: Oh yes, oh yes, Socrates, it was some higher power. That's what I think, no doubt about it. But after this, did you go on looking for the art? Did you find what you wanted, or didn't you?

Socrates:: Find it, good heavens! No, you would have laughed at us—we were like children after larks. always thought we were going to catch each knowledge by the tail, and the knowledge always got away. Why make a long story of it? We came to the art of kings, and examined that to see if that provided and manufactured happiness. Then it seemed like falling into a labyrinth; we thought we were at the finish, but our way bent round and we found ourselves as it were back at the beginning, and just as far from that which we were seeking at first.

Crito:: How did this happen to you, Socrates?

Socrates:: I will tell you. We thought the art of politics and the art of kings were the same.

Crito:: And what next?

Socrates:: To this art the generals and the rest gave over the control of the works of their own trades, as being the only art knowing how to use them. Thus it seemed clear to us that this was the art we sought, and the cause of doing right in the state, exactly as the verse of Aeschylus describes it, sitting alone at the helm of state, steering all and ruling all, and making all useful.

Crito:: And you thought this a good notion, Socrates?

Socrates:: You shall judge of that, Crito, if you will hear what happened to us next. You see we went on looking at it like this. Pray does this royal art, ruling all, make anything for us, or not? Certainly it does, we said to each other. Wouldn't you say the same, Crito?

Crito:: Yes, I should.

Socrates:: Then what would you say it makes? Put it in this way. If I should ask you whether the physician's art, ruling all that it rules, makes anything for us, would you not say it makes health?

Crito:: Yes, I should.

Socrates:: And what of your art of agriculture? Ruling all which it rules, what does it make? Wouldn't you say it produces for us the food from the earth?

Crito:: Yes.

Socrates:: Then what of the art of kings, ruling all which it rules? What does it make? Perhaps you cannot say exactly.

Crito:: No indeed, I cannot.

Socrates:: Nor could we, my dear Crito. But I know one thing, that if it is the art we seek, it must be helpful.

Crito:: Certainly.

Socrates:: Then surely it must provide something good for us?

Crito:: Obviously, Socrates.

Socrates:: But good, as Clinias and I agreed together, is nothing but some kind of knowledge.

Crito:: Yes, you said so.

Socrates:: Again, all the other 'works of politics' as one might call them—and there are many, for example, to make the people rich and free and without party spirit—all these things turned out to be neither good nor bad, but the necessary thing was to make them wise and to give them a share of knowledge, since knowledge was to be that which profited them and made them happy.

Crito:: That is true, that is what you agreed, according to your report of what was said.

Socrates:: Then does the art of kings make the people wise and good?

Crito:: Why not, Socrates?

Socrates:: But does it make all of them good, and good in all respects? Does it impart every knowledge, shoemaking and carpentry and all the others?

Crito:: I do not think so, Socrates.

Socrates:: But what knowledge does it teach? And what are we to do with it? For it must not be a contriver of any of those products which are neither good nor bad; it must impart no knowledge but itself alone. Can we say then what it is, and what we are to do with it? Would you like us to say it is the one by which we shall make other men good?

Casting_Chr_5: Yes, certainly.

Socrates:: And what shall these be good for, and how useful to us? Shall we say, to make others the same, and they to make others, and so on and on? And good at what? We cannot see, since we have despised what are generally said to be the works of statecraft, and as the proverb goes, it is always ‘Corinthus, son of Zeus.’ We are just as far from knowing, or farther, what is that knowledge which will make us happy.

Crito:: Yes, indeed, Socrates, it seems you got yourselves into a nice mess.

Socrates:: Well all I could do, my dear man, since I found myself in this mess, was to cry and clamor, praying to the two visitors like a second pair of savior gods [Castor and Polydeuces], to save us, me and the boy, from this tempest of logic, and to play no more but to be serious, and show to us which is the knowledge which once gained would bring us well through the rest of our life.

Crito:: What then? Was Euthydemus willing to show you?

Socrates:: Why, of course! And he began, my good friend, in this magnificent fashion.

Euthydemus:: Which do you prefer, then, my dear Socrates? Shall I teach you this knowledge which has been puzzling you for so long, or shall I show that you have it?

Socrates:: Heaven bless us, my dear man! Can you do that?

Euthydemus:: That I can.

Socrates:: Then show that I have it, I do beseech you, for that is much easier than learning for an old man like me.

Euthydemus:: Very well, just answer. Is there anything you do know?

Socrates:: Oh yes, plenty of things, but only small ones.

Euthydemus:: Quite enough. Then do you think it is possible for anything whatever of the things which are, not to be what it is?

Socrates:: Why no, I don't.

Euthydemus:: You know something then?

Socrates:: I do.

Euthydemus:: Then you are knowing, since you know?

Socrates:: Certainly, in that same something.

Euthydemus:: That makes no difference. Isn't it necessary that you know everything since you are knowing?

Socrates:: Why, no indeed. There are many other things I do not know.

Euthydemus:: Then if you do not know something, you are not knowing.

Socrates:: Not knowing that, my friend.

Euthydemus:: Are you any the less not knowing? But just now you said you were knowing, and so you are really this very same you, and again not the same, in relation to the same things at the same time!

Socrates:: All right, Euthydemus! As the proverb goes, 'You never say a word amiss, it's always either that or this!' And what then is my understanding of that knowledge we were looking for? I suppose it is this. It is impossible for the same thing both to be and not to be. If I know one thing I know all things, for I could not be knowing and not knowing at the same time. And so since I know everything, I have *that* knowledge too! There you are—isn't that what you tell us, isn't that your word of wisdom?

Euthydemus:: Look here, you are refuting *yourself,* Socrates!

Socrates:: Well, but what about you, Euthydemus? Weren't *you* in this same difficulty? Anyway, so long as I keep with you and with dear old Dionysodorus, I shall not feel at all vexed at any difficulty we get into! Tell me, don't you two know some of the things which are, and not know others of them?

Dionysodorus:: By no means.

Socrates:: What's that! Don't you know anything?

Dionysodorus:: Oh yes.

Socrates:: Then you know everything, since you know something?

Dionysodorus:: Everything, and so do you. If you know one thing, you know all things.

Socrates:: O God! Here's a wonder and a manifest miracle! Can it be that all the other men in the world know everything, or nothing?

Dionysodorus:: Surely, they cannot know some things and not others, or they would be at once knowing and not knowing.

Socrates:: Knowing what?

Dionysodorus:: Everyone, knows everything, if he knows one thing.

Socrates:: Good heavens! Good heavens, Dionysodorus! I see now you are both in earnest, and what a job I had to persuade you to take us in earnest! Do you both really and truly know everything? Carpentry and shoemaking, for instance?

Dionysodorus:: Certainly.

Socrates:: So you are able to stitch leather?

Dionysodorus:: Yes, and to do cobbling too.

Socrates:: And do you know things like these, the number of the stars, and the sand?

Dionysodorus:: Certainly. Do you think we would not admit that too?

Socrates:: Then Ctesippus broke in.

Ctesippus:: Show me a proof, Dionysodorus, for God’s sake, by which I may know that you two are telling the truth.

Dionysodorus:: What shall I show you?

Ctesippus:: Do you know how many teeth Euthydemus has, and does he know how many you have?

Dionysodorus:: Is it not enough for you, to be told that we know everything?

Ctesippus:: Not that, please. Just tell us this one thing more and show you are speaking the truth; if you each say how many teeth the other has, and if we count them and prove that you know, we will at once believe all the rest.

Socrates:: They thought he was making fun, so they were unwilling, but they kept on saying they knew everything, as Ctesippus asked them one question after another without the smallest restraint. And he left out nothing, not even the ugliest, but asked them if they knew that. They faced up boldly against every question maintaining that they did know, like wild boars charging against the spear thrust, so that I also became quite incredulous, Crito, and at last I myself was driven to ask if Dionysodorus knew how to dance.

Dionysodorus:: Oh yes!

Socrates:: Well, I suppose you can’t do a sword dance, and roll about on a wheel, at your age? Have you got that far in skill?

Dionysodorus:: There’s nothing I can’t do.

Socrates:: And do you know everything only now, or have you known it always?

Dionysodorus:: Always.

Socrates:: Even when you were children, and as soon as you were born, did you know everything?—

Yes, they said, both together.

—This seemed incredible to us, and Euthydemus asked;

Euthydemus:: Do you not believe it, Socrates?

Socrates:: I can only say, that you must be a wise pair.

Euthydemus:: But if you will answer me, I will prove that you also admit these surprising things.

Socrates:: Oh, well, I shall be very glad to be shown up like that. For if I have been wise without knowing it myself, and if you will show that I know everything and always did, what greater piece of luck could I have in all my life!

Euthydemus:: Answer then.

Socrates:: All right, ask away. I will answer.

Euthydemus:: Tell me then, Socrates, are you knowing in something or not?

Socrates:: I am.

Euthydemus:: Then do you know by that by which you are knowing, or by something else?

Socrates:: By that by which I am knowing. I suppose you mean the soul, or do you not mean this?

Euthydemus:: Aren't you ashamed, Socrates? When you are asked one question, do you ask another?

Socrates:: Oh dear, what am I to do? I will do just as you tell me. When I am not clear what you are asking, do you tell me to answer all the same, and not to ask anything myself?

Euthydemus:: I suppose you conceive some notion in what I say?

Socrates:: Yes, I do.

Euthydemus:: Then answer according to the notion which you conceive.

Socrates:: Well, what if you mean it in one way when you ask, and I conceive my notion in another way, and then I answer according to my notion—is it enough for you if I answer not at all to the point?

Euthydemus:: Enough for me, but however, not enough for you, as I take it.

Socrates:: Then, Euthydemus, I won't answer, I tell you that, before I find out.

Euthydemus:: You will not answer, according to your notion in each case, because you are more of an old fool than you need be, and *will* go on talking drivel.

Socrates:: Now I saw he was angry with me for picking holes in the phrases used, because he was trying to catch me in his net of words. So I remembered that Connus also is angry whenever I will not give way to him, and now he takes less trouble about me because he thinks me ignorant. And since I had the notion to be a pupil of this other one, I thought I ought to give way to him, or he might think me stupid and refuse to accept me. So I said, Well, Euthydemus, if you think it proper to do like this, so be it. For anyway you know dialectic far better than I do, who have only the skill of an outsider. Then ask again from the beginning.

Euthydemus:: Very well then, answer again. Do you know what you know by something or not?

Socrates:: Yes, by the soul.

Euthydemus:: There he goes again, answering more than he is asked! I did not ask by what, but whether by something.

Socrates:: Oh well, I answered too much, from want of education. Do forgive me; I will from now on answer simply—I know what I know by something.

Euthydemus:: Is it by this same thing always, or by this thing one time, and by another thing another time?

Socrates:: Always, when I do know, it is by this thing.

Euthydemus:: Oh, do stop putting things in!

Socrates:: But I don't want this 'always' to trip us up!

Euthydemus:: It will not trip *us* up, but *you,* if anybody. But answer. Do you know always by this?

Socrates:: Always, since I must take out the when.

Euthydemus:: Then you know always by this. But knowing always, do you know some things by this and other things by something else, or everything by this?

Socrates:: By this all things—all which I know.

Euthydemus:: Here we are again! The old addition!

Socrates:: Well, I take away that 'which I know.'

Euthydemus:: Oh, don't take away a single thing, I don't ask of you any favors. But answer me. Could you know all things, if you did not know everything?

Socrates:: That would be a miracle!

Euthydemus:: Go on, add what you like, you admit that you know all things.

Socrates:: It seems like it, since the words 'which I know' have been made powerless, and it seems I know everything.

Euthydemus:: Then also you have admitted that you know always by this thing by which you know, whether 'when you do know' or however you like, for you have admitted that you know always, and at the same time everything. It is clear therefore that you knew as a child, and when you were born, and when you were begotten, and that before you came into being, and before heaven and earth came into being, you knew all things, since you always know. And by God, you yourself always will know, and all things, if I choose.

Socrates:: Oh, do choose! O my precious friend Euthydemus, if you are really and truly telling the truth. Only I don't quite believe you can, unless your brother Dionysodorus here would choose too; if so, it may be all right. But tell me, both of you, I would not dare to dispute with men of such miraculous genius and say that I do not know everything when you both say I do, but there are some things which, how can I say that I know, Euthydemus, such as that good men are unjust? If you please, do I know that or not?

Euthydemus:: You know it sure enough.

Socrates:: What?

Euthydemus:: That good men are not unjust.

Socrates:: Oh yes, I knew that long ago, but that is not my question. But where did I learn that good men *are* unjust?

Dionysodorus:: Nowhere.

Socrates:: Then I don't know this.

—Euthydemus said to his brother;

Euthydemus:: You are spoiling the argument, and it will be shown up that this man does not know, and he will be at the same time knowing and not knowing.

Socrates:: Dionysodorus flushed red, and I said, But you, what do you mean, Euthydemus? Do you think your brother who knows everything was not right?

—Dionysodorus quickly broke in with;

Dionysodorus:: Am I brother to Euthydemus?

Socrates:: Let me be, my good man, until Euthydemus has taught me that I know that good men are unjust. Don't grudge me the lesson.

Dionysodorus:: You are running away, Socrates, and don't want to answer.

Socrates:: Naturally, I am not a match for either of you, so it is very likely I should run from the two! I am much weaker of course than Heracles, and he was not able to fight it out with the Hydra, a high-brow clever enough to produce many heads of argument instead of one if somebody cut one off, because another high-brow, just arrived from foreign parts I should think, came ashore out of the sea in the shape of a crab, and kept causing much pain to the hero by talking and biting at him on his left. So Heracles called in his nephew Iolaus to his help, and Iolaus helped him effectively. But if my Iolaus were to come, he would do more harm than good.

Dionysodorus:: Answer now, when you have done this incantation. Was Iolaus any more the nephew of Heracles than he was yours?

Socrates:: Well, the best thing for me is to answer you, Dionysodorus. For you will never have done with your questions, I am pretty well sure of that, envious and interfering, to keep Euthydemus from teaching me that bit of wisdom.

Dionysodorus:: Answer now.

Socrates:: I answer now, that Iolaus was the nephew of Heracles, but mine, I think, not one little bit. For my brother Patrocles was not his father, but one with a name something like that, Iphicles, was the brother of Heracles.

Dionysodorus:: And Patrocles was yours?

Socrates:: Yes, we had one mother but not one father.

Dionysodorus:: Then he is your brother and not your brother.

Socrates:: Not on the father's side, my dear man, for his father was Chaeredemus, and mine Sophroniscus.

Dionysodorus:: But Sophroniscus was father and Chaeredemus father?

Socrates:: Certainly, one mine, and one his.

Dionysodorus:: Then, Chaeredemus was other than the father?

Socrates:: Than mine.

Dionysodorus:: Then was a father being other than a father? Are you the same as the stone?

Socrates:: I'm afraid you may prove me so, but I don't think I am.

Dionysodorus:: Then you are other than the stone?

Socrates:: Other to be sure.

Dionysodorus:: Then being other than a stone, you are not a stone? And being other than gold, you are not gold?

Socrates:: That is all true.

Dionysodorus:: So then Chaeredemus, being other than a father, would not be a father.

Socrates:: It seems, that he is not a father.

—Euthydemus now chimed in :

Euthydemus:: I suppose if Chaeredemus is a father, Sophroniscus again being other than a father is not a father, so that you, Socrates, are fatherless.

Socrates:: Ctesippus took it on now, and said;

Ctesippus:: But is not the father of you two in the same case? He is other than my father.

Euthydemus:: Not at all.

Ctesippus:: What! Is he the same?

Euthydemus:: The same to be sure.

Ctesippus:: I hope not. But, Euthydemus, is he only my father or the father of everyone in the world?

Euthydemus:: Father of the others too. Or do you think the same man being a father is not a father?

Ctesippus:: I did not think so.

Euthydemus:: Eh, and that being gold a thing is not gold, or being a man one is not a man?

Ctesippus:: The two threads don't match, as the proverb goes, Euthydemus. You tell a strange thing, if your father is father of all.

Euthydemus:: But he is.

Ctesippus:: Of men and horses and all the other animals?

Euthydemus:: All.

Ctesippus:: And is your mother mother of all?

Euthydemus:: My mother too.

Ctesippus:: Of the sea urchins then, since your mother is mother of the sea animals!

Euthydemus:: So is yours.

Ctesippus:: Then you are brother of gudgeons and puppy dogs and little pigs!

Euthydemus:: So are you.

Ctesippus:: And a boar is your papa, and a dog!

Euthydemus:: Your papa too.

Dionysodorus:: Yes, and in a moment, if you would answer me, you will admit these things yourself, Ctesippus. Just tell me, have you a dog?

Ctesippus:: Yes, and a very bad one.

Dionysodorus:: Has he got puppies?

Ctesippus:: Very much so, as bad as he is.

Dionysodorus:: Then the dog is their father?

Ctesippus:: I have seen him myself, on the job with the bitch.

Dionysodorus:: Very well, isn’t the dog yours?

Ctesippus:: Certainly.

Dionysodorus:: Then being a father he is yours, so the dog becomes your father and you the puppies’ brother.

Socrates:: Dionysodorus quickly broke in again, that Ctesippus might not get in his retort first.

Dionysodorus:: One more little question. Do you beat this dog?

Socrates:: Ctesippus said with a laugh;

Ctesippus:: No mistake, I do, for I can’t beat you!

Euthydemus:: Well then, you beat your own father.

Ctesippus:: Well certainly, there would be much better reason for me to beat *your* father. What can have induced him to beget two such clever sons, Euthydemus? I wonder if much good has come from that cleverness of yours, for your father—and the puppy dogs’ father —to enjoy!

Euthydemus:: But he does not want a lot of good, Ctesippus, neither he nor you.

Ctesippus:: Nor you yourself, Euthydemus?

Euthydemus:: Nor anyone else in the world. Tell me, Ctesippus, do you think it good for a sick man to drink medicine, or not good, when he needs it? Or that when he goes to war, he had better be armed than unarmed?

Ctesippus:: I certainly do, but I think a bit of your pretty wit is coming!

Euthydemus:: You will soon find out. Just answer. You admitted that medicine is good for a man to drink, when necessary : then surely he needs to drink this good thing as much as he can, and it will have an excellent effect if someone will grind up and mix him a cartload of hellebore!

Ctesippus:: Very good indeed, Euthydemus, provided your drinker is as big as the statue in Delphi!

Euthydemus:: And then again in war, it’s good to carry arms; so you must carry as many spears and shields as you can, since it is a good thing!

Ctesippus:: I suppose it is, but I doubt if you think so, Euthydemus. Don’t you prefer one shield and one spear?

Euthydemus:: Yes, I do.

Ctesippus:: Then what about Geryon, and old hundred-hand Briareus—would you arm them with only one each? I thought you knew more about it than that, you the heavy-armed fighter, and your comrade too!

Socrates:: Euthydemus fell silent, but Dionysodorus went back to the earlier answer of Ctesippus, and asked him;

Dionysodorus:: Gold too—don’t you think it good a to have gold?

Ctesippus:: Yes indeed, and a lot of it!

Dionysodorus:: Very well then, don’t you think we ought to have good things always and everywhere?

Ctesippus:: As much as possible!

Dionysodorus:: And you admit gold also to be good?

Ctesippus:: Oh yes, I have admitted that.

Dionysodorus:: Then one ought always to have it everywhere, especially in oneself! And wouldn’t a man be happiest if he had three talents of gold in his belly, and a talent in his skull, and a golden stater in each eye?

Ctesippus:: Well, they do say, Euthydemus, that those are happiest among the Scythians, and the best men, who have a whole lot of gold in their ‘own’ skulls—as you spoke of ‘*own*-ing’ that father dog —and more astonishing still, that they even drink out of their own gilded skulls, holding each his own head in his hands, and can see the gold inside!

Euthydemus:: They see, yes, and do they see, whether Scythians or anybody else, things possible to see, or things impossible?

Ctesippus:: Possible, I suppose.

Euthydemus:: Then do you too?

Ctesippus:: Yes, I do too.

Euthydemus:: You see our clothes then?

Ctesippus:: Yes.

Euthydemus:: Then these clothes are able to see!

Ctesippus:: Marvelous!

Euthydemus:: And what do they see?

Ctesippus:: They see nothing. But perhaps you don’t think they do see? You sweet simple soul! Well then, Euthydemus, I think you are sleeping wide awake, and if it is possible to speak saying nothing, you are doing that!

Dionysodorus:: Isn’t a speaking of the silent possible?

Ctesippus:: Quite impossible.

Dionysodorus:: Or a silence of the speaking?

Ctesippus:: Still less.

Dionysodorus:: Well, when you speak of pieces of stone and wood and iron, do you not speak of the silent?

Ctesippus:: I don’t if I walk through a smithy; on the contrary the irons there talk with great clangs and booms if anyone handles them; so for this question your wisdom stopped you from noticing that you were saying nothing. Still, go on and demonstrate to me the other thing, how there is a silence of the speaking.

Socrates:: I thought Ctesippus was showing off because of his favorite.

Euthydemus:: When you are silent, are you not silent in everything?

Ctesippus:: Yes.

Euthydemus:: Then you are silent in the speaking things also, for those are part of all things.

Ctesippus:: What? Is not everything silent?

Euthydemus:: I suppose not.

Ctesippus:: Then, my dear sir, is everything speaking?

Euthydemus:: The speaking things, I suppose.

Ctesippus:: But I do not ask that, I ask whether everything is silent or speaking.

Socrates:: Dionysodorus now rushed in.

Dionysodorus:: Neither, and both! I am sure you will not know what to do with that answer!

Socrates:: Ctesippus burst into a great guffaw, as usual, and said;

Ctesippus:: My dear Euthydemus, your brother has 'bebothed' away your argument : it is beaten and done for!

Socrates:: And Clinias was delighted and laughed; so Ctesippus swelled bigger than ten Ctesippuses. But I think that rogue Ctesippus had picked up his skill from these men themselves, for such cleverness could not come nowadays from anyone else in the world.

Then I said, Why do you laugh, Clinias, at things so serious and beautiful?

Dionysodorus:: What about you, Socrates, have you ever seen a beautiful thing?

Socrates:: Yes, I have, and many of them, Dionysodorus.

Dionysodorus:: Were they different from the beautiful, or the same as the beautiful?

Socrates:: Here I was really in a fix, and I thought I deserved it for my grumbling; however, I said they were different from the beautiful itself, but each of them had some beauty with it.

Dionysodorus:: Then, if you have an ox with you, you are an ox, and because I am with you now, you are Dionysodorus?

Socrates:: Oh stop, don't say that!

Dionysodorus:: But how can it be, that when a different thing is with a different thing, the different thing should be different?

Socrates:: Does that worry you?—I was already trying to imitate the two men's wisdom, which I longed to have.

Dionysodorus:: How can I help being worried, both I and everybody else on earth, about that which is not?

Socrates:: What do you mean, Dionysodorus? Is not the beautiful beautiful, and the ugly ugly?

Dionysodorus:: If I think so.

Socrates:: And don't you think so?

Dionysodorus:: Certainly.

Socrates:: Then is not the same the same, and the different different? For I suppose the different is not the same, and I should think even a child would not be worried about this and think the different is not different. But, my dear Dionysodorus, you passed over that on purpose, for I think you two work out your dialectic perfectly, as good craftsmen do with their jobs proper to each.

Dionysodorus:: Then do you know, what job is proper to each kind of craftsmen? First, who is it whose proper job is to work metal, do you know?

Socrates:: Yes, the smith.

Dionysodorus:: And to make pottery?

Socrates:: The potter.

Dionysodorus:: Well, to slaughter and skin and cut up meat small and then boil and roast it?

Socrates:: The cook.

Dionysodorus:: And if anyone does his proper job, he will do right?

Socrates:: Especially so.

Dionysodorus:: You say that cutting up and skinning is proper for the cook? Did you admit that or not?

Socrates:: I did, but spare me please.

Dionysodorus:: It is clear, then, that if someone butchers the cook and cuts him up and boils and roasts him, he will be doing his proper job, and anyone who forges the smith and pots the potter, he does the proper job too.

Socrates:: O Poseidon! Now you put the finishing touch to your wisdom! Ah, will this never be with me for my very own!

Dionysodorus:: Could you recognize it as your very own, Socrates, if it became yours?

Socrates:: Clearly I could, if you choose.

Dionysodorus:: Well, do you believe that you can recognize your own things?

Socrates:: Unless you tell me that I can't, for I must begin from you, and finish up at Euthydemus here.

Dionysodorus:: Very well, then, do you think those things are yours, which you are master of and you can use as you will—an ox and a sheep, for example, you would think are yours, if you are free to sell and give and sacrifice them to any god you like? But things are not yours, if you cannot use them so?

Socrates:: I knew that something beautiful was going to emerge out of their questions, and besides I wanted to hear it as soon as possible; so I said, Certainly that is right; only such things are mine.

Dionysodorus:: Well, you call animals those which have life?

Socrates:: Yes.

Dionysodorus:: You admit, then, that of the animals those only are yours which you have liberty to deal with as I said just now?

Socrates:: I admit that.—He made a mysterious pause with the air of pondering some mighty problem, and said;

Dionysodorus:: Socrates, have you a family Zeus?

Socrates:: Suspecting that the speech was going to lead to the end which it came to finally, I made a desperate twist to escape, and at once I was like a fish caught wriggling in a net. I said, No, Dionysodorus, I have not.

Dionysodorus:: You must be some wretched outcast then and no Athenian at all, a man without family gods and sacrifices or anything else good and beautiful.

Socrates:: That will do Dionysodorus. Hush now, and don't preach me an unkind sermon. I have my own altars and my own religion and family prayers and all that sort of thing, as much as any other Athenian.

Dionysodorus:: Then the other Athenians have no family Zeus?

Socrates:: None of the Ionians give him that title, neither ourselves nor any of the colonials from the city; ours is family Apollo because of Ion's parentage. Our Zeus is not called family god, but courtyard god and clan god, and Athena is our clan goddess.

Dionysodorus:: Oh, that’s quite enough. For it seems you have both Apollo and Zeus, and Athena.

Socrates:: Yes.

Dionysodorus:: Then these would be your gods?

Socrates:: Ancestors, and masters.

Dionysodorus:: Yours, anyway, Did you not admit they were yours?

Socrates:: I did, for how could I help it?

Dionysodorus:: Then, are not these gods also animals? For you admitted that whatever has life is an animal. Have not these gods life?

Socrates:: They have.

Dionysodorus:: Then they are also animals?

Socrates:: Yes, animals.

Dionysodorus:: But you have admitted that of the animals those are yours which you are free to give and sell, and sacrifice to any god you will.

Socrates:: I have admitted that, for there is no way out for me, Euthydemus.

Euthydemus:: Tell me then straight, since you admit that Zeus is yours, and those other gods, are you free to sell them or give them or do what you will with them just as with the other animals?

Socrates:: Well, Crito, I was, so to speak, knocked out now by the argument, and lying speechless. But Ctesippus came to my help, and shouted, Bravo! O Heracles! What a fine speech!

—And Dionysodorus said;

Dionysodorus:: Is Heracles a bravo or is the bravo Heracles?

Socrates:: Then Ctesippus said;

Ctesippus:: O Poseidon, terribly clever speeches! I give in, the two men are invincible.

Socrates:: Then indeed, my dear Crito, all those present without exception praised them to the skies, the two men and their speech, laughing and clapping and cheering till they nearly wore themselves out. Hitherto there had been a real good noise at each point they made, but only from the admirers of Euthydemus, but now almost the very pillars in the Lyceum resounded with pleasure at the two men. I was ready myself to admit that I had never before in my life seen people so clever; I was altogether enslaved by their skill, and I began to praise and congratulate them myself, saying, O happy pair, blessed are you for your wonderful genius, to have perfected so great a work so quickly and so soon! Your speeches are full of fine things, Euthydemus and Dionysodorus; but most magnificent of all is this, that you do not concern yourselves with the multitude of men, nor men of solemn looks or great reputation, but only with those like yourselves. For I am quite sure that there a are very few men like you who would appreciate these arguments, and all the rest know so little of them that they would feel more ashamed to refute others by such ways of speech than to be refuted themselves. Here is another thing in your way of speaking that shows public spirit and kindness. When you say that nothing is beautiful and good, or white or so forth, and there are no differences at all, really and truly you sew up the mouths of people, just as you profess to do; since however you not only sew up other people’s mouths, but seem to sew up your own also, you do a most graceful thing which takes all offense from your words. Chief of all, you have everything so neat and thought out with such art, that in a very short time any man alive can learn it; I myself carefully watched Ctesippus, and I noticed that he too was quickly able to copy you on the spot. One thing about your system it is excellent for putting over quickly, but it is not suitable to exhibit in public. If I dare advise you, take care not to speak before a crowd, or they may learn it quickly and forget to thank you. The best thing would be for you two to argue against each other in private; or if there must be another then let it be one who will give you a fee. Give the same advice to your pupils, if you are prudent, never to argue with anybody else but with you or themselves. What is rare, is dear, Euthydemus; but water, which is best, as Pindar said, is cheapest. If you please, accept me and Clinias here as your pupils.

After this talk, Crito, and a little more, we parted. You must be sure to come with us to be schooled by the two men; they declared, you know, that they were able to teach anyone who would pay the fee, no age and no brains barred—all welcome, all would easily learn their clever system—and it is proper to add, for your benefit especially, they said it did not in any way hinder a man from making money.

Crito:: Oh well, Socrates, I am curious to hear, and always glad to learn something. But the truth is I am one of those not like Euthydemus, one of the others you mentioned yourself, who would prefer to be refuted by such talk rather than to refute. Now it is ridiculous for me to advise you, but I do however wish to report something I heard just now. I must tell you that someone came away from your crowd and met me walking about; he thinks himself to be a man of ability, one of those who are clever at making speeches for the law courts, and he said;

Someone:: Hullo, Crito, don’t you sit at the feet of these wise men?

Crito:: My word, no. I tried to stand close but I could not hear for the crowd.

Someone:: Well, it was worth hearing.

Crito:: What was it?

Someone:: You might have heard men using dialectic who are the cleverest men alive of those engaged in such speaking.

Crito:: What did you think of them?

Someone:: Think of them? What anyone would think who heard such people talking nonsense and making an unworthy fuss about matters worth nothing at all.

Crito:: That is how he put it, word for word. I said then, However, philosophy is a charming thing.

Someone:: Pooh, pooh, charming, bless you! Worth nothing, I tell you! But if you had been there just now, I feel sure you would have been ashamed of your own familiar friend; he was such a fool as to want to put himself in the hands of men who just grapple with every phrase and don't care what they say. And these, as I said, are among the most powerful men of the day. Indeed, Crito, the whole system and the men engaged in the system are contemptible and ridiculous.

Crito:: In my opinion, Socrates, he was not right in blaming the system nor would anyone else be right, but as to being willing to argue with such men before a whole crowd of people, I thought he was right to disapprove of that.

Socrates:: My dear Crito, such men are amazing. But I do not know as yet what I am to say. Which class did the man belong to who came to you and found fault with philosophy? Was he one of those skilled in contesting cases in court, an orator, or one of those who send such people in, who compose the speeches which the orators deliver?

Crito:: Not an orator, no indeed; I don't think he ever went up into a court of law. But I assure you they say he understands the business—a clever man, composes clever speeches.

Socrates:: Ah, now I know. Those were the ones I was just going to speak of. Those are the men, my dear Crito, whom Prodicus called the frontiersmen between philosophy and politics. They think they themselves are the wisest of men, and that they not only are, but also are thought such by very many, so that the only rivals in the way of their universal fame are the students of philosophy, none else. They believe therefore that if they can reduce the reputation of these, and make them of no account, they will at once win the prize of undisputed victory in public opinion as men of wisdom; they believe they are truly the most wise, but that in informal conversation, whenever they lag behind, they are being cut short by the Euthydemus group. It is quite reasonable if they think themselves wise; they know they are moderately well up in philosophy, and moderately well up in politics, quite reasonably, for they have as much as was wanted in both, and they keep clear of both danger and conflict, while they enjoy the fruits of wisdom.

Crito:: What do you think, then, Socrates? Is there something in what they say? There is no doubt that their account of themselves looks well.

Socrates:: Yes, that's exactly it, Crito, looks well rather than truly is well. For it is not easy to persuade them what is the truth about these borderlands. Both men and things, if they stand between two and have a share of both, when these two are bad and good, are better than the one and worse than the other; when they stand between two good things which do not aim at the same object, they are worse than both the two components for that for which each is useful; when these two things are bad, but not directed to the same thing, and they are composed of both and stand between them, these alone are better than either of those things of which they have a part. Then if both philosophy and political action are good, but each aims at a different thing, and if these persons are between them and have a part of both, there is nothing in what they say, for they are worse than both; if the things are one good and one bad, they are worse than the one and better than the other; if both are bad, then these people would be speaking some truth, but otherwise not at all. Now I do not think they would admit that the two are both bad, nor that one is good and one bad; but in reality these persons who partake of both are worse than both for each thing which politics and philosophy are important for, and although they are really third, they try to be thought first. We must then not be hard on them, because of their ambition; we must not be angry, but we must believe them to be such as they are. For we ought to be content with every man who says anything which comes near to wisdom, when he bravely follows it up and works it out.

Crito:: Well, you know, Socrates, as I always tell you, I am in perplexity about my sons and what I am to do with them. The younger is quite small still, but Critobulus is already growing up and needs someone to help him on. The fact is, whenever I meet you, I think of all the trouble I have taken, for the sake of the children, about many other things, as about marrying a woman of the best family to be their mother, and about money that they may be as rich as we can manage. And after all that it seems to me to be simple madness to neglect their education. But when I glance at any one of those who profess to educate people, I am horrified; each one I look at seems to me to be quite unsuitable, to tell you the truth, so I don’t see how I am to direct the boy to philosophy.

Socrates:: My dear Crito, don’t you know that in every line of life the stupid are many and worthless, the serious are few and worth everything? What about gymnastics? Doesn’t that seem a good line to you, and business and oratory, and leadership in war?

Crito:: Most certainly they do.

Socrates:: Very well, don’t you see that in each of these professions the many are just laughable at their professional work?

Crito:: Yes, I do. What you say is perfectly true.

Socrates:: Will that be a reason for yourself avoiding all the professions and not giving one to your son?

Crito:: That would not be fair, Socrates.

Socrates:: Then, Crito, don’t do what you ought not. Do not trouble about those who practice philosophy, whether they are good or bad; but examine the thing itself well and carefully. And if philosophy appears a bad thing to you, turn every man from it, not only your sons; but if it appears to you such as I think it to be, take courage, pursue it, and practice it, as the saying is, ‘both you and your house.’

# Euthydemus.

Translated by Rosamond Kent Sprague.

THE PERSONS OF THE DIALOGUE.

Crito, Socrates, Euthydemus, Dionysodorus,
Clinias, Ctesippus.

Crito:: Who was it, Socrates, you were talking to in the Lyceum yesterday? There was such a crowd standing around you that when I came up and wanted to listen, I couldn't hear anything distinctly. But by craning my neck I did get a look, and I thought it was some stranger you were talking to. Who was it?

Socrates:: Which one are you asking about, Crito? There was not just one, but two.

Crito:: The person I mean was sitting next but one to you on your right—between you was Axiochus' young son. He seemed to me, Socrates, to have grown tremendously, and to be almost of a size with our Critobulus. But Critobulus is thin, whereas this boy has come on splendidly and is extremely good-looking.

Socrates:: Euthydemus is the man you mean, Crito, and the one sitting next to me on my left was his brother, Dionysodorus—he, too, takes part in the discussions.

Crito:: I don't know either of them, Socrates. They are another new kind of sophist, I suppose. Where do they come from, and what is their particular wisdom?

Socrates:: By birth, I think, they are from this side, from Chios. They went out as colonists to Thurii but were exiled from there and have already spent a good many years in this region. As to your question about the wisdom of the pair, it is marvelous, Crito! The two are absolutely omniscient, so much so that I never knew before what pancratiasts really were. They are both absolutely all-round fighters, not like the two battling brothers from Acarnania who could only fight with their bodies. These two are first of all completely skilled in body, being highly adept at fighting in armor and able to teach this skill to anyone else who pays them a fee; and then they are the ones best able to fight the battle of the law court and to teach other people both how to deliver and how to compose the sort of speeches suitable for the courts. Previously these were their only skills, but now they have put the finishing touch to pancratistic art. They have now mastered the one form of fighting they had previously left untried; as a result, not a single man can stand up to them, they have become so skilled in fighting in arguments and in refuting whatever may be said, no matter whether it is true or false. So that I, Crito, have a mind to hand myself over to these men, since they say that they can make any other person clever at the same things in a short time.

Crito:: What's that, Socrates? Aren't you afraid that, at your age, you are already too old?

Socrates:: Far from it, Crito—I have enough example and encouragement to keep me from being afraid. The two men themselves were pretty well advanced in years when they made a start on this wisdom I want to get; I mean the eristic sort. Last year or the year before they were not yet wise. My only anxiety is that I may disgrace the two strangers just as I have already disgraced Connus the harpist, Metrobius' son, who is still trying to teach me to play. The boys who take lessons with me laugh at the sight and call Connus the "Old Man's Master." So I am afraid that someone may reproach the strangers on the same score; perhaps they may be unwilling to take me as a pupil for fear that this should happen. So, Crito, I have persuaded some other old men to go along with me as fellow pupils to the harp lessons, and I shall attempt to persuade some others for this project. Why don’t you come along yourself? We will take your sons as bait to catch them—I feel sure that their desire to get the boys will make them give us lessons too.

Crito:: I have no objection, Socrates, if you really think well of the plan. But first explain to me what the wisdom of the two men is, to give me some idea of what we are going to learn.

Socrates:: You shall hear at once, since I can’t pretend that I paid no attention to the pair. As a matter of fact, I did just that and remember what was said and will try to recount the whole thing from the beginning. As good luck would have it, I was sitting by myself in the undressing-room just where you saw me and was already thinking of leaving. But when I got up, my customary divine sign put in an appearance. So I sat down again, and in a moment the two of them, Euthydemus and Dionysodorus, came in, and some others with them, disciples of theirs, who seemed to me pretty numerous. When the pair came in, they walked around the cloister, and they had not yet made more than two or three turns when in came Clinias, who, as you rightly say, has grown a lot. Following him were a good many others, lovers of his, and among them Ctesippus, a young man from Paeania—he’s a well-bred fellow except for a certain youthful brashness. From the doorway Clinias caught sight of me sitting alone and came straight up and sat down on my right, just as you describe it. When Dionysodorus and Euthydemus saw him, at first they stood talking to each other and glancing at us every so often (I was keeping a good eye on them) but after a while they came over and one of them, Euthydemus, sat down next to the boy, and his brother next to me on my left, and the rest found places where they could. Since I hadn’t seen the two for quite a time, I gave them a good welcome, and then I said to Clinias, You know, Clinias, that the wisdom of these two men, Euthydemus and Dionysodorus, has to do with important matters and not mere trivia. They know all about war, that is, the things a man ought to know who means to be a good general, such as the formations of troops and their command and how to fight in armor; and besides this, they can make a man capable of looking out for himself in court if anyone should do him an injury.

They obviously thought little of me for saying this, because they both laughed and glanced at each other, and Euthydemus said;

Euthydemus:: We are not any longer in earnest about these things, Socrates—we treat them as diversions.

Socrates:: I was astonished and said, Your serious occupation must certainly be splendid if you have important things like these for your diversions! For heaven's sake, tell me what this splendid occupation is!

Euthydemus:: Virtue, Socrates, is what it is, and we think we can teach it better than anyone else and more quickly.

Socrates:: Good heavens, what a claim you make! Wherever did you find this godsend? I was still thinking of you, as I just said, as men particularly skilled in fighting in armor, and so I spoke of you in this way. When you visited us before, I remember that this was what you claimed to be. But now if you really have this other wisdom, be propitious—you see, I am addressing you exactly as though you were gods because I want you to forgive me for what I said earlier. But make sure, Euthydemus and Dionysodorus, that you are telling the truth—the magnitude of your claim certainly gives me some cause for disbelief.

Euthydemus:: Rest assured, Socrates, that things are as we say.

Socrates:: Then I count you much happier in your possession of this wisdom than the Great King in that of his empire! But tell me just this: do you plan to give a demonstration of this wisdom, or what do you mean to do?

Euthydemus:: We are here for that very purpose, Socrates: to give a demonstration, and to teach, if anyone wants to learn.

Socrates:: I give you my word that everyone who does not have this wisdom will wish to have it: first myself, then Clinias here, and, in addition to us, this fellow Ctesippus and these others, pointing to the lovers of Clinias who were already grouped around us. This had come about because Ctesippus had taken a seat a long way from Clinias, and when Euthydemus leaned forward in talking to me, he apparently obscured Ctesippus' view of Clinias, who was sitting between us. So Ctesippus, who wanted to look at his darling, as well as being interested in the discussion, sprang up first and stationed himself right in front of us. When the others saw him doing this, they gathered around too, not only Clinias' lovers but the followers of Euthydemus and Dionysodorus as well. These were the ones I pointed to when I told Euthydemus that everyone was ready to learn. Then Ctesippus agreed very eagerly and so did all the rest, and all together they besought the pair to demonstrate the power of their wisdom.

So Euthydemus and Dionysodorus, do your absolute best to gratify these people and give a demonstration—and do it for my sake too. To give a complete one would obviously be a lengthy business; but tell me just this: are you able to make only that man good who is already persuaded that he ought to take lessons from you, or can you also make the man good who is not yet persuaded on this point, either because he believes that this thing, virtue, cannot be taught at all, or because he thinks that you two are not its teachers? Come tell me, does the task of persuading a man in this frame of mind both that virtue can be taught, and that you are the ones from whom he could learn it best, belong to this same art or to some other one?

Dionysodorus:: It belongs to this same art, Socrates.

Socrates:: Then, Dionysodorus, you and your brother are the men of the present day best able to exhort a man to philosophy and the practice of virtue?

Dionysodorus:: This is exactly what we think, Socrates.

Socrates:: Then put off the rest of your display to another time and give us a demonstration of this one thing: persuade this young man here that he ought to love wisdom and have a care for virtue, and you will oblige both me and all the present company. The boy's situation is this: both I and all these people want him to become as good as possible. He is the son of Axiochus (son of the old Alcibiades) and is cousin to the present Alcibiades—his name is Clinias. He is young, and we are anxious about him, as one naturally is about a boy of his age, for fear that somebody might get in ahead of us and turn his mind to some other interest and ruin him. So you two have arrived at the best possible moment. If you have no objection, make trial of the boy and converse with him in our presence.

When I had spoken, in almost these exact words, Euthydemus answered, with a mixture of bravery and confidence.

Euthydemus:: It makes no difference to us, Socrates, so long as the young man is willing to answer.

Socrates:: As a matter of fact, he is quite used to that, since these people here are always coming to ask him all sorts of questions and to converse with him. So he is pretty brave at answering.

As to what happened next, Crito, how shall I give you an adequate description of it? It is no small task to be able to recall such wisdom in detail, it was so great. So I ought to begin my account as the poets do, by invoking the Muses and Memory. Well, Euthydemus, as I remember, began something like this:

Euthydemus:: Clinias, which are the men who learn, the wise or the ignorant?

Socrates:: Being confronted with this weighty question, the boy blushed and looked at me in doubt. And I, seeing that he was troubled, said, Cheer up, Clinias, and choose bravely whichever seems to you to be the right answer—he may be doing you a very great service.

Just at this moment Dionysodorus leaned a little toward me and, smiling all over his face, whispered in my ear and said;

Dionysodorus:: I may tell you beforehand, Socrates, that whichever way the boy answers he will be refuted.

Socrates:: While he was saying this, Clinias gave his answer, so that I had no chance to advise the boy to be careful; and he answered that the wise were the learners.

Then Euthydemus said;

Euthydemus:: Are there some whom you call teachers, or not?

Socrates:: He agreed that there were.

Euthydemus:: And the teachers are teachers of those who learn, I suppose, in the same way that the music master and the writing master were teachers of you and the other boys when you were pupils?

Socrates:: He agreed.

Euthydemus:: And when you were learning, you did not yet know the things you were learning, did you?

Clinias:: No.

Euthydemus:: And were you wise when you did not know these things?

Clinias:: By no means.

Euthydemus:: Then if not wise, ignorant?

Clinias:: Very much so.

Euthydemus:: Then in the process of learning what you did not know, you learned while you were ignorant?

Socrates:: The boy nodded.

Euthydemus:: Then it is the ignorant who learn, Clinias, and not the wise, as you suppose.

Socrates:: When he said this, the followers of Dionysodorus and Euthydemus broke into applause and laughter, just like a chorus at a sign from their director. And before the boy could well recover his breath, Dionysodorus took up the argument and said;

Dionysodorus:: Well then, Clinias, when the writing master gave you dictation, which of the boys learned the piece, the wise or the ignorant?

Clinias:: The wise.

Dionysodorus:: Then it is the wise who learn, and not the ignorant, and you gave Euthydemus a wrong answer just now.

Socrates:: Whereupon the supporters of the pair laughed and cheered very loudly indeed, in admiration of their cleverness. We, on the other hand, were panic-struck and kept quiet. Euthydemus, observing our distress, and in order to confound us further, would not let the boy go but went on questioning him and, like a skillful dancer, gave a double twist to his questions on the same point, saying;

Euthydemus:: Do those who learn learn the things they know or the things they do not know?

Socrates:: And Dionysodorus again whispered to me in a low voice;

Dionysodorus:: This is another, Socrates, just like the first.

Socrates:: Mercy on us, the first question certainly seemed good enough!

Dionysodorus:: All our questions are of this same inescapable sort, Socrates.

Socrates:: And this, no doubt, is the reason why your pupils admire you so much.

Just then Clinias answered Euthydemus that the learners learned what they do not know, whereupon Euthydemus put him through the same course of questions as before.

Euthydemus:: What then, don’t you know your letters?

Clinias:: Yes.

Euthydemus:: Then you know them all?

Socrates:: He agreed.

Euthydemus:: Whenever anyone dictates anything, doesn’t he dictate letters?

Socrates:: He agreed.

Euthydemus:: Then doesn’t he dictate something you know, if you really know them all?

Socrates:: He agreed to this too.

Well then, you are not the one who learns what someone dictates, are you, but the one who doesn’t know his letters is the one who learns?

Clinias:: No, I am the one who learns.

Euthydemus:: Then you learn what you know, if you in fact do know all your letters.

Socrates:: He agreed.

Euthydemus:: Then your answer was wrong.

Socrates:: Euthydemus had barely said this when Dionysodorus picked up the argument as though it were a ball and aimed it at the boy again, saying;

Dionysodorus:: Euthydemus is completely deceiving you, Clinias. Tell me, isn't learning the acquisition of the knowledge of what one learns?

Socrates:: Clinias agreed.

Dionysodorus:: And what about knowing? Is it anything except having knowledge already?

Socrates:: He agreed.

Dionysodorus:: Then not knowing is not yet having knowledge?

Socrates:: He agreed with him.

Dionysodorus:: And are those who acquire something those who have it already or those who do not?

Clinias:: Those who do not.

Dionysodorus:: And you have admitted, haven't you, that those who do not know belong to the group of those who do not have something?

Clinias:: He nodded.

Dionysodorus:: Then the learners belong to those who acquire and not to those who have?

Socrates:: He agreed.

Dionysodorus:: Then it is those who do not know who learn, Clinias, and not those who know.

Socrates:: Euthydemus was hastening to throw the young man for the third fall when I, seeing that he was going down and wanting to give him a chance to breathe so that he should not turn coward and disgrace us, encouraged him, saying, Don't be surprised, Clinias, if these arguments seem strange to you, since perhaps you don't take in what the visitors are doing with you. They are doing exactly what people do in the Corybantic mysteries when they enthrone a person they intend to initiate. If you have been initiated you know that there is dancing and sport on these occasions; and now these two are doing nothing except dancing around you and making sportive leaps with a view to initiating you presently. So you must now imagine yourself to be hearing the first part of the sophistic mysteries. In the first place, as Prodicus says, you must learn about the correct use of words; and our two visitors are pointing out this very thing, that you did not realize that people use the word "learn" not only in the situation in which a person who has no knowledge of a thing in the beginning acquires it later, but also when he who has this knowledge already uses it to inspect the same thing, whether this is something spoken or something done. (As a matter of fact, people call the latter "understand" rather than "learn," but they do sometimes call it "learn" as well.) Now this, as they are pointing out, had escaped your notice—that the same word is applied to opposite sorts of men, to both the man who knows and the man who does not. There was something similar to this in the second question, when they asked you whether people learn what they know or what they do not know. These things are the frivolous part of study (which is why I also tell you that the men are jesting); and I call these things "frivolity" because even if a man were to learn many or even all such things, he would be none the wiser as to how matters stand but would only be able to make fun of people, tripping them up and overturning them by means of the distinctions in words, just like the people who pull the chair out from under a man who is going to sit down and then laugh gleefully when they see him sprawling on his back. So you must think of their performance as having been mere play. But after this they will doubtless show you serious things, if anyone will, and I shall give them a lead to make sure they hand over what they promised me. They said they would give a demonstration of hortatory skill, but now it seems to me that they must have thought it necessary to make fun of you before beginning. So, Euthydemus and Dionysodorus, put an end to this joking; I think we have had enough of it. The next thing to do is to give an exhibition of persuading the young man that he ought to devote himself to wisdom and virtue. But first I shall give you two a demonstration of the way in which I conceive the undertaking and of the sort of thing I want to hear. And if I seem to you to be doing this in an unprofessional and ridiculous way, don't laugh at me—it is out of a desire to hear your wisdom that I have the audacity to improvise in front of you. Therefore, you and your disciples restrain yourselves and listen without laughing; and you, son of Axiochus, answer me:

Do all men wish to do well? Or is this question one of the ridiculous ones I was afraid of just now? I suppose it is stupid even to raise such a question, since there could hardly be a man who would not wish to do well.

Clinias:: No, there is no such person.

Socrates:: Well then, the next question is, since we wish to do well, how are we to do so? Would it be through having many good things? Or is this question still more simple-minded than the other, since this must obviously be the case too?

He agreed.

Well then, what kinds of existing things are good for us? Or perhaps this isn't a difficult question and we don't need an important personage to supply the answer because everybody would tell us that to be rich is a good—isn't that so?

Clinias:: Very much so.

Socrates:: And so with being healthy, and handsome, and having a sufficient supply of the other things the body needs?

He agreed.

And, again, it is clear that noble birth, and power, and honor in one's country are goods.

He agreed.

Then which goods do we have left? What about being self-controlled and just and brave? For heaven's sake tell me, Clinias, whether you think we will be putting these in the right place if we class them as goods or if we refuse to do so? Perhaps someone might quarrel with us on this point—how does it seem to you?

Clinias:: They are goods.

Socrates:: Very well. And where in the company shall we station wisdom? Among the goods, or what shall we do with it?

Clinias:: Among the goods.

Socrates:: Now be sure we do not leave out any goods worth mentioning.

Clinias:: I don't think we are leaving out any.

Socrates:: But I remembered one and said, Good heavens, Clinias, we are in danger of leaving out the greatest good of all!

Clinias:: Which one is that?

Socrates:: Good fortune, Clinias, which everybody, even quite worthless people, says is the greatest of the goods.

Clinias:: You are right.

Socrates:: And I reconsidered a second time and said, son of Axiochus, you and I have nearly made ourselves ridiculous in front of our visitors.

Clinias:: How so?

Socrates:: Because in putting good fortune in our previous list we are now saying the same thing all over again.

Clinias:: What do you mean?

Socrates:: Surely it is ridiculous, when a thing has already been brought up, to bring it up again and say the same things twice.

Clinias:: What do you mean by that?

Socrates:: Wisdom is surely good fortune,—this is something even a child would know.

He was amazed—he is still so young and simple-minded.

I noticed his surprise and said, You know, don’t you, Clinias, that flute players have the best luck when it comes to success in flute music?

He agreed.

And the writing masters at reading and writing?

Clinias:: Certainly.

Socrates:: What about the perils of the sea—surely you don’t think that, as a general rule, any pilots have better luck than the wise ones?

Clinias:: Certainly not.

Socrates:: And again, if you were on a campaign, with which general would you prefer to share both the danger and the luck, a wise one or an ignorant one?

Clinias:: With a wise one.

Socrates:: And if you were sick, would you rather take a chance with a wise doctor or with an ignorant one?

Clinias:: With a wise one.

Socrates:: Then it is your opinion, that it is luckier to do things in the company of wise men than ignorant ones?

He agreed.

So wisdom makes men fortunate in every case, since I don’t suppose she would ever make any sort of mistake but must necessarily do right and be lucky—otherwise she would no longer be wisdom.

We finally agreed (I don’t know quite how) that, in sum, the situation was this: if a man had wisdom, he had no need of any good fortune in addition. When we had settled this point, I went back and asked him how our former statements might be affected. We decided, that if we had many good things, we should be happy and do well.

He agreed.

And would the possession of good things make us happy if they were of no advantage to us, or if they were of some?

Clinias:: If they were of some advantage.

Socrates:: And would they be advantageous to us if we simply had them and did not use them? For instance, if we had a great deal of food but didn’t eat any, or plenty to drink but didn’t drink any, would we derive any advantage from these things?

Clinias:: Certainly not.

Socrates:: Well then, if every workman had all the materials necessary for his particular job but never used them, would he do well by reason of possessing all the things a workman requires? For instance, if a carpenter were provided with all his tools and plenty of wood but never did any carpentry, could he be said to benefit from their possession?

Clinias:: Not at all.

Socrates:: Well then, if a man had money and all the good things we were mentioning just now but made no use of them, would he be happy as a result of having these good things?

Clinias:: Clearly not, Socrates.

Socrates:: So it seems, that the man who means to be happy must not only have such goods but must use them too, or else there is no advantage in having them.

Clinias:: You are right.

Socrates:: Then are these two things, the possession of good things and the use of them, enough to make a man happy, Clinias?

Clinias:: They seem so to me, at any rate.

Socrates:: If, he uses them rightly, or if he does not?

Clinias:: If he uses them rightly.

Socrates:: Well spoken. Now I suppose there is more harm done if someone uses a thing wrongly than if he lets it alone—in the first instance there is evil, but in the second neither evil nor good. Or isn't this what we maintain?

He agreed that it was.

Then what comes next? In working and using wood there is surely nothing else that brings about right use except the knowledge of carpentry, is there?

Clinias:: Certainly not.

Socrates:: And, again, I suppose that in making utensils, it is knowledge that produces the right method.

He agreed.

And also, with regard to using the goods we mentioned first—wealth and health and beauty—was it knowledge that ruled and directed our conduct in relation to the right use of all such things as these, or some other thing?

Clinias:: It was knowledge.

Socrates:: Then knowledge seems to provide men not only with good fortune but also with well-doing, in every case of possession or action.

He agreed.

Then in heaven's name, is there any advantage in other possessions without good sense and wisdom? Would a man with no sense profit more if he possessed and did much or if he possessed and did little? Look at it this way: if he did less, would he not make fewer mistakes; and if he made fewer mistakes, would he not do less badly, and if he did less badly, would he not be less miserable?

Clinias:: Yes, indeed.

Socrates:: And in which case would one do less, if one were poor or if one were rich?

Clinias:: Poor.

Socrates:: And if one were weak or strong?

Clinias:: Weak.

Socrates:: If one were held in honor or in dishonor?

Clinias:: In dishonor.

Socrates:: And if one were brave and self-controlled would one do less, or if one were a coward?

Clinias:: A coward.

Socrates:: Then the same would be true if one were lazy rather than industrious?

He agreed.

Socrates:: And slow rather than quick, and dull of sight and hearing rather than keen?

We agreed with each other on all points of this sort.

So, to sum up, Clinias, it seems likely that with respect to all the things we called good in the beginning, the correct account is not that in themselves they are good by nature, but rather as follows: if ignorance controls them, they are greater evils than their opposites, to the extent that they are more capable of complying with a bad master; but if good sense and wisdom are in control, they are greater goods. In themselves, however, neither sort is of any value.

Clinias:: It seems, to be just as you say.

Socrates:: Then what is the result of our conversation? Isn’t it that, of the other things, no one of them is either good or bad, but of these two, wisdom is good and ignorance bad?

He agreed.

Then let us consider what follows: since we all wish to be happy, and since we appear to become so by using things and using them rightly, and since knowledge was the source of rightness and good fortune, it seems to be necessary that every man should prepare himself by every means to become as wise as possible—or isn’t this the case?

Clinias:: Yes, it is.

Socrates:: And for a man who thinks he ought to get this from his father much more than money, and not only from his father but also from his guardians and friends (especially those of his city and elsewhere who claim to be his lovers), and who begs and beseeches them to give him some wisdom, there is nothing shameful, Clinias, nor disgraceful if, for the sake of this, he should become the servant or the slave of a lover or of any man, being willing to perform any honorable service in his desire to become wise. Or don’t you think so?

Clinias:: You seem to me to be absolutely right;

Socrates:: But only if wisdom can be taught, Clinias, and does not come to men of its own accord. This point still remains for us to investigate and is not yet settled between you and me.

Clinias:: As far as I am concerned, Socrates, I think it can be taught.

Socrates:: I was pleased and said, I like the way you talk, my fine fellow, and you have done me a good turn by relieving me of a long investigation of this very point, whether or not wisdom can be taught. Now then, since you believe both that it can be taught and that it is the only existing thing which makes a man happy and fortunate, surely you would agree that it is necessary to love wisdom and you mean to do this yourself.

Clinias:: This is just what I mean to do, Socrates, as well as ever I can.

Socrates:: When I heard this I was delighted and said, There, Dionysodorus and Euthydemus, is my example of what I want a hortatory argument to be, though amateurish, perhaps, and expressed at length and with some difficulty. Now let either of you who wishes give us a demonstration of the same thing in a professional manner. Or if you do not wish to do that, then start where I left off and show the boy what follows next: whether he ought to acquire every sort of knowledge, or whether there is one sort that he ought to get in order to be a happy man and a good one, and what it is. As I said in the beginning, it is of great importance to us that this young man should become wise and good.

This is what Crito, and I paid particular attention to what should come next and watched to see just how they would pick up the argument and where they would start persuading the young man to practice wisdom and virtue. The elder of the two, Dionysodorus, took up the argument first and we all gazed at him in expectation of hearing some wonderful words immediately. And this is just what happened, since the man began an argument which was certainly wonderful, in a way, Crito, and worth your while to hear, since it was an incitement to virtue.

Dionysodorus:: Tell me, Socrates, and all you others who say you want this young man to become wise—are you saying this as a joke or do you want it truly and in earnest?

Socrates:: This gave me the idea that they must have thought we were joking earlier when we asked them to talk to the boy, and that this was why they made a joke of it and failed to take it seriously. When this idea occurred to me, I insisted all the more that we were in dead earnest.

And Dionysodorus said;

Dionysodorus:: Well, take care, Socrates, that you don't find yourself denying these words.

Socrates:: I have given thought to the matter, and I shall never come to deny them.

Dionysodorus:: Well then, you say you want him to become wise?

Socrates:: Very much so.

Dionysodorus:: And at the present moment, is Clinias wise or not?

Socrates:: He says he is not yet, at least—he is a modest person.

Dionysodorus:: But you people wish him to become wise, and not to be ignorant?

Socrates:: We agreed.

Dionysodorus:: Therefore, you wish him to become what he is not, and no longer to be what he is now?

Socrates:: When I heard this I was thrown into confusion, and he broke in upon me while I was in this state and said;

Dionysodorus:: Then since you wish him no longer to be what he is now, you apparently wish for nothing else but his death. Such friends and lovers must be worth a lot who desire above all things that their beloved should utterly perish!

When Ctesippus heard this he became angry on his favorite's account and said;

Ctesippus:: Thurian stranger, if it were not a rather rude remark, I would say “perish yourself” for taking it into your head to tell such a lie about me and the rest, which I think is a wicked thing to say—that I could wish this person to die!

Euthydemus:: Why Ctesippus,  do you think it possible to tell lies?

Ctesippus:: Good heavens yes, I should be raving if I didn’t.

Euthydemus:: When one speaks the thing one is talking about, or when one does not speak it?

Ctesippus:: When one speaks it.

Euthydemus:: So that if he speaks this thing, he speaks no other one of things that are except the very one he speaks?

Ctesippus:: Of course.

Euthydemus:: And the thing he speaks is one of those that are, distinct from the rest?

Ctesippus:: Certainly.

Euthydemus:: Then the person speaking that thing speaks what is.

Ctesippus:: Yes.

Euthydemus:: But surely the person who speaks what is and things that are speaks the truth—so that Dionysodorus, if he speaks things that are, speaks the truth and tells no lies about you.

Ctesippus:: Yes, but a person who speaks these things, Euthydemus, does not speak things that are.

Socrates:: And Euthydemus said;

Euthydemus:: But the things that are not surely do not exist, do they?

Ctesippus:: No, they do not exist.

Euthydemus:: Then there is nowhere that the things that are not are?

Ctesippus:: Nowhere.

Euthydemus:: Then there is no possibility that any person whatsoever could do anything to the things that are not so as to make them be when they are nowhere?

Ctesippus:: It seems unlikely to me.

Euthydemus:: Well then, when the orators speak to the people, do they do nothing?

Ctesippus:: No, they do something.

Euthydemus:: Then if they do something, they also make something?

Ctesippus:: Yes.

Euthydemus:: Speaking, then, is doing and making?

Socrates:: He agreed.

Euthydemus:: Then nobody speaks things that are not, since he would then be making something, and you have admitted that no one is capable of making something that is not. So according to your own statement, nobody tells lies; but if Dionysodorus really does speak, he speaks the truth and things that are.

Ctesippus:: Yes indeed, Euthydemus, but he speaks things that are only in a certain way and not as really is the case.

Dionysodorus:: What do you mean, Ctesippus? Are there some persons who speak of things as they are?

Ctesippus:: There certainly are,—gentlemen and those who speak the truth.

Dionysodorus:: Now then, are not good things well and bad things ill?

Socrates:: He agreed.

Dionysodorus:: And you admit that gentlemen speak of things as they are?

Ctesippus:: Yes, I do.

Dionysodorus:: Then good men speak ill of bad things, Ctesippus, if they do in fact speak of them as they are.

Ctesippus:: They certainly do,—at any rate they speak ill of bad men. If you take my advice you will take care not to be one of them in case the good speak ill of you. For rest assured that the good speak ill of the bad.

Euthydemus:: And do they speak greatly of the great and hotly of the hot?

Ctesippus:: Very much so, and what is more, they speak coldly of persons who argue in a frigid fashion.

Dionysodorus:: You, Ctesippus, are being abusive, very abusive indeed.

Ctesippus:: I am certainly doing no such thing, Dionysodorus, since I like you, I am merely giving you a piece of friendly advice and endeavoring to persuade you never to say, so rudely and to my face, that I want my most cherished friends to die.

Socrates:: Since they seemed to be getting pretty rough with each other, I started to joke with Ctesippus and said, Ctesippus, I think we ought to accept what the strangers tell us, if they are willing to be generous, and not to quarrel over a word. If they really know how to destroy men so as to make good and sensible people out of bad and stupid ones, and the two of them have either found out for themselves or learned from someone else a kind of ruin or destruction by which they do away with a bad man and render him good, if, as I say, they know how to do this—well, they clearly do, since they specifically claimed that the art they had recently discovered was that of making good men out of bad ones—then let us concede them the point and permit them to destroy the boy for us and make him wise—and do the same to the rest of us as well. And if you young men are afraid, let them “try it on the Carian,” as they say, and I will be the victim. Being elderly, I am ready to run the risk, and I surrender myself to Dionysodorus here just as I might to Medea of Colchis. Let him destroy me, or if he likes, boil me, or do whatever else he wants, but he must make me good.

And Ctesippus said;

Ctesippus:: I too, Socrates, am ready to hand myself over to the visitors; and I give them permission to skin me even more thoroughly than they are doing now so long as my hide will in the end become not a wineskin (which is what happened to Marsyas), but a piece of virtue. And yet Dionysodorus here thinks I am cross with him. It’s not that I’m cross—I’m simply contradicting the things he said which I find objectionable. So, my fine Dionysodorus, don’t call contradiction abuse—abuse is something quite different.

Socrates:: And Dionysodorus answered;

Dionysodorus:: Are you making your speech on the assumption that there exists such a thing as contradiction, Ctesippus?

Ctesippus:: I certainly am, decidedly so. And do you think there is none, Dionysodorus?

Dionysodorus:: Well you, at any rate, could not prove that you have ever heard one person contradicting another.

Ctesippus:: Do you really mean that? Well then, just listen to Ctesippus contradicting Dionysodorus, if you want to hear my proof.

Dionysodorus:: And do you undertake to back that up?

Ctesippus:: I certainly do.

Dionysodorus:: Well then, are there words to describe each thing that exists?

Ctesippus:: Certainly.

Dionysodorus:: And do they describe it as it is or as it is not?

Ctesippus:: As it is.

Dionysodorus:: Now if you remember, Ctesippus, we showed a moment ago that no one speaks of things as they are not, since it appeared that no one speaks what does not exist.

Ctesippus:: Well, what about it? Are you and I contradicting each other any the less?

Dionysodorus:: Now would we be contradicting, if we were both to speak the description of the same thing? I suppose we would be saying the same things in that case.

Socrates:: He agreed.

Dionysodorus:: But when neither of us speaks the description of the thing, would we be contradicting then? Or wouldn't it be the case that neither of us had the thing in mind at all?

Socrates:: He agreed to this too.

Dionysodorus:: But when I speak the description of the thing whereas you speak another description of another thing, do we contradict then? Or is it the case that I speak it but that you speak nothing at all? And how would a person who does not speak contradict one who does?

Socrates:: Ctesippus fell silent at this, but I was astonished at the argument and said, How do you mean, Dionysodorus? The fact is that I have heard this particular argument from many persons and at many times, and it never ceases to amaze me. The followers of Protagoras made considerable use of it, and so did some still earlier. It always seems to me to have a wonderful way of upsetting not just other arguments, but itself as well. But I think I shall learn the truth about it better from you than from anyone else. The argument amounts to claiming that there is no such thing as false speaking, doesn't it? And the person speaking must either speak the truth or else not speak?

He agreed.

Now would you say it was impossible to speak what is false, but possible to think it?

Dionysodorus:: No, thinking it is not possible either.

Socrates:: Then there is absolutely no such thing as false opinion.

Dionysodorus:: There is not.

Socrates:: Then is there no ignorance, nor are there any ignorant men? Or isn't this just what ignorance would be, if there should be any—to speak falsely about things?

Dionysodorus:: It certainly would.

Socrates:: And yet there is no such thing.

He said there was not.

Are you making this statement just for the sake of argument, Dionysodorus—to say something startling—or do you honestly believe that there is no such thing as an ignorant man?

Dionysodorus:: Your business is to refute me.

Socrates:: Well, but is there such a thing as refutation if one accepts your thesis that nobody speaks falsely?

Euthydemus:: No, there is not.

Socrates:: Then it can't be that Dionysodorus ordered me to refute him just now, can it?

Euthydemus:: How would anyone order a thing which doesn't exist? Are you in the habit of giving such orders?

Socrates:: The reason I've raised the point, Euthydemus, is that I'm rather thick-witted and don't understand these fine clever things. And perhaps I'm about to ask a rather stupid question, but bear with me. Look at it this way: if it is impossible to speak falsely, or to think falsely, or to be ignorant, then there is no possibility of making a mistake when a man does anything? I mean that it is impossible for a man to be mistaken in his actions—or isn't this what you are saying?

Euthydemus:: Certainly it is.

Socrates:: This is just where my stupid question comes in. If no one of us makes mistakes either in action or in speech or in thought—if this really is the case—what in heaven's name do you two come here to teach? Or didn't you say just now that if anyone wanted to learn virtue, you would impart it best?

Dionysodorus:: Really, Socrates, interrupting, are you such an old Cronus as to bring up now what we said in the beginning? I suppose if I said something last year, you will bring that up now and still be helpless in dealing with the present argument.

Socrates:: Well you see, these arguments are very difficult (as is natural, since they come from wise men) and this last one you mention turns out to be particularly difficult to deal with. Whatever in the world do you mean by the expression "be helpless in dealing with," Dionysodorus? Doesn't it clearly mean that I am unable to refute the argument? Just tell me, what else is the sense of this phrase "I am helpless in dealing with the argument"?

Dionysodorus:: But at least it is not very difficult to deal with your phrase, so go ahead and answer.

Socrates:: Before you answer me, Dionysodorus?

Dionysodorus:: You refuse to answer then?

Socrates:: Well, is it fair?

Dionysodorus:: Perfectly fair.

Socrates:: On what principle? Or isn’t it clearly on this one, that you have come here on the present occasion as a man who is completely skilled in arguments, and you know when an answer should be given and when it should not? So now you decline to give any answer whatsoever because you realize you ought not to?

Dionysodorus:: You are babbling instead of being concerned about answering. But, my good fellow, follow my instructions and answer, since you admit that I am wise.

Socrates:: I must obey then, and it seems I am forced to do so, since you are in command, so ask away.

Dionysodorus:: Now are the things that have sense those that have soul, or do things without soul have sense too?

Socrates:: It is the ones with soul that have sense.

Dionysodorus:: And do you know any phrase that has soul?

Socrates:: Heavens no, not I.

Dionysodorus:: Then why did you ask me just now what was the sense of my phrase?

Socrates:: I suppose, for no other reason than that I made a mistake on account of being so stupid. Or perhaps I did not make a mistake but was right when I spoke as if phrases had sense? Are you saying that I made a mistake or not? Because if I did not make one you will not refute me no matter how wise you are, and you will be “helpless in dealing with the argument.” And if I did make one, you said the wrong thing when you claimed it was impossible to make mistakes—and I’m not talking about things you said last year. So, Dionysodorus and Euthydemus, it looks as if this argument has made no progress and still has the old trouble of falling down itself in the process of knocking down others. And your art has not discovered how to prevent this from happening in spite of your wonderful display of precision in words.

And Ctesippus said;

Ctesippus:: Your manner of speech is certainly remarkable, O men of Thurii or Chios, or from wherever and however you like to be styled, because it matters nothing to you if you talk complete nonsense.

Socrates:: I was worried in case there might be hard words, and started to pacify Ctesippus once again, saying, Ctesippus, let me say to you the same things I was just saying to Clinias, that you fail to recognize how remarkable the strangers' wisdom is. It's just that the two of them are unwilling to give us a serious demonstration, but are putting on conjuring tricks in imitation of that Egyptian sophist, Proteus. So let us imitate Menelaus and refuse to release the pair until they have shown us their serious side. I really think some splendid thing in them will appear whenever they begin to be in earnest, so let us beg and exhort and pray them to make it known. As for me, I think I ought once again to take the lead and give an indication of what sort of persons I pray they will show themselves to be. Beginning where I left off earlier, I shall do my best to go through what comes next so as to spur them to action and in hopes that out of pity and commiseration for my earnest exertions they may be earnest themselves.

So, Clinias, remind me where we left off. As far as I can remember it was just about at the point where we finally agreed that it was necessary to love wisdom, wasn't it?

Clinias:: Yes.

Socrates:: Now the love of wisdom, or philosophy, is the acquisition of knowledge, isn't that so?

Clinias:: Yes.

Socrates:: Well, what sort of knowledge would we acquire if we went about it in the right way? Isn't the answer simply this, that it would be one which will benefit us?

Clinias:: Certainly.

Socrates:: And would it benefit us in any way if we knew how to go about and discover where in the earth the greatest quantities of gold are buried?

Clinias:: Perhaps.

Socrates:: But earlier, said, we gave a thorough demonstration of the point that even if all the gold in the world should be ours with no trouble and without digging for it, we should be no better off—no, not even if we knew how to make stones into gold would the knowledge be worth anything. For unless we also knew how to use the gold, there appeared to be no value in it. Or don't you remember?

Clinias:: Yes, I remember very well.

Socrates:: Nor does there seem to be any value in any other sort of knowledge which knows how to make things, whether money making or medicine or any other such thing, unless it knows how to use what it makes—isn't this the case?

He agreed.

And again, if there exists the knowledge of how to make men immortal, but without the knowledge of how to use this immortality, there seems to be no value in it, if we are to conclude anything from what has already been settled.

We agreed on all this.

Then what we need, my fair friend, is a kind of knowledge which combines making and knowing how to use the thing which it makes.

Clinias:: So it appears.

Socrates:: Then it seems not at all needful for us to become lyre makers and skilled in some such knowledge as that. For there the art which makes is one thing and that which uses is another; they are quite distinct although they deal with the same thing. There is a great difference between lyre making and lyre playing, isn't there?

He agreed.

And it is equally obvious that we stand in no need of the art of flute making, since this is another of the same kind.

He said yes.

Seriously then, if we were to learn the art of writing speeches, is this the art which we would have to get if we are going to be happy?

Clinias:: I don't think so.

Socrates:: On what ground do you say this?

Clinias:: Well, I notice that certain speech writers have no idea of how to use the particular speeches they themselves have written, in the same way that the lyre makers have no idea of how to use their lyres. And in the former case too, there are other people who are capable of using what the speech writers have composed but are themselves unable to write. So it is clear that in regard to speeches too, there is one art of making and another of using.

Socrates:: You seem to me, to have sufficient ground for stating that the art of speech writing is not the one a man would be happy if he acquired. And yet it was in this connection that I expected the very knowledge we have been seeking all this time would put in an appearance. Because, as far as I am concerned, whenever I have any contact with these same men who write speeches, they strike me as being persons of surpassing wisdom, Clinias; and this art of theirs seems to me something marvelous and lofty. Though after all there is nothing remarkable in this, since it is part of the enchanters' art and but slightly inferior to it. For the enchanters' art consists in charming vipers and spiders and scorpions and other wild things, and in curing diseases, while the other art consists in charming and persuading the members of juries and assemblies and other sorts of crowds. Or do you have some other notion of it?

Clinias:: No, it seems to me to be just as you say.

Socrates:: Where should we turn next, then? I asked. To which one of the arts?

Clinias:: I find myself at a loss.

Socrates:: But I think I have discovered it.

Clinias:: Which one is it?

Socrates:: The art of generalship seems to me, to be the one which, more than any other, a man would be happy if he acquired.

Clinias:: It doesn't seem so to me.

Socrates:: How is that?

Clinias:: Well, this art is a kind of man hunting.

Socrates:: What then?

Clinias:: No art of actual hunting, extends any further than pursuing and capturing: whenever the hunters catch what they are pursuing they are incapable of using it, but they and the fishermen hand over their prey to the cooks. And again, geometers and astronomers and calculators (who are hunters too, in a way, for none of these make their diagrams; they simply discover those which already exist), since they themselves have no idea of how to use their prey but only how to hunt it, hand over the task of using their discoveries to the dialecticians—at least, those of them do so who are not completely senseless.

Socrates:: Well done, most handsome and clever Clinias! And is this really the case?

Clinias:: Very much so. And the same is true of the generals. Whenever they capture some city, or a camp, they hand it over to the statesmen—for they themselves have no idea of how to use the things they have captured—just in the same way, I imagine, that quail hunters hand theirs over to quail keepers. So, if we are in need of that art which will itself know how to use what it acquires through making or capturing, and if it is an art of this sort which will make us happy, then, we must look for some other art besides that of generalship.

Crito:: What do you mean, Socrates? Did that boy utter all this?

Socrates:: You're not convinced of it, Crito?

Crito:: Good heavens no! Because, in my opinion, if he spoke like that, he needs no education, either from Euthydemus or anyone else.

Socrates:: Dear me, then perhaps after all it was Ctesippus who said this, and I am getting absent-minded.

Crito:: Not my idea of Ctesippus!

Socrates:: But I'm sure of one thing at least, that it was neither Euthydemus nor Dionysodorus who said it. Do you suppose, my good Crito, that some superior being was there and uttered these things—because I am positive I heard them.

Crito:: Yes, by heaven, Socrates, I certainly think it was some superior being, very much so. But after this did you still go on looking for the art? And did you find the one you were looking for or not?

Socrates:: Find it, my dear man—I should think not! We were really quite ridiculous—just like children running after crested larks; we kept thinking we were about to catch each one of the knowledges, but they always got away. So why should I recount the whole story? When we got to the kingly art and were giving it a thorough inspection to see whether it might be the one which both provided and created happiness, just there we got into a sort of labyrinth: when we thought we had come to the end, we turned round again and reappeared practically at the beginning of our search in just as much trouble as when we started out.

Crito:: And how did this come about, Socrates?

Socrates:: I shall tell you. We had the idea that the statesman's art and the kingly art were the same.

Crito:: And then what?

Socrates:: It was due to this art that generalship and the others handed over the management of the products of which they themselves were the craftsmen, as if this art alone knew how to use them. It seemed clear to us that this was the art we were looking for, and that it was the cause of right action in the state, and, to use the language of Aeschylus, that this art alone sits at the helm of the state, governing all things, ruling all things, and making all things useful.

Crito:: And wasn't your idea a good one, Socrates?

Socrates:: You will form an opinion, Crito, if you like to hear what happened to us next. We took up the question once again in somewhat this fashion: Well, does the kingly art, which rules everything, produce some result for us, or not? Certainly it does, we said to each other. Wouldn't you say so too, Crito?

Crito:: Yes, I would.

Socrates:: Then what would you say its result was? For instance, if I should ask you what result does medicine produce, when it rules over all the things in its control, would you not say that this result was health?

Crito:: Yes, I would.

Socrates:: And what about your own art of farming, when it rules over all the things in its control—what result does it produce? Wouldn't you say that it provides us with nourishment from the earth?

Crito:: Yes, I would.

Socrates:: Now what about the kingly art; when it rules over all the things in its control—what does it produce? Perhaps you won't find the answer quite so easy in this case.

Crito:: No, I certainly don't, Socrates.

Socrates:: Nor did we, Crito. But you are aware of this point at least, that if this is to be the art we are looking for, it must be something useful.

Crito:: Yes indeed.

Socrates:: And it certainly must provide us with something good?

Crito:: Necessarily, Socrates.

Socrates:: And Clinias and I of course agreed that nothing is good except some sort of knowledge.

Crito:: Yes, you said that.

Socrates:: Then the other results which a person might attribute to the statesman's art—and these, of course, would be numerous, as for instance, making the citizens rich and free and not disturbed by faction—all these appeared to be neither good nor evil; but this art had to make them wise and to provide them with a share of knowledge if it was to be the one that benefited them and made them happy.

Crito:: True enough. So you agreed on this for the moment at any rate, according to your account.

Socrates:: And does the kingly art make men wise and good?

Crito:: Why not, Socrates?

Socrates:: But does it make all people good, and in every respect? And is it the art which conveys every sort of knowledge, shoe making and carpentry and all the rest?

Crito:: I don’t think so, Socrates.

Socrates:: Then what knowledge does it convey? And what use are we to make of it? It must not be the producer of any of those results which are neither good nor bad, but it must convey a knowledge which is none other than itself. Now shall we try to say what in the world this is, and what use we are to make of it? Is it agreeable to you if we say it is that by which we shall make others good?

Crito:: Certainly.

Socrates:: And in what respect will they be good and in what respect useful, as far as we are concerned? Or shall we go on to say that they will make others good and that these others will do the same to still others? But in what conceivable way they are good is in no way apparent to us, especially since we have discredited what are said to be the results of the statesman’s art. It is altogether a case of the proverbial “Corinthus, son of Zeus”; and, as I was saying, we are in just as great difficulties as ever, or even worse, when it comes to finding out what that knowledge is which will make us happy.

Crito:: Mercy on us, Socrates, you seem to have got yourselves into a frightful tangle.

Socrates:: As far as I was concerned, Crito, when I had fallen into this difficulty, I began to exclaim at the top of my lungs and to call upon the two strangers as though they were the Heavenly Twins to rescue both myself and the boy from the third wave of the argument and to endeavor in every conceivable way to make plain what this knowledge can be which we ought to have if we are going to spend the remainder of our lives in the right way.

Crito:: And what about it? Was Euthydemus willing to reveal anything to you?

Socrates:: Of course! And he began his account, my friend, in this generous manner:

Euthydemus:: Would you prefer, Socrates, to have me teach you this knowledge you have been in difficulties over all this time, or to demonstrate that you possess it?

Socrates:: O marvelous man, is this in your power?

Euthydemus:: Very much so.

Socrates:: Then for heaven's sake demonstrate that I possess it! That will be much easier than learning for a man of my age.

Euthydemus:: Then come answer me this: Is there anything you know?

Socrates:: Oh, yes, many things, though trivial ones.

Euthydemus:: That will serve the purpose. Now do you suppose it possible for any existing thing not to be what it is?

Socrates:: Heavens no, not I.

Euthydemus:: And do you know something?

Socrates:: Yes, I do.

Euthydemus:: Then you are knowing, if you really know?

Socrates:: Of course, as far as concerns that particular thing.

Euthydemus:: That doesn't matter, because mustn't you necessarily know everything, if you are knowing?

Socrates:: How in heaven's name can that be, when there are many other things I don't know?

Euthydemus:: Then if there is anything you don't know, you are not knowing.

Socrates:: In just that matter, my friend.

Euthydemus:: Are you any the less not knowing for all that? And just now you said you were knowing, with the result that you are the man you are, and then again you are not, at the same time and in respect to the same things.

Socrates:: Very good, Euthydemus—according to the proverb, “whatever you say is well said.” But how do I know that knowledge we were looking for? Since it is impossible both to be and not to be the same thing, if I know one thing I know absolutely everything—because I could not be both knowing and not knowing at the same time—and since I know everything, I also have this knowledge. Is this what you mean, and is this your piece of wisdom?

Euthydemus:: You are refuted out of your own mouth, Socrates.

Socrates:: But Euthydemus, aren’t you in the same condition? Because I would not be at all vexed at anything I might suffer in company with you and this dear man Dionysodorus. Tell me, don’t you two know some existing things, and aren’t there others you don’t know?

Dionysodorus:: Far from it, Socrates.

Socrates:: What’s that? Do you know nothing at all?

Dionysodorus:: On the contrary.

Socrates:: Then you know everything, since you know something?

Dionysodorus:: Yes, everything, and you also know everything if you really know even one thing.

Socrates:: O heavens, how marvelous! And what a great blessing has come to light! But it can’t be true that all the rest of mankind either know everything or nothing?

Dionysodorus:: Well, I don’t suppose they know some things and not others and are thus knowing and not knowing at the same time.

Socrates:: But what follows?

Dionysodorus:: Everyone, knows everything, if he really knows something.

Socrates:: By the gods, Dionysodorus,—for I realize that you are both now in earnest, although I have provoked you to it with some difficulty—do you two really know everything? Carpentry and shoe making, for instance?

Euthydemus:: Yes indeed.

Socrates:: So you are both able to do leather stitching?

Dionysodorus:: Heavens yes, and we can do cobbling.

Socrates:: And do you also have the sort of information which tells the number of the stars and of the sands?

Dionysodorus:: Of course. Do you think we would fail to agree to that too?

Socrates:: Here Ctesippus interrupted:

Ctesippus:: For goodness' sake, Dionysodorus, give me some evidence of these things which will convince me that you are both telling the truth.

Dionysodorus:: What shall I show you?

Ctesippus:: Do you know how many teeth Euthydemus has, and does he know how many you have?

Dionysodorus:: Aren't you satisfied, with being told that we know everything?

Ctesippus:: Not at all, but tell us just this one thing in addition and prove that you speak the truth. Because if you say how many each of you has, and you turn out to be right when we have made a count, then we shall trust you in everything else.

Socrates:: Well, they weren't willing to do it, since they thought they were being laughed at, but they claimed to know every single thing they were questioned about by Ctesippus. And there was practically nothing Ctesippus did not ask them about in the end, inquiring shamelessly whether they knew the most disgraceful things. The two of them faced his questions very manfully, claiming to know in each case, just like boars when they are driven up to the attack. The result was that even I myself, Crito, was finally compelled, out of sheer disbelief, to ask whether Dionysodorus even knew how to dance, to which he replied that he certainly did.

I don't suppose, that at your age you are so far advanced in wisdom as to somersault over swords or be turned about on a wheel?

Dionysodorus:: There is nothing I cannot do.

Socrates:: And do you know everything just at the present moment, I asked, or is your knowledge also a permanent thing?

Dionysodorus:: It is permanent as well.

Socrates:: And when you were children and had just been born, did you know everything?

They both answered yes at the same moment.

Now the thing struck us as unbelievable; and Euthydemus asked;

Euthydemus:: Are you incredulous, Socrates?

Socrates:: Well, I would be, except for the probability that you are both wise men.

Euthydemus:: But if you are willing to answer my questions, I will prove that you agree to these remarkable things too.

Socrates:: But, there is nothing I would like better than to be refuted on these points. Because if I am unaware of my own wisdom, but you are going to demonstrate that I know everything and know it forever, what greater godsend than this would I be likely to come across my whole life long?

Euthydemus:: Then answer.

Socrates:: Ask away, I am ready.

Euthydemus:: Well then, Socrates, when you have knowledge, do you have it of something, or not?

Socrates:: I have it of something.

Euthydemus:: And do you know by means of that by which you have knowledge, or by means of something else?

Socrates:: By means of that by which I have knowledge. I suppose you mean the soul, or isn't this what you have in mind?

Euthydemus:: Aren't you ashamed, Socrates, to be asking a question of your own when you ought to be answering?

Socrates:: Very well, but how am I to act? I will do just what you tell me. Now whenever I don't understand your question, do you want me to answer just the same, without inquiring further about it?

Euthydemus:: You surely grasp something of what I say, don't you?

Socrates:: Yes, I do.

Euthydemus:: Then answer in terms of what you understand.

Socrates:: Well then, if you ask a question with one thing in mind and I understand it with another and then answer in terms of the latter, will you be satisfied if I answer nothing to the purpose?

Euthydemus:: I shall be satisfied, although I don't suppose you will.

Socrates:: Then I'm certainly not going to answer, until I understand the question.

Euthydemus:: You are evading a question you understand all along, because you keep talking nonsense and are practically senile.

Socrates:: I realized he was angry with me for making distinctions in his phrases, because he wanted to surround me with words and so hunt me down. Then I remembered that Connus, too, is vexed with me whenever I don't give in to him, and that as a result, he takes fewer pains with me because he thinks I am stupid. And since I had made up my mind to attend this man's classes too, I thought I had better give in for fear he might think me too uncouth to be his pupil. So Well, Euthydemus, if you think this is how to do things, we must do them your way, because you are far more of an expert at discoursing than I, who have merely a layman's knowledge of the art. So go back and ask your questions from the beginning.

Euthydemus:: And you answer again from the beginning. Do you know what you know by means of something, or not?

Socrates:: I know it by means of the soul.

Euthydemus:: There he is again, adding on something to the question! I didn't ask you by what you know, but whether you know by means of something.

Socrates:: Yes, I did give too much of an answer again, because I am so uneducated. Please forgive me and I shall answer simply that I know what I know by means of something.

Euthydemus:: And do you always know by this same means, or is it rather the case that you know sometimes by this means and sometimes by another?

Socrates:: Always, whenever I know, it is by this means.

Euthydemus:: Won't you stop adding things on again?

Socrates:: But I'm afraid that this word "always" may trip us up.

Euthydemus:: It won’t do it to us, but to you, if anyone. Come along and answer: do you always know by this means?

Socrates:: Always, since I have to withdraw the “whenever.”

Euthydemus:: Then you always know, by this means. And since you are always knowing, the next question is, do you know some things by this means by which you know and others by some other means, or everything by this one?

Socrates:: Absolutely everything by this one,—those that I know, that is.

Euthydemus:: There it is again, —here comes the same qualification.

Socrates:: Well I take back the “those that I know,”

Euthydemus:: No, don’t take back a single thing,—I’m not asking you any favors. Just answer me this: would you be capable of knowing “absolutely everything,” if you did not know everything?

Socrates:: It would be remarkable if I did.

Euthydemus:: And Then add on everything you like now, because you admit that you know absolutely everything.

Socrates:: It seems I do, especially since my “those that I know” has no effect, and I know everything.

Euthydemus:: And you have also admitted that you always know (by means of that by which you know), whenever you know, or however else you like to put it, because you have admitted that you always know and know all things at the same time. It is obvious that you knew even when you were a child and when you were being born and when you were being conceived. And before you yourself came into being and before the foundation of heaven and earth, you knew absolutely everything, if it is true that you always know. And, by heaven, you always will know, and will know everything, if I want it that way.

Socrates:: I hope you will want it that way, most honorable Euthydemus, if you are genuinely telling the truth. But I don't quite believe in your ability to bring it off unless your brother Dionysodorus here should lend a helping hand—perhaps the two of you might be able to do it. Tell me, I went on: with respect to other things I see no possibility of disputing with men of such prodigious wisdom by saying that I do not know everything, since you have stated that I do; but what about things of this sort, Euthydemus—how shall I say I know that good men are unjust? Come tell me, do I know this, or not?

Euthydemus:: Oh yes, you know it.

Socrates:: Know what?

Euthydemus:: That the good are not unjust.

Socrates:: Yes, I've always known that. But this isn't my question—what I'm asking is, where did I learn that the good are unjust?

Dionysodorus:: Nowhere.

Socrates:: Then this is something I do not know.

Euthydemus:: You are ruining the argument, and this fellow here will turn out to be not knowing, and then he will be knowing and not knowing at the same time.

Socrates:: And Dionysodorus blushed.

But you, what do you say, Euthydemus? Your all-knowing brother doesn't appear to be making a mistake, does he?

Dionysodorus:: Am I a brother of Euthydemus?

Socrates:: said Dionysodorus, interrupting quickly.

And I said, Let that pass, my good friend, until Euthydemus instructs me as to how I know that good men are unjust, and don't begrudge me this piece of information.

Dionysodorus:: You are running away, Socrates, and refusing to answer.

Socrates:: And with good reason, because I am weaker than either of you, so that I do not hesitate to run away from you both together. I am much more worthless than Heracles, who was unable to fight it out with both the Hydra, a kind of lady-sophist who was so clever that if anyone cut off one of her heads of argument, she put forth many more in its place, and with another sort of sophist, a crab arrived on shore from the sea—rather recently, I think. And when Heracles was in distress because this creature was chattering and biting on his left, he called for his nephew Iolaus to come and help him, which Iolaus successfully did. But if my Iolaus should come, he would do more harm than good.

Dionysodorus:: And when you have finished this song and story, will you tell me whether Iolaus is any more Heracles' nephew than yours?

Socrates:: Well, I suppose it will be best for me if I answer you, Dionysodorus, because you will not stop asking questions—I am quite convinced of that—out of an envious desire to prevent Euthydemus from teaching me that piece of wisdom.

Dionysodorus:: Then answer.

Socrates:: Well, my answer is that Iolaus was the nephew of Heracles, but as for being mine, I don't see that he is, in any way whatsoever. Because my brother, Patrocles, was not his father, although Heracles' brother, Iphicles, does have a name which is somewhat similar.

Dionysodorus:: And Patrocles, is your brother?

Socrates:: Yes indeed,—we have the same mother, though not the same father.

Dionysodorus:: Then he both is and is not your brother.

Socrates:: Not by the same father, my good friend, because his father was Chaeredemus and mine was Sophroniscus.

Dionysodorus:: But Sophroniscus and Chaeredemus were both fathers?

Socrates:: Certainly,—the former was mine and the latter his.

Dionysodorus:: Then was Chaeredemus other than a father?

Socrates:: Other than mine at any rate.

Dionysodorus:: Then he was a father while he was other than a father? Or are you the same as a stone?

Socrates:: I'm afraid you will show that I am, although I don't feel like one.

Dionysodorus:: Then are you other than a stone?

Socrates:: Yes, quite other.

Dionysodorus:: Then isn't it the case that if you are other than a stone, you are not a stone, and if you are other than gold, you are not gold?

Socrates:: That's true.

Dionysodorus:: Then Chaeredemus is not a father if he is other than a father.

Socrates:: So it seems that he is not a father.

Euthydemus:: Because if Chaeredemus is a father;

Socrates:: said Euthydemus, interrupting;

Euthydemus:: then, on the other hand, Sophroniscus, being other than a father, is not a father, so that you, Socrates, are without a father.

Socrates:: Here Ctesippus took up the argument, saying;

Ctesippus:: Well, isn't your father in just the same situation? Isn't he other than my father?

Euthydemus:: Far from it.

Ctesippus:: What! Is he the same?

Euthydemus:: The same, certainly.

Ctesippus:: I should not agree with that. But tell me, Euthydemus, is he just my father, or the father of everyone else as well?

Euthydemus:: Of everyone else as well. Or do you think the same man is both a father and not a father?

Ctesippus:: I was certainly of that opinion.

Euthydemus:: What,—do you think that a thing can be both gold and not gold? Or both a man and not a man?

Ctesippus:: But perhaps, Euthydemus, you are not uniting flax with flax, as the proverb has it. Because you are making an alarming statement if you say your father is the father of all.

Euthydemus:: But he is.

Ctesippus:: Just of men, or of horses and all the other animals?

Euthydemus:: All of them.

Ctesippus:: And is your mother their mother?

Euthydemus:: Yes, she is.

Ctesippus:: And is your mother the mother of sea urchins?

Euthydemus:: Yes, and so is yours.

Ctesippus:: So you are the brother of gudgeons and puppies and piglets.

Euthydemus:: Yes, and so are you.

Ctesippus:: And your father turns out to be a boar and a dog.

Euthydemus:: And so does yours.

Dionysodorus:: You will admit all this in a moment, Ctesippus, if you answer my questions. Tell me, have you got a dog?

Ctesippus:: Yes, and a brute of a one too.

Dionysodorus:: And has he got puppies?

Ctesippus:: Yes indeed, and they are just like him.

Dionysodorus:: And so the dog is their father?

Ctesippus:: Yes, I saw him mounting the bitch myself.

Dionysodorus:: Well then: isn't the dog yours?

Ctesippus:: Certainly.

Dionysodorus:: Then since he is a father and is yours, the dog turns out to be your father, and you are the brother of puppies, aren't you?

Socrates:: And again Dionysodorus cut in quickly to keep Ctesippus from making some reply first and said;

Dionysodorus:: Just answer me one more small question: Do you beat this dog of yours?

Socrates:: And Ctesippus laughed and said;

Ctesippus:: Heavens yes, since I can't beat you!

Dionysodorus:: Then do you beat your own father?

Ctesippus:: There would certainly be much more reason for me to beat yours, for taking it into his head to beget such clever sons. But I suppose, Euthydemus, that the father of you and the puppies has benefited greatly from this wisdom of yours!

Euthydemus:: But he has no need of a lot of good things, Ctesippus—he does not, and neither do you.

Ctesippus:: Nor you either, Euthydemus?

Euthydemus:: Nor any other man. Tell me, Ctesippus, do you think it a good thing for a sick man to drink medicine whenever he needs it, or does it seem to you not a good thing? And do you think it good for a man to be armed when he goes to war rather than to go unarmed?

Ctesippus:: It seems good to me. And yet I think you are about to play one of your charming tricks.

Euthydemus:: The best way to find out is to go ahead and answer. Since you admit that it is a good thing for a man to drink medicine whenever he needs it, then oughtn't he to drink as much as possible? And won't it be fine if someone pounds up and mixes him a wagon load of hellebore?

Socrates:: And Ctesippus said;

Ctesippus:: Very true indeed, Euthydemus, if the man drinking is as big as the statue at Delphi!

Euthydemus:: It also follows, that since it is a good thing to be armed in war, a man ought to have as many spears and shields as possible, if it really is a good thing?

Ctesippus:: It really does seem to be so, But surely you don't believe this yourself, Euthydemus? Wouldn't you prefer one shield and one spear?

Euthydemus:: Yes, I would.

Ctesippus:: And would you also arm Geryon and Briareus in this fashion? I thought you and your companion here were cleverer than that, considering that you both fight in armor.

Socrates:: Euthydemus was silent, but Dionysodorus went back to the answers Ctesippus had given earlier and asked;

Dionysodorus:: And what about gold, then? In your opinion is it a good thing to have?

Ctesippus:: Yes indeed, and, in this case, lots of it.

Dionysodorus:: Well then, oughtn't one to have good things always and everywhere?

Ctesippus:: Very much so.

Dionysodorus:: And you admit that gold is also one of the good things?

Ctesippus:: Yes, I have admitted that already.

Dionysodorus:: Then one should have it always and everywhere, and especially in oneself? And wouldn’t a man be happiest of all if he had three talents of gold in his stomach, and a talent in his skull, and a stater of gold in each eye?

Ctesippus:: Well, they do say, Euthydemus, that among the Scythians the happiest and best are the men who have a lot of gold in their own skulls (the same way that you were talking a moment ago about the dog being my father); and, what is still more remarkable, the story is that they also drink out of their own gilded skulls and gaze at the insides of them, having their own heads in their hands!

Euthydemus:: Tell me, do the Scythians and the rest of mankind see things capable of sight or incapable?

Ctesippus:: Capable, I suppose.

Euthydemus:: And do you do so too?

Ctesippus:: Yes, so do I.

Euthydemus:: And do you see our cloaks?

Ctesippus:: Yes.

Euthydemus:: Then these same cloaks are capable of sight.

Ctesippus:: Remarkably so.

Euthydemus:: Well, what do they see?

Ctesippus:: Nothing at all. And you, perhaps, don’t suppose you see them, you are such a sweet innocent. But you strike me, Euthydemus, as having fallen asleep with your eyes open; and if it is possible to speak and say nothing, you are doing exactly that.

Dionysodorus:: But surely it is not possible for there to be a speaking of the silent.

Ctesippus:: Entirely impossible.

Dionysodorus:: Then neither is there a silence of the speaking?

Ctesippus:: Still less so.

Dionysodorus:: But whenever you mention stones and wood and pieces of iron, are you not speaking of the silent?

Ctesippus:: Not if I go by the blacksmiths' shops, because there the pieces of iron are said to speak out and cry aloud if anyone handles them. So here, thanks to your wisdom, you were talking nonsense without being aware of it. But prove me the other point, how there can be a silence of the speaking.

Socrates:: (I had the notion that Ctesippus was very much keyed up on account of his favorite being there.)

Euthydemus:: Whenever you are silent, are you not silent with respect to all things?

Ctesippus:: Yes, I am.

Euthydemus:: Therefore, you are also silent with respect to the speaking, if "the speaking" is included in all things.

Ctesippus:: What, all things are not silent, are they?

Euthydemus:: I imagine not.

Ctesippus:: Well then, my good friend, do all things speak?

Euthydemus:: All the speaking ones, I suppose.

Ctesippus:: But, this is not my question—I want to know, are all things silent, or do they speak?

Dionysodorus:: Neither and both;

Socrates:: said Dionysodorus, breaking in, and

Dionysodorus:: I'm convinced you will be helpless in dealing with that answer.

Socrates:: Ctesippus gave one of his tremendous laughs and said;

Ctesippus:: Euthydemus, your brother has made the argument sit on both sides of the fence and it is ruined and done for!

Socrates:: Clinias was very pleased and laughed too, which made Ctesippus swell to ten times his normal size. It is my opinion that Ctesippus, who is a bit of a rogue, had picked up these very things by overhearing these very men, because there is no wisdom of a comparable sort among any other person of the present day.

And I said, Clinias, why are you laughing at such serious and beautiful things?

Dionysodorus:: Why Socrates, have you ever yet seen a beautiful thing?

Socrates:: Yes indeed, Dionysodorus, and many of them.

Dionysodorus:: And were they different from the beautiful, or were they the same as the beautiful?

Socrates:: This put me in a terrible fix, which I thought I deserved for my grumbling. All the same I answered that they were different from the beautiful itself, but at the same time there was some beauty present with each of them.

Dionysodorus:: Then if an ox is present with you, you are an ox? And because I am present with you now, you are Dionysodorus?

Socrates:: Heaven forbid.

Dionysodorus:: But in what way, can the different be different just because the different is present with the different?

Socrates:: Are you in difficulties there? (I was so eager to have the wisdom of the pair that I was already trying to copy it.)

Dionysodorus:: How can I not be in difficulties? Not only I but everyone else must be, when a thing is impossible.

Socrates:: What are you saying, Dionysodorus? Isn't the beautiful beautiful and the ugly ugly?

Dionysodorus:: Yes, if I like.

Socrates:: And do you like?

Dionysodorus:: Certainly.

Socrates:: Then isn't it also the case that the same is the same and the different different? Because I don't imagine that the different is the same, but I thought even a child would hardly doubt that the different is different. But you must have neglected this point deliberately, Dionysodorus, since in every other respect you and your brother strike me as bringing the art of argument to a fine pitch of excellence, like craftsmen who bring to completion whatever work constitutes their proper business.

Dionysodorus:: You know then, what the proper business of each craftsman is? For instance, you know whose business it is to work metal?

Socrates:: Yes, I do—the blacksmith's.

Dionysodorus:: Well then, what about making pots?

Socrates:: The potter's.

Dionysodorus:: And again, to slaughter and skin, and to boil and roast the pieces after cutting them up?

Socrates:: The cook's.

Dionysodorus:: Now if a man does the proper business, he will do rightly?

Socrates:: Very much so.

Dionysodorus:: And the proper business in the case of the cook is, as you say, to cut up and skin? You did agree to that didn't you?

Socrates:: Yes, I did, but forgive me.

Dionysodorus:: Then it is clear, that if someone kills the cook and cuts him up, and then boils him and roasts him, he will be doing the proper business. And if anyone hammers the blacksmith himself, and puts the potter on the wheel, he will also be doing the proper business.

Socrates:: By Poseidon, you are putting the finishing touches on your wisdom! And do you think that such skill will ever be mine?

Dionysodorus:: And would you recognize it, Socrates, if it did become yours?

Socrates:: If only you are willing, I clearly would.

Dionysodorus:: What's that,—do you think you know your own possessions?

Socrates:: Yes, unless you forbid it—for all my hopes must begin with you and end with Euthydemus here.

Dionysodorus:: And do you consider those things to be yours over which you have control and which you are allowed to treat as you please? For instance, an ox or a sheep: do you regard these as yours because you are free to sell them or give them away or sacrifice them to any god you please? And if you could not treat them in this fashion, then they would not be yours?

Socrates:: And because I knew that some fine thing would emerge from their questions, and, at the same time, because I wanted to hear it as quickly as possible, This is exactly the case—it is only things like these which are mine.

Dionysodorus:: Very well. You give the name of living beings to all things that have a soul, don't you?

Socrates:: Yes.

Dionysodorus:: And you admit that only those living beings are yours over which you have power to do all these things I mentioned just now?

Socrates:: I admit it. And he pretended to pause as though he were contemplating some weighty matter, and then said;

Dionysodorus:: Tell me, Socrates, do you have an ancestral Zeus?

Socrates:: I had a suspicion (a correct one as it turned out) of the way in which the argument would end, and I began to make a desperate effort to escape, twisting about as though I were already caught in the net.

No, I have not, Dionysodorus.

Dionysodorus:: Then you are a miserable sort of fellow, and not even an Athenian, if you have no ancestral gods nor shrines, nor any of the other things of this sort which befit a gentleman.

Socrates:: Enough of that, Dionysodorus—mind your tongue and don't give me a lecture which is prematurely harsh. I certainly do have altars; and I have shrines, both domestic and ancestral, and everything else of the kind, just like the other Athenians.

Dionysodorus:: Well, what about the other Athenians? Doesn't each of them have an ancestral Zeus?

Socrates:: None of the Ionians use that expression, neither those who are colonists from the city nor we ourselves. We do have an ancestral Apollo because of Ion's parentage, but Zeus is not given the name of "ancestral" by us. Rather we call him "defender of the house" or "of the tribe," and we also have an Athena "of the tribe."

Dionysodorus:: Oh, that will do, since you do appear to have an Apollo and a Zeus and an Athena.

Socrates:: Certainly.

Dionysodorus:: Then these would be your gods?

Socrates:: My ancestors, and my masters.

Dionysodorus:: But at any rate they are yours. Or didn't you admit that they were?

Socrates:: Yes, I admitted it. What is going to happen to me?

Dionysodorus:: Then these gods, are also living beings? Because you have admitted that everything which has a soul is a living being. Or don't these gods have a soul?

Socrates:: Oh yes, they do.

Dionysodorus:: Then they are living beings?

Socrates:: Yes, living beings.

Dionysodorus:: And you have agreed that those living beings are yours which you have a right to give away and to sell and to sacrifice to any god you please.

Socrates:: Yes, I agreed to that,—there is no retreat for me, Euthydemus.

Dionysodorus:: Then come tell me straightway, since you admit that Zeus and the other gods are yours, then do you have the right to sell them or give them away or treat them in any way you like, as you do with the other living creatures?

Socrates:: Then I, Crito, lay speechless, just as if the argument had struck me a blow. But Ctesippus ran to my aid, saying;

Ctesippus:: Bravo, Heracles, what a fine argument!

Socrates:: And Dionysodorus said;

Dionysodorus:: Is Heracles a bravo, or is a bravo Heracles?

Ctesippus:: By Poseidon, what marvelous arguments! I give up—the pair are unbeatable.

Socrates:: Whereupon, my dear Crito, there was no one there who did not praise to the skies the argument and the two men, laughing and applauding and exulting until they were nearly exhausted. In the case of each and every one of the previous arguments, it was only the admirers of Euthydemus who made such an enthusiastic uproar; but now it almost seemed as if the pillars of the Lyceum applauded the pair and took pleasure in their success. Even I myself was so affected by it as to declare that I had never in my life seen such wise men; and I was so absolutely captivated by their wisdom that I began to praise and extol them and said, O happy pair, what miraculous endowment you possess to have brought such a thing to perfection in so short a time! Among the many other fine things which belong to your arguments, Euthydemus and Dionysodorus, there is one which is the most magnificent of all, that you care nothing for the many, or in fact, for men of consequence or reputation, but only for persons of your own sort. And I am convinced that there are very few men like you who would appreciate these arguments, but that the majority understand them so little that I feel sure they would be more ashamed to refute others with arguments of this sort than to be refuted by them. And then there is this other public-spirited and kindly aspect of your performance; whenever you deny that there is anything beautiful or good or white, and that the different is in any way different, you do in fact completely stitch up men’s mouths, as you say. But since you would appear to stitch up your own as well, you are behaving in a charming fashion and the harshness of your words is quite removed. But the greatest thing of all is that your skill is such, and is so skillfully contrived, that anyone can master it in a very short time. I myself found this out by watching Ctesippus and seeing how quickly he was able to imitate you on the spur of the moment. This ability of your technique to be picked up rapidly is a fine thing, but not something which lends itself well to public performance. If you will take my advice, be careful not to talk in front of a large group; the listeners are likely to master it right away and give you no credit. Better just talk to each other in private, or, if you must have an audience, then let no one come unless he gives you money. And if you are sensible you will give your disciples the same advice, never to argue with anyone but yourselves and each other. For it is the rare thing, Euthydemus, which is the precious one, and water is cheapest, even though, as Pindar said, it is the best. But come, and see to admitting Clinias and me to your classes.

After saying these things, Crito, and making a few other brief remarks, we separated. Now figure out a way to join us in attending their classes, since they claim to be able to instruct anyone who is willing to pay, and say that neither age nor lack of ability prevents anyone whatsoever from learning their wisdom easily. And, what is specially relevant for you to hear, they say that their art is in no way a hindrance to the making of money.

Crito:: Well, Socrates, I am indeed a person who loves listening and who would be glad to learn something; but all the same I am afraid that I also am not one of Euthydemus' sort. Instead I am one of those you mentioned who would rather be refuted by arguments of this kind than use them to refute. Now it seems ridiculous to me to give you advice, but I want to tell you what I heard. When I was taking a walk one of the men who was leaving your discussion came up to me (someone who has a high opinion of himself for wisdom and is one of those clever people who write speeches for the law courts) and

Someone:: Crito, aren't you a disciple of these wise men?

Crito:: Heavens no,—there was such a crowd that I was unable to hear, even though I stood quite close.

Someone:: And yet, it was worth hearing.

Crito:: What was it?

Someone:: You would have heard men conversing who are the wisest of the present day in this kind of argument.

Crito:: What did they show you?

Someone:: Nothing else, than the sort of thing one can hear from such people at any time—chattering and making a worthless fuss about matters of no consequence.

Crito:: (These are his approximate words.) But surely, philosophy is a charming thing.

Someone:: Charming, my innocent friend? —why it is of no value whatsoever! And if you had been present, I think you would have been embarrassed on your friend's account, he acted so strangely in his willingness to put himself at the disposal of men who care nothing about what they say, but just snatch at every word. And these men, as I was just saying, are among the most influential people of the present day. But the fact is, Crito, that both the activity itself and the men who engage in it are worthless and ridiculous. Now as far as I am concerned, Socrates, the man is wrong to criticize the activity and so is anyone else who does so. But to be willing to argue with such people in front of a large crowd does seem to me worthy of reproach.

Socrates:: Crito, men like these are very strange. Still, I don't yet know what to say in return. What sort of man was this who came up and attacked philosophy? Was he one of those clever persons who contend in the law courts, an orator? Or was he one of those who equip such men for battle, a writer of the speeches which the orators use?

Crito:: He was certainly not an orator, no indeed. Nor do I think he has ever appeared in court. But they say he understands the business—very much so—and that he is a clever man and can compose clever speeches.

Socrates:: Now I understand—it was about this sort of person that I was just going to speak myself. These are the persons, Crito, whom Prodicus describes as occupying the no-man's-land between the philosopher and the statesman. They think that they are the wisest of men, and that they not only are but also seem to be so in the eyes of a great many, so that no one else keeps them from enjoying universal esteem except the followers of philosophy. Therefore, they think that if they place these persons in the position of appearing to be worth nothing, then victory in the contest for the reputation of wisdom will be indisputably and immediately theirs, and in the eyes of all. They think they really are the wisest, and whenever they are cut short in private conversation, they attribute this to Euthydemus and his crew. They regard themselves as very wise, and reasonably so, since they think they are not only pretty well up in philosophy but also in politics. Yes, their conceit of wisdom is quite natural because they think they have as much of each as they need; and, keeping clear of both risk and conflict, they reap the fruits of wisdom.

Crito:: And so, Socrates, do you think there is anything in what they say? For surely it can't be denied that their argument has a certain plausibility.

Socrates:: Plausibility is just what it does have, Crito, rather than truth. It is no easy matter to persuade them that a man or anything else which is between two things and partakes of both is worse than one and better than the other in the case where one of the things is good and the other evil; and that in the case where it partakes of two distinct goods, it is worse than either of them with respect to the end for which each of the two (of which it is composed) is useful. It is only in the case where the thing in the middle partakes of two distinct evils that it is better than either of those of which it has a share. Now if philosophy is a good, and so is the activity of a statesman (and each has a different end), and those partaking of both are in between, then these men are talking nonsense, since they are inferior to both. If one is good and the other bad, then they are better than the practitioners of the latter and worse than those of the former; while if both are bad, there is some truth in what they say, but otherwise none at all. I don't suppose they would agree that both [philosophy and politics] are bad, nor that one is bad and the other good. The fact of the matter is that, while partaking of both, they are inferior to both with respect to the object for which either politics or philosophy is of value; and that whereas they are actually in the third place, they want to be regarded as being in the first. However, we ought to forgive them their ambition and not feel angry, although we still ought to see these men for what they are. After all, we ought to admire every man who says anything sensible, and who labors bravely in its pursuit.

Crito:: All the same, Socrates, as I keep telling you, I am in doubt about what I ought to do with my sons. The younger one is still quite small, but Critobulus is at an age when he needs someone who will do him good. Now whenever I am in your company your presence has the effect of leading me to think it madness to have taken such pains about my children in various other ways, such as marrying to make sure that they would be of noble birth on the mother's side, and making money so that they would be as well off as possible, and then to give no thought to their education. But on the other hand, whenever I take a look at any of those persons who set up to educate men, I am amazed; and every last one of them strikes me as utterly grotesque, to speak frankly between ourselves. So the result is that I cannot see how I am to persuade the boy to take up philosophy.

Socrates:: My dear Crito, don’t you realize that in every pursuit most of the practitioners are paltry and of no account whereas the serious men are few and beyond price? For instance, doesn’t gymnastics strike you as a fine thing? And money making and rhetoric and the art of the general?

Crito:: Yes, of course they do.

Socrates:: Well then, in each of these cases don’t you notice that the majority give a laughable performance of their respective tasks?

Crito:: Yes indeed—you are speaking the exact truth.

Socrates:: And just because this is so, do you intend to run away from all these pursuits and entrust your son to none of them?

Crito:: No, this would not be reasonable, Socrates.

Socrates:: Then don’t do what you ought not to, Crito, but pay no attention to the practitioners of philosophy, whether good or bad. Rather give serious consideration to the thing itself: if it seems to you negligible, then turn everyone from it, not just your sons. But if it seems to you to be what I think it is, then take heart, pursue it, practice it, both you and yours, as the proverb says.

# The Euthydemus.

Translated by Thomas Taylor.

*THE PERSONS OF THE DIALOGUE.*

CRITO, DIONYSODORUS,
SOCRATES, CLINIAS,
[EUTHYDEMUS, CTESIPPUS. ]

Crito:: With whom, Socrates, did you yesterday converse in the Lyceum? For you were surrounded with so great a crowd, that though I approached, desirous to hear, yet I could not hear any thing clearly. I raised myself indeed on my feet that I might see more distinctly, and it appeared to me that it was a certain stranger with whom you were conversing. Who was this stranger?

Socrates:: You must ask, Crito, which of them it was; for not one only, but two were present.

Crito:: He, of whom I speak, sat the third from your right hand; but in the middle of you was a lad, the son of Axiochus, who appeared to me, Socrates, to have made a great proficiency in learning, and who does not much differ in age from our Critobulus; though he indeed is very slender, but this lad looks older than he is, and is of a fair and engaging aspect.

Socrates:: It is Euthydemus, Socrates, of whom you inquire; but he who sat with me, on my left hand, was his brother Dionysodorus, who also partook of the discourse.

Crito:: I know neither of them, Socrates.

Socrates:: They are recent sophists, as it appears.

Crito:: Whence do they come; and what is the wisdom which they profess?

Socrates:: They are, I think, natives of Chius, but they migrated to the Thurians, and flying from thence, dwelt for many years about these places. But in answer to your inquiry respecting their wisdom, they are indeed very wise, Crito; but I have been hitherto ignorant that they were pancratiasts; for they are skilled in every kind of contest, not after the manner of those brother pancratiasts of Acarnania; since they are only able to contend with the body; but these, in the first place, are most powerful in body, and excel in that contest which consists in vanquishing all men. For they are very skilful in contending with arms, and they know how to impart this skill to another who gives them a reward for it. In the next place, they are most powerful in judicial contests, and are able both to contend themselves, and instruct others, to deliver and compose forensic orations, at first, therefore, they were only skilled in these things, but now they have carried the pancratiastic art to its utmost perfection: for they are now so skilled in that kind of contest, which it remained for them to acquire; that no one is able to resist them; so skilful are they become in verbal contention, and in always confuting whatever is said, whether it be true or false. I therefore, Crito, intend to deliver myself to these men: for they say that, in a short time, they can render another person skilled in the same things.

Crito:: But are you not afraid, Socrates, that you are too old for this purpose?.

Socrates:: By no means, Crito, as I have a sufficient argument and remedy against fear: for these very men, as I may say, who are now old, have entered on the study of this wisdom, which I desire, viz. the art of contending. For last year, or the year before last, they were not in the least skilled in this art. But I am only afraid of one thing, lest I should be a disgrace to these strangers, in the same manner as I am to Connus the harper, the son of Metrobius, who even now teaches me to play on the harp.

The boys, therefore, who are my fellow disciples, on seeing me, laugh, and call Connus the preceptor of old men. Lest therefore some one should reproach these strangers with the same thing, and they dreading this should be unwilling to receive me, I have, Crito, persuaded other elderly men to attend me thither as my fellow disciples, and here also I am persuading others to accompany me. Do you also join us. Perhaps too, as an allurement, we may bring your sons to them: for, in consequence of desiring to have them as their pupils, I know that they will also instruct us.

Crito:: Nothing hinders, Socrates, if you are so disposed. But, in the first place, tell me what this wisdom of these men is, that I may also know what it is which we shall learn.

Socrates:: You will be disappointed, if you think that I am not able to tell you as if I did not attend to them. For I paid great attention, and very well remember what they said: and I will endeavor to relate the whole to you from the beginning. For, by a certain divine allotment, I had seated myself where you saw me, alone, in the Apodyterium: and I then intended to have risen; but as I was about to rise, the dæmon gave me the accustomed signal. I again therefore sat down, and soon after Euthydemus and Dionysodorus entered, and, together with these, many others, who appeared to me to be their disciples; and having entered, they walked in the covered porch of the Gymnasium. But they had not yet walked twice or thrice round this place, when Clinias entered, who you say has made a great proficiency, and in so saying you speak the truth. Behind him there were many lovers and, others, and besides these Ctesippus, a Pæanean youth, very beautiful and naturally very worthy, but wanton in consequence of his youth. Clinias, therefore, as soon as he entered, seeing me sitting alone, came towards me, and sat down on my right hand, as you say. Dionysodorus and Euthydemus perceiving him, at first stopped and conversed with each other, occasionally looking at us: for I beheld them very attentively. Afterwards approaching nearer, they sat down, Euthydemus indeed by the lad, but Dionysodorus by me, on my left hand. The rest seated themselves just as it happened. These therefore I saluted, because I had not seen them for some time. After this, I said to Clinias, These men, Euthydemus and Dionysodorus, O Clinias, are not wise in small, but in great things. For they are skilled in every thing pertaining to war, in all that a good general ought to know, and in the arrangement and management of an army. They likewise know how to render a man able to defend himself in courts of justice, when he is injured by any one. For thus speaking however they despised me, and both of them laughed, looking at each other. And Euthydemus indeed said, We no longer engage in these matters seriously, Socrates, but incidentally. And I being surprised said, Your pursuit must indeed be beautiful, if such great affairs are with you incidental. And, by the gods, inform me, what this beautiful study is.

Euthydemus:: We are of opinion, Socrates, that we are able to teach virtue in the best manner, and with the greatest celerity of all men.

Socrates:: O Jupiter! What a mighty thing do you announce. Whence was this gain derived? I indeed had hitherto conceived respecting you, as I just now said, that you were very skilful in military contests; and this I had asserted to others. For when you first came hither, I remember that you announced this. But now, if in reality you possess this science, be propitious. For indeed I invoke you, as if you were gods, entreating you to pardon what I have before said. But see, Euthydemus and Dionysodorus, if you have spoken the truth: For it is by no means wonderful if the magnitude of the promise should occasion disbelief.

Euthydemus:: Be assured, Socrates, that it is so.

Socrates:: I therefore consider you as much more blessed through this possession, than the great king through his dominion. Thus much however inform me, whether you intend to exhibit this wisdom, or how have you determined to act.

Euthydemus:: We came hither, Socrates, for this very purpose, to demonstrate and to teach, if any one is willing to learn.

Socrates:: Pointing out to him the lovers of Clinias, by whom we were then surrounded:

But that all men who do not possess wisdom are willing to learn, I readily admit: for, in the first place, I myself am willing, and, in the next place, Clinias here; and besides these Ctesippus, and all the rest that you see.

Ctesippus at that time happened to be sitting at a considerable distance from Clinias. And as it appeared to me, Euthydemus, while he was discoursing with me, prevented, by the inclination of his body, Ctesippus from seeing Clinias, who was seated in the middle of us, Ctesippus therefore wishing to see his familiars, and at the same time being anxious to hear what was said, was the first that rose, and stood opposite to me. Afterwards the rest seeing him, stood round us, viz. the lovers of Clinias, and the companions of Euthydemus and Dionysodorus. I therefore introducing these to Euthydemus, informed him that they were all ready to learn. And Ctesippus indeed, and the rest, very readily assented; and all of them in common exhorted him to exhibit the power of his wisdom. I therefore said;

O Euthydemus and Dionysodorus, these persons must by all means be gratified, and you must exhibit your wisdom to them for my sake. And it is evident indeed, that to demonstrate most things pertaining to this subject: will be no small labor; but inform me whether you are able to make him alone a good man, who is already persuaded that he ought to be instructed by you, or him also, who is not yet persuaded in consequence of not believing that virtue is a thing to be taught, or that you are the teachers of it: for, it is the business of the same art, to persuade a man thus affected, that virtue may be taught, and that you are capable of teaching it in the best manner. Or is it not?

Dionysodorus:: It is the business, Socrates, of the same art.

Socrates:: You therefore, O Dionysodorus, can in the best manner, of all the men that now exist, exhort to philosophy and the study of virtue. Is it not so?

Dionysodorus:: We think we can, Socrates.

Socrates:: Of other things, therefore, you will afterwards give us the demonstration, but of this now: and you will persuade this youth that he ought to philosophize, and study virtue; and in so doing you will oblige me, and all that are present: For it so happens that both I, and all these, are desirous that this lad may become the best of men. He is the son of Axiochus, who descended from the ancient Alcibiades, and the cousin of the now-existing Alcibiades; and his name is Clinias. But he is young, and we are fearful, as it is likely we should be concerning one of his age, lest some one previous to our endeavors should turn his dianoëtic part to another study, and thus corrupt it. You therefore are very opportunely come: and if it is the same thing to you, make trial of the lad, and discourse with him before us.

When I had thus nearly said these things, Euthydemus boldly, and at the same time confidently, replied.

Euthydemus:: It makes no difference, Socrates, if the lad is but willing to answer.

Socrates:: But indeed, he is accustomed to do this. For these frequently meeting together ask many questions, and discourse much with each other; so that it is likely that he will answer with confidence.

But how, O Crito, shall I disclose to you, in a proper manner, what follows? For it is no trifling labor to narrate such immense wisdom. So that I, after the manner of the poets, in beginning this narration, find it necessary to invoke the Muses and Mnernosyne. Euthydemus, therefore, as I think, began after this manner.

Euthydemus:: Whether, O Clinias, are those men that learn, wise or unwise?

Socrates:: And the lad through the magnitude of the question blushed, and being dubious, looked at me. But I, perceiving his perturbation said;

Be confident, Clinias, and boldly answer what appears to you to be the truth: for perhaps the greatest advantage will thence ensue.

Upon this Dionysodorus whispering in my ear, and smiling;

Dionysodorus:: Indeed, Socrates, I predict that in whatever manner the lad may answer he will be confuted.

Socrates:: However, while he was thus speaking, Clinias happened to answer, so that it was not possible for me to admonish the lad any further. But he answered, that those that learnt were wise men. Euthydemus, therefore, said;

Euthydemus:: Do you admit that there are certain teachers, or not?

Socrates:: He admitted that there are.

Euthydemus:: Are not therefore preceptors the preceptors of those that learn? As, for instance, a harper and a grammarian, were the preceptors of you and other boys, but you were their disciples.

Socrates:: He assented to this.

When you learned, therefore, were you not ignorant of these things which you learned?

Clinias:: Yes.

Euthydemus:: Were you, therefore, wise, when you were ignorant of these things?

Clinias:: By no means.

Euthydemus:: If, therefore, you were not wise, were you not ignorant?

Clinias:: Entirely so.

Euthydemus:: You therefore, when learning things of which you had no knowledge, learned them being ignorant?

Socrates:: The lad assented to this.

Euthydemus:: The ignorant therefore learn, O Clinias, and not the wise, as you thought.

Socrates:: On his speaking in this manner, just like a choir, on a signal given by the master, the followers of Dionysodorus and Euthydemus loudly applauded what was said and laughed. And before the lad could well take breath, Dionysodorus said to, him;

Dionysodorus:: But what, Clinias, when the grammarian recites, whether are the boys who learn what he recites, wise, or unwise?

Clinias:: They are wise.

Dionysodorus:: The wise therefore learn, and not the ignorant; and consequently you did not rightly just now answer Euthydemus.

Socrates:: But on this, the lovers of these men more loudly laughed and applauded, admiring the wisdom of Dionysodorus and Euthydemus; but the rest of us being astonished were silent. Euthydemus therefore, perceiving our astonishment, that we might yet still more admire him, did not dismiss, the lad, but further interrogated him; and, after the manner of skilful dancers, turned two-fold inquiries about the same thing. For, whether do those who learn, learn the things which they know, or things which they do not know?

And again Dionysodorus said to me whispering;

Dionysodorus:: This also, Socrates, is just such another question as the former.

Socrates:: By Jupiter, the former question appeared to me to be beautiful.

Dionysodorus:: We always ask, Socrates, such like inevitable questions.

Socrates:: You appear therefore to me, to possess a great reputation among your disciples. In the mean time Clinias answered Euthydemus, that those who learn, learn that of which they are ignorant. And Euthydemus interrogated him as before.

Euthydemus:: Do you not, know your letters?

Clinias:: I do.

Euthydemus:: Do you not, therefore, know all of them?

Socrates:: He acknowledged that he did.

Euthydemus:: When therefore any one recites, does he not recite letters?

Socrates:: He confessed it.

Euthydemus:: Hence, he recites things which you know, since you know all the letters.

Socrates:: This also he acknowledged.

Euthydemus:: What then? Do you not learn that which some one recites?

Clinias:: Yes.

Euthydemus:: But do you learn, not knowing your letters?

Clinias:: I do not,, but I learn in consequence of knowing them.

Euthydemus:: Do you not therefore learn the things which you know, since you know all the letters?

Socrates:: He acknowledged that he did.

Euthydemus:: Hence, you have not answered rightly.

Socrates:: Euthydemus had scarcely thus spoken, when Dionysodorus, taking up the discourse as if it had been a ball, again aimed at the lad as a mark, and said;

Dionysodorus:: Euthydemus deceives you, O Clinias. For tell me, is not to learn, to receive the science of that which any one learns?

Socrates:: Clinias assented.

Dionysodorus:: But,, is to know scientifically any thing else than to possess science when thus knowing?

Socrates:: He granted it was nothing else.

Dionysodorus:: Not to know scientifically, therefore, is not yet to possess science.

Socrates:: He assented to this.

Dionysodorus:: Whether, therefore, are those that receive any thing, those who now possess it, or those who do not possess it?

Clinias:: Those who do not possess it.

Dionysodorus:: Have you not then confessed that those who have not scientific knowledge, are among the number of those who do not possess?

Socrates:: He acknowledged that he had.

Dionysodorus:: Those that learn, therefore, belong to those that receive, and not to those that possess.

Socrates:: He granted it.

Dionysodorus:: Those therefore, Clinias, learn who have not a scientific knowledge, and not those who have.

Socrates:: After this, again wrestling as it were the third time, Euthydemus attacked the youth. But I, seeing the merged condition of the lad, and wishing to give him some respite, lest he should be afraid of us, said, in order to console him, Do not wonder, Clinias, if these discourses appear to you to be unusual; for perhaps you do not perceive the intention of these strangers. They act however in the same manner as those in the mysteries of the Corybantes, when they place him whom they are about to initiate on a throne: for there also there are dancing and sports, as you know, if you have been initiated in these mysteries. And now they do nothing else than dance, and as it were sportively leap round, as if after this they would initiate you. Now therefore think that you have heard the first part of sophistical sacred rites. For, in the first place, as Prodicus says, it is necessary to learn the proper signification of names; which these strangers also have indicated to you, because you have not perceived that men employ the verb to learn in a thing of this kind, when any one, at first possessing no science concerning a certain thing, afterwards receives the science of that thing. They also employ this verb, when any one now possessing science, considers this very thing by this same science, either while the thing is effected or while it is enunciated. Or they rather call this *to apprehend* than to *learn*, though sometimes they call it *to learn*. But of this, as they indicate, you are ignorant, viz. that the same name pertains to men affected in a contrary manner, viz. with respect to him who knows, and him who is ignorant. Similar to this is that which took place in the second question, in which they asked you, whether men learn things which they know, or things of which they are ignorant. These indeed are the sports of disciplines: on which account I say that these men play with you. But I use the word play on this account, because, though some one should learn many, or all such particulars as these, yet he would not be in any respect wiser with respect to the manner in which things subsist. However, he may sport with men, by supplanting and subverting what they assert, through the difference of names; just as they who draw away the seats from those that are going to sit down rejoice and laugh when they see him whom they have overturned supine. Consider therefore what has happened to you from these men as sport; but what follows will be exhibited to you by them as serious concerns: and I will show them the way that they may fulfill their promise to me. For they promise to exhibit their exhortatory wisdom: but now, as it appears to me, they have thought it was requisite first to sport with you.

Thus far therefore, O Euthydemus and Dionysodorus, you have sported and perhaps sufficiently: but in the next place show, exhorting the lad, in what manner it is requisite to pay attention to wisdom and virtue. First of all, however, I will indicate to you my conceptions on this affair, and what I desire to hear concerning it. If, therefore, I shall appear to you to do this, in a foolish and ridiculous manner, do not deride me: for, through a desire of hearing your wisdom, I will venture for a time to speak before you. Endure therefore to hear me, both you and your disciples, without laughing: but do you, O son of Axiochus, answer me.

Do we not all then, wish to do well? Or is this question, of which we were just now afraid, one among those that are ridiculous? For indeed, it is stupid to ask questions of this kind. For who is there that does not wish to do well?

Clinias:: No one.

Socrates:: Be it so. But in the next place, since we wish to do well, in what manner shall we be able to accomplish this? Shall we say, by having many good things? Or is this answer still more stupid than the former? For it is evident that this also must be the case.

He assented.

But come, what are the things which are good to us? Or does it appear to be a thing neither difficult, nor the province of a venerable man, to discover this? For every one will tell us that it is good to be rich. Will they not?

Clinias:: Certainly.

Socrates:: And is it not also good to be in health, to be beautiful, and to be sufficiently furnished with other things pertaining to the body:

So it appeared to him.

But nobility also, power, and honors, in one's own city, are also good.

He granted that they were.

What then, yet remains for us among things good? What is it to be temperate, just, and brave? Whether, by Jupiter, Clinias, do you think that, if we consider these things as good, we shall consider them properly? Or that this will be the case if we consider them not as good? For perhaps this may be disputed by some one. But how does it appear to you?

Clinias:: That these things are good.

Socrates:: Be it so; but in what choir shall we place wisdom? Among things good? Or how do you say?

Clinias:: Among things good.

Socrates:: But consider, lest among things good, we should omit any one which is worthy to be related.

Clinias:: But, it appears to me that we have not omitted any one.

Socrates:: However, I then recollecting, said;

But, by Jupiter, we appear to have omitted the greatest of goods.

Clinias:: What is that?

Socrates:: Felicity, O Clinias, which all men, and even those that are perfectly depraved, assert to be the greatest of goods.

Clinias:: What you say is true.

Socrates:: And I again, correcting myself, said; We have nearly, O son of Axiochus, rendered ourselves ridiculous to these strangers.

Clinias:: Why so?

Socrates:: Because, having placed felicity in the things which we before enumerated, we now again speak concerning it.

Clinias:: But why is this improper?

Socrates:: Because it is certainly ridiculous again to adduce that which was formerly proposed, and to say the same things twice.

Clinias:: How do you mean?

Socrates:: Wisdom, is certainly felicity: this even a boy knows.

He indeed wondered, so young and simple was he. And I perceiving his admiration, said;

Do you not know, Clinias, that in performing well on the pipe, pipers are most happy?

He granted that they were.

Are not therefore, grammarians also most happy in the writing and reading of letters?

Clinias:: Entirely so.

Socrates:: But what? In dangers of the sea, do you think that any in short are more happy than wise pilots?

Clinias:: Certainly not.

Socrates:: Again: In battle, with which will you more pleasantly partake of danger and fortune? with a wise, or with an ignorant general?

Clinias:: With a wise general.

Socrates:: And when you are dangerously ill, with which will you be more pleasantly circumstanced? with a wise, or with an ignorant physician?

Clinias:: With a wise physician.

Socrates:: Is it not therefore, because you think that you will act more prosperously, by acting with one wise, than with one unwise?

He granted it.

Wisdom, therefore, every where, renders men happy. For certainly no one can ever err through wisdom; but it is necessary that through this he should act rightly, and obtain his end: for otherwise it would not be wisdom.

At length, but I do not know how, we summarily agreed that this was the case; viz. that when wisdom is present, nothing of felicity is wanting. After we had agreed in this particular, I again asked him how we should be affected with relation to the things which we had formerly granted.

For, we granted that if many good things were present with us we should be happy, and act well.

He assented to this.

Whether, therefore, should we be happy through present good, if it were of no advantage to us, or if it benefited us?

Clinias:: If it benefited us.

Socrates:: Would then any thing benefit us, if we alone possessed it, but did not use it? As, for instance, if we possessed much food, but did not eat it, or drink, but did not drink it, should we in any respect be benefited by this?

Clinias:: Certainly not.

Socrates:: But what? If all artificers had every thing requisite prepared for them, each for his own work, but did not use them when thus procured, would they act well through the possession of these, viz. merely because they possessed every thing which an artificer ought to possess? Thus, for instance, if a carpenter had all kinds of instruments and wood prepared for him sufficient for his purpose, but yet should fashion nothing, would he derive any advantage from this possession?

Clinias:: By no means.

Socrates:: But what? If any one should possess riches, and all such things as we now denominate good, but should not use them, would he be happy through the possession of these goods?

Dionysodorus:: He certainly would not, Socrates.

Socrates:: It is necessary therefore, as it seems, that he who intends to be happy should not only possess good things of this kind, but should likewise use them.

Clinias:: What you say is true.

Socrates:: Is not therefore, O Clinias, the possession and the use of good, sufficient to make any one happy?

Clinias:: It appears so to me.

Socrates:: Whether, if any one uses good things properly, or if he does not?

Clinias:: If he uses them properly.

Socrates:: You speak well. For I think that the improper use of a thing is worse than the neglect of it. For the former is vicious, but the latter is neither good nor bad. Or do we not say so?

He assented.

What then? In the operation and use pertaining to wood, is there any thing else which produces a right use than the tectonic science?

Clinias:: Certainly not.

Socrates:: Perhaps also, in producing proper apparatus, it is science which produces with rectitude.

He granted that it was.

Whether therefore, with respect to the use of those goods which we first mentioned, viz. riches, health, and beauty, is it science, leading and properly directing the practice, which enables us to use every thing of this kind properly, or is it any thing else?

Clinias:: It is science.

Socrates:: Science, therefore, imparts to men in every possession and action, not only felicity, as it seems, but likewise success.

He confessed that it was so.

Is there then, by Jupiter, any advantage to be derived from other possessions, without prudence and wisdom? Or will a man be benefited who possesses many things, and performs many actions, but without intellect? Or rather will not this be the case, if he possesses and performs but a few things, but is endued with intellect? However, consider thus. Will he not by doing less, err less? And erring less, will he not act less improperly? And acting less improperly, will he not be less miserable?

Clinias:: Entirely so.

Socrates:: Whether, therefore, will he rather perform fewer things being poor, than being rich?

Clinias:: Being poor.

Socrates:: But whether if he is weak or strong?

Clinias:: If he is weak.

Socrates:: Whether also, if he is honored, or dishonored?

Clinias:: If dishonored.

Socrates:: But whether, if he is brave and temperate, will he do less, or if he is timid?

Clinias:: If he is timid.

Socrates:: Will not this then also be the case, if he is indolent rather than if he is active?

He granted that it would.

And if he is slow rather than if he is quick? And if his sight and hearing are blunt rather than if they are sharp? In every thing of this kind we agreed with each other.

But in short, O Clinias, it appears that, with respect to all those things which we first asserted to be good, the discourse about them is not that they are naturally essentially good, but, as it seems, that they subsist in the following manner; viz. that if they are under the guidance of ignorance, they are greater evils than their contraries, by how much the more capable they are of becoming subservient to that evil leader; but that if they are led by prudence and wisdom, they are greater goods; but that neither of them, when they are considered by themselves, is of any worth.

Clinias:: It appears, to be as you say.

Socrates:: What then happens to us, from what has been said? Is it any thing else than this, that no one of other things is either good or evil? But these being two, that wisdom is good, and ignorance evil?

He assented.

Further still then, let us consider what remains. Since we all of us strive to be happy, and we appear to become such from using things, and from using them rightly, but science affords rectitude and success, it is requisite, as it seems, that every man should by all possible means endeavor to become most wise. Is it not so?

Clinias:: It is.

Socrates:: And he should think that he ought to receive this from his father, his tutors, his friends, and from others who profess themselves to be his lovers, much more than wealth, and should request and suppliantly implore strangers and his fellow citizens to impart wisdom. Nor is it in any respect base or reprehensible, O Clinias, for the sake of this, to be obsequious and subservient both to a lover and to every man, willingly obeying him in worthy services, through an ardent desire of becoming wise. Or does it not appear so to you?

Clinias:: You entirely, appear to me to speak well.

Socrates:: If, Clinias, wisdom can but be taught, and does not casually subsist among men. For this is yet to be considered by us, and has not yet been assented to by me and you.

Clinias:: But to me, Socrates, it appears that it can be taught.

Socrates:: And I, being delighted, said;

You speak beautifully, O best of men, and you have done well in liberating me from a long speculation about this very thing, whether wisdom can, or cannot be taught.

Now, therefore, since it appears to you that it can be taught, and that it is the only thing which can make a man happy and prosperous, do you say any thing else than that it is necessary to philosophize? And is it your intention to do this?

Clinias:: Entirely so, Socrates, as much as possible.

Socrates:: And I, rejoicing to hear these things, said;

My example, O Dionysodorus and Euthydemus, of exhortatory discourses, such as I desired it to be, is of this kind; vulgar perhaps and scarcely unfolded by a multitude of words: but let whichever of you is willing, considering this very thing according to art, render it apparent to us. But if you are unwilling to do this, point out to the lad what follows, from that part in which my discourse ended, viz. whether he ought to procure for himself every science, or whether there is one particular science which, when he receives, he will necessarily be happy and a good man; and what that science is. For, as I said in the beginning, it is of great consequence to us that this youth should become wise and good.

I therefore, Crito, said these things; but I paid very great attention to what followed, and considered after what manner they would discourse, and whence they would begin, while they were exhorting the youth to the study of wisdom and virtue. Dionysodorus then, who was the elder of them, first began the conference. And all of us beheld him, as those who were immediately to hear certain very wonderful discourses; which indeed was the case. For the man, O Crito, began a certain admirable discourse, which it is proper you should hear, because it exhorted to virtue.

Dionysodorus:: Tell me, Socrates, and the rest of you who express a desire that this youth should become wise, whether you are jesting when you make this assertion, or truly and seriously desire this?

Socrates:: Then I perceived that they were of opinion that we had, prior to this, been jesting, when we exhorted them to converse with the youth, and that on this account they also jested and had not discoursed seriously with him. Perceiving this therefore to be the case, I further said, that we were serious in a wonderful degree.

Dionysodorus:: See, Socrates, that you do not hereafter deny what you now assert.

Socrates:: I have considered this: for I shall never deny what I have asserted.

Dionysodorus:: What is it then, that you assert? Do you wish that he should become wise?

Socrates:: Entirely so.

Dionysodorus:: But now, whether is Clinias wise or not?

Socrates:: Not yet, according to his own confession: and he does not, speak idly.

Dionysodorus:: But do you, wish that he should become wise, and not be unlearned?

Socrates:: We acknowledged that we did.

Dionysodorus:: Do you not therefore wish him to become that which he is not; and no longer to be that which he now is?

Socrates:: And I, on hearing this, was disturbed. But he, taking advantage of my perturbation;

Dionysodorus:: Since, you wish him to be no longer that which he now is, you wish, as it seems, that he may perish; though those friends and lovers would certainly be but of little worth, who should be desirous above all things that the objects of their love may be destroyed.

Socrates:: Ctesippus on hearing this was indignant, on account of his attachment to the youth, and said;

Ctesippus:: O Thurian stranger, if it were not more rustic than is becoming, I should call you to an account for this assertion, and should ask you why you falsely ascribe to me and the rest a thing of this kind, which I think it is not holy to assert, viz. that I should wish that this youth might perish.

Euthydemus:: But what? O Ctesippus, does it appear to you, that it is possible to speak falsely?

Ctesippus:: By Jupiter, it does, unless I were in sane.

Euthydemus:: But whether will this be the case, when asserting a thing which is the subject of discourse, or when not asserting it.

Ctesippus:: When asserting it.

Euthydemus:: When, therefore, he asserts that thing, is it not true, that he does not speak of any thing else than that which he asserts?

Ctesippus:: For how should he do otherwise?

Euthydemus:: But that is one of the things which exist, of which he speaks, separate from others.

Ctesippus:: Entirely so.

Euthydemus:: Does he not therefore, when he speaks of that thing, speak of that which has a being?

Ctesippus:: Yes.

Euthydemus:: But he who speaks of that which is, and of beings, speaks of things which are true. So that if Dionysodorus speaks of beings, he speaks of things which are true, and according to you utters nothing false.

Ctesippus:: He does so. But he who says these things, does not speak, O Euthydemus, of beings.

Euthydemus:: Are non-beings any thing else than things which are not?

Ctesippus:: They are not.

Euthydemus:: By no means, therefore, are non-beings, beings.

Ctesippus:: By no means.

Euthydemus:: Can therefore any one perform any action about these non-beings, so as to make things which in no respect are?

Ctesippus:: It does not appear to me, that he can.

Euthydemus:: What then? Do rhetoricians, when they speak to the people, perform nothing?

Ctesippus:: They do something.

Euthydemus:: If, therefore, they do something, do they not also make something? To speak then is to do and to make.

Socrates:: He assented.

Euthydemus:: No one therefore, speaks of nonentities: for if he did, he would make something. But you acknowledge that no one can make nonentities. So that, according to you, no one can assert things which are false; but if Dionysodorus speaks, he speaks things which are true, and he speaks of beings.

Ctesippus:: By Jupiter, it is so, Euthydemus: yet he speaks of beings after a certain manner, though not as they subsist.

Dionysodorus:: How do you say, Ctesippus? Are there some who speak of things as they are?

Ctesippus:: There are indeed; and these are men worthy and good, and who assert things which are true.

Dionysodorus:: What then? Are not things good, well, and things evil, ill-conditioned?

Socrates:: He granted that they were.

Dionysodorus:: And do you not acknowledge that the worthy and the good speak of things as they are?

Ctesippus:: I do.

Dionysodorus:: The good therefore, O Ctesippus, speak of evil things evilly, if they speak of them as they are.

Ctesippus:: Truly, by Jupiter, they do very much so of bad men, among which, if you are persuaded by me, you will be careful that you may not be numbered, lest the good should speak evilly of you; because you well know that the good speak evilly of the bad.

Euthydemus:: Do they not also, speak magnificently of great men, and warmly of those that are fervent?

Ctesippus:: Very much so indeed. Of cold men, therefore, they speak coldly, and assert that they speak frigidly.

Dionysodorus:: You revile, O Ctesippus, you revile.

Ctesippus:: Not I, by Jupiter, Dionysodorus, for I love you; but I admonish you as my companion, and I endeavor to persuade you, that you should never in my presence make such a rustic assertion, as that I wish the destruction of those whom I very much esteem.

Socrates:: I therefore, as they appeared to me to conduct themselves in a rustic manner towards each other, jested with Ctesippus, and said, it appears to me, Ctesippus, that we ought to receive what is asserted by the strangers, if we wish to impart it to others, and not contend about words. For if they know how to destroy men in such a manner as to make them, from being depraved and unwise, worthy and wise, whether they have discovered this themselves, or have learnt from some other, a corruption and destruction of this kind, so that having destroyed him who is depraved, they afterwards render him worthy; if they know how to effect this (but it is evident that they do possess this knowledge; for they affirm that the art of making men worthy that were depraved, is an art which they have recently invented;) we must therefore permit them to destroy the lad, and to make him and all the rest of us wise. But if you young men are afraid of me, make trial of me, as if, according to the proverb, in Car, since, though an elderly man, I am prepared for danger: and I deliver myself to this Dionysodorus, as to Medea the Colchian. Let him destroy me, and, if he will, boil me, or do whatever else he pleases with me, if he does but render me worthy.

Ctesippus:: I also, Socrates, am prepared to deliver myself to these strangers, though they should be willing to excoriate more than they do at present, provided my skin does not end in a bladder like that of Marsyas, but in virtue. Indeed Dionysodorus, here, thinks that I am angry with him: I am not however angry, but I contradict those things which, in my opinion, he has not well advanced against me. But do not, O Dionysodorus, call contradiction reviling; for reviling is a different thing.

Dionysodorus:: Do not you, Ctesippus, discourse as if you contradicted?

Ctesippus:: Entirely, and very much so. Or do not you think, that I speak as if I contradicted?

Dionysodorus:: You cannot therefore at any time demonstrate that, if you have heard no one contradicting another.

Ctesippus:: True, but let us now hear whether I can demonstrate to you that Ctesippus contradicts Dionysodorus. Or can you bear a discourse of this kind?

Dionysodorus:: By all means.

Ctesippus:: What then? are there definitions of every thing which exists?

Dionysodorus:: Entirely so.

Ctesippus:: Whether, therefore, is there a definition of every thing, as it is, or as it is not?

Dionysodorus:: As it is.

Ctesippus:: For if you remember, we have just now shown that no one speaks of a thing as it is not.

Dionysodorus:: For no one appears to speak of that which is not.

Ctesippus:: But why this? Shall you and I, on this account, contradict the less?

Dionysodorus:: Whether therefore,, shall we contradict, if we both of us know the definition of the same thing, or shall we indeed thus say the same things?

Socrates:: He granted that we should.

Dionysodorus:: But, when neither of us gives the definition of that thing, shall we not then contradict? Or, indeed, will it not follow, that thus no mention whatever of that thing will be made by either of us?

Socrates:: He granted this also.

Dionysodorus:: When therefore, I give the definition of that thing, but you of something else, do we then contradict each other? Or do I then speak of that thing, but you do not speak of it in any respect whatever? But how can he who does not speak of a thing contradict him who does?

Socrates:: Ctesippus indeed was then silent; but I, wondering at the discourse, said;

Socrates:: How do you say, Dionysodorus? For, though I have heard this assertion often, and from many, yet I always wondered at it. For it was much used by Protagoras and his followers, and by others more ancient than these; but to me he always appears to be a wonderful person, who both subverts others and himself. I think, however, that I shall especially learn the truth of this assertion from you. Is the assertion then any other than this, that it is not possible to assert things which are false? For this is the force of the argument. Is it not? And that he who speaks, asserts things which are true, or otherwise does not speak:

He granted that it was so.

Whether, therefore, is it not possible to assert things which are false, but to form an opinion of them is possible?

Dionysodorus:: It is not even possible, to form an opinion of them.

Socrates:: Neither therefore, is there any such thing as false opinion.

Dionysodorus:: There is not.

Socrates:: Neither therefore is there ignorance, nor are there unlearned men. Or would not this be ignorance, if there were any such thing, viz. to speak falsely of things?

Dionysodorus:: Entirely so.

Socrates:: But, this is not possible.

Dionysodorus:: It is not.

Socrates:: Do you make this assertion, O Dionysodorus, for the sake of discourse, that you may speak that which is wonderful; or does it truly appear to you that no man is unlearned?

Dionysodorus:: Confute, the assertion.

Socrates:: Or, according to your assertion, can confutation take place, while no one speaks falsely?

Euthydemus:: It cannot.

Dionysodorus:: Neither therefore do I, order you to confute. For how can any one order that to be done which is not?

Socrates:: O Euthydemus, I do not well understand these wise and excellent assertions, but I hastily as it were conceive them. Perhaps, therefore, I shall ask something which will be troublesome; but you will pardon me. See then. For if it is neither possible to speak falsely, nor to entertain false opinions, nor to be unlearned, neither is it possible for any one to err when he does any thing. For he who acts cannot err in that which he does. Do you not say so?

Euthydemus:: Entirely so.

Socrates:: This, is the troublesome question which I just now mentioned. For if we do not err, neither acting nor speaking, nor thinking, if this be the case, of what, by Jupiter, do you come as the teachers? Or did you not just now say, that you could teach him virtue who was willing to learn it, the best of all men?

Dionysodorus:: Are you so dull, Socrates, taking up the discourse, as that you now remember what we first said, and would even now remember any thing which I may have said last year, yet do not know how to use what has been said at present?

Socrates:: The things which have been now asserted are difficult: and this very properly; for they have been asserted by wise men. And likewise this last thing which you said cannot be used without extreme difficulty: for what will you say, Dionysodorus, is the meaning of this assertion, There is something which I do not know how to use? Does it not mean this, that I do not know how to confute it? Or tell me, what other conception you form of these words, I do not know how to use these assertions?

Dionysodorus:: Do you affirm, that they mean any thing else than this, that it is very difficult to use them? Answer me.

Socrates:: Before you have answered, Dionysodorus?

Dionysodorus:: Will you not answer.

Socrates:: Is it just that I should?

Dionysodorus:: It is certainly just.

Socrates:: After what manner? Is it because you being a person very wise, have now entered into a discussion with us respecting discourse, and because you know when it is proper to answer, and when not; and now will not give any answer, because you know that it is not requisite?

Dionysodorus:: You babble, neglecting when it is proper to answer, and when not. But, good man, be obedient and answer; since you acknowledge that I am a wise man.

Socrates:: We must obey, and as it seems it is necessary: for you are the ruler. Ask, then.

Dionysodorus:: Whether therefore do those that understand, understand having a soul? or do inanimate natures also understand?

Socrates:: They understand having a soul.

Dionysodorus:: Do you know, therefore, any assertion which has a soul?

Socrates:: Not I, by Jupiter.

Dionysodorus:: Why, then, did you just now ask me what was the meaning of my assertion?

Socrates:: For what other reason, than that I have erred through indolence: or shall I say, that I have not erred, but that I have also said this rightly, when I asserted that my word, understood? Whether will you say that I erred, or not? For if I have not erred, neither do you confute though you are a wise man, nor have you anything to reply to my assertion: but if I have erred, neither thus do you speak rightly, in saying that it is not possible to err. And I say these things, not in opposition to what you have asserted last year. But this discourse, O Dionysodorus and Euthydemus, seems to remain in the same condition, and even now as formerly, having thrown down others, to fall itself; nor has your art discovered a method of preventing this, though it is so wonderful with respect to accuracy of arguments.

Ctesippus:: You certainly speak wonderful things, O Thurian or Chian men, or by whatever other name it may delight you to be called, as you are not in the least concerned whether you are delirious or not.

Socrates:: And I, fearing lest defamation should take place, again appeased Ctesippus, and said, O Ctesippus? and now indeed, O Ctesippus, what I have said to Clinias, I also say to you, that you do not know that the wisdom of these strangers is admirable. They are however, unwilling to exhibit it to us seriously, but imitate Proteus the Egyptian sophist, and deceive us by enchantments. Let us, therefore, imitate Menelaus, and not suffer the men to leave us, till they have unfolded to us what it is in which they are serious: for I think that something pertaining to them very beautiful will appear, when they begin to act seriously; but we request, we exhort, and we beseech them to unfold themselves.

I therefore again appear to myself to be about to relate in what manner I beseech them to unfold themselves to me: for I will endeavor to the best of my ability to discuss what I formerly left unfinished, if I can in a certain respect allure them, and induce them to pity and commiserate me thus strenuously and seriously acting, and to act seriously themselves. But do you, Clinias, enable me to recollect whence we at that time discontinued our discourse: for I think we ended there, whence we acknowledged we should philosophize: did we not?

Clinias:: We did.

Socrates:: But philosophy is the possession of science: is it not so?

Clinias:: It is.

Socrates:: By the possession therefore, of what science shall we rightly possess? is not this indeed obvious, that it must be by the possession of that science which will benefit us?

Clinias:: Entirely so.

Socrates:: Should we therefore be in any respect benefited, if we scientifically knew, while travelling, in what part of the earth much gold is buried?

Clinias:: Perhaps so.

But formerly, this was our decision, that we should gain nothing, even though without labor, and without digging the earth, all the gold that exists should be ours. So that neither if we knew how to make golden stones would this science be of any worth; for if we knew not how to use gold, no advantage would be apparent from the possession of it. Or do you not remember?

Clinias:: I do very well remember it.

Socrates:: Nor, as it seems, will any advantage be derived from any other science, neither from that which is employed in the negotiation of money, nor from the medicinal science, nor from any others which knows how to make any thing, but does not know how to use that which it makes. Is it not so?

He granted that it was.

Nor even, if there were a science by which men could be made immortal, but without knowing how to use immortality, neither from this does it appear that there would be any advantage, if it is proper to argue from what has been previously granted.

To all these particulars we mutually assented.

A certain science, therefore, is requisite for us, O beautiful boy, of such a kind, in which both to make, and to know how to use that which is made, may concur.

Clinias:: It appears to.

Socrates:: It is of much consequence therefore, as it seems, whether we are skilful makers of the lyre, or in possession of a certain science of that kind: for here the art which makes is separated from the art which uses, about the same thing. For the lyre-making and the harp-making arts differ very much from each other. Is it not so?

He granted that it was.

Nor shall we indeed require the pipe-making art: for this is another such-like art.

He granted that it was.

But, by the gods, if we should learn the art of composing orations, is this the art from the possession of which we should be happy?

Clinias:: I do not think it is.

Socrates:: What argument, do you employ in thinking thus?

Clinias:: I see,, certain framers of orations, who do not know how to use the very orations which they themselves have composed: just as the makers of lyres are unskilled in the use of the lyre; but here others are able to use the orations which these have framed, though they are incapable of framing orations themselves. It is evident, therefore, with respect to orations, that the art of making is separate from the art of using them.

Socrates:: You appear to me, to adduce a sufficient argument that the art of composing orations is not that art by the acquisition of which any one will be happy; though I thought that here that science would be apparent which we some time since investigated: for to me those very men who compose orations appear, O Clinias, to be transcendently wise, when I am conversant with them; and this very art of theirs also appears to be something divine and elevated. This indeed is by no means wonderful: For it is a portion of the art of enchantments, to which it is but a little inferior; for the art of enchantments is that art by which vipers, spiders called phalangii, and scorpions, are allured; but this allures and soothes judges, those that frequent assemblies, and other tumultuous affectations. Or are you of a different opinion?

Clinias:: I am not; but it appears to me as you say.

Socrates:: Where then shall we yet further turn ourselves? and to what art?

Clinias:: I do not well know.

Socrates:: But I think, that I have discovered this art.

Clinias:: What is it?

Socrates:: The art of commanding an army, appears to me, more than any other art, to be that which will confer felicity on its possessor.

Clinias:: It does not appear so to me.

Socrates:: Why not?

Clinias:: This is certainly an art of hunting men.

Socrates:: What then?

Clinias:: No part, of the hunting art extends beyond hunting and subjugating; but when they have subjugated that which they have hunted, they are not able to use it. But hunters and fishermen assign this to cocks; while, on the contrary, geometricians, astronomers, and those skilled in the logistic art (for these also are hunters) do not make diagrams, but investigate things themselves. As therefore they do not know how to use these, but are alone skilled in hunting, they deliver their inventions to be used by those who are expert in dialectic; I mean that this is done by such among these as are not entirely stupid.

Socrates:: Be it so, O most beautiful and wise Clinias.

Clinias:: After the same manner, the commanders of armies also, when they have hunted any city or camp, deliver it to the care of politicians; for they know not how to use those things which they have hunted: just, I think, as the hunters of quails deliver them to those by whom quails are nurtured. If, therefore,, we are in want of that art which its possessor, whether he makes or hunts it, will know how to use, and an art of this kind will render us blessed, some other art, must be investigated instead of that of commanding an army.

Crito:: What do you say, Socrates? Did that lad assert things of this kind?

Socrates:: Do you not think he did, Crito?

Crito:: By Jupiter, I do not indeed. For I think if he had said these things, that he would not have required the assistance either of Euthydemus, or any other man, with respect to erudition.

Socrates:: But, by Jupiter, was it Ctesippus then that said these things? for I do not remember.

Crito:: What, Ctesippus?

Socrates:: This, indeed, I well know, that neither Euthydemus nor Dionysodorus said these things. But, O divine Crito, was it not some one of the beings more excellent than man, who being present said these things? For I well know that I heard them.

Crito:: It is so, by Jupiter, Socrates; and it appears to me, and indeed very much so, to have been some one of the more excellent order of beings. But after this, what art have you still investigated? And have you discovered that art for the sake of which you engaged in this investigation?

Socrates:: Whence, blessed man, should we have discovered it? But we were perfectly ridiculous, just like boys that pursue larks; for we continually thought that we should immediately apprehend each of the sciences, but they always fled from our view. Why therefore should I speak to you concerning many sciences? But when we came to the royal art, and considered whether it is that art which imparts and produces felicity, here falling as it were into a labyrinth, when we thought that we had now arrived at the end, we again proceeded in a winding course, as if we appeared to be in the beginning of our inquiry, and were as much distant from the object of our search as when we began the investigation.

Crito:: But how has this happened to you, Socrates?

Socrates:: I will tell you. For the political and the royal art appear to us to be the same.

Crito:: But what then?

Socrates:: The art of commanding an army, and the other arts, appear to impart dominion over those works of which they are the artificers, as alone knowing how to use them. Hence it clearly appeared to us to be the art which we were investigating, and the cause of good conduct in a city, and, in short, according to the Iambic of Æschylus, that it alone is seated in the stern of the city, governing and ruling over all things, and rendering all things useful.

Crito:: Does not this therefore appear to you to be well said respecting this art?

Socrates:: You shall judge, Crito, if you are willing to hear what after these things will happen to us. For again, let us nearly consider as follows. What work will that royal art which rules over all things produce for us? Shall we say none? But we have said to each other that it certainly will produce some work. For did not you assert this, Crito?

Crito:: I did.

Socrates:: What then will you say is the work of it? Just as if I should ask you what work the medicinal art produces in all those things over which it rules? Would you not say it is health?

Crito:: I should.

Socrates:: But what? With respect to your art, agriculture, what does it effect in all those things over which it rules? Would you not say that it affords us food from the earth?

Crito:: I should.

Socrates:: But what does the royal art effect while it governs every thing over which it has dominion? Perhaps you do not clearly perceive this.

Crito:: I do not, by Jupiter, Socrates.

Socrates:: Nor do we, Crito. But thus much indeed you know, that if it is that art which we investigate, it ought to be useful.

Crito:: Entirely so.

Socrates:: Ought it not, therefore, to impart to us a certain good?

Crito:: Necessarily so, Socrates.

Socrates:: But we have acknowledged to each other, I and Clinias, that good is nothing else than a certain science.

Crito:: You did indeed say so.

Socrates:: Do not therefore other works, which may be said to belong to the political art, (but these will be many, such as to render the citizens rich, free, and without sedition,) do not all these appear to be neither evil nor good? But it is necessary that this art should make men wise, and impart wisdom, if it is to be that art which will benefit and render men happy.

Crito:: It is so: and thus you accord with each other conformably to your narration.

Socrates:: Does therefore the royal art make men wise and good?

Crito:: What should hinder, Socrates?

Socrates:: Does it therefore make all men to be so, and to be entirely good? And is it that art which imparts every science, that of the shoe-maker, of the smith, and of all other artificers?

Crito:: I do not think it is, Socrates.

Socrates:: But what science is it? Or to what purpose do we employ it? For it is requisite that it should not be the artificer of any work which is neither good nor evil, and that it should impart no other science than itself. Let us therefore say what it is, or to what purpose we should use it. Are you willing, Crito, we should say it is that by which we make others good?

Crito:: Entirely so.

Socrates:: But in what will these be good, and to what purpose will they be useful? Or shall we also say that they will make others good, and that those others will make others to be so? However, it will no where appear to us in what they are good, because we have rejected the works which are said to belong to the political science. But in reality, according to the proverb, Corinthian Jupiter is present; and as I have said, we are still equally, or more than equally, remote from knowing what that science is which will make us happy.

Crito:: By Jupiter, Socrates, you have arrived as it seems at abundant doubting.

Socrates:: I myself, therefore, Crito, since I was fallen into this doubt, with every possible exertion of voice entreated the strangers, and called upon them as if they had been the Dioscuri to save us, viz. me and the lad from the overwhelming billows of this discourse, to be by all means serious, and seriously to show us what that science is, by the possession of which we may pass through life in a becoming manner.

Crito:: What then? was Euthydemus willing to unfold any thing to you?

Socrates:: How could he do otherwise? And he began, my friend, the discourse very magnificently thus:

Euthydemus:: Whether, Socrates, shall I teach you this science about which you formerly doubted, or evince that you possess it?

Socrates:: O blessed man, are you able to effect this?

Euthydemus:: Entirely so.

Socrates:: Show me, therefore, by Jupiter, that I possess it for this will be much easier than to instruct a man so far advanced in years.

Euthydemus:: Come then, answer me. Is there any thing which you know?

Socrates:: Certainly, there are many things which I know, and these of small importance.

Euthydemus:: It is sufficient. Does it therefore appear to you to be possible, that any thing which exists should not be that thing which it is?

Socrates:: It does not, by Jupiter.

Euthydemus:: Do you not therefore, know something?

Socrates:: I do.

Euthydemus:: Are you not therefore knowing, if you know?

Socrates:: Entirely so, in this very thing which I know;

Euthydemus:: It is of no consequence. Is it not then necessary that you should know all things, in consequence of possessing knowledge?

Socrates:: It is not, by Jupiter, since there are many things which I do not know.

Euthydemus:: Will it not therefore follow, if there is any thing which you do not know, that you are not knowing?

Socrates:: It will follow that I am not knowing in that thing, my friend.

Euthydemus:: Will you then, be less destitute of knowledge? For you just now said, that you were knowing: and thus you will be the same person, and again not the same person, according to the same, and at the same time.

Socrates:: Be it so, Euthydemus: for, according to the proverb, you say all things well. How then do I know that science which we investigate? Since it is impossible for the same thing to be and not be: if knowing one thing, I know all things. For I cannot possess, and at the same time be destitute of knowledge. But if I know all things, I also possess that knowledge. Is this then what you say? And is this that wise thing?

Euthydemus:: You yourself, Socrates, confute yourself.

Socrates:: But what? O Euthydemus, does not the very same thing happen to you? For I, whatever I may suffer with you and this Dionysodorus, the beloved head, shall not be very indignant. Tell me, do you not know some things, and are you not ignorant of others?

Dionysodorus:: By no means, Socrates.

Socrates:: How do you say? Do you therefore know nothing?

Dionysodorus:: Very far from it.

Socrates:: Do you then know all things, since you also know any thing?

Dionysodorus:: All things. And you likewise, if you know one thing, know all things.

Socrates:: O Jupiter! What a wonderful thing you speak of: and a mighty good becomes apparent. But do all other men likewise know all things, or nothing?

Dionysodorus:: They certainly, do not know some things, but are ignorant of others; and are not at the same time scientifically knowing, and deprived of science.

Socrates:: But how is this?

Dionysodorus:: All men,, know all things, if they know one thing.

Socrates:: O, by the gods! Dionysodorus, (For it is now manifest to me that you are serious, though I with difficulty incited you to be so,) do you in reality know all things, such as the carpenter's and the shoe-maker's art?

Dionysodorus:: Entirely so.

Socrates:: And are you also able to sew shoes, in the same manner as shoe-makers?

Dionysodorus:: I am, by Jupiter, and also to mend them.

Socrates:: Do you also know such things as these, viz. the number of the stars and the sands?

Dionysodorus:: Perfectly so. Do you not think, we should confess that we do?

Socrates:: And Ctesippus then taking up the discourse;

Ctesippus:: By Jupiter, O Dionysodorus, exhibit to me such a proof of these things, that I may know that you speak the truth.

Dionysodorus:: What shall I exhibit.

Ctesippus:: Do you know how many teeth Euthydemus has, and does Euthydemus know how many you have?

Dionysodorus:: Is it not sufficient for you, to have heard that we know all things?

Ctesippus:: By no means; but only tell us this one thing more, and show that you speak the truth. And if you tell how many teeth each of you have, and you shall appear to know this on our counting them, we shall then also believe you in other things.

Socrates:: Conceiving, therefore, that they were derided, they were unwilling to comply, but they acknowledged that they knew all things, while they were severally interrogated by Ctesippus. For there was not any thing at length, which Ctesippus did not ask them without any hesitation, and even asked them, if they knew the most indecent things. They however most bravely advanced to the interrogations, confessing that they knew, like wild boars rushing on the blow; so that I also myself, Crito, was at length compelled, through my incredulity, to ask Euthydemus, whether Dionysodorus knew also how to dance?

Euthydemus:: Perfectly so.

Socrates:: However, he certainly does not know how to precipitate himself upon swords, and to be whirled on a wheel, being so much advanced in years as he is. Or is he master of this piece of wisdom also?

Euthydemus:: There is nothing, which he does not know.

Socrates:: But whether, do you now only know all things, or has this always been the case?

Euthydemus:: Always.

Socrates:: And when you were boys, and as soon as you were born, did you know all things?

All things, said both of them together.

And to us, indeed, the thing appeared to be incredible.

Euthydemus:: You do not believe, Socrates.

Socrates:: Except this one thing, that it is likely you are wise men.

Euthydemus:: But, if you are willing to answer me, I will also show you, giving your assent to these wonderful things.

Socrates:: I shall most gladly be confuted in these things. For if it is concealed from me that I am wise, and you demonstrate that I know all things, and that I have always possessed this knowledge, what greater gain than this shall I be able to discover through the whole of life?

Euthydemus:: Answer then.

Socrates:: Ask me as one that will answer.

Euthydemus:: Whether, therefore, Socrates, do you know anything or not?

Socrates:: I do.

Euthydemus:: Do you then know by that thing through which you are knowing, or by any thing else?

Socrates:: By that by which I am knowing: for I think that you speak of the soul. Or do you not speak of this?

Euthydemus:: Are you not ashamed, Socrates, to interrogate when you are interrogated?

Socrates:: Be it so; but what shall I do? Shall I do as you bid me, when I know not what it is you ask me, though at the same time you order me to answer and not to interrogate?

Euthydemus:: You, doubtless, apprehend what I say.

Socrates:: I do.

Euthydemus:: Now therefore answer to that which you apprehend.

Socrates:: What then? if you indeed ask conceiving one thing, but I apprehend another, and afterwards I should answer to this, would it be sufficient for you if I answered nothing to the purpose?

Euthydemus:: To me it would,, but not to you, as I think.

Socrates:: I will not therefore, by Jupiter, answer, till I understand.

Euthydemus:: You will not answer, to the things which you always apprehend, because you trifle, and are more simple than is becoming.

Socrates:: And I perceived that he was indignant with me for disputing what was said, he being desirous to catch me by enclosing me with words. I recollected, therefore, that Connus was always indignant with me, when I did not yield to him, and that afterwards he paid less attention to me, as one that was ignorant. As, therefore, I had formed the design of becoming instructed by these men, I thought it was necessary to submit to them, lest, considering me as an illiterate person, they should reject me. Hence I said;

If you are disposed to act in this manner, Euthydemus, let it be done: for you, in every respect, better know how to discourse than I do, you who possess art, than I who am a rude unlettered man. Again, therefore, interrogate from the beginning.

Euthydemus:: Answer then again, whether you know those things which you know, by something or not.

Socrates:: I do; for I know them, by my soul.

Euthydemus:: Again, in his answer, he adds to what he is asked. For I did not ask by what you know, but if you know by any thing.

Socrates:: Again, I have answered more than is sufficient, through my want of erudition; but pardon me. For I will now answer simply that I always know by a certain thing what I know.

Euthydemus:: But whether, do you always know by this very same thing? Or do you at one time know by this, and at another by something else?

Socrates:: Always by this, when I know.

Euthydemus:: Again, you will not cease to speak superfluously.

Socrates:: But I am afraid lest this certain something always should deceive us.

Euthydemus:: It will not deceive us; but if at all, it will deceive you. Answer me, however, whether you always know by this.

Socrates:: Always; since it is necessary to take away the when.

Euthydemus:: Do you therefore always know by this? And always knowing, whether do you know some things by this by which you know, but other things by something else? Or do you know all things by this?

Socrates:: All things by this, which I do know.

Euthydemus:: This latter part of your answer, is again superfluous.

Socrates:: But I take away, the words which I do know.

Euthydemus:: You should not, however, take away even one word; for I want none of your assistance. But answer me; would you be able to know all things unless you could know all things? This would be a prodigy.

Euthydemus:: Add now whatever you please: for you confess that you know all things.

Socrates:: I appear to have done so, since the words, the things which I know, possess no power whatever; but I know all things.

Euthydemus:: Have you not therefore also confessed that you always know by this thing by which you know? whether it be when you know, or in whatever way you please: for you have acknowledged that you always know, and at the same time, that you know all things. It is evident therefore that you knew when you was a boy, and when you was begot, and when you was born. Hence, before you was born, and before heaven and earth were produced, you knew all things, if you always possessed knowledge. And by Jupiter, you always will know, and will always know all things, if I am willing that you should.

Socrates:: But be willing, O much honored Euthydemus, if you speak the truth in reality. But I cannot entirely believe that you are sufficient to accomplish this, unless this your brother Dionysodorus assists you with his counsel: and thus perhaps what you say may be accomplished. But tell me, I said; for in other things I cannot contend with you, who are endued with such portentous wisdom, nor deny that I know all things, since you say that I do; how shall I say that I know such things as the following, O Euthydemus, viz. that good men are unjust? Come, inform me, do I know this, or do I not know it?

Euthydemus:: You certainly know it.

Socrates:: What, do I know?

Euthydemus:: That good men are not unjust.

Socrates:: This, I perfectly knew a long time ago. But I do not ask this; but where did I learn that good men are unjust?

Dionysodorus:: No where.

Socrates:: I do not therefore, know this.

Euthydemus then said to Dionysodorus;

Euthydemus:: You destroy the conversation; and he will appear to be not knowing, and to possess, and at the same time to be deprived of knowledge.

Socrates:: And Dionysodorus blushed.

But you, Euthydemus, how do you say? Does not your brother appear to you to speak rightly, who knows all things?

Dionysodorus:: But am I the brother of Euthydemus?

Socrates:: Excuse me from answering you, O good man, till Euthydemus has taught me that I know that good men are unjust, and do not envy me the discipline.

Dionysodorus:: You fly, Socrates, and are not willing to answer.

Socrates:: It is reasonable that I should: for I am inferior to either of you, so that there is an abundant necessity that I should fly from two. For I am much more imbecile than Hercules, who was not able to contend with the hydra (a sophist who, by her wisdom, if one head of the discourse was cut off, presented many instead of one), and at the same time with the crab, a certain other sophist, who, as it appears to me, recently drove on shore from the sea); and when Hercules had in a similar manner tormented the crab) by speaking to and biting him on the left-hand side, he called upon Iolaus, the son of his brother, to assist him: and he gave him sufficient aid. But my Iolaus Patrocles, if he should come, would rather effect the very contrary.

Dionysodorus:: Answer then, since these things are celebrated by you, whether Iolaus was more the nephew of Hercules than of you.

Socrates:: It is therefore best for me, O Dionysodorus, to answer you. For you will not desist from interrogating, nearly envying (for this I well know), and hindering Euthydemus from teaching me that wise thing.

Dionysodorus:: Answer, however.

Socrates:: But I will answer, that Iolaus was the son of the brother of Hercules, but, as it appears to me, is by no means my nephew. For Patrocles, who is my brother, was not his father; but Iphicles, who resembles him in name, was the brother of Hercules.

Dionysodorus:: But is Patrocles, your brother?

Socrates:: Certainly; for he had the same mother, though not the same father with me.

Dionysodorus:: He is your brother therefore, and not your brother.

Socrates:: He was not from the same father, O best of men: for his father was Chaeredemus, but mine Sophroniscus.

Dionysodorus:: But the father, was Sophroniscus and Chaeredemus. Was he not?

Socrates:: Certainly; the former was my, and the latter his father.

Dionysodorus:: Was not therefore, Chaeredemus different from the father?

Socrates:: From my father.

Dionysodorus:: Was he therefore a father, being different from a father? Or are you the same thing as a stone?

Socrates:: I am afraid, lest through you I should appear to be the same; but I do not appear to myself to be the same.

Dionysodorus:: Are you not therefore, different from a stone?

Socrates:: Different certainly.

Dionysodorus:: Being different from a stone, therefore, you are something else, and not a stone: and being different from gold, you are not gold.

Socrates:: Granted.

Dionysodorus:: Will not Chaeredemus therefore, since he is different from father, not be a father?

Socrates:: It seems, he is not a father.

Euthydemus, taking up the discourse said;

Euthydemus:: For certainly, if Chæredemus is a father, again Sophroniscus, on the contrary, being different from father, is not a father; so that you, O Socrates, are without a father.

And then Ctesippus, taking up the discourse, said;

Ctesippus:: Does not your father suffer these very same things? for he is different from my father.

Euthydemus:: Very far from it.

Ctesippus:: Is he then the same?

Euthydemus:: The same, indeed.

Ctesippus:: I should not consent to this. But whether, O Euthydemus, is he alone my father, or is he the father also of other men?

Euthydemus:: Of other men also. Or do you think that the same person being father, is not father?

Ctesippus:: I should indeed think so.

Euthydemus:: But what? A thing being gold, is it not gold? Or being man, is it not man?

Ctesippus:: You do not, according to the proverb, connect, O Euthydemus, thread with thread. For you speak of a dire thing, if your father is the father of all men.

Euthydemus:: But he is.

Ctesippus:: Whether is he the father of men, or also of horses? Or likewise of all other animals?

Euthydemus:: Of all others animals.

Ctesippus:: Is a mother also the mother of all animals?

Euthydemus:: And a mother likewise.

Ctesippus:: Your mother therefore, is also the mother of marine hedgehogs.

Euthydemus:: And yours too.

Ctesippus:: Hence then you are the brother of gudgeons, whelps, and pigs.

Euthydemus:: For you also are.

Ctesippus:: And; besides this, your father also is a dog.

Euthydemus:: For your father is likewise.

Dionysodorus:: But, if you answer me, you will in a short time acknowledge these things. For tell me, have you a dog?

Ctesippus:: And a very bad one.

Dionysodorus:: Has he therefore whelps?

Ctesippus:: He has indeed, others very much like himself.

Dionysodorus:: Is not the dog then the father of them?

Ctesippus:: I, saw him having connection with a bitch.

Dionysodorus:: What then? Is he not your dog?

Ctesippus:: Certainly.

Dionysodorus:: Being a father therefore, is he not yours? So that the dog becomes your father, and you are the brother of whelps.

Socrates:: And again, Dionysodorus hastily took up the discourse that Ctesippus might not say any thing in reply prior to him; and still further, answer me a trifling particular.

Dionysodorus:: Do you strike this dog?

Socrates:: And Ctesippus laughing;

Ctesippus:: By the gods, I do; for I cannot strike you.

Dionysodorus:: Do you not therefore, strike your father?

Ctesippus:: I should much more justly, strike your father, and ask him what he meant, by begetting such wise sons. But certainly, O Euthydemus, your father and the father of the whelps has obtained the possession of many good things from this your wisdom.

Dionysodorus:: But he is not in want of many good things, O Ctesippus, neither he, nor you.

Ctesippus:: Nor are you, O Euthydemus, in want of them.

Euthydemus:: Neither I nor any other man am in want of them. For tell me, O Ctesippus, whether you think it good for a sick man to drink a medicine, or does it appear to you to be not good, when it is requisite he should drink it; or when any one is going to a battle, ought he rather to go armed, or without arms?

Ctesippus:: To me, it appears to be better to do the former of these; though I think that you are about to say something beautiful.

Euthydemus:: You understand most excellently; but answer me. For since you acknowledge that it is good for a man to drink a medicine when it is requisite, it is also necessary to drink abundantly of this good, and it will in this case be well, if some one bruising it, should mingle with it a cart load of hellebore.

Ctesippus:: This would be very proper indeed, O Euthydemus, if he who drank it were as large as the statue in Delphi.

Euthydemus:: As therefore, it is also good to have arms in battle, is it not necessary to have a great number of shields and spears, since it is a good thing?

Ctesippus:: Very much so. But you are not of this opinion, O Euthydemus; for you think that one shield and one spear are sufficient. Or do you not?

Euthydemus:: I do.

Ctesippus:: Would you also, arm Gorgon and Briareus after this manner? But I think that you are more skilful than to act in this manner, as being one who fights with military weapons, as is also the case with this your associate.

Socrates:: And Euthydemus indeed was silent; but Dionysodorus said, in reply to those things which had been before answered by Ctesippus;

Dionysodorus:: Does it not therefore also appear to you to be good to possess gold?

Ctesippus:: Certainly, and also to have a great quantity of it.

Dionysodorus:: What then? Does it not appear to you to be a good thing always to possess riches, and every where?

Ctesippus:: Very much so.

Dionysodorus:: Do you not therefore also acknowledge gold to be a good thing?

Ctesippus:: We have acknowledged it.

Dionysodorus:: Is it not then necessary always to possess it, and every where, and especially in one’s self? And would not a man be most happy, if he had three talents of gold in his belly, a talent in his skull, and a stater of gold in each of his eyes?

Ctesippus:: They say indeed, O Euthydemus, that those among the Scythians are the most happy and the best men, who have much gold in their skulls, just as you lately said, that a dog was your father: and, what is still more wonderful, they say, that they drink out of their own golden skulls, and view the gold within them, having their own head in their hands.

Euthydemus:: But whether, do the Scythians and other men see things which maybe seen, or things which cannot be seen?

Ctesippus:: Things which can be seen, certainly.

Euthydemus:: Is this, therefore, also the case with you?

Ctesippus:: It is.

Euthydemus:: Do you therefore see our garments?

Ctesippus:: Yes.

Euthydemus:: Are these then things which may be seen?

Ctesippus:: Transcendently so.

Euthydemus:: But what?

Ctesippus:: Nothing. But you perhaps do not think that they are seen; so pleasant are you. To me however, Euthydemus, you appear, not sleeping to be asleep, and if it were possible for a man when speaking to say nothing, that you also do this.

Dionysodorus:: Is it not therefore possible, for him who is silent to speak?

Ctesippus:: By no means.

Dionysodorus:: Is it also impossible for him who speaks to be silent?

Ctesippus:: This is still less possible.

Dionysodorus:: When therefore you speak of stones, and pieces of wood and iron, do you not speak of things silent?

Ctesippus:: I do not, if I walk in braziers' shops; but the pieces of iron are called things which found, and make the greatest noise, if any one meddles with them. So that in this particular, it is concealed from you through your wisdom, that you have said nothing. But further still, explain to me the other assertion, how it is possible for one who speaks to be silent.

Socrates:: And Ctesippus appeared to me to contend in a transcendent manner, on account of the youth, the object of his love.

Euthydemus:: When you are silent, are you not silent as to all things?

Ctesippus:: I am.

Euthydemus:: Are you not therefore silent, as to things which are said, if things which are said are among the number of all things?

Ctesippus:: But what? are not all things silent?

Euthydemus:: Certainly not.

Ctesippus:: Do therefore, O best of men, all things speak?

Euthydemus:: Those things certainly do, which do speak.

Ctesippus:: But, I do not ask this; but I ask whether all things are silent, or speak?

Socrates:: Dionysodorus, hastily taking up the discourse:

Dionysodorus:: They do neither, and they do both. For I well know that you have not any thing to say to this answer.

Socrates:: And Ctesippus, as was usual with him, laughing very loudly;

Ctesippus:: O Euthydemus, your brother has lost his position in both cases, and his assertion perishes and is vanquished.

Socrates:: And Clinias was very much delighted and laughed; so that Ctesippus became ten times greater than he was. But Ctesippus, as being very crafty, appeared to me to have stolen these things from these very men. For a wisdom of this kind is not now possessed by any other persons.

Why do you laugh, O Clinias, at things so serious and beautiful?

Dionysodorus:: Why have you now, Socrates, ever seen a beautiful thing?

Socrates:: I have, and many such, O Dionysodorus.

Dionysodorus:: Were they therefore, things different from the beautiful, or the same with the beautiful?

Socrates:: And I then became perfectly involved in doubt, and thought I had suffered justly for having granted. At the same time, however; They are different from the beautiful; but a certain beauty is present to each of them.

Dionysodorus:: If, therefore, an ox is present with you, you are an ox; and because I now am present with you, you are Dionysodorus.

Socrates:: Predict better things.

Dionysodorus:: But after what manner; when one thing is present with another, will that which is different be different:

Socrates:: Are you then, dubious respecting this? But I will now endeavor to imitate the wisdom of men, as being one who is desirous of it.

Dionysodorus:: How should I not doubt, both I and all other men, respecting that which is not?

Socrates:: What do you say? O Dionysodorus. Is not the beautiful, beautiful, and the base, base?

Dionysodorus:: If, it appears to be so to me.

Socrates:: Does it not therefore appear to be so to you?

Dionysodorus:: Entirely so.

Socrates:: Is not therefore also the same, same? and is not the different, different? For certainly the different is not the same. But I should not think that even a boy would doubt this, that the different is not different. But, O Dionysodorus, this indeed you willingly pass by; since in other things you appear to me to resemble artists on whom it is incumbent to accomplish certain particulars; for it is proper that you should accomplish the business of discourse in an all-beautiful manner.

Dionysodorus:: Do you know therefore, what is proper to each of the artists? And, in the first place, do you know to whom it belongs to work in brass?

Socrates:: I know that this belongs to copper-smiths.

Dionysodorus:: But to whom does it belong to fashion things from clay?

Socrates:: To a potter.

Dionysodorus:: And whose business is it to cut throats, to excoriate, and cutting off small pieces of flesh to boil and roast them?

Socrates:: It is the business of a cook.

Dionysodorus:: If then, a man does things which are proper, does he not act rightly?

Socrates:: Especially so.

Dionysodorus:: But it is proper, as you say, that a cook should cut and excoriate. Have you assented to these things or not?

Socrates:: I have assented; but pardon me.

Dionysodorus:: It is evident, therefore, that if any one, cutting the throat of a cook and chopping him into small pieces, should boil and roast him, he would do, what is proper; and that if any one should work on a coppersmith himself after the manner of braziers, and on a potter after the manner of potters, he also would do what is proper.

Socrates:: O Neptune, now you place a summit on your wisdom. Will it therefore ever be present with me, so as to become familiar to me?

Dionysodorus:: You will know it, Socrates, when it becomes familiar to you.

Socrates:: That is to say, if you are willing that it should.

Dionysodorus:: But what? Do you think you know the things pertaining to yourself?

Socrates:: Unless you say any thing to the contrary. For it is necessary to begin from you, but to end in Euthydemus here.

Dionysodorus:: Whether therefore, do you think these things to be yours, over which you have dominion, and which you can use as you please? As, for instance, with respect to oxen and sheep, do you think that such among these are yours as it is lawful for you to sell and give, and sacrifice to whatever god you please? And that those of them over which you have not this power, are not yours?

Socrates:: And I (for I knew that from those questions something beautiful would emerge, and at the same time being desirous to hear very quickly) said, it is perfectly so: things of this kind are alone mine.

Dionysodorus:: But what? Do you not call these things animals, which possess a soul?

Socrates:: Yes.

Dionysodorus:: Do you acknowledge then, that these alone among animals are yours respecting which you have the liberty of doing all these things which I have just now mentioned?

Socrates:: I acknowledge it.

And he pausing, very ironically, as if considering something of great consequence said;

Dionysodorus:: Tell me, Socrates, is Jupiter with you *Patrius*?

Socrates:: And I, suspecting that the discourse would come to that place, in which it would end, fled with a certain ambiguous craftiness, and now turned myself as if I had been caught in a net. And I said;

He is not, O Dionysodorus.

Dionysodorus:: You therefore are a miserable man; nor are you an Athenian, since you have neither gods called *Patrii*, nor sacred rights, nor any thing else beautiful and good.

Socrates:: Spare me, O Dionysodorus, predict better things and do not instruct me with severity. For I have altars, and domestic sacred concerns, and such as belong to my country, and whatever other things of this kind are possessed by the rest of the Athenians.

Dionysodorus:: In the next place, is not Jupiter Patrius to the rest of the Athenians?

Socrates:: That appellation, does not belong to any one of the Ionians, nor to such as are colonized from this city, nor to us. But Apollo is Patrius, through the nativity of Ion. Jupiter, however, is not called by us Patrius, but Herceus and Phratrius; and Minerva also is called Phratria.

Dionysodorus:: This is sufficient, said Dionysodorus; for you have, as it seems, Apollo, Jupiter, and Minerva.

Socrates:: Entirely so.

Dionysodorus:: Will not these therefore, be your gods?

Socrates:: My progenitors, and masters.

Dionysodorus:: They will be so then to you. Or have you not confessed that they are yours?

Socrates:: I have confessed it. For what can I do?

Dionysodorus:: Are not therefore, those gods also animals? For you have acknowledged that such things as have a soul are animals. Or have not those gods a soul?

Socrates:: They have.

Dionysodorus:: Are they not therefore also animals?

Socrates:: Animals.

Dionysodorus:: But of animals, you have acknowledged these to be yours, which you can give and sell, and sacrifice to any god you please.

Socrates:: I have acknowledged it. For I do not recant, O Euthydemus.

Dionysodorus:: Come then, tell me immediately, since you acknowledge that Jupiter is yours and the other gods, are you therefore permitted to sell them, or give them, or to use them in any other way you please, in the same manner as other animals?

Socrates:: I therefore, O Crito, as if struck by what he said, lay speechless; but Ctesippus coming as it were to my assistance;

Ctesippus:: Pypax, O Herules, a beautiful discourse!

Dionysodorus:: Whether, is Hercules Pypax, or Pypax Hercules?

Ctesippus:: O Neptune, what weighty questions! I yield; the men are unconquerable.

Socrates:: Here indeed, my dear Crito, there was not any one present, who did not in the highest degree praise what was said; and the men were almost ready to die with laughing, applauding, and exulting. For before this, the lovers alone of Euthydemus applauded every thing that was said in a very beautiful manner; but here, not far from the pillars in the Lyceum, they applauded the men, and were delighted with what they said. As to myself, my feelings were such, that I was forced to acknowledge that I had never at any time seen men so wise; and being perfectly enslaved by their wisdom, I applied myself to the praising and passing encomiums on them; and I said, O blessed ye for your admirable genius, who have so rapidly, and in a short time, accomplished a thing of such magnitude! Your arguments indeed, O Euthydemus and Dionysodorus, contain many other beautiful things; but this is the most magnificent thing in them, that you pay no attention to the multitude of mankind, nor to things venerable, and which appear to be of some consequence, but only to those who are like yourselves. For I well know, that very few men, and those such as are similar to you, delight in these arguments; but others are so ignorant of them, that I well know, they would be more ashamed to confute others with such like arguments, than to be themselves confuted. This too again is another popular and mild thing in your arguments, that when you say there is nothing either beautiful, or good, or white, or any thing else of this kind, and, in short, that one thing is not different from another, you in reality sew up the mouths of men, as you also acknowledge that you do; but that you not only sew up the mouths of others, but appear also to sew up your own, this is very polite, and removes that which is oppressive in your arguments. The greatest thing however is, that these arguments subsist in such a manner, and are so artificially invented by you, that any one may learn them in a very short time. This I have perceived, and I have noticed how rapidly, and indeed immediately, Ctesippus has been able to imitate you. This wisdom therefore of yours, with respect to its being rapidly imparted to another, is beautiful, but is not adapted to be discussed before men. But if you will be persuaded by me, be careful that you do not speak before many, lest rapidly learning, they should not thank you for your instruction. But especially discourse together by yourselves alone: if not, if you discourse before another, let it be before him alone, who gives you silver for what you say. These same things too if you are wise you will also admonish your disciples, viz. That they never discourse with any man, unless with you and themselves. For that which is rare, O Euthydemus, is honorable; but water may be bought for a vile price, being the best of things, as Pindar says. But come, make Clinias and me partakers of your discipline.

Having said these things, O Crito, and a few others, we departed. Consider therefore now, how you will accompany me to these men. For they say that they are able to teach any one who is willing to give them money; and that they do not exclude any genius or age. They likewise assert that which it is especially proper for you to hear, that an attention to gain does not hinder any one from easily receiving their wisdom.

Crito:: And indeed, Socrates, I am desirous of hearing them, and would willingly learn something from them; though indeed I also appear to be among the number of those who do not resemble Euthydemus, but those whom, as you said, would more willingly be confuted by such like arguments than confute them. It seems however to me to be ridiculous to admonish you, at the same time I wish to relate to you what I have heard. Do you not know, that among those that left you, a certain person came to me as I was walking, a man who thought himself to be very wise, and one of those who are skilful in forensic harangues, and that he said to me;

Someone:: O Crito, have you heard nothing of these wise men?

Crito:: By Jupiter, I have not said I. For I could not stand before others, so as to hear, on account of the crowd.

Someone:: But, it was worth while to have heard them.

Crito:: Why?

Someone:: Because you would have heard men discoursing, who are the wisest of all those who at present engage in such like arguments.

Crito:: And I said, What then do you think of their arguments?

Someone:: What else, than that they are such as you will always hear from such like triflers, who bestow vile attention on things of no worth.

Crito:: For these were his very words.

And I said, But certainly philosophy is an elegant thing.

Someone:: How, elegant, O blessed man! It is indeed a thing of no worth. But if you had been present just now, I think that you would have been very much ashamed on account of your associate, who was so absurd as willingly to put himself in the power of men, who pay no attention to what they say, but adhere to every word. And these men, as I just now said, are among the best of those that exist at present. But indeed, Crito, both the thing itself, and the men who are conversant with it, are very vile and ridiculous.

Crito:: But to me, Socrates, neither he appears rightly to blame the thing, nor any other who blames it. To be willing, however, to discourse with these men before many appears to me to be rightly blamed.

Socrates:: O Crito, men of this kind are wonderful. But I do not yet know what I am about to say. To what class of men did he belong who came to you, and blamed philosophy? Was he among the number of those who are skilful in contending in courts of justice, a certain orator; or was he one of those who introduce men of this description, a composer of the orations with which orators contend?

Crito:: The least of all, by Jupiter, was he an orator; nor do I think that he ever went into a court of justice; but they say that he is knowing in the thing itself, by Jupiter, and likewise that he is skilful, and that he compose skilful orations.

Socrates:: I now understand: for I myself was just now about to speak concerning these men. For these are they, O Crito, whom Prodicus says exist in the confines of a philosopher and politician. But they think themselves to be the wisest of men; and besides being such in their own opinion, they also entirely appear to be so among the many. Hence, as they are celebrated by all men, no others are an impediment to them, than those whose conversant with philosophy. They think therefore, if they can establish an opinion, that philosophers are of no worth, they shall obtain the palm of wisdom without contention in the opinion of all men. For they consider themselves to be in reality most wise; but think that their authority is lessened by the followers of Euthydemus, when they are intercepted in their private discourses. But they are very reasonably thought to be wise men: for moderately to possess philosophy, and moderately to engage in political concerns, is very convenient; since this is to partake of both, as much as is requisite, and to enjoy the fruits of wisdom, secure from dangers and contests.

Crito:: What then? Do they appear to you, O Socrates, to say any thing of consequence?

Socrates:: They do not, indeed.

Crito:: But the discourse of the men possesses a certain gracefulness.

Socrates:: For it has in reality, O Crito, gracefulness rather than truth. For it is not easy to persuade them, that men and all other things which subsist between two certain things, and participate of both, viz. such particulars as consist from good and evil, become better than the one, and worse than the other; but that such things as consist from two goods, not tending to the same, are worse than both with respect to that for which each of the things is useful from which they are composed; and that such things as are composed from two evils, not tending to the same, and which are in the middle, are alone better than each of those things, a part of both of which they participate. If, therefore, philosophy and political action are good, but each tends to that which is different, and these men, while they participate of both, are situated in the middle, they say nothing to the purpose; for they are viler than both. But if philosophy and political action are both good and bad, these men are better than some and worse than others. And if both are bad, thus they will assert something which is true, but by no means otherwise. I do not therefore think they will acknowledge, either that both these are bad, or that the one is bad, and the other good;

but they in reality partaking of both, are inferior to both with respect to the performing of either, with a view to which both the political science and philosophy are worthy of regard; and though in reality they rank as the third, they endeavor to appear to be the first. It is requisite, therefore, to pardon their desire, and not to be indignant with them. We should however consider them to be such as they are: For it is requisite to embrace every man who says any thing which adheres to intellect, and who valiantly labors in endeavoring to do so.

Crito:: And indeed, Socrates, I also (as I always say to you) am dubious with respect to the management of my own children. For the youngest is yet but a little one; but Critobulus is now an adult, and requires the assistance of some one. I therefore, when I converse with you, am led to think that it is madness to be so much concerned about other things for the sake of children, such as about marriage, that they may be born from the most generous mother, and about riches, that they may become most wealthy, and yet neglect their education. But when I look at any one of those who profess to instruct men, I am struck with astonishment; and, to tell you the truth, every one of them appears to me to be unfit for the purpose; so that I cannot exhort the lad to philosophy.

Socrates:: O, my dear Crito, do you not know that in every pursuit, the many are vile, and of no worth, and that the few are worthy of all regard? For do not the gymnastic art, the art of acquiring money, rhetoric, and the art of commanding an army, appear to you to be beautiful?

Crito:: To me they certainly do, in every respect.

Socrates:: What then? In each of these do you not see that the multitude are ridiculous with respect to the several employments of these arts?

Crito:: Yes, by Jupiter; and you speak most truly.

Socrates:: Would you, therefore, on this account avoid all pursuits, and not suffer your son to engage in them?

Crito:: This indeed, Socrates, would not be just.

Socrates:: You must not, therefore, O Crito, do that which ought not to be done; but bidding farewell to those who study philosophy, whether they are good or bad, explore the thing itself, well and properly; and if it should then appear to you to be a vile thing, dissuade every man from it, and not your sons only; but if it should appear to you such as I think it is, confidently pursue and cultivate it, as it is said, both you and your children.

THE END OF THE EUTHYDEMUS.

## Gorgias.

Monday, August 10, 2020

> Socrates:: Shall we lay it down then that there are two forms of persuasion, the one producing belief without knowledge, the other knowledge?

Plato is going to divide grammar into two categories. As grammar systems are used to construct the memory of behaviors in order to recursively apply the best behaviors for survival, grammars can then be said to be conversant with the motivation, influencing, the persuasion of human behavior. The standard Dialectic and Rhetoric are based on differ, one is particular to the circumstance and people involved, and the other is based on a universal biological standard. Dialectic is based on a biological standard of a life support system, while Rhetoric is not. One can clearly define dialectic, for it employs factual binary recursion, however, Rhetoric is not based on the factual principles of grammar, therefore it does not have to be grammar at all, for it is not paired with memory. Rhetoric can be used to construct mythologies to influence the behavior of individuals which also complies with a life support system, or it can be used for the basest of desires.

In short, Rhetoric we use for what we want, but Dialectic is used for satisfying the definition of a life support system. Rhetoric is what the illiterate use, but Dialectic, the educated. One can say, if properly used, one can accomplish the biologically defined job of a mind by not only telling the truth, as in Dialectic, but also by lying as in Rhetoric. The good and evil is not in the grammatical method, but the products they effect. Socrates uses both, as the Bible does also. The ends do not justify the means, the ends are justified by a universal biological imperative, what is good for life.

It is a biological fact, that even when we are without knowledge, we have to find a way to motivate ourselves to comply with our own definition as a life support system. The meaning of To they own self be true can only be understood by those who understand themselves as a biologically defined life support system.

The overall result is Rhetoric is in the class of Dialectic, a member of that class. Thus, it is impossible to be a Rhetorican at all, one has to be, by biological fact, a Dialectician which uses rhetoric to the same end as dialectic. A Philosopher, claiming the science of grammar, has to be conversant with both Dialectic, and Rhetoric. At the end of this dialog, Plato is going to use Rhetoric in the construction of his myth, he is demonstrating the correct use of Rhetoric.

Many who claim to be expert in Plato, confuse his mythologies as his religious beliefs! Which is wholly absurd, as he says in more than one dialog, that only a senseless person whould take them literally. Thus, once again, Plato is demonstrating that between Socrates and Gorgious, Gorgious is tauted as expert in Rhetoric, while Socrates demonstrates that he is ignorant while also showing how it is Socrates which is also expert in Rhetoric.

As ignorance is an evil state to be in, the evil is in the person, it is not in grammar systems save when one is ignorant of factual grammar and why it is apply for the modification of human behavior.

One thing Plato does highlight, is that as it is impossible to know Rhetoric without knowing Dialectic, the terms Sophist and Rhetorician are often confused. Therefore, as many claim to know what a Philosopher is, but instead only describe a Sophist, so too with the term Rhetorician.

One can liken the situation we find today with religion. Where the author of the Bible promises the human race but one Prophet, it is literally raining prophets in ever age of mankind. The Prophet promised in the Bible, is the final product called man, which we are not yet today. In the Bible, the term prophet is also given to particular people, but if one examine the Law, it is their message which is to be examined, not the person carrying that message. The judgment is on what they say, being either true or false. Every metaphor in the Bible is to be judged and understood in relation to the biologically defined job of the mind. What may be predicated of any thing is wholly determined by the definition of that thing.

# Gorgias.

or

On Rhetoric.

Translated by Henry Cary.

Callicles, Socrates, Chærephon,
Gorgias, and Polus.

Callicles:: They say, Socrates, that we should thus take part in war and battle.

Socrates:: Have we then, as the saying is, come after the feast, and are we too late?

Callicles:: And a very elegant feast. For Gorgias has just now exhibited many fine things to us.

Socrates:: Chærephon here, Callicles, is the cause of this, by having compelled us to waste our time in the forum.

Chaerephon:: It’s of no consequence, Socrates; for I will also find a remedy; for Gorgias is my friend, so that he will exhibit to us now, if you please, or, if you prefer it, at some future time.

Callicles:: What, Chærephon? is Socrates desirous of hearing Gorgias?

Chaerephon:: We are come for this very purpose.

Callicles:: Whenever you please, then, come to my house; Gorgias lodges with me, and will exhibit to you.

Socrates:: You say well, Callicles. But would he be inclined to converse with us? For I wish to learn from him what is the power of his art, and what it is that he professes and teaches: the rest of the exhibition, as you say, he may make at some other time.

Callicles:: There is nothing like asking him, Socrates: for this is one part of his exhibition: he just now bade all that were in the house ask what question they pleased, and promised to answer every thing.

Socrates:: You say well in truth. Ask him, Chaerephon.

Chaerephon:: What shall I ask him?

Socrates:: What he is.

Chaerephon:: How mean you?

Socrates:: Just as, if he happened to be a maker of shoes, he would surely answer you, that he is a shoemaker. Do you not understand what I mean?

Chaerephon:: I understand, and will ask him. Tell me, Gorgias, does Callicles here say truly that you promised to answer whatever any one should ask you?

Gorgias:: Truly, Chaerephon: for I just now made that very promise: and I affirm that for many years no one has asked me any thing new.

Chaerephon:: Without doubt, then, you will answer easily, Gorgias.

Gorgias:: You may make trial of that, Chaerephon.

Polus:: By Jupiter, Chærephon, if you please, make trial of me: for Gorgias appears to me to be fatigued; as he has just now been speaking a great deal.

Chaerephon:: What, Polus, do you think you can answer better than Gorgias?

Polus:: What matters that, if I answer well enough for you?

Chaerephon:: Not at all: since you wish it then, answer.

Polus:: Ask.

Chaerephon:: I ask then, If Gorgias happened to be skilled in the same art as his brother Herodicus is skilled, what name should we rightly give him? Would it not be the same as his brother?

Polus:: Certainly.

Chaerephon:: In calling him a physician, then, we should speak correctly?

Polus:: Yes.

Chaerephon:: But if he were skilled in the same art as Aristophon, son of Aglaophon, or his brother, what should we properly call him?

Polus:: Evidently, a painter.

Chaerephon:: But now, since he is skilled in a certain art, what can we properly call him?

Polus:: Chærephon, there are many arts among men by experience experimentally discovered: for experience causes our life to proceed according to art, but inexperience according to chance. Of each of these different persons partake of different arts, in different manners; but the best of the best; in the number of whom is Gorgias here, who possesses the finest of the arts.

Socrates:: Polus appears, Gorgias, to be very well prepared for speaking: but he does not do what he promised Chærephon.

Gorgias:: How so, Socrates?

Socrates:: He does not appear to me to answer the question that was asked.

Gorgias:: Do you then, if you please, ask him.

Socrates:: No, but if yourself would be willing to answer me, I would much rather ask you. For it is evident to me that Polus, from what he has said, has studied more what is called rhetoric, than conversation.

Polus:: Why so, Socrates?

Socrates:: Because, Polus, when Chærephon asked you in what art Gorgias was skilled, you praised his art, as if some one had blamed it, but you did not say what the art itself is.

Polus:: Did I not answer, that it was the finest of all arts?

Socrates:: Certainly. But no one asked you what was the quality of the art of Gorgias, but what it was, and by what name we ought to call Gorgias; just as Chærephon proposed the former questions to you, and you answered him well and in few words. Now, therefore, tell me in the same manner, what art Gorgias professes, and what we ought to call him. Or rather, Gorgias, do you tell us yourself what we ought to call you as skilled in what art.

Gorgias:: In rhetoric, Socrates.

Socrates:: Ought we, then, to call you a rhetorician?

Gorgias:: And a good one, Socrates, if you wish to call me, as Homer says, what "I boast myself to be."

Socrates:: But I do wish.

Gorgias:: Call me so, then.

Socrates:: Shall we say too that you are able to make others rhetoricians?

Gorgias:: I profess this not only here but elsewhere.

Socrates:: Are you willing then, Gorgias, to continue, as we are now doing, partly to ask questions and partly to answer, and to defer to some other occasion that prolixity of speech, such as Polus just now began with? But do not belie what you promised, but be willing to answer each question briefly.

Gorgias:: There are some answers, Socrates, which must necessarily be made at length: however, I will endeavor to make them as short as possible. For this is one of the things which I profess, that no one can say the same things in fewer words than me.

Socrates:: There is need of this now, Gorgias; give me therefore a specimen of this very thing, conciseness of speech, and of prolixity at some other time.

Gorgias:: I will do so; and you will admit that you never heard any one speak more concisely.

Socrates:: Well then, since you say that you are skilled in the art of rhetoric, and that you can teach another this art, tell me about what is rhetoric employed? just as the art of weaving is employed in the making of garments, is it not so?

Gorgias:: It is.

Socrates:: And is not music also employed in the composing of melodies?

Gorgias:: Yes.

Socrates:: By Juno, Gorgias, I admire your answers, for you answer as briefly as possible.

Gorgias:: I think, Socrates, that I do this well enough.

Socrates:: You say well. Come then, answer me thus respecting rhetoric, of what is it the science?

Gorgias:: Of words.

Socrates:: What kind of words, Gorgias? Are they such as inform the sick by what kind of diet they may become well?

Gorgias:: No.

Socrates:: Rhetoric, then, is not concerned with all kinds of words?

Gorgias:: Certainly not.

Socrates:: Yet it makes men able to speak?

Gorgias:: Yes.

Socrates:: And does it not enable men to think on the same things on which it enables them to speak?

Gorgias:: Without doubt.

Socrates:: Does not, then, the medicinal art, of which we just now spoke, make men able to think and speak about the sick?

Gorgias:: Necessarily so.

Socrates:: The medicinal art, then, as it appears, is conversant with words?

Gorgias:: Yes.

Socrates:: And those that concern diseases?

Gorgias:: Just so.

Socrates:: And is not the gymnastic art also conversant with words that relate to the good and bad habit of bodies?

Gorgias:: Certainly.

Socrates:: And it is the same with other arts, Gorgias: each of them is conversant with those words that are employed about that particular thing of which each is the art.

Gorgias:: It appears so.

Socrates:: Why, then, do you not call other arts rhetorical, as being conversant with words, since you call that rhetoric which is employed about words?

Gorgias:: Because, Socrates, almost the whole science of other arts is conversant with manual operations and such-like actions; in rhetoric, however, there is no such manual operation, but all its activity and efficiency is by means of words. For this reason, I consider that the art of rhetoric is conversant with words, herein speaking correctly, as I affirm.

Socrates:: Do I understand what kind of art you wish to call it? but I shall soon comprehend it more clearly. However, answer me. We have arts, have we not?

Gorgias:: Yes.

Socrates:: Of all the arts, some, I think, consist principally in workmanship, and stand in need of but few words, and others of none at all, but their work may be accomplished in silence, as painting, statuary, and many others. With such arts, you appear to me to say rhetoric has nothing to do? is it not so?

Gorgias:: You apprehend my meaning perfectly, Socrates.

Socrates:: On the other hand, there are other arts which accomplish all by means of words, and require no work at all, or very little, such as theoretical and practical arithmetic, geometry, the game of dice, and many other arts; some of which require almost as many words as actions, and most of them more, so that altogether their whole activity and efficiency is by means of words. You appear to me to say that rhetoric is among arts of this kind.

Gorgias:: You say truly.

Socrates:: However, I do not think you mean to call any one of these rhetoric, although in the expression you used you so said, that rhetoric has its efficiency by means of words; and any who wished to catch at your words might reply, Do you say then, Gorgias, that arithmetic is rhetoric? But I do not think that you call either arithmetic or geometry rhetoric.

Gorgias:: You think rightly, Socrates, and apprehend my meaning correctly.

Socrates:: Come then, complete the answer to my question. Since rhetoric is one of those arts which make great use of words, and there are others of the same kind, endeavor to tell me in reference to what rhetoric has its efficiency in words. Just as if any one should ask me respecting any of the arts which I but now mentioned: Socrates, what is the arithmetical art? I should say to him, as you did just now, That it is one of the arts that have their efficiency in words. And if he should further ask me, In reference to what? I should answer, In reference to the knowledge of even and odd, how many there may be of each. But if again he should ask me, What do you mean by the art of computation? I should answer, that this also is one of those arts whose whole efficiency consists in words. And if he should further ask me, In reference to what? I should answer, as they do who draw up motions in the assemblies of the people, That in other respects computation is the same as arithmetic, for it has reference to the same object, that is to say, the even and the odd; but it differs in this respect, that computation considers what relation even and odd have to themselves and to each other in regard to quantity. And if any one should ask me about astronomy, and after I had said that its whole efficiency consists in words, should say, But Socrates, to what do words employed about astronomy refer? I should answer, That they are employed about the course of the stars, and of the sun and the moon, how they are related to each other with respect to velocity.

Gorgias:: And you would answer rightly, Socrates.

Socrates:: Now then do you answer, Gorgias. For rhetoric is one of those arts which accomplish and effect every thing by means of words: is it not so?

Gorgias:: It is so.

Socrates:: Tell me then in reference to what? what is the particular thing about which these words are, which rhetoric uses?

Gorgias:: The greatest of all human concerns, Socrates, and the best.

Socrates:: But, Gorgias, what you say is questionable, and by no means clear. For I think you must have heard at banquets men singing that song in which the singers enumerate that the best thing is health, the second beauty, and the third, as the author of the song says, riches gained without fraud.

Gorgias:: I have heard it; but with what object do you mention this?

Socrates:: Because the artificers of those things which the author of the song has commended, namely, the physician, the master of gymnastics, and the money-getter, will forthwith present themselves, and the physician will say: Socrates, Gorgias deceives you. For his art is not employed about the greatest good to men, but mine is. If, then, I should ask him, Who are you that say this? he would probably answer, I am a physician. What then do you say? that the object of your art is the greatest good? How can it be otherwise, Socrates, he would probably say, since its object is health? and what greater good can men have than health? And if after him again the master of gymnastics should say, I too should wonder, Socrates, if Gorgias could show you any greater good from his art than I can from mine, I should again say to him, And who are you, Sir, and what is your employment? A master of gymnastics, he would say, and my employment is to make men beautiful and strong in their bodies. After the master of gymnastics, the money-getter would say, as I imagine, despising all others, Consider, I beg, Socrates, whether there is any greater good than riches, either with Gorgias, or any one else? I should thereupon say to him, What, then, are you the artificer of this good? He would say, I am. Who are you then? A money-getter. What then? Do you consider riches to be the greatest good to men? I shall say. Assuredly, he will answer. However, Gorgias here contends that his art is the cause of greater good than yours. It is clear then that after this he would ask, And what is this good? let Gorgias answer. Come then, Gorgias, suppose that you are asked by them and by me, and answer, What is this, which you say is the greatest good to men, and of which you are the artificer?

Gorgias:: That which is in reality, Socrates, the greatest good, and is at the same time the cause of liberty to men, and of their being able to rule over others in their several cities.

Socrates:: What then do you say it is?

Gorgias:: I say it is the power of persuading by words judges in a court of justice, senators in the senate-house, and the hearers in a public assembly, and in every other convention of a political nature. Moreover, by this power you will make the physician your slave, and the master of gymnastics your slave, and the money-getter will be found to have gained money, not for himself, but for another, for you who are able to speak, and persuade the multitude.

Socrates:: At length you appear to me, Gorgias, to have shown as nearly as possible what kind of art you consider rhetoric to be; and if I understand you rightly, you say that rhetoric is the artificer of persuasion, and that its whole employment and the sum of it terminates in this. Can you say that rhetoric has any further power than that of producing persuasion in the minds of the hearers?

Gorgias:: By no means, Socrates; but you appear to me to have defined it sufficiently. For that is the sum of it.

Socrates:: Listen then, Gorgias. Be assured that I, as I persuade myself, if there is any one, who in conversing with another, wishes to know the very thing about which the conversation is, be assured, I say, that I am such a person; and I think that you are too.

Gorgias:: What then, Socrates?

Socrates:: I will now tell you. The persuasion which you speak of as resulting from rhetoric, what it is, and with what particulars it is conversant, be assured I do not clearly understand, not but that I have a suspicion of what I suppose you mean, and about what it is employed: yet I will not the less ask you what persuasion you mean results from rhetoric, and with what particulars it is conversant. Why then do I who have a suspicion ask you, and not rather myself speak? Not on your account, but on account of the discussion, that it may proceed in such a manner as to make the subject of the discussion most clear to us. For consider whether I seem to you right in putting the question to you: just as if I should ask you what kind of a painter is Zeuxis? if you were to tell me that he paints animals, might I not justly enquire of you, what kind of animals he paints? is it not so?

Gorgias:: Certainly.

Socrates:: And would it not be for this reason, because there are also other painters who paint many other animals?

Gorgias:: Yes.

Socrates:: But if no one else but Zeuxis painted them, you would have answered properly.

Gorgias:: Assuredly.

Socrates:: Come then, with respect to rhetoric, tell me, whether it appears to you that rhetoric alone produces persuasion, or do other arts produce it likewise? My meaning is this: Does he who teaches any thing persuade what he teaches, or not?

Gorgias:: He does certainly persuade, Socrates.

Socrates:: Again, if we speak of the same arts of which we just now made mention, does not arithmetic teach us such things as relate to number? and does not an arithmetician the same?

Gorgias:: Certainly.

Socrates:: Does it not also persuade?

Gorgias:: Yes.

Socrates:: Arithmetic, then, is an artificer of persuasion.

Gorgias:: It appears so.

Socrates:: If, then, any one should ask us, What persuasion it produces, and with respect to what? we should answer, That which teaches about the quantity of even and odd. In like manner we may show, that all the other arts of which we spoke just now, produce persuasion, and what kind of persuasion, and with respect to what: is it not so?

Gorgias:: Yes.

Socrates:: Rhetoric then, is not alone an artificer of persuasion.

Gorgias:: You say truly.

Socrates:: Since then, it does not alone produce this effect, but other arts do the same, we may justly, as in the case of the painter, next enquire of the speaker; of what kind of persuasion, and of persuasion on what subject rhetoric is the art? Does it not appear to you that this question may fairly be asked?

Gorgias:: It does.

Socrates:: Answer then, Gorgias, since this appears to you to be the case.

Gorgias:: I speak then, Socrates, of that persuasion which is produced in courts of justice, and in other public assemblies, as I just now mentioned, and with respect to matters that are just and unjust.

Socrates:: I suspected, Gorgias, that you meant that persuasion, and on such matters. But do not be surprised if I shortly ask you a question that may appear to be evident, but which I shall notwithstanding repeat, for, as I before observed, I ask it for the sake of carrying on the discussion in an orderly manner, and not on your account, but that we may not be in the habit of catching up each other's words on suspicion; but do you finish what you have to say according to your own plan, just as you please.

Gorgias:: You appear to me to act rightly, Socrates.

Socrates:: Come then, let us examine this too. Do you admit that to learn is any thing?

Gorgias:: I do admit it.

Socrates:: Again? to believe?

Gorgias:: I do.

Socrates:: Whether, therefore, does it appear to you, that to learn and to believe, and learning and belief are the same, or different?

Gorgias:: I think, Socrates, that they are different.

Socrates:: You think rightly; and you may know from this; if any one should ask you, Is there, Gorgias, a false and true belief? I think you would say there is.

Gorgias:: I should.

Socrates:: Well then, is there a false and true science?

Gorgias:: Certainly not.

Socrates:: It is clear, therefore, that the belief and science are not the same.

Gorgias:: You say truly.

Socrates:: Yet both those who learn are persuaded, and those who believe.

Gorgias:: Such is the case.

Socrates:: Are you willing, therefore, that we lay down two kinds of persuasion, one that produces belief without knowledge, but the other science?

Gorgias:: Certainly.

Socrates:: Which kind of persuasion, then, does rhetoric produce in courts of justice and other public assemblies, respecting what is just and unjust? is it that from which belief springs without knowledge, or that from which knowledge arises?

Gorgias:: It is evident, Socrates, that it is that from which belief springs.

Socrates:: Rhetoric then, as it seems, Gorgias, is the artificer of a persuasion which produces belief, and not of that which teaches respecting the just and unjust.

Gorgias:: It is so.

Socrates:: A rhetorician, therefore, does not profess to teach courts of justice and other public assemblies, respecting things just and unjust, but only to produce belief. For surely he could not teach so great a multitude in a short time things of such great importance.

Gorgias:: Certainly not.

Socrates:: Come then, let us see now what we ought to say of rhetoric. For I, indeed, am not yet able to understand what I should say. When an assembly is held in a city, for the choice of physicians, or shipwrights, or any other kind of artificer, is it not the case that the rhetorician will refrain from giving his advice? for it is evident that, in each election, the most skilful artist ought to be chosen. Nor *will he be consulted* when the question is respecting the building of walls, or the construction of ports or docks, but architects only. Nor, again, when a deliberation occurs respecting the choice of generals, or the marshalling an army against enemies, or the occupation of posts,—but on such occasions those who are skilled in military affairs will give advice, and not rhetoricians. What do you say, Gorgias, on such points? For since you say that you are a rhetorician, and are able to make others rhetoricians, it is proper to enquire of you what are the things about which your art is concerned. And consider that I am laboring for your benefit. For, perhaps, some one who is now within the house may wish to become your disciple; for I perceive some, nay several, who probably are ashamed to question you. In being questioned, therefore, by me, consider yourself to be questioned by them, What would be the consequence to us, Gorgias, if we should put ourselves under your instructions? On what subjects shall we be able to give advice to the city? Whether about the just only and the unjust; or on those subjects of which Socrates just now made mention? Endeavor to answer them.

Gorgias:: I will endeavor, Socrates, to develop clearly the whole power of rhetoric: for you have admirably led the way. You doubtless know that these docks and walls of the Athenians, and the structure of the ports, were made partly on the advice of Themistocles, and partly on that of Pericles, but not of artificers.

Socrates:: This is told of Themistocles, Gorgias: and I myself heard Pericles when he gave us his advice respecting the middle wall.

Gorgias:: And when there is an election of any such persons as you mentioned, Socrates, you see that the rhetoricians are the persons who give advice, and whose opinion prevails in such matters.

Socrates:: It is because I wonder at this, Gorgias, that I have been for some time asking you, what is the power of rhetoric. For when I consider it in this manner, it appears to me almost divine in its magnitude.

Gorgias:: If you knew all, Socrates, that it comprehends under itself almost all powers! And I will give you a strong proof of this. For I have often, ere now, gone with my brother and other physicians to various sick persons, who would neither drink their medicine, nor suffer themselves to be cut or cauterized by the physician, and when the physician was unable to persuade them, I have done so by no other art than rhetoric. I say too, that if a rhetorician and a physician should go to any city you please, and it were necessary to contend by argument in a general assembly, or any other convention, which should be chosen, a rhetorician or a physician, the physician would be held in no account, but he that has the power of speaking would be chosen, if he pleased. And if he should contend with any other artist whatever, the rhetorician would persuade that he himself should be chosen in preference to any one else. For there is no subject on which a rhetorician will not speak to the multitude more persuasively than any other artist whatever. Such, then, and so great is the power of this art. It is right however, Socrates, to use rhetoric in the same way as any other exercise employed in contests: for it is not right to use other exercises against all men alike; nor, because any one has learnt pugilism, and the pancratium, and to fight with arms, so as to be superior both to friends and enemies, is it therefore proper to strike, or pierce, or slay one’s friends. Nor, by Jupiter, if some one who, by having frequented the palæstra, has made his body robust, and become a pugilist, should afterwards strike his father or mother, or any other of his relatives or friends, would, it on that account be proper to hate, and expel from cities, the training masters and those who teach how to fight with arms. For they instructed their pupils in these exercises, in order that they might make a proper use of them against enemies, and those that do wrong, for self-defense, and not for attack; but they contrariwise, use their strength and skill improperly. The teachers, therefore, are not wicked, nor is their art either to be blamed, or for this reason wicked, but they, I think, who do not use it properly. The same may be said of rhetoric. For a rhetorician is able to speak against all men, and on every subject; so that he can best persuade the multitude, in a word, on whatever subject he pleases: but he ought not any the more on this account to detract from the reputation of physicians, because he is able to do it, nor of other artificers; but he should use rhetoric justly, as well as other exercises. In my opinion, however, if any one having become a rhetorician abuses this power and art, it is not proper to hate the teacher and expel him from cities, for he imparted the knowledge of it for just purposes, but the other makes a contrary use of it. It is just, therefore, to hate, banish, and slay him who does not make a right use of it, but not the teacher.

Socrates:: I think, Gorgias, that you as well as I, have been present at many discussions, and that you have observed this in them, that it is not easy for men, on whatever subject they undertake to converse, having propounded their ideas to each other, both learning themselves and teaching one another, then to put an end to the conference; but if they have a controversy about any thing, and one says that the other does not speak correctly or clearly, they are indignant, and each thinks that the other is speaking out of envy, from a love of contention, and not seeking what was proposed in the discussion; and some, at length, depart in a most disgraceful manner, having reviled each other, and spoken and heard such things that even the bystanders are vexed at themselves for having deigned to listen to such men. But why do I say this? Because you now appear to me to say what does not follow from, or accord with, what you first said respecting rhetoric. I am afraid, therefore, to proceed with my refutation, lest you should suppose that I do not speak with zeal for the subject, that it may be made clear, but out of opposition to you. If, then, you are of that class of men to which I belong, I should gladly question you: but if not, I would forbear to do so. But to what class of men do I belong? To those who are willingly refuted, if they say any thing that is not true, and who willingly refute if any one says any thing that is not true; and who are not less pleased to be refuted than to refute. For I consider the former to be the greater good, inasmuch as it is a greater good one's-self to be delivered from the greatest evil than to deliver another. For I think no evil so great to man as false opinion on the subjects we, are now discussing. If, then, you say that you are such a man, let us continue our discussion; but if you think we ought to desist, let us give it up, and put an end to the argument.

Gorgias:: But indeed, Socrates, I profess myself to be such a man as you describe. Perhaps, however, it is right to attend to the wishes of the company who are present. For, some time since, before you came, I explained many things to the present company: and now, perhaps, we shall protract it too far if we continue the discussion. We must, therefore, respect their wishes lest we detain any of them, who have something else to do.

Chaerephon:: You yourselves, Gorgias and Socrates, hear the noise these men make, from their anxiety to hear, if you say any thing. For my part, may I never have so much business, as to be obliged to leave such a discussion and so conducted, from having any thing else more important to do.

Callicles:: By the gods, Chærephon, and I too, though I have been present at many conferences, know not whether I have ever been so delighted as now; so that you will gratify me much, should you even be willing to continue the discussion throughout the whole day.

Socrates:: There is no obstacle on my side, Callicles, if only Gorgias is willing.

Gorgias:: After this, Socrates, it would be shameful in me not to be willing, especially as I myself announced that any one might ask what he pleased. But, if it is agreeable to the company, continue the discussion, and ask any question you please.

Socrates:: Hear then, Gorgias, what I wonder at in what you said. For, perhaps, you spoke correctly, and I did not rightly apprehend you. You say that you can make any one a rhetorician, who is willing to be instructed by you?

Gorgias:: Yes.

Socrates:: So that he can speak persuasively on any subject to the multitude, not teaching, but persuading?

Gorgias:: Exactly so.

Socrates:: You said too, that a rhetorician is able to speak more persuasively than a physician, on the subject of health.

Gorgias:: I did say so, at least to a multitude.

Socrates:: Does not, then, this expression “to a multitude” mean to the ignorant? for, surely, among the well-informed he will not be better able to persuade than the physician.

Gorgias:: You say truly.

Socrates:: If then he shall be better able to persuade than the physician, he is better able to persuade than one who possesses knowledge?

Gorgias:: Certainly.

Socrates:: Although he is not a physician? is it not so?

Gorgias:: Yes.

Socrates:: But he who is not a physician must, surely, be unskilled in those things in which a physician is skilled.

Gorgias:: Clearly so.

Socrates:: He, therefore, who is ignorant will be more capable than one who possesses knowledge of persuading the ignorant, since a rhetorician is better able to persuade than a physician. Is this the result, or something else?

Gorgias:: That is the result in this instance.

Socrates:: The case therefore is the same as concerns a rhetorician and rhetoric with respect to all other arts: I mean, there is no need for it to know the subjects themselves, how they are circumstanced, but only to discover some means of persuasion, so as to appear to the ignorant to know more than those who possess knowledge.

Gorgias:: Is it not a great advantage, Socrates, without having other arts, but this one only, to be in no respect inferior to artificers?

Socrates:: Whether from this being the case, a rhetorician is inferior, or not inferior to others, we will presently consider, if our argument requires it. But first let us consider this: Whether a rhetorician is in the same condition with reference to the just and the unjust, the base and the honorable, the good and the evil, as he is with reference to health, and other things with which other arts are concerned; I mean, that he does not know them, what is good, or what is evil, what is honorable or what is base, what is just, or what is unjust, but is able to devise some means of persuasion respecting them, so that, though he is ignorant, he appears to the ignorant to know more than one who possesses knowledge; or is it necessary that he should know these, and is it requisite that he who is about to learn rhetoric should have acquired these things before he comes to you; if not, will you, who are a teacher of rhetoric, teach him who comes to you none of these things for it is not your province, but make him appear to the multitude to know these things, though he does not know them, and to seem to be a good man when he is not so? or shall you be unable to teach him rhetoric at all, unless he knows beforehand the truth respecting these things? What is the case in this respect, Gorgias? And, by Jupiter, as you just now promised, unfold the whole power of rhetoric.

Gorgias:: I think, Socrates, that any one, if he did not know, would learn these things from me.

Socrates:: Stay; for you say well. If then you make any one a rhetorician, it is necessary that he should know what is just and unjust, either before, or afterwards from your instructions.

Gorgias:: Certainly.

Socrates:: What then? Is he who has learnt carpentering, a carpenter, or not?

Gorgias:: He is.

Socrates:: And is not he who has learnt music, a musician?

Gorgias:: Yes.

Socrates:: And he who has learnt medicine, a physician? And so, in the same way, with regard to other things, is not he who has learnt any particular art such a person as each science respectively makes its proficient?

Gorgias:: Certainly.

Socrates:: By the same reason, then, does it not follow, that he who has learnt just things is just?

Gorgias:: Assuredly.

Socrates:: And he who is just surely performs just actions.

Gorgias:: Yes.

Socrates:: Is it not, therefore, necessary that the just man should wish to do just actions?

Gorgias:: It appears so.

Socrates:: The just man, therefore, will never wish to act unjustly.

Gorgias:: Necessarily.

Socrates:: And it follows from the argument that the rhetorician should be just?

Gorgias:: Yes.

Socrates:: A rhetorician, therefore, will never wish to act unjustly?

Gorgias:: It appears not.

Socrates:: Do you remember that you said a little before that we ought not to accuse the trainers of youth, nor expel them from cities, if a pugilist does not make a good use of the pugilistic art, and acts unjustly? And so, likewise, if a rhetorician make an unjust use of rhetoric, that we should not accuse the teacher, nor expel him from the city, but the person who acts unjustly, and does not make a proper use of rhetoric? Were these things said, or not?

Gorgias:: They were said.

Socrates:: But now this very same rhetorician appears incapable of ever acting unjustly. Is it not so?

Gorgias:: It appears so.

Socrates:: And it was said, Gorgias, at the commencement of our discussion, that rhetoric is conversant with words, not those respecting the even and the odd, but those respecting the just and the unjust. Was it not so?

Gorgias:: It was.

Socrates:: When, therefore, you spoke thus, I supposed that rhetoric could never be an unjust thing, since it always discourses concerning justice. But when you said shortly afterwards that a rhetorician might use rhetoric unjustly, then, wondering, and thinking that the two statements did not accord, I made that remark, that if you should think it a gain to be confuted, as I do, it was worth while to continue the discussion, but if not, to give it up. Afterwards, however, when we were investigating the matter, you see yourself that it is again allowed to be impossible for a rhetorician to make an unjust use of rhetoric, and to be willing to act unjustly. How the case really stands, by the dog, Gorgias, requires no little discussion to examine it thoroughly.

Polus:: What then, Socrates? Have you really such an opinion of rhetoric as you now say? or do you not think that Gorgias was ashamed not to acknowledge that the rhetorician knows what is just, beautiful, and good, and that, if any one should come to him ignorant of these things, he himself would teach them? Then perhaps from this admission some inconsistency in his arguments followed; the very thing which you love, yourself leading the way to such questions. For who do you think will deny that he knows what is just, and can teach it to others? To lead the discussion to such matters is a piece of great rusticity.

Socrates:: Most excellent Polus! we get ourselves friends and sons, for this express purpose, that when we, through being advanced in years, fall into error, you that are younger, being with us, may correct our life both in deeds and words. If, then, Gorgias and I have fallen into any error in our arguments, do you who are present correct us: you ought to do so. And I wish that if any of the things that have been granted appear to you to have been improperly granted, you would retract whatever you please, only I beg you beware of one thing.

Polus:: What is that?

Socrates:: That you would restrain that prolixity of speech which at first you attempted to employ.

Polus:: What? shall I not be allowed to speak as much as I please?

Socrates:: You would indeed be very badly treated, my excellent friend, if, having come to Athens, where of all Greece there is the greatest liberty of speech, you alone should here be deprived of this liberty. But set this against it: if you speak in a prolix manner, and will not answer a question put to you, should not I be badly treated, if I am not allowed to go away and not listen to you? But if you feel any interest in the discussion that has taken place, and wish to correct it, as I just now said, retract whatever you please, and questioning and being questioned in turn, as Gorgias and I did, confute and be confuted. For you profess, surely, to know the same things as Gorgias; is it not so?

Polus:: I do.

Socrates:: Will not you, then, also bid any one ask you what question he pleases, as knowing how to answer him.

Polus:: Assuredly.

Socrates:: Then do whichever of these you please, ask or answer.

Polus:: I will do so; and do you answer me, Socrates. Since Gorgias appears to you to be in doubt respecting rhetoric, what do you say it is?

Socrates:: Do you ask me what kind of art I say it is?

Polus:: I do.

Socrates:: To tell you the truth, Polus, it does not appear to me to be an art at all.

Polus:: What, then, does rhetoric appear to you to be?

Socrates:: A thing which you say produced art, in the treatise which I lately read.

Polus:: What do you say this is?

Socrates:: A certain skill.

Polus:: Does rhetoric, then, appear to you to be skill?

Socrates:: To me it does, unless you say otherwise.

Polus:: Of what is it the skill?

Socrates:: Of procuring a certain gratification and pleasure.

Polus:: Does not rhetoric, then, appear to you to be a beautiful thing, since it is able to gratify mankind?

Socrates:: What, Polus? Have you already heard from me what I say it is, that you afterwards ask me, if it does not appear to me to be beautiful?

Polus:: Did I not hear you say that it is a certain skill?

Socrates:: Since, then, you prize giving pleasure, are you willing to give me a little pleasure?

Polus:: I am.

Socrates:: Ask me, then, what kind of art cookery appears to me to be.

Polus:: I do ask you; what kind of an art is cookery?

Socrates:: None at all, Polus.

Polus:: What is it? say.

Socrates:: I say, then, it is a certain skill.

Polus:: Of what? say.

Socrates:: I say, of procuring gratification and pleasure, Polus.

Polus:: Are cookery and rhetoric the same thing?

Socrates:: By no means, but a part of the same study.

Polus:: Of what study are you speaking?

Socrates:: I fear it would be too rude to speak the truth, for I hesitate to speak on account of Gorgias, lest he should think that I ridicule his profession. But I know not whether this is the rhetoric which Gorgias studies: for it was not at all clear from our late discussion what his opinion is. But what I call rhetoric is a part of a certain thing which does not rank among things beautiful.

Gorgias:: Of what thing, Socrates? say, without fear of offending me.

Socrates:: It appears to me, then, Gorgias, to be a certain study, that does not belong to art, but to a soul that is sagacious and manly, and naturally powerful in its intercourse with men. The sum of it I call flattery. Of this study there appears to me to be many other divisions, and one of them is that of cookery; which, indeed, appears to be an art, but, as I maintain, is not an art, but skill and practice. I also call rhetoric a division of this, and personal decoration, and sophistry, these four divisions relating to four particulars. If, therefore, Polus wishes to enquire, let him enquire, for he has not yet heard what division of flattery I assert rhetoric to be: but he did not observe that I had not yet finished my answer, nevertheless he asks me, if

I do not think that it is beautiful. But I shall not answer him, whether I think rhetoric is beautiful or base, till I have first answered what it is. For that would not be right, Polus. If then you wish to enquire, ask me what division of flattery I assert rhetoric to be.

Polus:: I ask, then, and do you answer, what division it is.

Socrates:: Will you understand me when I answer? For rhetoric, in my opinion, is a semblance of a division of the political art.

Polus:: What then? Do you say that it is beautiful, or base?

Socrates:: Base, I say; for I call evil things base: since I must answer you, as now knowing what I mean.

Gorgias:: By Jupiter, Socrates, but I do not myself understand what you mean.

Socrates:: Very likely, Gorgias: for I have not yet spoken clearly. But Polus here is young and hasty.

Gorgias:: But leave him alone; and tell me in what way you say that rhetoric is a semblance of a division of the political art.

Socrates:: I will endeavor to tell you what rhetoric appears to me to be. And if it is not such as I describe it, Polus here will confute me. Do you not call body something, and soul something?

Gorgias:: How not?

Socrates:: Do you not, then, think that there is a certain good habit of each of these?

Gorgias:: I do.

Socrates:: What then? an apparent good habit, which is not really so? for instance, to explain my meaning, many appear to have a good constitution of body, whom no one but a physician, and a teacher in gymnastics, could easily perceive not to have a good constitution.

Gorgias:: You say truly.

Socrates:: I say that there is something of this kind both in the body and in the soul, which causes the body and the soul to appear to be in a good condition, when they are any thing but so.

Gorgias:: Such is the case.

Socrates:: Come now, if I can, I will explain to you more clearly what I mean. As there are two subject matters, I say there are two arts: and that which relates to the soul I call political, but that which relates to the body I am not able to describe to you off-hand by one name; but of the culture of the body, which is one, I say there are two divisions, one gymnastics, the other medicine. But in the political art I lay down legislation, as corresponding to gymnastics, and the judicial to medicine. Now these respectively communicate with each other, as being concerned about the same subject, medicine with gymnastics, and the judicial art with legislation; yet they in some respect differ from each other. These then being four, and always taking the best possible care, the former of the body, and the latter of the soul, flattery perceiving this, I do not say knowing, but sagaciously guessing it, and having divided itself fourfold, and having stealthily put on the garb of each of these divisions, feigns itself to be that which it has put on; and it is not in the least concerned for what is best; but by means of that which is most pleasant, captivates and seduces ignorance, so as to appear to be of great value. Cookery, therefore, puts on the garb of medicine, and pretends that it knows the aliment best for the body. So that if a cook and a physician had to contend before boys, or before men as foolish as boys, which of the two was acquainted with good and bad aliments, the physician or the cook, the physician would die of hunger. This, then, I call flattery; and I say that a thing of this kind is base, Polus, for I say this to you, because it looks to what is agreeable without regard to what is best; and I affirm that it is not an art, but skill, because it has no knowledge of the things which it employs, what they severally are in their nature, so that it is unable to tell the use of each. But I do not call that an art which is a thing without reason. If you are doubtful about these things, I am willing to give you a reason for them. The flattery, then, pertaining to cookery, as I have said, is concealed under medicine; and in the same manner, under gymnastics, personal decoration, which is mischievous, deceitful, ignoble, and illiberal, deceiving by means of gestures and colors, by smoothness and outward appearance; so as to make men put on an adventitious beauty, and neglect that which is their own, and is acquired by gymnastics. That I may not, then, be prolix, I wish to tell you, after the manner of geometricians, for perhaps you can now follow me, that what personal decoration is to gymnastics, that is cookery to medicine: or rather thus, that what personal decoration is to gymnastics, that is sophistry to legislation, and that what cookery is to medicine, that is rhetoric to justice. As I have said, they are thus different in their nature: but as they are proximate to each other, sophists and rhetoricians are confounded with *legislators and judges*, and are employed about the same things, and know not what to make of themselves, nor other men of them. For, if the soul did not preside over the body, but the body over itself, and cookery and medicine were not examined into and distinguished by the soul, but the body itself decided, estimating things by its own gratifications, that tenet of Anaxagoras would prevail extensively, friend Polus, for you surely are acquainted with it, that is, all things would be confounded together, things medicinal, and healthy, and pertaining to cookery, being undistinguished from each other. You have heard, therefore, what I consider rhetoric to be, corresponding to cookery in the soul, as that in the body. Perhaps, however, I have acted absurdly, in that, though I do not allow you to make a long speech, I myself have extended mine to a great length. But I deserve to be pardoned: for when I spoke briefly you did not understand me, nor were you able to make use of the answer that I gave you, but required an explanation. If, therefore, when you answer, I in my turn shall not know what to make of it, do you also prolong your discourse: but, if I do know, suffer me to do so; for that is fair. And now, if you can make any use of this answer, do so.

Polus:: What do you say, then? Does rhetoric appear to you to be flattery?

Socrates:: I said, indeed, that it was a division of flattery. But do not you remember, Polus, though so young? What will you do by and by?

Polus:: Does it seem to you, then, that good rhetoricians are to be esteemed as vile flatterers in cities?

Socrates:: Do you ask this as a question, or are you beginning an argument?

Polus:: I ask a question.

Socrates:: They appear to me to be of no estimation at all.

Polus:: How to be of no estimation? Have they not the greatest power in cities?

Socrates:: Not, if you mean that to have power is a good to him who possesses it.

Polus:: But I do say so.

Socrates:: In that case, rhetoricians appear to me to possess the least power of all men in cities.

Polus:: But what? do they not, like tyrants, slay whomever they please, and deprive of their property, and banish from cities whomever they think fit?

Socrates:: By the dog, Polus, I am doubtful with respect to each of the things you say, whether you assert these things yourself, and declare your own opinion, or ask me.

Polus:: I ask you.

Socrates:: Be it so, my friend. Then you ask me two questions at once.

Polus:: How two?

Socrates:: Did you not just now say, that rhetoricians, like tyrants, slay whomever they please, and deprive them of their property, and banish from cities whomever they think fit?

Polus:: I did.

Socrates:: I say, then, that these are two questions, and I will give you an answer to both. For I affirm, Polus, that rhetoricians and tyrants have very little power in cities, as I just now said: for they do scarcely any thing that they wish, though they do what to them appears to be best.

Polus:: Is not this, then, to possess great power?

Socrates:: It is not, at least as Polus says.

Polus:: I say not? On the contrary, I say it is.

Socrates:: By Jupiter, not you. For you said that to have great power is a good to him who possesses it.

Polus:: And I repeat it.

Socrates:: Do you think, then, it is a good for any one to do what appears to him to be best, when he is void of understanding? And do you call this to possess great power?

Polus:: Not I.

Socrates:: Prove, therefore, that rhetoricians are possessed of understanding, and that rhetoric is an art, and not flattery, if you mean to confute me. But, if you will leave me unconfuted, rhetoricians and tyrants, who do in cities whatever they please, will derive no good from thence. Power is, as you say, good; but to do, without understanding, whatever one pleases, you yourself admit is an evil. Is it not so?

Polus:: I do.

Socrates:: How then can rhetoricians or tyrants have great power in cities, unless Socrates is persuaded by Polus to admit that they do what they wish?

Polus:: What a strange man!

Socrates:: I deny that they do what they wish: but confute me.

Polus:: Did you not just now admit that they do what appears to them to be best?

Socrates:: And I now admit it.

Polus:: They do, therefore, what they wish.

Socrates:: I deny it.

Polus:: But they do what appears best to them?

Socrates:: I grant it.

Polus:: You speak absurdly and monstrously, Socrates.

Socrates:: Do not accuse me, most excellent Polus, that I may address you in your own style; but, if you have any other question to ask me, show that I am deceived; if not, do you answer me.

Polus:: I am willing to answer, in order that I may know what you mean.

Socrates:: Whether, then, do men appear to you to wish the thing that they do from time to time, or that for the sake of which they do the thing that they do? As for instance, do those who drink medicine from physicians appear to you to wish the thing that they do, viz., to drink the medicine, and suffer pain, or do they wish to be well, for the sake of which they drink the medicine?

Polus:: It is clear they wish to be well, for the sake of which they drink the medicine.

Socrates:: In like manner those who sail on the sea, and those who carry on any other commercial business, do not wish the thing that they do from time to time: for who wishes to sail and to encounter danger, and to be harassed with business; but the object for which they sail is to acquire riches; for they sail for the sake of riches.

Polus:: Certainly.

Socrates:: Is it not so then in all cases? whosoever does any thing for the sake of some thing else, does not wish the thing that he does, but that for the sake of which he does it.

Polus:: Yes.

Socrates:: Is there any thing in the world, then, that is not either good or evil, or between these, neither good nor evil?

Polus:: It must needs be so, Socrates.

Socrates:: Do you not admit then, that wisdom, and health, and riches, and other things of the same kind, are good, but their contraries evil?

Polus:: I do.

Socrates:: By the things that are neither good nor evil do you not mean such as sometimes partake of good, sometimes of evil, and sometimes of neither, as to sit, to walk, to run, and to sail, and again, stones, wood, and other things of the same kind? Are not these the things that you mean? Or do you call certain other things neither good nor evil?

Polus:: No, but these.

Socrates:: Whether, therefore, do men, when they do these intermediate things, do them for the sake of the good, or the good for the sake of the intermediate.

Polus:: The intermediate, surely, for the sake of the good.

Socrates:: Pursuing the good, therefore, we both walk when we walk, thinking it better, and, on the contrary, we stand when we stand, for the sake of the same thing, viz., the good. Is it not so?

Polus:: Yes.

Socrates:: Do we not, therefore, if we slay any one, slay, or banish, or deprive him of his possessions, thinking that it is better for us to do so than not?

Polus:: Certainly.

Socrates:: They, therefore, who do these things do them all for the sake of good.

Polus:: I allow it.

Socrates:: Are we not agreed, then, that we do not wish those things which we do for the sake of something else, but that for the sake of which we do them?

Polus:: By all means.

Socrates:: We do not, then, wish simply to slay, or banish from cities, or deprive any one of his possessions; but if these things are useful we wish to do them, but if they are hurtful we do not wish to do them. For we wish, as you admit, things that are good, but we do not wish such as are neither good nor evil, nor such as are evil. Is it not so? Do I seem to you, Polus, to speak the truth, or not? Why do you not answer?

Polus:: You speak the truth.

Socrates:: Since then we are agreed on these things, if any one slays, banishes from a city, or deprives another of his possessions, whether he is a tyrant or a rhetorician, thinking that it is better for him so to do, though it is really worse, he surely does what seems fit to him: is it not so?

Polus:: Yes.

Socrates:: Does he, then, do what he wishes, if these things are really evil? Why do you not answer?

Polus:: He does not appear to me to do what he wishes.

Socrates:: Is it possible, then, that such a man can have great power in the supposed city, if, according to your admission, to have great power is a good?

Polus:: It is not possible.

Socrates:: I spoke truly, then, when I said that it is possible for a man to do what he pleases in a city, and yet not have great power, nor do what he wishes.

Polus:: As if, Socrates, you yourself would not like to be allowed to do what you please in a city, rather than not, and would not be envious when you saw any one either slaying whom he pleased, or taking away his possessions, or putting him in bonds.

Socrates:: Do you mean justly or unjustly?

Polus:: Whichever he should do, is he not in either case to be envied?

Socrates:: Good words, I pray you, Polus.

Polus:: But why?

Socrates:: Because it is not right, either to envy those that are not to be envied, or the wretched; but to pity them.

Polus:: What say you? Does such appear to you to be the case with the men of whom I am speaking?

Socrates:: How can it be otherwise?

Polus:: Does he, then, who slays whom he pleases, slaying him justly, appear to you to be wretched, and an object of pity?

Socrates:: Not at all; nor indeed is he to be envied.

Polus:: Did you not say just now that he was wretched?

Socrates:: I said, my friend, that he is wretched who slays another unjustly, and more than that, to be pitied; but that he who slays another justly is not to be envied.

Polus:: He surely who dies unjustly is to be pitied, and is wretched.

Socrates:: Less so, Polus, than he who slays him; and less than he who dies justly?

Polus:: How so, Socrates?

Socrates:: Thus; because to act unjustly is the greatest of evils.

Polus:: But is this really the greatest of evils? Is it not a greater evil to suffer unjustly?

Socrates:: By no means.

Polus:: Had you, then, rather suffer unjustly than act unjustly?

Socrates:: I should wish neither of these: but if I must necessarily either act unjustly or suffer unjustly, I should choose rather to suffer unjustly than to act unjustly.

Polus:: Would you not, then, consent to be a tyrant?

Socrates:: I would not, if by being a tyrant you mean the same that I do.

Polus:: I mean by it what I just now said, to have the power to do in a city whatever one pleases; to slay and banish, and do every thing according to one’s own pleasure.

Socrates:: My excellent friend, attend to what I say, and confute me if you can. If, when the forum is full, I should take a dagger under my arm, and say to you, Polus, a certain wonderful power and tyranny has just now fallen to my lot: for, if it seems fit to me that any one of these men whom you see ought immediately to die, he shall die; and if it seems fit to me that any one of them ought to have his head broken, he shall immediately have it broken; or if that his garment should be torn to pieces, it shall be torn to pieces: so great is the power I possess in the city. And if, on your disbelieving me, I should show you the dagger, perhaps, on seeing it, you would say: According to this, Socrates, all men may have great power, since any house that you please might be burnt in this way, and even the dock-yards of the Athenians, and the triremes, and all the shipping, as well public as private. But surely this is not to possess great power, to do whatever one pleases: do you think so?

Polus:: Certainly not in this way.

Socrates:: Can you tell me, then, why you blame a power of this kind?

Polus:: I can.

Socrates:: Why then? tell me.

Polus:: Because it must needs be that one who acts thus should be punished.

Socrates:: But is not the being punished an evil?

Polus:: Certainly.

Socrates:: Therefore, my excellent friend, to have great power appears to you to be, when advantage attends one's doing what one pleases, and then it is a good; and this, as it seems, is to have great power; but if not, it is an evil, and to have little power. Let us consider this too. Are we not agreed that it is sometimes better to do the things which we just now spoke of, to slay, to banish men, and deprive them of their property, and sometimes not?

Polus:: Certainly.

Socrates:: This, then, as it seems, is agreed on both by you and me?

Polus:: Yes.

Socrates:: When, then, do you say it is better to do these things? Tell me what limit you establish?

Polus:: Do you, Socrates, answer this question.

Socrates:: I say, then, Polus, since it is more agreeable to you to hear it from me, when any one does these things justly, it is better, but when unjustly, it is worse.

Polus:: Forsooth, it is difficult to confute you, Socrates! but could not even a child convince you that you do not speak the truth?

Socrates:: I should be very much obliged to the child, and equally so to you, if you can confute me, and free me from my extravagances. But be not weary in obliging a man who is your friend, but confute me.

Polus:: However, Socrates, there is no need to confute you by ancient examples. For things that have recently happened are sufficient to confute you, and to prove that many men who have acted unjustly are happy.

Socrates:: What are these?

Polus:: Do you not see, for instance, this Archelaus, son of Perdiccas, ruler of Macedonia?

Socrates:: If not, at all events I hear of him.

Polus:: Does he appear to you to be happy or miserable?

Socrates:: I do not know, Polus: for I have never yet had any intercourse with him.

Polus:: What then? if you had intercourse with him, should you know? And do you not know otherwise, from the circumstances of the case, that he is happy?

Socrates:: By Jupiter, certainly not.

Polus:: It is evident then, Socrates, you will say, that you do not even know whether the great king is happy?

Socrates:: And I should say the truth. For I do not know what his state is with regard to enlightenment and justice.

Polus:: What? Does all happiness consist in this?

Socrates:: In my opinion, Polus. For I say that an honest and good man or woman is happy; but an unjust and wicked one is miserable.

Polus:: This Archelaus, then, is miserable, according to your account?

Socrates:: At least, my friend, if he is unjust.

Polus:: But how can he be other wise than unjust, who had no right to the empire which he now possesses, as he was born of a woman who was the slave of Alcetas, brother of Perdiccas, and according to justice was the slave of Alcetas, and, if he had wished to do what is just, would have served Alcetas as a slave, and would have been happy, according to your account? whereas now he has become wonderfully miserable, since he has committed the greatest injustice. For, first of all, having sent for this his master and uncle, as if he would restore the government which Perdiccas had taken from him, and having entertained and intoxicated both him and his son Alexander, his own cousin, and nearly his equal in age, he forced them into a carriage, and having carried them off by night, had their throats cut and made away with them both. And after he had committed these wrongs, he was not aware that he had become most miserable, and did not repent, but shortly afterwards, he did not wish to become happy by nurturing his legitimate brother, the son of Perdiccas, a child about seven years of age, to whom the government of right belonged, and by restoring it to him; but having thrown him into a well, and suffocated him, he told his mother Cleopatra that he had fallen in in pursuing a goose, and so met with his death. Wherefore since he has committed the greatest wrongs of all in Macedonia, he is the most miserable of all the Macedonians, and not the most happy. And perhaps there are some among the Athenians, beginning with you, who would rather be any other of the Macedonians than Archelaus.

Socrates:: At the beginning of our conference, Polus, I praised you, because you appeared to me to be well instructed in rhetoric, though you had neglected the art of dialectics. And now, what else is this reasoning, by which even a child could confute me, and I, as you suppose, am now confuted by this reasoning of yours, when I said that a man who acts unjustly is not happy? How so, my friend? For I do not grant you any one of the things you assert.

Polus:: Because you are not willing to do so; though it appears to you as I say.

Socrates:: My excellent friend, you attempt to confute me rhetorically, like those who think they confute their adversaries in courts of justice. For there some fancy they confute others when they produce many reputable witnesses in favor of what they say, whereas the adverse party produces some one only, or none at all. But this mode of confutation is worth nothing with reference to truth. For sometimes a man may be borne down by the false testimony of many witnesses who seem to be somewhat. And now, with respect to what you say, almost all the Athenians and strangers will agree with you, and if you wish to produce witnesses against me to prove that I do not speak the truth, there will testify for you, if you wish it, Nicias, son of Niceratus, and his brothers with him, who gave the tripods that stand in a row in the temple of Bacchus; or again, if you wish it, Aristocrates, son of Scellius, who gave that beautiful offering in the temple of

Pythian Apollo; or if you wish it, the whole house of Pericles, or any other family, that you may think proper to choose out of this city. But I, who am but one, do not agree with you. For you do not convince me by arguments, but producing many false witnesses against me, you endeavor to eject me from my substance and the truth. But I, unless I shall be able to adduce you, who are one, as a witness agreeing with what I say, shall think that I have accomplished nothing worthy of mention with respect to the subject of our discussion; nor shall I think that you have done so, unless I, being one, alone testify for you, and you dismiss all those others. This, then, is one mode of refutation, as you and many others think: but there is also another mode, which, on the contrary, I adopt. Let us, therefore, compare them with each other, and consider whether they differ at all from one another. For the matters about which we differ are by no means trifling; but they are indeed such as to know which is most honorable, and not to know most disgraceful, for the sum of them is to know, or to be ignorant, who is happy, and who is not. For instance, in the first place, with respect to the subject of our present discussion, you think it possible that a man may be happy who acts unjustly and is unjust; since you think that Archelaus, though unjust, is happy. Must we not suppose that such is your opinion?

Polus:: Certainly.

Socrates:: But I say it is impossible. On this one point, then, we differ.

Polus:: Be it so.

Socrates:: But will he who acts unjustly be happy if he meet with justice and is punished?

Polus:: By no means, for in that case he would be most miserable.

Socrates:: If, therefore, he who acts unjustly does not meet with the punishment he deserves, according to your account he will be happy.

Polus:: So I say.

Socrates:: But, according to my opinion, Polus, he who acts unjustly, and is unjust, is in everyway miserable; though more miserable if he does not suffer punishment, and does not meet with chastisement for his unjust actions; but less miserable if he suffers punishment, and meets with his just deserts both from gods and men.

Polus:: You attempt, Socrates, to advance strange paradoxes.

Socrates:: Yet I shall endeavor, my friend, to make you say the same things as I do: for I consider you as a friend. Now, then, the things about which we differ are these: and do you also consider. I said in a former part of our discussion, that to commit an injustice is worse than to suffer one.

Polus:: Just so.

Socrates:: But you say it is worse to suffer an injustice.

Polus:: Yes.

Socrates:: And I said that they who act unjustly are miserable, and was confuted by you.

Polus:: You were so, by Jupiter.

Socrates:: At least as you think, Polus.

Polus:: And I probably thought the truth.

Socrates:: But you, on the contrary, said that they who act unjustly are happy, if they do not suffer punishment.

Polus:: Certainly.

Socrates:: But I say that they are most miserable; and that they who suffer punishment are less so. Do you wish to refute this also?

Polus:: But this is more difficult to refute than the former, Socrates.

Socrates:: By no means, Polus, but it is impossible; for truth can never be refuted.

Polus:: How say you? If a man should be detected acting unjustly, as in attempting to compass absolute power, and being detected should be put to the torture, be mutilated, and have his eyes burnt out, and after having himself suffered many other great and various torments, and having moreover seen his children and wife suffer the same, should at last be crucified, or covered with pitch and burnt, will he be more happy, than if, having escaped punishment, he should become a tyrant, and ruling in the city, should pass through life doing whatever he pleases, being envied, and accounted happy, both by citizens and strangers? Do you say that it is impossible to refute these things?

Socrates:: You are now trying to terrify me, noble Polus, and do not refute me; but just now you adduced witnesses. However, remind me of a trifling circumstance; did you say, if a person should attempt unjustly to compass absolute power?

Polus:: I did.

Socrates:: In that case, neither of them will ever be happier than the other, neither he who has unjustly acquired absolute power, nor he who has been punished. For, of two miserable persons, one cannot be happier than the other; but he is more miserable who escapes punishment and acquires absolute power. What is this, Polus? do you laugh? Is this another species of refutation, when any one asserts any thing, to laugh at him, and not refute him?

Polus:: Do you not think you are already refuted, Socrates, when you say such things as no man in the world would assert? for ask any one of these.

Socrates:: Polus, I am not among the number of politicians: and last year, happening to be chosen a senator, since my tribe held the presidency and it was necessary for me to collect the votes, I occasioned laughter, because I did not know how to collect them. Do not, then, require me to collect the votes of those who are present. But if you have no better mode of refutation than this, as I just now said, give the question up to me in my turn, and make trial of that mode of refutation which I think ought to be adopted. For I know how to procure one witness of what I say, that is, the person with whom I am discoursing, but I let alone the multitude; and I know how to take the vote of one person, but I do not even discourse with the multitude. Consider, then, whether you are willing in your turn to give me an opportunity of refuting by answering the questions I shall put to you. For I think, that you and I, and other men, are of opinion, that to commit injustice is worse than to suffer it; and not to be punished, than to be punished.

Polus:: But I, on the contrary, think that neither myself nor any other man is of this opinion. For would you rather suffer injustice than commit it?

Socrates:: Yes, and you, and all other men.

Polus:: Far from it; neither would you, nor I, nor any other man.

Socrates:: Will you not answer, then?

Polus:: By all means. For I am anxious to know what you will say.

Socrates:: Tell me then, that you may know, as if I asked you from the beginning: whether does it appear to you, Polus, worse to commit an injustice or to suffer one?

Polus:: To suffer one, in my opinion.

Socrates:: What then? whether is it more base to commit an injustice or to suffer one? Answer me.

Polus:: To commit an injustice.

Socrates:: Is it not, therefore, worse, since it is more base?

Polus:: By no means.

Socrates:: I understand. You do not think, as it seems, that the beautiful and the good, and the evil and the base, are the same?

Polus:: Certainly not.

Socrates:: But what do you say to this? Beautiful things in general, such as bodies, colors, forms, sounds, and pursuits, do you call them severally beautiful, without reference to any thing else? As, for instance, first of all, with respect to beautiful bodies, do you not say that they are beautiful, on account of their usefulness, in reference to the particular thing for which each is useful, or on account of some pleasure, if in being seen they give delight to the beholders? Have you any thing else besides this to say respecting beauty of body?

Polus:: I have not.

Socrates:: Do you not, then, denominate all other things in the same manner beautiful, such as forms and colors, either on account of some pleasure, or utility, or both?

Polus:: I do.

Socrates:: And is not the case the same as to sounds, and every thing that relates to music?

Polus:: Yes.

Socrates:: And moreover, with respect to laws and pursuits, they surely are beautiful, for no other reason except that they are either useful, or pleasant, or both?

Polus:: So it appears to me.

Socrates:: And is it not the same with the beauty of the sciences?

Polus:: Certainly. And now, Socrates, you define beautifully, in defining the beautiful by pleasure and good.

Socrates:: Must not, therefore, the base be defined by the contrary, by pain and evil?

Polus:: Necessarily so.

Socrates:: When, therefore, of two beautiful things, one is more beautiful than the other, it is more beautiful because it excels in one or both of these, either in pleasure, or utility, or both.

Polus:: Certainly.

Socrates:: And when of two things one is more base than the other, it must be more base because it exceeds in pain or evil: is not this necessarily so?

Polus:: Yes.

Socrates:: Come then; what did we say just now respecting committing injustice and suffering it? Did you not say that to suffer injustice is more evil, but to commit it, more base?

Polus:: I did say so.

Socrates:: Therefore, since it is more base to commit injustice than to suffer it, it must be more base because it is more painful and exceeds in pain, or evil, or both. Is not this also necessary?

Polus:: How can it be otherwise?

Socrates:: First, then, let us consider whether to commit injustice exceeds in pain the suffering it; and whether they who commit injustice feel greater pain than they who suffer it.

Polus:: This is by no means the case, Socrates.

Socrates:: It does not, then, exceed in pain?

Polus:: By no means.

Socrates:: Therefore, if it does not exceed in pain, it will no longer exceed in both.

Polus:: It appears not.

Socrates:: It remains, therefore, that it exceeds in the other.

Polus:: Yes.

Socrates:: In the evil.

Polus:: So it seems.

Socrates:: Since, therefore, to commit injustice exceeds in evil, it must be more evil than to suffer injustice.

Polus:: Evidently so.

Socrates:: Was it not admitted by men in general, and by you to me formerly, that it is more base to commit injustice than to suffer it?

Polus:: Yes.

Socrates:: Now, however, it appears to be worse.

Polus:: So it seems.

Socrates:: Would you, then, rather choose that which is worse and more base, than that which is less so? Do not hesitate to answer, Polus, for you will not be injured by so doing, but answer, giving yourself up generously to the discussion as to a physician; and either admit or deny the question I ask.

Polus:: Then I should not rather choose it, Socrates.

Socrates:: Would any other man in the world?

Polus:: To me it appears not, according to what has been said.

Socrates:: I therefore said truly, that neither you, nor I, nor any other man in the world, would rather choose to commit injustice than to suffer it; for it is worse to do so.

Polus:: So it appears.

Socrates:: You see then, Polus, that my mode of proof when compared with your mode of proof, does not at all resemble it; but all others agree with you, except myself. For my part you alone are sufficient for my purpose, agreeing with me and testifying for me; and I, having asked your opinion only, disregard that of others. Let this then be settled between us. And next, let us proceed to consider that which we doubted about in the second place, viz. whether it is the greatest of evils for one who has committed injustice to be punished, as you thought, or whether it is not a greater evil not to be punished, as I thought. And let us consider it thus: To suffer punishment and to be justly chastised, when one has committed injustice, do you not call the same thing?

Polus:: I do.

Socrates:: Can you say, then, that all just things are not beautiful, so far as they are just? When you have well considered, answer me.

Polus:: It appears to me that they are, Socrates.

Socrates:: Consider this also: When a man does any thing, must there not necessarily be something which is passive to him as an agent?

Polus:: It appears so to me.

Socrates:: And does not the patient suffer what the agent does, and just such a thing as the agent does? I mean in this way: If any one strikes, is it not necessary that something should be struck?

Polus:: It is necessary.

Socrates:: And if the striker strikes hard or swiftly, must not the thing struck be stricken accordingly?

Polus:: Yes.

Socrates:: That which is struck, then, undergoes a passion corresponding to that which the striker does.

Polus:: Certainly.

Socrates:: In like manner, if any one burns, is it not necessary that something should be burnt?

Polus:: How can it be otherwise?

Socrates:: And if he burns vehemently or painfully, that which is burnt must be burnt according as the burner burns?

Polus:: Certainly.

Socrates:: So, if any one cuts any thing, is not the reasoning the same? for something is cut.

Polus:: Yes.

Socrates:: And if the cut is large or deep, or painful, that which is cut is cut with such a cut as the cutter cuts.

Polus:: It appears so.

Socrates:: In a word, then, see if you grant what I just now said respecting every thing, viz., that according as the agent does, so the patient suffers.

Polus:: I do grant it.

Socrates:: These things, then, being agreed on, whether is the being punished, to suffer, or to do something?

Polus:: Necessarily, Socrates, it is to suffer.

Socrates:: Must it not, therefore, be by some agent?

Polus:: Undoubtedly: by him who chastises.

Socrates:: But does not he who chastises rightly, chastise justly?

Polus:: Yes.

Socrates:: Doing what is just, or not?

Polus:: What is just.

Socrates:: Then, does not he who is chastised, when he is deservedly punished, suffer justly?

Polus:: It appears so.

Socrates:: But what is just has been acknowledged to be beautiful.

Polus:: Certainly.

Socrates:: Of these, then, the one does, and the other, he that is chastised, suffers that which is beautiful.

Polus:: Yes.

Socrates:: And if beautiful, then good; for *that which is beautiful* is either pleasant or useful.

Polus:: Necessarily so.

Socrates:: He therefore who is punished suffers that which is good.

Polus:: So it seems.

Socrates:: He is therefore benefited.

Polus:: Yes.

Socrates:: Is it with such a benefit as I suppose? Does he become better as to his soul, since he is chastised justly?

Polus:: That is probable.

Socrates:: He, therefore, who is punished is freed from a vice of the soul.

Polus:: Yes.

Socrates:: Is he not freed, then, from the greatest evil? Consider the matter thus: in the condition of a man's property do you perceive any other evil than poverty?

Polus:: No other than poverty.

Socrates:: Well, in the constitution of the body? would you say that weakness, disease, deformity, and the like, are evils?

Polus:: I should.

Socrates:: Do you not think, too, that there is a certain depravity in the soul?

Polus:: How otherwise?

Socrates:: Do you not then call this injustice, ignorance, cowardice, and the like?

Polus:: Certainly.

Socrates:: Have you not said, then, that of these three, property, body, and soul, there are three corresponding evils, poverty, disease, injustice?

Polus:: Yes.

Socrates:: Then which of these evils is the most base? Is it not injustice, and, in a word, the depravity of the soul?

Polus:: By far.

Socrates:: But, if it is most base, then is it not also the worst?

Polus:: How mean you, Socrates?

Socrates:: Thus. In every case, that which is most base is so because, from what has been before admitted, it occasions the greatest pain, or harm, or both.

Polus:: By all means.

Socrates:: But injustice and the whole depravity of the soul, have been just now admitted by us to be most base.

Polus:: They have been so admitted.

Socrates:: Is it not, therefore, the most troublesome and most base of these *depravities*, because it exceeds either in troublesomeness or hurtfulness, or both?

Polus:: Necessarily so.

Socrates:: Is then the being unjust, intemperate, cowardly, and ignorant, more painful than to be poor and diseased?

Polus:: It does not appear so to me, Socrates, from what has been said.

Socrates:: The depravity of the soul, then, is the most base of all, because it exceeds the others by some extraordinarily great harm and wonderful evil, since, according to your argument, it is not exceeded in painfulness.

Polus:: So it appears.

Socrates:: But, surely, that which exceeds in the greatest harmfulness must be the greatest evil of all?

Polus:: Yes.

Socrates:: Then injustice, intemperance, and the other depravities of the soul, are the greatest evils of all.

Polus:: So it appears.

Socrates:: What art, then, frees from poverty? Is it not that of money-making?

Polus:: Yes.

Socrates:: What, from disease? Is it not the medicinal?

Polus:: Necessarily so.

Socrates:: What, from depravity and injustice? If in this way you cannot readily answer, consider it thus: whither, and to whom, do we take those that are diseased in body?

Polus:: To physicians, Socrates.

Socrates:: Whether those who act unjustly, and are intemperate?

Polus:: Do you mean, to the judges?

Socrates:: Is it not, then, that they may be punished?

Polus:: I grant it.

Socrates:: Do not then those who chastise rightly chastise by employing a certain justice?

Polus:: Clearly.

Socrates:: The art of money-making, therefore, frees from poverty, medicine from disease, and justice from intemperance and injustice.

Polus:: So it appears.

Socrates:: Which of these, therefore, is the most beautiful?

Polus:: Of what are you speaking?

Socrates:: The art of money-making, medicine, and justice.

Polus:: Justice, Socrates, is far superior.

Socrates:: Does it not, then, produce the greatest pleasure, or utility, or both, since it is the most beautiful?

Polus:: Yes.

Socrates:: Is it, then, pleasant to be under the care of a physician? and do they who are under such charge rejoice?

Polus:: It does not appear so to me.

Socrates:: But it is useful. Is it not?

Polus:: Yes.

Socrates:: For they are freed from a great evil; so that it is advantageous to endure pain and be restored to health.

Polus:: How can it be otherwise?

Socrates:: Would the man then, thus be most happy with respect to his body who is under the care of a physician, or who is not diseased at all?

Polus:: Clearly he that is not diseased.

Socrates:: For this is not happiness, as it seems, the being freed from evil; but the never possessing it at all.

Polus:: It is so.

Socrates:: But what? Of two men that have evil, either in body or soul, which is the more miserable, he that is under the care of a physician, and is freed from the evil, or he that is not under the care of a physician, and retains the evil?

Polus:: It appears to me, he that is not under the care of a physician.

Socrates:: And is not punishment the being freed from the greatest evil, depravity?

Polus:: It is.

Socrates:: For justice produces a sound mind, makes men more just, and becomes the medicine of depravity?

Polus:: Yes.

Socrates:: He, then, is most happy who has no vice in his soul, since this is proved to be the greatest of evils.

Polus:: It is evident.

Socrates:: The second, surely, is he who is freed from it.

Polus:: So it seems.

Socrates:: But this is he who is admonished, reproved, and punished.

Polus:: Yes.

Socrates:: He, therefore, lives worst, who is afflicted with injustice, and is not freed from it.

Polus:: It appears so.

Socrates:: Is not, then, he one who, having committed the greatest injustice, and employing the greatest injustice, contrives that he may be neither admonished, nor chastised, nor punished, as you said was the case with Archelaus, and other tyrants, rhetoricians, and powerful men?

Polus:: So it seems.

Socrates:: For these, my excellent friend, have managed much the same as one who being afflicted with the worst diseases should contrive not to have his bodily maladies corrected or subjected to medical treatment, fearing, as if he were a child, to be burnt and cut, because these operations are painful. Does it not appear so to you?

Polus:: It does.

Socrates:: Being ignorant, as it seems, of what health is, and a good habit of the body. Now from what we have just agreed on, Polus, those who flee from punishment appear to do something of this kind; they look to the pain attending it, but are blind to its utility, and are ignorant how much more miserable than an unhealthy body it is to dwell with an unhealthy soul, that is corrupt, unjust, and impious. Whence they do every thing that they may not be punished, nor freed from the greatest evil, procuring for themselves riches and friends, and the power of speaking as persuasively as possible. But if we have agreed on what is true, Polus, do you perceive what consequences result from our discourse? do you wish that we should draw the conclusions from them?

Polus:: I do, unless you think otherwise.

Socrates:: Does it not follow that injustice and to act unjustly is the greatest evil?

Polus:: It appears so.

Socrates:: And to suffer punishment was proved to be a means of freedom from this evil.

Polus:: It appears to be so.

Socrates:: But not to suffer punishment is a continuance of the evil.

Polus:: Yes.

Socrates:: To act unjustly, therefore, is the second of evils in magnitude; but to act unjustly and not to suffer punishment is the greatest and chief of all evils.

Polus:: So it seems.

Socrates:: Was not this the point, my friend, with respect to which we differed, you considering Archelaus happy, for that having committed the greatest injustice he suffers no punishment; but I on the contrary thinking, that whether Archelaus, or any other man whatever, is not punished when he commits injustice, he must needs be far more wretched than all other men, and that he who commits injustice is ever more wretched than he who suffers it, and he that is not punished than he that is. Are not these the things that I said?

Polus:: Yes.

Socrates:: And has it not been demonstrated that they were said truly?

Polus:: It appears so.

Socrates:: Well then, if these things are true, Polus, what is the great utility of rhetoric? For, from what has been now agreed on, every one ought especially to beware of acting unjustly, for that, if he does so act, he will sustain great evil. Is it not so?

Polus:: Certainly.

Socrates:: And if a man has committed injustice, either himself, or any one else for whom he has regard, he ought of his own accord to betake himself thither, where as soon as possible he will be punished, to a judge as to a physician, taking every pains lest the disease of injustice becoming inveterate should render the soul corrupt and incurable; or what must we say, Polus, if our former admissions are to stand? Do not these things necessarily harmonize with the former in this, but in no other way?

Polus:: For what else can we say, Socrates?

Socrates:: For the purpose, then, of excusing injustice, our own, or that of our parents, or friends, or children, or country, when it acts unjustly, rhetoric is of no use to us at all, Polus, unless on the contrary, any one supposes that he ought especially to accuse himself, and afterwards his relatives, and any other of his friends, who may have acted unjustly, and not conceal the crime, but bring it to light, in order that he may be punished, and restored to health; moreover, that he should compel both himself and the others to lay aside fear, and with his eyes shut, and in a manly way, deliver himself up, as to a physician, to be cut and cauterized, pursuing the good and the beautiful, without paying any regard to what is painful; if he has committed a wrong worthy of stripes, delivering himself up to be beaten, if of bonds, to be bound, if of a fine, to pay it, if of exile, to be banished, if of death, to die, being himself the first accuser of himself, and others his relatives, not sparing either himself or them, but employing rhetoric for this very purpose, that, the crimes being exposed, they may be freed from the greatest of evils, injustice. Shall we say thus, Polus, or not?

Polus:: These things appear to me, Socrates, to be absurd; but it must be admitted, they accord with what was before said.

Socrates:: Must not, therefore, either our former conclusions be done away with, or these results necessarily follow?

Polus:: Yes; such is the case.

Socrates:: Contrariwise, if it is requisite to do ill to any one, whether to an enemy, or any other person, provided only that he is not himself injured by his enemy; for this is to be guarded against; but if an enemy injures another, we should endeavor by all possible means, both by actions and words, that he may not be punished, nor brought before a judge: but, if he is brought before him, we should contrive so that our enemy may escape, and not suffer punishment: and if he has robbed us of a great quantity of gold, that he should not restore it, but should retain it and spend it on himself and his associates unjustly and impiously; and if he has committed an injustice worthy of death, we should contrive that he may not die, if possible never, but that he may be immortal in depravity, or if this cannot be, that he may live in this state for as long a period as possible. For such purposes, Polus, rhetoric appears to me to be useful, since to him who does not intend to act unjustly, its utility does not appear to me to be great, if indeed it is of any utility at all, as in the former part of our discussion it appeared in no respect to be.

Callicles:: Tell me, Chærephon, does Socrates say these things seriously, or is he jesting?

Chaerephon:: He appears to me, Callicles, to speak most seriously; but there is nothing like asking him himself.

Callicles:: You are right, by the gods, and I desire to do it. Tell me, Socrates, whether we must say that you are now speaking seriously, or jesting? For, if you are speaking seriously, and if what you say is true, is not our human life altogether subverted, and are not all our actions, as it seems, contrary to what they ought to be?

Socrates:: If there were not a certain passion, Callicles, common to men, to some, one, to others, another, but each of us had a peculiar passion different from others, it would not be easy for one to make known one's own affection to another. I speak thus because I perceive that you and I are now affected in the same manner; for, being two, we each of us love two things: I, Alcibiades, son of Clinias, and philosophy, you, the Demus of the Athenians, and the son of Pyrilampes. Now I continually perceive that you, eloquent as you are, are unable to contradict the objects of your love, in whatever they may say, and in whatever manner they may assert a thing takes place, but you are changed by them upwards and downwards. For, in the assembly, if, when you say any thing, the Athenian people say that it is not so, you, changing your opinion, say what they wish; and you are affected in the same manner towards that beautiful youth, the son of Pyrilampes; for you cannot bring yourself to oppose the wishes and discourses of the objects of your love: so that, if any one, when from time to time you say what you do to please them, should wonder at its absurdity, perhaps you would say to him, if you wished to speak the truth, that unless some one shall cause the objects of your love to desist from such discourses, neither can you desist from saying what you do. Think, therefore, that you need to hear the like from me; and do not wonder that I speak thus, but cause philosophy, my favorite, to desist from speaking so. For, my dear friend, she always says what you now hear from me, and is much less fickle than my other loves. For the son of Clinias, here, says different things at different times; but philosophy always the same. And she says the things that you now wonder at; and you have just heard what she said. Either, therefore, confute her, as to what I just now said, and prove that to act unjustly, and when one has acted unjustly not to suffer punishment, is not the worst of all evils; or, if you suffer this to remain unconfuted, then, by the dog, the deity of the Egyptians, Callicles will not agree with you, but will differ from you, Callicles, through the whole of his life. However, I think, my excellent friend, that it would be better for me that my lyre should be out of tune and discordant, and the choir of which I might be the leader, and that most men should not agree with me, but oppose what I say, rather than that I, being one, should be discordant with and contradict myself.

Callicles:: You seem to me, Socrates, to act the boaster in your discourses, as being in truth a mob-orator: and now you thus declaim, since Polus has met with the same treatment as he objected Gorgias met with from you. For he said that Gorgias, when asked by you, whether if one should come to him, washing to learn rhetoric without being acquainted with justice, Gorgias would teach him, was ashamed, and said that he would teach him, on account of the custom among men, because they would be displeased if any one were to refuse: and that from this admission Gorgias was compelled to contradict himself, and you were delighted with this very circumstance; for which he then ridiculed you, as it appeared to me, very properly. And now he himself has in turn been treated the very same way; I, however, in this particular, do not commend Polus, because he has conceded to you, that to commit injustice is more base than to suffer it. For, from this admission, he being entangled by you in the discussion, has been brought to a check, because he was ashamed to say what he thought. For you in reality, Socrates, while you profess to be in search of truth, lead to such vulgar and popular things as these which are not beautiful by nature, but by law. For these are, for the most part, contrary to each other, nature and law. If any one, therefore, is ashamed, and dares not say what he thinks, he is compelled to contradict himself. And you, having perceived this subtle distinction, deal unfairly in the discussion; for, if any one speaks of any thing according to law, you cunningly ask him about it according to nature, and if he speaks of things according to nature, you ask him about them according to law; as just now in the present discussion, respecting committing injustice and suffering it. when Polus spoke of that which is more base according to nature, you followed up the law *as if it were* according to nature. For, by nature, every thing is more base which is also worse, as to suffer injustice, but by law to commit it. For to submit to injustice is not the condition of a man, but of a slave, to whom it is better to die than to live, since, being injured and disgraced, he is unable to defend himself or any one else for whom he has regard. But I think, those who make the laws are the weak and the many: they, therefore, make laws with a view to themselves and their own advantage, and with the same view they bestow praise and impute blame; and to terrify such men as are stronger, and who are able to acquire more, that they may not acquire more than themselves, they say that it is base and unjust to obtain a superiority, and that to endeavor to acquire more than others is to commit injustice. For they are content, I think, if they, being weaker, have an equal portion. For this reason, therefore, by law it is said to be unjust and base to endeavor to possess more than the many, and they call this committing an injustice. But nature herself, I think, evinces, on the contrary, that it is just that the better should have more than the worse, and the more powerful than the weaker. And it is evident in many instances that it is so, both in other animals, and in whole cities and races of men, that the just is so settled that the superior should rule over the inferior, and possess more than they. For, with what justice did Xerxes make war upon Greece, or his father on the Scythians? or ten thousand other instances which one might adduce? But I think they do these things according to natural justice, and, by Jupiter, according to the law of nature; not, perhaps, according to that law which we have framed, taking the best and strongest amongst us from their youth, like lions, we tame them by incantations and juggleries, telling them that it is right to preserve equality, and that this is the beautiful and the just. But, I think, if there should be a man found with sufficient natural power, having shaken off all these trammels, and broken through, and abandoned, and trampled under foot our written ordinances, and quackeries, and incantations, and laws contrary to nature, he, from being our slave, would rise up and prove himself our master; and then natural justice would shine forth. Pindar, too, appears to me to have declared what I now assert, in the ode in which he says that "law is the king of all, both mortals and immortals; and," he adds, "He with most powerful hand makes use of might, calling it right; and this I infer from the deeds of Hercules, since *he drove away the oxen of Geryon* unbought." He speaks pretty much in this manner; for I do not remember the ode by heart. He says, then, that Hercules drove away the oxen of Geryon, without having either bought them, or received them as a gift, as if this were naturally just, that both oxen, and all other possessions, when the property of the worse and inferior, belong to the better and superior. Such, then, is the truth; and you will know that it is so, if, dismissing philosophy, you betake yourself to greater things. For philosophy, Socrates, is an elegant thing, if one handles it moderately in youth; but if one dwells upon it longer than is becoming, it is the ruin of men. For if a man should have excellent abilities, and should study philosophy beyond the period of youth, he must necessarily become unskilled in all things in which he ought to be skilled, who desires to be a worthy, good, and distinguished man. For such men are unskilled in the laws of the city, and in those arguments which any one must use, who is conversant with the business transactions of men, both privately and publicly: they are likewise altogether unskilled in human pleasures and desires, and, in short, in the manners of men. When, therefore, they engage in any private or public business, they make themselves ridiculous, just as, I think, politicians are ridiculous when they meddle with your disputations and arguments. For that saying of Euripides is verified: "Every one shines in this, and to this applies himself, consuming the greater part of the day in whatever he most excels." But that wherein a man is weak he avoids, and abuses it, and praises the other through self-love, thinking thereby to praise himself: but I think the most correct way is to partake of both. Of philosophy, indeed, so far as is requisite for education, it is well to partake, nor is it any disgrace for one who is young to study philosophy: but when a man who has reached an advanced age, still studies philosophy, Socrates, the thing becomes ridiculous; and I have very much the same feeling towards those who study philosophy, as to those who stammer and sport. For when I see a child whom it still becomes to talk thus stammering and sporting, I am delighted, and his conduct appears to me to be graceful and liberal, and suited to the age of a child. But when I hear a little boy talking with precision, it seems a disagreeable thing to me, and offends my ears, and appears to be somewhat servile. When, however, one hears a man stammering, or sees him sporting, it appears to be ridiculous, unmanly, and worthy of stripes. Now I have this same feeling towards those who study philosophy. For, when I see philosophy in a young man, I am delighted, and it appears to me becoming, and I consider such a man to be of a liberal mind, but if he does not study philosophy, I consider him illiberal, and one who will never think himself worthy of any noble or generous action. When, however, I see a man advanced in years still studying philosophy, and not having abandoned it, such a man, Socrates, appears to me to be deserving of stripes. For, as I just now said, such a man, even though he has excellent abilities, must needs become unmanly, by avoiding the public places of the city, and the forum, in which, as the poet says, men acquire celebrity, and by concealing himself from the public view, he passes the remainder of his life with three or four boys, whispering in a corner, but never utters any thing liberal, great, and becoming. But I, Socrates, am very friendly disposed towards you; and I seem to have the same feeling as Zethus towards Amphion in Euripides, whom I just now mentioned; for it occurs to me to say to you the same that he said to his brother: that you neglect, Socrates, what you ought to attend to, and strive to adorn the nature of a soul thus generous by a certain juvenile form; nor in deliberations of justice are you able to advance an argument correctly, nor lay hold of what is probable and persuasive, nor can you suggest vigorous advice for others. However, my dear Socrates, and do not be angry with me, for I speak out of good-will to you, does it not appear to you to be base to be in the state in which I think you are, and others who continually make too great advances in philosophy? For now, if any one should arrest you, or any other of the same character, and should take you to prison, asserting that you had acted unjustly, when you had not, you are aware you would not know what to do for yourself; but you would lose your head and gape, and not have any thing to say; and when you went into a court of justice, having met with a very vile and despicable accuser, you would die, if he chose to charge you capitally. And indeed, Socrates, how can this be wise, if any art meeting with a man of good natural ability renders him worse, and neither able to assist himself, nor preserve either himself or any one else from the greatest dangers, but suffers him to be plundered of all his substance by enemies, and to live in the city utterly without honor? Such a man, if I may speak somewhat rudely, one may slap on the face with impunity. But, my friend, be persuaded by me, and give up confuting, cultivate harmony of conduct, and employ yourself in what will give you a reputation for wisdom, leaving to others these graceful subtleties, whether it is proper to call them frivolities, or fooleries, “by which you will come to dwell in an empty house and emulate, not men who are able to confute these trifling things, but those who have wealth, renown, and many other goods.

Socrates:: If I happened to have a golden soul, Callicles, do you not think I should gladly find one of the best of those stones by which they test gold, to which applying it, if it should allow that my soul was well cultivated, I should then know for a certainty that I was in a good state, and that I had no further need of any other test?

Callicles:: Why do you ask this, Socrates?

Socrates:: I will now tell you. I think that in meeting with you, I have met with this good fortune.

Callicles:: Why so?

Socrates:: I well know, that if you agree with me in those things which my soul entertains, such things are the very truth. For I perceive that he who intends to examine sufficiently respecting his soul whether it lives uprightly or not, ought to possess three qualities, all which you do possess, viz., science, benevolence, and freedom of speech. For I meet with many who are not able to test me, through not being wise as you are; but others are wise, indeed, but are not willing to speak the truth to me, because they are not concerned about me as you are. Thus these two strangers, Gorgias and Polus, are indeed wise, and my friends, but they are deficient in freedom of speech, and are more bashful than is proper. For how should it be otherwise? since they have reached such a pitch of bashfulness that through shamefacedness each of them dares to contradict himself before many persons, and this on the most important subjects. You however possess all these qualities, which the others have not. For you are both well instructed, as many of the Athenians will affirm, and are well-disposed towards me. What proof do I use? I know, Callicles, that you four have studied wisdom together, you, Tisander the Aphidnsean, Andron son of Androtion, and Nausicydes the Cholargean; and I once heard you deliberating how far wisdom ought to be cultivated, and I know that this opinion prevailed among you, that you should not endeavor to study philosophy with great accuracy; but you advised each other to be cautious, lest, by becoming more wise than is proper, you should destroy yourselves without perceiving it. Since, then, I hear you giving me the very same advice that you gave to your most intimate friends, it is to me a sufficient proof that you are really well-disposed towards me. Moreover, that you are able to speak boldly and not be ashamed, both yourself say, and the speech which you just now made, evinces. The case is evidently this, with reference to our present discussion; if you shall agree with me in any thing, in our argument, that point will have been sufficiently examined by you and me, and it will be no longer necessary to put it to another test. For you would never have assented to it, either through deficiency of wisdom, or excess of bashfulness. Nor, again, would you have assented in order to deceive me: for you are my friend, as you have yourself said. In reality, therefore, your and my assent will have reached the perfect truth. But the most beautiful consideration of all, Callicles, with respect to the things about which you have reproved me, is that, viz., what kind of person a man ought to be, what he ought to study, and how far, both when he is advanced in life and when he is young. For, with respect to myself, if I do any thing in my life not rightly, be assured that I do not err willingly, but through my own ignorance. Do you, therefore, as you have begun to advise me, not desist, but show me clearly what it is that I ought to study, and in what way I may accomplish it. And if you find me now assenting to you, but in time to come not doing the things to which I have assented, then consider me as utterly stupid, and thenceforth give me no more advice, as being a man altogether worthless. But repeat it to me again from the beginning, how say you and Pindar is the case with natural justice? is it that the superior should take by force from the inferior, and that the better should rule over the worse, and that the more excellent should have more than the depraved? Do you say that the just is any thing else than this? or do I remember rightly?

Callicles:: These things I said then, and I say now.

Socrates:: But do you call the same person better and superior? For I was not able at the time to understand you, what you meant: whether do you call the stronger superior, and must the weaker submit to the stronger; as you seemed to me to intimate when you said, that great cities attack little ones by natural justice, because they are superior and stronger; as if the superior, the stronger, and the better, were the same; or is it possible to be better, and at the same time inferior and weaker, and to be superior, but more depraved? or is there the same definition of the better and the superior? Define this clearly for me, are the superior, the better, and the stronger, the same, or different?

Callicles:: Then I tell you clearly, that they are the same.

Socrates:: Are not, then, the many by nature superior to one? since they establish laws for the one, as you just now said?

Callicles:: How can it be otherwise?

Socrates:: The laws, then, of the many are those of such as are superior?

Callicles:: Certainly.

Socrates:: Therefore, of the better? For, according to your account, the superior are far better.

Callicles:: Yes.

Socrates:: Are not, then, their laws by nature beautiful, since they are superior?

Callicles:: I admit it.

Socrates:: Now do not the many think thus, as you just now said, that it is just to possess the equal, and that it is more base to injure than to be injured? Is this so, or not? And take care that you are not detected here in being shamefaced. Do the many think or not that to possess the equal, but not more, is just? and that it is more base to injure than to be injured? Do not refuse me an answer to this, Callicles, in order that, if you agree with me, I may be confirmed in my opinion by you, seeing that a man competent to decide has agreed with me.

Callicles:: The many, then, do think thus.

Socrates:: Not therefore by law only, but by nature also, it is more base to injure than to be injured, and just to possess the equal. So that you appear not to have spoken the truth before, nor to accuse me rightly, in saying that law and nature are contrary to each other, and that I, knowing this, deal unfairly in the discussion, if any one speaks according to nature, by leading him to law, and if any one speaks according to law, by leading him to nature.

Callicles:: This man will not cease trifling. Tell me, Socrates, are you not ashamed, at your age, to catch at words, and, if any one makes a mistake in an expression to consider it an unexpected gain? For, do you think that by the superior I mean any thing else than the better? Did I not tell you long since, that I consider the better and the superior to be the same? Do you suppose I mean, that if a crowd of slaves, and all sorts of men of no worth, except perhaps for bodily strength, should meet together, that what they should say would be legal institutions?

Socrates:: Be it so, most wise Callicles: is that your meaning?

Callicles:: Certainly.

Socrates:: But I, Sir, long since suspected that you meant some such thing by the superior; and therefore I repeat the question, desiring to understand clearly what you do mean; for you surely do not think that two are better than one nor that your slaves are better than you because they are stronger than you. Tell me then from the beginning whom you mean by the better, since you do not mean the stronger. And, my admirable friend, teach me in the outset in a milder manner, that I may not leave you.

Callicles:: You are bantering, Socrates.

Socrates:: By Zethus, no, Callicles, in whose name you just now bantered me a good deal. But come, tell me who do you mean are the better?

Callicles:: I mean the more excellent.

Socrates:: You see, then, that you yourself speak words, but explain nothing. Will you not tell me whether by the better and superior you mean the more wise, or some others?

Callicles:: But, by Jupiter, I mean these, certainly.

Socrates:: Often, therefore, according to your account, one wise man is superior to ten thousand that are not wise; and it is right that he should govern, and they be governed, and that the governor should have more than the governed. For you appear to me to wish to say this and I do not catch at expressions, if one man is superior to ten thousand.

Callicles:: That is what I mean. For I think this is just by nature, that the better and the more wise should both govern and have more than the worthless.

Socrates:: Stop there. What then do you now say? If we were in the same place, as we now are, many men together, and had, in common, abundance of meat and drink, and were men of various descriptions, some strong, others weak, and one of us being a physician should happen to be more wise respecting these things, and should be as is likely stronger than some, and weaker than others, will it not follow that this man who is wiser than we are, will be better and superior with respect to these things?

Callicles:: Certainly.

Socrates:: Should he, therefore, have more of these meats than we, because he is better? Or, because he is chief, ought he not to distribute the whole, but, in consuming and using them for his own body, not take more than others, under pain of injury to himself, but should have more than some, and less than others; and if he should happen to be the weakest of all, though the best, he must have least of all, Callicles? Is it not so, my friend?

Callicles:: You speak of meats and drinks, and physicians, and such trifles; but I do not speak of these.

Socrates:: Whether, then, do you say that the more wise is better? Grant or deny.

Callicles:: I do.

Socrates:: And do you not say that the better ought to have more?

Callicles:: Not of meats and drinks.

Socrates:: I understand. But perhaps of clothes, and the most skilful weaver should have the largest garment, and go about most abundantly and beautifully clad.

Callicles:: What garments do you mean?

Socrates:: And with respect to shoes, it is clear that he who is more skilled and best, should have more than others; the shoemaker, perhaps, ought to walk about with the largest and greatest number of shoes.

Callicles:: What shoes? Are you still trifling?

Socrates:: But if you do not mean such things, perhaps you do the following: for instance, that a husbandman, wise and skilled in the cultivation of land, should perhaps have more seeds than others, and use as much as possible on his own land.

Callicles:: How constantly you repeat the same things, Socrates.

Socrates:: Not only so, Callicles, but on the same subject.

Callicles:: By the gods, you never cease talking about shoemakers, fullers, cooks, and physicians, as if our discourse were about them.

Socrates:: Will you not tell me, then, with respect to what things a person should be superior and more wise, who having more than others, justly has more? Will you neither permit; me to suggest, nor say yourself?

Callicles:: But I have said some time since. First, by the superior I do not mean shoemakers, or cooks, but those who are skilled in the affairs of a city, in what way they can be well administered, and not only skilled, but also brave, able to accomplish what they have conceived, and who do not fail through effeminacy of soul.

Socrates:: Do you see, most excellent Callicles, that you do not make the same objection to me that I do to you? For you allege that I always say the same things, and blame me for it; and I, on the contrary, complain of you, that you never say the same things on the same subjects; but at one time you defined the better and the superior to be the stronger, and at another time the more wise: and now again you come with something else; and certain persons that are braver are said by you to be the superior and better. But, my friend, tell me once for all, whom you call the better and superior, and in reference to what.

Callicles:: I have already said that they are such as are wise and brave, with respect to the affairs of a city. For it belongs to them to govern cities, and it is just that they should have more than others, the governors than the governed.

Socrates:: But what? my friend, as governing themselves, or being governed?

Callicles:: What mean you?

Socrates:: I mean that each person governs himself. Is there no occasion for this, that a man should govern himself, but only others?

Callicles:: What do you mean by governing himself?

Socrates:: Nothing uncommon; but as men frequently say, that a man is temperate, and master of himself, controlling the pleasures and desires that are within himself.

Callicles:: How ridiculous you are! By the temperate you mean the foolish.

Socrates:: How otherwise? There is no one but would know that that is my meaning.

Callicles:: Most assuredly, Socrates; since how can a man be happy who is a slave to any one? But this it is which is beautiful, and just according to nature, and which I now freely tell you, namely, that a man who lives rightly should suffer his desires to be as great as possible, and should not restrain them; but should be able, when they are at their height, to minister to them by his courage and prudence, and satisfy each desire as it springs up. This, however, I think, is not possible for the generality of men; wherefore they blame such persons through shame, to conceal their own impotency, and say that intemperance is base; as I said before, enslaving men of a better nature, and themselves not being able to satisfy their own pleasures, they praise temperance and justice, on account of their own effeminacy. For to those whom it has befallen from the first either to be the sons of kings, or who are able by nature to procure for themselves a government, or tyranny, or dynasty, what can be more disgraceful and base than temperance? who, when it is in their power to enjoy the good things of this life, and no one hinders them, impose a master on themselves, the law, discourse, and censure of the multitude? Or how should they be otherwise than miserable through the beauty of justice and temperance, while they impart no more to their friends than to their enemies, and this though they have supreme power in their own city? Thus, then, it stands with the truth, Socrates, which you say you are in search of: luxury, intemperance, and liberty, if they have the proper aids, these are virtue and felicity; but all those other fine things, those compacts contrary to nature, are extravagancies of men, and of no value.

Socrates:: Not at all ignobly, Callicles, have you expressed your opinions, speaking freely; for you now plainly say what others think, indeed, but are unwilling to say. I beg of you, therefore, on no account to relax, in order that it may really become evident how we ought to live. Come tell me: do you say that our desires ought not to be checked, if one intends to be such as one ought, and that, suffering them to be as great as possible, one ought to provide for their satisfaction from every possible source, and that this constitutes virtue?

Callicles:: I do say so.

Socrates:: They, therefore, who need nothing, are not rightly said to be happy.

Callicles:: For thus stones and the dead would be most happy.

Socrates:: But, indeed, even as you say, life is grievous. For in truth I should not wonder if Euripides speaks the truth when he says: “Who knows whether to live is not death, and to die, life?” And we, perhaps, are really dead; as I have heard from one of the wise, that we are now dead, and that the body is our sepulcher, and that the part of the soul in which the desires are is of such a nature that it can be persuaded different ways, and change upwards and downwards; and this, some skilful man, perhaps a Sicilian, or Italian, turning into a fable, by a slight change of the word, called a cask, from its being credulous and easily persuaded, but the foolish he called uninitiated. He further compared that part of the soul of the uninitiated in which the desires are, namely, its intemperate and unclosed part, to a pierced cask, on account of its insatiable greediness. This man, too, quite contrary to you, Callicles, shows that of those in Hades meaning thereby the invisible world the most miserable must be the uninitiated, and that they carry water to a perforated cask by a similarly perforated sieve. The sieve, as he who spoke to me said, is the soul. But he likened the soul of the foolish to a sieve, as being perforated and not able to retain any thing, through incredulity and forgetfulness. This probably is somewhat absurd, nevertheless it shows that by proof of which I wish, if by any means I can, to persuade you to change your opinion, and to prefer to an insatiable and intemperate life one that is well regulated, and that is satisfied and contented with the things that are from time to time present. But do I persuade you at all, and do you change your opinion, and admit that the moderate are more happy than the intemperate? or have I produced no impression, and though I tell you many such fables, will you not be any the more disposed to change your opinion?

Callicles:: In this you have spoken more truly, Socrates.

Socrates:: Come, then, I will mention to you another similitude from the same school as the preceding. For consider whether you would speak thus of each kind of life, the temperate and the intemperate, as if two men had each many casks; and that those of one were sound and full, one of wine, another of honey, a third of milk, and many others of other things; that the fountains of each were rare and difficult to be obtained, and could only be procured by many and severe toils; the one, then, having filled his casks, pours no more into them, nor is at all concerned about them, but on this score is at ease; that the fountains of the other, as of the former one, are possible to be procured, though with difficulty, that his vessels are perforated arid defective, and he compelled, both night and day, to fill them, or suffer the most extreme pain. When such is the life of each, do you say that of the intemperate is more happy than that of the moderate man? Do I persuade you at all, by relating these things, to grant that a moderate life is better than an intemperate one, or do I not persuade you?

Callicles:: You do not persuade me, Socrates. For he that has filled his casks has no longer any pleasure: but this is, what I just now mentioned, to live like a stone, when he has filled them, neither rejoicing any more nor grieving: but a pleasant life consists in as much flowing in as possible.

Socrates:: Is it not, therefore, necessary, if much flows in, that much also should go out, and that there should be certain large holes for its flowing out?

Callicles:: Certainly.

Socrates:: You speak now of the life of a sea-lark, and not of a corpse, or a stone. But tell me, do you mean such a thing as being hungry, and, when hungry, eating?

Callicles:: I do.

Socrates:: And of being thirsty, and, when thirsty, drinking?

Callicles:: I do mean that, and that he who has all other desires, and, having the power to do so, satisfies them, lives a joyful and happy life.

Socrates:: Well done, my excellent friend! Proceed as you have begun, and take care not to be ashamed. But it is right, too, as it seems, that neither should I be ashamed. And first of all, tell me if, when a man, who is scabby and itches, is able to scratch himself without stint, and passes his life in scratching himself, this is to live happily?

Callicles:: How absurd you are, Socrates, and a mere babbler.

Socrates:: Hence it is, Callicles, that I have astonished Polus and Gorgias, and made them ashamed. You, however, will not be astonished nor ashamed, for you are courageous: but only answer me.

Callicles:: I say, then, that he who scratches himself lives pleasantly.

Socrates:: Therefore, if pleasantly, also happily?

Callicles:: Certainly.

Socrates:: Will this be the case if he only itches in his head, or must I ask you still further? Consider, Callicles, what answer you would give, if any one asks you respecting all the parts of the body in succession. And to take that which is the chief of all, is not the life of catamites dreadful, base, and wretched? Will you dare to call them happy, if they have what they desire, without stint?

Callicles:: Are you not ashamed, Socrates, to lead the discussion to such subjects?

Socrates:: Do I lead it hither, noble Sir, or does he who asserts thus broadly, that such as rejoice, in whatever way they rejoice, are happy, and does not distinguish between pleasures, what are good and what are bad? But tell me further still, whether do you say that the pleasant and the good are the same: or that there is something pleasant which is not good?

Callicles:: In order that my argument may not contradict itself, if I should say they are different, I say that they are the same.

Socrates:: You subvert your former statements, Callicles, and no longer search for the truth with me properly, if you speak contrary to your real opinion.

Callicles:: And you do the same, Socrates.

Socrates:: Neither, then, do I act rightly, if I do so, nor do you. But, good Sir, consider whether to rejoice in any way be not good. For it is clear that many base consequences, which were just now hinted at, will follow, if this should be the case, and many others besides.

Callicles:: As you think, at least, Socrates.

Socrates:: Do you in reality, Callicles, persist in your assertion?

Callicles:: I do.

Socrates:: Shall we then enter on the discussion, as if you were in earnest?

Callicles:: Most certainly.

Socrates:: Come, then, since you are of that opinion, explain this to me. Do you call science any thing?

Callicles:: I do.

Socrates:: And did you not just now say, that there is a certain courage joined with Science?

Callicles:: I did say so.

Socrates:: Did you speak of these two, as if courage was different from science?

Callicles:: Certainly.

Socrates:: But what? Are pleasure and science the same, or different?

Callicles:: Different, surely, most wise friend.

Socrates:: Is courage also different from pleasure?

Callicles:: Undoubtedly.

Socrates:: Come, then, let us retain these things in our memory; that Callicles of Acharne said that the pleasant and the good are the same; but that science and courage are different both from each other and the good.

Callicles:: But Socrates of Alopecia does not agree to this; does he agree?

Socrates:: He does not agree: and I think neither will Callicles when he has rightly examined himself. For tell me, do you not think that those who fare well are affected in a manner quite contrary to those who fare ill?

Callicles:: I do.

Socrates:: If these, therefore, are contrary to each other, is it not necessary that the case should be the same with them as it is with health and disease? For, surely, a man is not at the same time well and diseased, nor at the same time separated from health and disease.

Callicles:: How say you?

Socrates:: For instance, take any part of the body you please, and consider. Has not a man sometimes a disease in the eyes, which is called ophthalmia?

Callicles:: Undoubtedly.

Socrates:: And his eyes, surely, are not at the same time well?

Callicles:: Certainly not.

Socrates:: But what? When he is freed from the ophthalmia, does he then also lose the health of his eyes, and, in a word, is he at the same time freed from both?

Callicles:: By no means.

Socrates:: For that, I think, would be wonderful and absurd. Would it not?

Callicles:: Assuredly.

Socrates:: But I think he, alternately, receives one, and loses the other.

Callicles:: I admit it.

Socrates:: And will it not be the same with regard to strength and weakness?

Callicles:: Yes.

Socrates:: And swiftness and slowness?

Callicles:: Certainly.

Socrates:: And with respect to things good and happiness, and their contraries, things evil and wretchedness, does he receive and part from each of these alternately?

Callicles:: Most assuredly.

Socrates:: If, therefore, we should find certain things which a man at the same time parts from and possesses, it is clear that these would not be both good and evil. Do we agree to this? Consider well and answer me.

Callicles:: I agree entirely.

Socrates:: Let us then recur to what was before agreed on. Did you say that to be hungry is pleasant, or painful? I mean the very fact of being hungry.

Callicles:: I said it was painful: though to eat when hungry is pleasant.

Socrates:: I understand you: but to be hungry of itself is painful; is it not so?

Callicles:: I admit it.

Socrates:: And also to be thirsty?

Callicles:: Assuredly.

Socrates:: Whether, then, shall I ask you any more questions? Or do you allow that all want and desire is painful?

Callicles:: I allow it; so do not ask.

Socrates:: Be it so. And do you not say that for a man to drink when he is thirsty is pleasant?

Callicles:: I do.

Socrates:: In the instance then of which you are speaking, to be thirsty is, doubtless, painful?

Callicles:: Yes.

Socrates:: But to drink is the satisfying of a want, and a pleasure?

Callicles:: Yes.

Socrates:: Therefore as to drinking you say that the man rejoices?

Callicles:: Certainly.

Socrates:: But as to being thirsty?

Callicles:: I say—

Socrates:: That he suffers pain?

Callicles:: Yes.

Socrates:: Do you perceive then what follows? that you say he who is in pain at the same time rejoices, when you say that he who is thirsty drinks. And does not this happen at the same place and time, with respect either to the soul or body, whichever you please? For I think there is no difference. Is this so, or not?

Callicles:: It is.

Socrates:: You admitted, however, that it was impossible for one who fares well at the same time to fare ill.

Callicles:: I allow it.

Socrates:: But you have granted that it is possible for one who is in pain to rejoice.

Callicles:: It appears so.

Socrates:: To rejoice, therefore, is not to fare well, nor to be in pain, ill: so that the pleasant is different from the good?

Callicles:: I know not what subtleties you are using, Socrates.

Socrates:: You know, though you pretend not, Callicles.

Callicles:: Proceed still further, trifling as you are, that you may know how wise you are who take upon yourself to admonish me.

Socrates:: Does not each of us at the same time cease to be thirsty, and to receive pleasure from drinking?

Callicles:: I do not know what you mean.

Gorgias:: Say not so, Callicles; but answer for our sakes, that the discussion may be brought to a conclusion.

Callicles:: But this is always the way with Socrates, Gorgias, he asks trifling questions, and things that are of no consequence, and then refutes them.

Gorgias:: But what difference does that make to you? That is no concern at all of yours: but suffer Socrates to argue in whatever way he pleases.

Callicles:: Ask, then, these trifling and petty questions, since Gorgias thinks proper.

Socrates:: You are happy, Callicles, in that you have been initiated in the great mysteries before you were in the small: but I thought that was not allowed. Answer me, then, from the point where you left off, does not each of us at the same time cease to be thirsty, and to receive pleasure?

Callicles:: I admit it.

Socrates:: And does not one cease to be hungry and to feel other desires and pleasures at the same time?

Callicles:: Such is the case.

Socrates:: Does one not, then, at the same time cease to feel both pains and pleasures?

Callicles:: Yes.

Socrates:: However one does not at the same time cease to experience good and evil, as you admitted; but now do you not admit it?

Callicles:: I do. But what then?

Socrates:: It follows, my friend, that good things are not the same with such as are pleasant, nor evil things with such as are painful. For, from these one ceases at the same time, but not from those, because they are different. How, therefore, can pleasant things be the same with such as are good, or painful things with such as are evil? But, if you please, consider it in this way: for I think that you are not even thus agreed with yourself. Consider then. Do you not call the good good, from the presence of good things, just as you call those beautiful to whom beauty is present?

Callicles:: I do.

Socrates:: But what? Do you call foolish men and cowards good men? For you did not just now; but you said the brave and prudent were so. Do you not call these good?

Callicles:: Certainly.

Socrates:: But what? Have you ever seen a boy without understanding, rejoicing?

Callicles:: I have.

Socrates:: And have you not also seen a man without understanding, rejoicing?

Callicles:: I think I have. But to what purpose is this?

Socrates:: Nothing: answer however.

Callicles:: I have seen it.

Socrates:: But what? have you seen a man endued with intellect grieving and rejoicing?

Callicles:: I have.

Socrates:: But which rejoice and grieve the more; the wise, or the foolish?

Callicles:: I think there is not much difference.

Socrates:: That is enough. In war have you ever seen a coward?

Callicles:: Most assuredly.

Socrates:: What then? On the departure of the enemy which appeared to you to rejoice the more, the cowards or the brave?

Callicles:: Both appeared to me to rejoice more: or, if not, in nearly the same degree.

Socrates:: It is of no consequence. Cowards, then, also rejoice?

Callicles:: Very much so.

Socrates:: And the foolish, as it seems?

Callicles:: Yes.

Socrates:: But, when the enemy approaches, do cowards only grieve? or do the brave also?

Callicles:: Both.

Socrates:: In an equal degree?

Callicles:: Cowards perhaps more.

Socrates:: But, when the enemy departs, do they not rejoice more?

Callicles:: Perhaps so.

Socrates:: Do not, therefore, as you say, the foolish and the wise, cowards and the brave, similarly grieve and rejoice, much in the same degree, but cowards more than the brave?

Callicles:: I admit it.

Socrates:: The wise however and the brave are good, but cowards and the foolish bad?

Callicles:: Yes.

Socrates:: The good and the bad, therefore, rejoice and grieve equally?

Callicles:: I admit it.

Socrates:: Are, then, the good and the bad, good and bad in an equal degree? or are the bad yet more good and bad?

Callicles:: By Jupiter, I do not know what you mean.

Socrates:: Do you not know that you said the good are good, through the presence of good things, and the bad through the presence of evil things? And that pleasures are good things, and pains evil?

Callicles:: I did.

Socrates:: Are not, therefore, good things, viz., pleasures, present with those that rejoice, if they do rejoice?

Callicles:: Undoubtedly.

Socrates:: And since good things are present are not they who rejoice good?

Callicles:: Yes.

Socrates:: But what? Are not evil things, viz., pains, present with those that suffer pain?

Callicles:: They are present.

Socrates:: But do you not say that the bad are bad, through the presence of evil things? Or do you say so no longer?

Callicles:: I do.

Socrates:: Those, therefore, that rejoice, are good; but those that suffer pain are bad?

Callicles:: Certainly.

Socrates:: And those that are more so, more, but those that are less so, less? and those that are equally so, equally?

Callicles:: Yes.

Socrates:: Do you not say, then, that the wise and the foolish, cowards and the brave, rejoice and grieve in an equal degree, or cowards even more?

Callicles:: I do.

Socrates:: Now in common with me, draw the inferences that result from these admissions. For, they say, it is beautiful to repeat and consider beautiful things twice, and even thrice. We say, that the prudent and brave man is good; do we not?

Callicles:: Yes.

Socrates:: But that the foolish man and a coward is bad?

Callicles:: Certainly.

Socrates:: Again, that he who rejoices is good?

Callicles:: Yes.

Socrates:: And that he who suffers pain is bad?

Callicles:: Necessarily so.

Socrates:: And that the good and the bad suffer pain and rejoice equally, but perhaps the bad more?

Callicles:: Yes.

Socrates:: Therefore, the bad man becomes equally bad and good, with the good man, or even more good? Do not these results follow, as well as the former ones, if one says that the pleasant and the good are the same? Are not these consequences necessary, Callicles?

Callicles:: I have been long listening to you, Socrates, and making concessions, considering with myself that if any one grants you any thing, even in jest, you seize it eagerly as boys do. And can you suppose that I or any other person in the world does not believe that some pleasures are better, and others worse?

Socrates:: Ho, Ho! Callicles, how cunning you are! You treat me as a child, now asserting that these things are in this manner, and now in another manner; trying to deceive me. Though, at the outset, I did not think that I should be purposely deceived by you, because you are my friend. But now I have been mistaken, and as it seems, must needs, according to the old proverb, make good use of what I have, and receive what you give me. What you now say, as it appears, is this, that some pleasures are good, others bad; is it not so?

Callicles:: Yes.

Socrates:: And are not the profitable good, and the noxious bad?

Callicles:: Certainly.

Socrates:: And those which effect a certain good, are profitable, but those which effect a certain evil, bad?

Callicles:: I admit it.

Socrates:: Do you not speak then of such as the following; as for instance, with respect to the body, those pleasures which we just now mentioned of eating and drinking; and if some of these produce in the body health or strength, or some other bodily excellences, are they not good, but those that produce the contraries of these, evil?

Callicles:: Certainly.

Socrates:: And are not pains, in like manner, some beneficial, others injurious?

Callicles:: Undoubtedly.

Socrates:: Ought we not, therefore, both to choose and to exercise ourselves in such pleasures and pains as are beneficial?

Callicles:: Certainly.

Socrates:: But not such as are injurious?

Callicles:: That is evident.

Socrates:: For, if you remember, it was agreed between us, Polus and me, that all things should be done for the sake of what is good. And do you agree with us in thinking, that the good is the end of all actions, and that all other things ought to be done for its sake, but not it for the sake of other things? Do you accord with us and make up the third?

Callicles:: I do.

Socrates:: We ought, then, to do both all other things and such as are pleasant, for the sake of things good, but not good things for the sake of such as are pleasant?

Callicles:: Certainly.

Socrates:: Is every man, therefore, able to choose among pleasant things such as are good, and such as are evil? or is there need of a person skilled in each case?

Callicles:: Of a person skilled.

Socrates:: Let us then again call to mind what I said to Polus and Gorgias. I said, if you remember, that there are certain occupations which regard pleasure, and are occupied in this alone, but are ignorant of the better and the worse; but that there are others that know both what is good and what is evil. And I have placed among those which have pleasure for their object, cookery, as a skill relating to the body, but not an art; and among those that have the good for their object I placed the medicinal art. And by the god of friendship, Callicles, think not that you ought to jest with me, nor give any answer that may occur to you contrary to your opinion, nor receive what I say as if I were in jest. For you see that our discourse is on a subject, than which there is none that a man endued even with the smallest understanding would take more pains about, namely in what way we ought to live, whether in such a way as that to which you exhort me, engaging in such employments of a man, as speaking among the people, cultivating rhetoric, and applying oneself to political affairs, in the manner which you now do; or whether we should devote ourselves to a philosophic life, and in what the latter differs from the former. Perhaps, then, it is best, as I just now attempted, to make a distinction; and when we have distinguished and agreed with each other, that these are two kinds of life, then to consider in what they differ from each other, and which of them ought to be pursued. Perhaps, however, you do not yet understand what I mean.

Callicles:: I do not, indeed.

Socrates:: I will explain it to you more clearly. Since we have agreed, you and I, that there is something good, and something pleasant, and that the pleasant is different from the good, and that there is a certain study and preparation for the acquirement of each of them, one being a search after the pleasant, and the other after the good—however, first of all, grant me this, or not; do you grant it?

Callicles:: I do.

Socrates:: Come then, concede to me also what I said to these men, if at the time I appeared to you to speak the truth. I said that cookery does not appear to me to be an art, but a skill; and that medicine is an art; for I said that medicine considers the nature of that which it cures, and the cause of the things that it does, and is able to give an account of each of these: but that the other, being concerned about pleasure, to which its whole attention is directed, proceeds to it without any art at all, neither considering the nature nor the cause of pleasure, altogether without reason, and in a word incapable of giving any account of itself, a mere practice and skill, only preserving the memory of that which usually takes place, by which also it supplies pleasures. First of all, then, consider whether these things appear to you to have been sufficiently established, and that there are also certain other corresponding studies relating to the soul, of which some follow rules of art, and regard what is best for the soul; but others that neglect this, and consider only, as in the former case, the pleasure of the soul, in what way it may be procured; but paying no attention to which pleasure is better or worse, nor caring for anything else than gratification only, whether it be better or worse. For my part, Callicles, there appear to me to be such studies; and I say that such a thing is flattery, as well in relation to the body as the soul, and to any thing else the pleasure of which one sedulously attends to, without paying any regard to the better and the worse. But do you entertain the same opinion as we do respecting these things, or do you gainsay it?

Callicles:: No, but I yield this point in order that our discussion may be brought to a close, and that I may gratify Gorgias here.

Socrates:: Does this take place with respect to one soul, but not with respect to two and several?

Callicles:: No; but it takes place with respect to two and several.

Socrates:: Is it not, then, possible to gratify a number of souls collected together, without considering at all what is best?

Callicles:: I think so.

Socrates:: Can you tell me, then, what those studies are which produce this effect? Or rather, if you please, on my asking, whichever appears to you to be one of these, say so, and which not, deny it. And first of all, let us consider flute-playing. Does it not appear to you to be such a thing, Callicles, as pursues only our pleasure, but regards nothing else?

Callicles:: It appears so.

Socrates:: And is it not the case with all such studies, as for instance, harp-playing in the public games?

Callicles:: Yes.

Socrates:: And what as to the representation of choruses and dithyrambic poetry? does it not appear to you to be of the same kind? Do you think that Cinesias son of Meles cares at all to express himself in such a way that his hearers may become better? or rather what will gratify the crowd of spectators?

Callicles:: The latter is clearly the case, Socrates, with respect to Cinesias.

Socrates:: But what as to his father Meles? Did he appear to you to play on the harp, looking to that which is best? or did not he look to what was most pleasant? For in singing he offended the audience. Consider, however; does not all harp-playing and dithyrambic poetry appear to you to have been invented for the sake of pleasure?

Callicles:: It does.

Socrates:: But what of that venerable and wonderful art, tragic poetry, at what does it aim? Do its endeavor and aim appear to you to be only to gratify the spectators? or does it strive, if any thing should be pleasing and grateful to them, but mischievous, to avoid saying this, but if it happens to be unpleasant and beneficial, to say and sing this, whether it gratifies the spectators or not? In which of these two ways do you think tragic poetry is framed?

Callicles:: This is clear, Socrates, that it rather aims at pleasure, and the gratification of the spectators.

Socrates:: Did we not just now say, Callicles, that a thing of this kind is flattery?

Callicles:: Certainly.

Socrates:: Come then, if any one should take from all poetry, melody, rhythm, and measure, would any thing else than words remain?

Callicles:: Necessarily so.

Socrates:: Are not these words, then, addressed to a great multitude, and to the people?

Callicles:: I admit it.

Socrates:: Poetry, therefore, is a kind of popular speaking.

Callicles:: It appears so.

Socrates:: Therefore it must be a rhetorical method of popular speaking: for do not poets appear to you to employ rhetoric in the theatres?

Callicles:: They do.

Socrates:: Now, therefore, we have found a certain rhetoric among the people, consisting at the same time of boys and women and men, slaves and free-men, of which we do not altogether approve; for we have called it flattery.

Callicles:: Certainly.

Socrates:: Well then. But as to the rhetoric addressed to the Athenian people, and the people in other cities consisting of free-men, what shall we say as to that? Do the rhetoricians appear to you always to speak with a view to what is best, aiming at this, that the citizens may be made as good as possible by their discourses? or do they, too, endeavor to gratify the citizens, and neglecting the public interest for the sake of their own private advantage, do they treat the people as children, trying only to gratify them, without being in the least concerned whether they shall become better or worse by these means?

Callicles:: This is not a simple question that you ask me. For there are some who, looking to the interest of the citizens, say what they do; but others are such as you describe.

Socrates:: That is enough. For, if this also is twofold, one part of it will be flattery, and a base popular speaking, but the other will be honorable, namely, that which endeavors to make the souls of the citizens as good as possible, and strives to speak what is best, whether it be pleasant or unpleasant to the hearers. But you have never yet seen this kind of rhetoric. Or, if you can mention any one of the rhetoricians who is of this stamp, why do you not tell me who he is?

Callicles:: But, by Jupiter, I cannot instance to you any of the rhetoricians of the present day.

Socrates:: But what? Can you instance any one of the ancients through whose means the Athenians have become better, after he had begun to harangue them, when previously they had been worse? For I know not who such a one is.

Callicles:: What? Have you not heard that Themistocles was a good man, and Cimon and Miltiades, and Pericles, who died lately, whom you have also heard?

Socrates:: If that is true virtue, Callicles, which you before mentioned as such, namely, for a man to gratify both his own desires and those of others. But if this is not the case, but, as we were afterwards compelled to confess, those desires which, when satisfied, make a man better, ought to be indulged, but those which make him worse, not so, and if there is a certain art in this, can you say that any one of these was a man of this kind?

Callicles:: I know not what to say.

Socrates:: But if you seek well, you will find out. Let us however, consider, and see quietly if any one of these was such. For come, is it not true that a good man, who says what he says with a view to the best, does not speak at random, but looking to some end? just as all other artists, looking each to his own work, does not take at random and employ what he employs in his work, but so that the subject he is at work upon may have a certain form: for instance, if you will look at painters, architects, shipwrights, and any other artists you please, you will see that each places whatever he employs in a certain order, and compels one thing to adapt itself to and harmonize with another, until the whole workmanship is compacted together with order and regularity. And moreover, those other artificers, whom we just now mentioned, who are employed about the body, teachers of gymnastics, and physicians, adorn the body in a way, and dispose it in an orderly manner. Do we allow that this is so or not?

Callicles:: Let it be so.

Socrates:: A house, then, that has acquired order and regularity will be a good house, but when disorder, a bad one.

Callicles:: I admit it.

Socrates:: And a ship in like manner?

Callicles:: Yes.

Socrates:: And do we not say the same with respect to our bodies?

Callicles:: Certainly.

Socrates:: But what as to the soul? when in a state of disorder will it be in a good condition, or when it is in a state of order and regularity?

Callicles:: From what has been said, it is necessary to grant that the latter must be the case.

Socrates:: What, then, in the body, is the name of that which results from order and regularity?

Callicles:: You probably mean health and strength.

Socrates:: I do. But what, again, is the name of that which subsists in the soul from order and regularity?

Endeavor to discover and mention it, as you did the name of the former.

Callicles:: Why do not you say what it is yourself, Socrates?

Socrates:: If it pleases you better, I will. But do you, if I seem to you to speak well, assent, if not, confute, and do not spare me. To me, then, it appears that the name belonging to the orderly disposition of the body is the healthful, from which health springs, and every other excellence of the body. Is it so, or not?

Callicles:: It is.

Socrates:: But the name belonging to the orderly and regular disposition of the soul is the legitimate and law; whence men become obedient to law and orderly; but these are justice and temperance. Do you admit this or not?

Callicles:: Be it so.

Socrates:: Will not, then, that good rhetorician who follows the rules of art, looking to these things, address the arguments he uses and all his actions to souls, and if he should bestow a gift, will he not bestow it, and, if he should take any thing away, will he not take it away *with the same end*, always directing his attention to this, that justice may be produced in the souls of his fellow-citizens, and injustice banished; that temperance may be produced in them, and intemperance banished; and, in short, that every virtue may be planted in them, but vice driven out. Do you grant this, or not?

Callicles:: I do grant it.

Socrates:: For where is the utility, Callicles, in giving a body diseased, and ill-disposed, abundance of the most agreeable food or drink, or any thing else, which will not be more profitable to it than the contrary, but, according to right reason, even less? Is this so?

Callicles:: Be it so.

Socrates:: For I think it is of no advantage for a man to live with a miserable state of body; for thus it would be necessary for him to live miserably: is it not so?

Callicles:: Yes.

Socrates:: And do not physicians generally allow a man in health to satisfy his desires, as, for instance, when hungry to eat as much as he pleases, or when thirsty to drink, but when ill, they scarcely ever allow him to satisfy himself with what he desires? Do you grant this too?

Callicles:: I do.

Socrates:: And should not the same method, my excellent friend, be adopted with respect to the soul? So long as it is depraved, as being without understanding, intemperate, unjust and unholy, one ought to restrain it from the indulgence of its desires, and not permit it to do any thing except what will render it better? Do you admit this or not?

Callicles:: I do.

Socrates:: For this surely is better for the soul itself.

Callicles:: Certainly.

Socrates:: And is not to restrain any one from what he desires to punish him?

Callicles:: Yes.

Socrates:: To be punished, therefore, is better for the soul than intemperance, as you just now thought.

Callicles:: I don’t know what you mean, Socrates: ask some one else.

Socrates:: This man will not submit to be benefited and to suffer the very thing of which we are speaking, viz., punishment.

Callicles:: I don’t at all heed what you say; I only answered you thus far for the sake of Gorgias.

Socrates:: Be it so. What shall we do then? Shall we break off the discussion in the midst?

Callicles:: You shall determine.

Socrates:: But they say it is not right to leave even fables in the midst, but a head should be placed on them, that they may not wander without a head. Answer, therefore, to what remains, that our discussion may have a head to it.

Callicles:: How importunate you are, Socrates! But, if you will be persuaded by me, you will give up this discussion, or carry it on with some one else.

Socrates:: Who else is willing? for we must not leave the discussion unfinished.

Callicles:: Cannot you go through with it yourself, either speaking by yourself or answering yourself?

Socrates:: That the saying of Epicharmus may be verified in me, “what two men said before, I alone am able to say.” But it appears to be very necessary. If, however, we shall do so, I think we ought all of us to strive heartily that we may understand what is true and what false with respect to the subject we are treating of: for it is for the common interest of all that this should become clear. I will, therefore, go through the matter under discussion, as it appears to me to be: but, if I shall seem to any of you to grant myself what is not true, he must take me up and confute me. for I do not say what I say as knowing it, but I am enquiring in common with you, so that, if he who disputes with me should appear to say any thing to the purpose, I shall be the first to give in to him. I say this, however, in case you think the discussion ought to be finished; but if you do not wish it, let us give it up and depart.

Gorgias:: But it appears to me, Socrates, that we should not depart yet, but that you should pursue the argument: and it is evident that the others think so. And I, for my part, wish to hear you go through the remainder of the subject.

Socrates:: But indeed, Gorgias, I would gladly have continued to carry on the discussion with Callicles here, until I had giver him back the saying of Amphion for that of Zethus: but since you are not willing, Callicles, to finish the discussion with me, yet listen to me at least, and take me up if I appear to you to say any thing incorrectly. And if you shall confute me, I shall not be angry with you, as you are with me, but you shall be recorded by me as my greatest benefactor.

Callicles:: Speak then yourself, my good friend, and finish the argument.

Socrates:: Hear me then repeating the argument from the beginning. Are the pleasant and the good the same? They are not the same, as I and Callicles have agreed. But whether is the pleasant to be done for the sake of the good, or the good for the sake of the pleasant? The pleasant for the sake of the good. But is the pleasant that, with which when present we are pleased? and the good that, by which when present we are good? Certainly. Now we are good, both ourselves and all other things that are good, when a certain virtue is present? To me this appears to be necessary, Callicles. But the virtue of each thing, whether instrument, or body, or soul, and moreover of every animal, does not reach a high pitch of perfection by chance, but by order, and rectitude, and the art that is attributed to each of them. Is this so? I admit it. The virtue, then, of every thing is regulated and adorned by order? I should say so. A certain order, then, proper to each, becoming inherent in each, makes each thing good? It appears so to me. The soul, therefore, that has its own order, is better than that which is without order? Necessarily so. That, however, which has order is orderly? How should it not? And that which is orderly is temperate? Most necessarily. A temperate soul, then, is good? I am not able to say any thing against this, my dear Callicles; but do you, if you can do so, inform me.

Callicles:: Proceed, my good friend.

Socrates:: I say, then, that if a temperate soul is good, that which is affected contrariwise to the temperate is base: and this surely is the foolish and intemperate? Certainly. Moreover, a temperate man would act becomingly both towards gods and towards men? for he would not be temperate if he acted unbecomingly? It must needs be so. Moreover, by acting becomingly towards men he would act justly, and towards the gods piously; but it is necessary that he who acts justly and piously should be just and pious? It must be so. It is moreover necessary that he should be brave? for it is not the part of a temperate man either to pursue or avoid what is not becoming, but to pursue and avoid those things and men, pleasures and pains, which he ought, and to endure patiently wherever he ought. So that it is absolutely necessary, Callicles, that the temperate man, as we have described him, being just, brave, and pious, should be a perfectly good man, and that a good man should do whatever he does well and honorably, and that he who does well should be blessed and happy, but that the wicked, who does ill, should be wretched: but this latter would be directly contrary to the temperate man, namely, the intemperate, whom you praised. I, therefore, thus lay down these things, and affirm that they are true. But if they are true, as it seems, he who wishes to be happy must pursue and practice temperance, and must avoid intemperance, every one of us with all his might, and must endeavor never to stand in need of punishment, but if he does need it, either he or any of his family, whether it be the case of a private person, or a city, justice must be administered, and punishment inflicted, if he is to be happy. This appears to me to be the mark to which we ought to look for the guidance of our life, and referring all private and public actions to this point, that justice and temperance may be ever present with him who will be blessed, and to act accordingly, not suffering his desires to be intemperate, nor endeavoring to satisfy them, which is an irremediable evil, causing a man to live like a robber. For such an one could neither be dear to any other man, nor to God; for it is impossible there can be any communion between them; and where there is no communion there can be no friendship. The sages too, say, Callicles, that heaven and earth, gods and men, are held together by communion, friendship, order, temperance, and justice, and for this reason, my friend, they call this universe, order, and not disorder or intemperance. You, however, appear to me not to attend to these things, and this though you are wise; but it has escaped your observation that geometrical equality has great power both among gods and among men; on the contrary you think that every one should strive to get more than others; for you neglect geometry. Well then; either this argument of mine must be confuted, *and it must be shown* that the happy are not happy from the possession of justice and temperance, and the wretched, wretched from vice; or, if the argument is true, we must consider what are its results. Now, Callicles, all those things before mentioned, with respect to which you asked me if I was speaking in earnest, result from it, to the effect that a man should accuse himself, his son, and his friend, if he committed any injustice, and should employ rhetoric for this purpose. And what you thought Polus granted through shame was therefore true, that by how much it is more base to do an injury than to be injured, by so much is it worse: and that he who would be a good orator ought to be just and skilled in the knowledge of things just; which, again, Polus said Gorgias acknowledged through shame.

This then being the case, let us consider what it is that you find fault with in me, and whether you are right or not in saying that I can neither assist myself, nor any of my friends or domestics, nor save myself from the greatest dangers, but that I am in the power of any one who chooses, like men marked with infamy, if he pleases, according to that petulant expression of yours, to strike me on the face, or to take away my property, or expel me from the city, or, worst of all, to kill me, and that to be thus circumstanced, is the most disgraceful of all things, according to your opinion. But mine is this, it has indeed been often mentioned, yet nothing prevents its being again repeated; I deny, Callicles, that to be struck in the face unjustly is most disgraceful, or for my body or purse to be cut, but that to strike unjustly and to cut me and mine, is both more disgraceful and worse, and that to rob, enslave, break open a house, and, in short, to injure in any respect me and mine, is both more disgraceful and worse for him who does the injury than for me who am injured. These things, that were proved to be thus in the former part of our discussion, as I affirm, are held and bound though it is somewhat rude to say so in reasons of iron and adamant, as would really appear to be the case, so that unless you or some one stronger than you can break them, it is not possible that any one who says otherwise than as I now say can speak correctly; for my statement is always the same, that I know not how these things are, but that of all the persons with whom I have ever conversed, as now with you, no one, who says otherwise, can avoid being ridiculous. I therefore again assert that these things are so. But if this is the case, and injustice is the greatest of evils to him that commits it, and if, great as this evil is, it is still a greater, if possible, for one who acts unjustly not to be punished, what kind of help will that be, which, if a man cannot procure for himself, he would be really ridiculous? will it not be that which would avert from us the greatest harm? But there is an absolute necessity that this should be most disgraceful, for a man not to be able to assist either himself, or his friends and domestics, next to that, an inability to avoid the second evil, and the third, an inability to avoid the third evil, and so on with the rest; in proportion to the magnitude of each evil, so is it beautiful to be able to avoid each of them, and disgraceful not to be able. Is the case thus or otherwise, Callicles?

Callicles:: No otherwise.

Socrates:: Of these two things then, the doing injustice and receiving an injury, we say that to do injustice is a greater evil, but to receive an injury a less one. By recourse to what means, then, could a man so assist himself as to have both these advantages, that of not doing injustice, and that of not receiving an injury? Is it by power, or will? I mean thus: whether, if a man wishes not to be injured, will he not be injured, or, if he has acquired the power of not being injured, will he not be injured?

Callicles:: It is clear that he will not, if he has acquired the power.

Socrates:: But what with respect to doing injustice? Whether, if any one wishes not to do injustice, is this sufficient, for in that case he will not do it, or, besides this, is it requisite to acquire a certain power and art, so that, unless he has learned and practiced them, he will do injustice? Come then, answer me this question, Callicles; whether do Polus and I appear to you to have been compelled, rightly or not, to make that admission in the former part of our discussion, when we admitted that no one willingly commits injustice, but that all who do commit it do so unwillingly?

Callicles:: Let that point be granted, Socrates, in order that you may bring the argument to a conclusion.

Socrates:: For this purpose, then, as it appears, we must acquire a certain power and art, in order that we may not commit injustice.

Callicles:: Certainly.

Socrates:: What then is the art by means of which a man will receive no injury at all, or scarcely any? Consider, if it appears to you the same as it does to me. For to me it appears thus; either that he ought to govern in a city or even have absolute power, or be a friend of the existing government.

Callicles:: Do you observe, Socrates, how ready I am to praise you, if you say any thing well? This you appear to me to have said remarkably well.

Socrates:: Consider also, whether I appear to you to say this well. Each person seems to me for the most part to be a friend to each, according as the ancient sages say “like to like:” does it not seem so to you?

Callicles:: It does.

Socrates:: Wherever, therefore, a savage and uneducated tyrant governs, if there should be any one in the city much better than him, would not the tyrant fear him, and never be able to be cordially his friend.

Callicles:: Such is the case.

Socrates:: Nor yet, if any one should be much worse than the tyrant, would he become his friend; for the tyrant would despise him, nor ever feel any affection for him as a friend.

Callicles:: This also is true.

Socrates:: It remains, therefore, that he alone would be a friend, worthy of notice, to such a man. who, having a similar disposition, should blame and praise the same things, and be willing to be governed by and submit to his sway. Such a person will have great influence in this city, and no one will injure him with impunity. Is it not so?

Callicles:: Yes.

Socrates:: If, therefore, any young man in this city should consider within himself, "How could I obtain influence, and be injured by no one?" this, as it seems, must be his method, he must from his very youth accustom himself to rejoice and grieve at the same things as the despot, and contrive to make himself as like him as possible. Is it not so?

Callicles:: Yes.

Socrates:: Will not he, then, have managed so as not to be injured, and to have great power in that city, according to your argument?

Callicles:: Certainly.

Socrates:: Will he also manage not to commit injustice? or far from it, since he will be like the governor, who is unjust, and will have great influence with him? I think, for my part, that quite contrariwise he will contrive so as to be able to commit the greatest injustice and not to be punished for it. Will he not?

Callicles:: It appears so.

Socrates:: Will not, then, the greatest evil befall him, in consequence of being depraved in his soul, and tainted through imitation of the despot and his influence with him?

Callicles:: I know not, Socrates, how you always turn the arguments upside down. Do you not know, that he who imitates can kill him who does not imitate *the despot* if he pleases, and deprive him of his property?

Socrates:: I do know it, good Callicles, unless I am deaf, since I have just now heard it often both from you and Polus, and from almost every one else in the city. But do you in your turn listen to me: he will kill him if he pleases, but a depraved man, one who is upright and good.

Callicles:: And is not this a thing to be indignant at?

Socrates:: Not to a man of sense, as our argument proves. Do you think that a man should aim at this; to live as long as possible, and should study those arts which always preserve us from dangers, as rhetoric which you bid me study, and which saves us in courts of justice?

Callicles:: I do, by Jupiter, and therein I advise you well.

Socrates:: What then, my excellent friend, does the science of swimming too appear to you to be very fine?

Callicles:: No, by Jupiter.

Socrates:: And yet this too saves men from death, when they fall into such a danger as requires this science. But if this appears to you to be mean, I will mention to you one more important than this, namely that of piloting a ship, which not only saves lives, but also bodies and property from extreme danger, just as rhetoric does. And this art is moderate and modest, and does not brag and strut as if it accomplished something wonderful, but when it has accomplished the same thing as the forensic art, if it has brought us safe here from Ægina, it demands, I think, two oboli, and if from Egypt or the Pontus, for so great a benefit in having brought safe what I now mention, ourselves and children, our property and wives, and in having landed them in port, it usually demands two drachms, and the man who possesses this art, and accomplishes these things, when he has disembarked, walks by the sea and his ship, with a modest gait. For he knows, I think, how to reason with himself, that it is uncertain whom of his passengers he has benefited by not allowing them to be drowned, and whom he has injured, knowing that he has not put them ashore in any respect better than they were when they went on board, either as to their souls or bodies. He therefore reasons with himself, that if one who is afflicted in his body with severe and incurable diseases should happen not to be drowned, such a man is indeed miserable for having escaped death, and has received no benefit from him; but if any one labors under many and incurable diseases in that which is more precious than the body, his soul, such a one ought not to live, nor would he benefit him, if he saved him from the sea, or from a court of justice, or from any other danger, for he knows that it is not better for a depraved man to live, because he must needs live badly. For this reason, it is not usual for a pilot to boast, although he saves our lives; nor, my admirable friend, is it usual for an engineer who is sometimes able to save, no less than a general of an army, not to mention a pilot or any other person; for sometimes he saves whole cities. Does it not appear to you that he is fit to be compared with a forensic orator? though, if he chose to speak, Callicles, as you do, extolling his own art, he would overwhelm you with words, urging and exhorting you to the fitness of your becoming an engineer, for that other things are of no consequence; and he would have enough to say. You, however, would nevertheless despise him and his art, and, by way of reproach would call him an engineer, and would neither give your daughter to his son, nor accept his daughter for your son. Though, if from the reasons for which you praise your own art, on what just pretext do you despise the engineer, and the others whom I have just now mentioned? I know that you would say you are better, and of a better family. But if that which is better is not what I say it is, but if excellence consists in this, for a man to save himself and his property, whatever kind of man he may be, then your contempt for the engineer and the physician, and for whatever other arts are pursued for the purpose of preservation, is ridiculous.

But, my good friend, consider whether that which is noble and good is not something else than to save and be saved; and whether that principle, that one should live as long as one can, is not to be given up by one who is truly a man, and life not too fondly loved, but that leaving these things to the care of the deity, and believing the women, *who say* that no man can avoid his fate, one should consider this, by what means one may pass the remainder of one's life in the best possible manner, whether by conforming one's-self to the government under which one dwells. And in that case whether it is right that you should resemble as much as possible the Athenian people, if you wish to be dear to them, and to have great influence in their city? Consider whether this is advantageous to you and to me, lest, my admirable friend, we should suffer what they say the Thessalian witches did, who drew down the moon, and our choice of this power in the city should be attended with the loss of what is dearest to us. If, however, you think that any man in the world can teach you any such art, as will cause you to have great power in this city, while you are unlike the character of the people, whether for the better or the worse, as appears to me, Callicles, you are not rightly advised. For you must not only be an imitator of, but like them in your natural disposition, if you mean to do any thing effectual towards gaining the friendship of the Athenian people, and, by Jupiter, you must towards that of the son of Pyrilampes. Whoever, therefore, shall make you most like them, will make you a politician and an orator, such as you desire to be. For all men are delighted with arguments suited to their own dispositions, but are angry with such as are strange to them; unless you, my dear friend, have any thing to say to the contrary.  Have we any objection to make to this, Callicles?

Callicles:: I do not know how it is, Socrates, you appear to me to speak well. Yet that which happens to most happens to me; I am not quite persuaded by you.

Socrates:: For the love of the people, Callicles, dwelling in your soul, resists me; but perhaps, if we should often and more fully examine into these same matters, you would be persuaded. Remember, then, that we said there were two methods for the cultivation of each, both the body and the soul, and that one had reference to pleasure, but the other to that which is best, not by gratifying, but opposing the inclinations. Is not this what we before settled?

Callicles:: Certainly.

Socrates:: The one, then, that looks to pleasure is ignoble, and nothing else than flattery; is it not?

Callicles:: Be it so, if you please.

Socrates:: But the other endeavors that that which we cultivate may be made as excellent as possible, whether it be the body or the soul?

Callicles:: Certainly.

Socrates:: Must we then so endeavor to cultivate the city and the citizens, that we may make the citizens themselves as good as possible? For without this, as we discovered before, it is of no advantage to confer any other benefit upon them, unless the mind of those who are about to receive either great riches, or dominion or any other power, be upright and good. Shall we lay this down, as being so?

Callicles:: Certainly, if it is more agreeable to you.

Socrates:: If, therefore, Callicles, when setting about some public works, we were to exhort one another to works of architecture, as to very large buildings of walls, or docks or temples, would it be necessary that we should consider and examine ourselves, first, whether we are skilled or not in the art of architecture, and from whom we learnt it? Would this be necessary or not?

Callicles:: Certainly.

Socrates:: Then, secondly, we should consider this, whether we have ever constructed any private building, either for any one of our friends, or for ourselves, and whether this building is beautiful or ugly. And if on examination we found that our masters had been good and famous, and that we have constructed, in conjunction with our masters, many and beautiful buildings, and many privately by ourselves, after we had left our masters: in that case it would become men of sense to undertake public works: but if we were not able to show that we had a master, nor any building at all, or many and those of no account, it would surely in that case be foolish to attempt public works, and to exhort one another to undertake them. Shall we admit that this is well said, or not?

Callicles:: Certainly.

Socrates:: And is not this the case with all other things, and if, attempting to serve the public in the capacity of physicians, we should exhort each other, as if we were skilful physicians, should not you and I examine each other thus: By the gods, in what state is Socrates with respect to bodily health? Has any other person, whether slave or freeman, been cured by Socrates of any disease? And I too, I think, should make similar enquiries about you. And if we did not find that any one, whether stranger or citizen, man or woman, had been improved in health by our means, by Jupiter, Callicles, would it not be truly ridiculous, that men should come to such a pitch of folly, as before they had practiced much in private, as best they could, and had succeeded in many cases, and thoroughly exercised the art, to attempt to learn the potter's art in making a pitcher, as the proverb goes, and attempt to serve the public in the capacity of physician, and exhort others to do the same? Does it not appear to you that it would be foolish to act thus?

Callicles:: It does.

Socrates:: But now, O best of men, since you have yourself just now begun to busy yourself in affairs of state, and you exhort and reprove me because I do not busy myself about them, should we not examine each other; Come then, whom of the citizens has Callicles yet made better? Is there any one who, being before depraved, unjust, intemperate, and foolish, has become upright and good through Callicles, whether stranger or citizen, slave or free-man? Tell me, Callicles, if any one should ask you these questions, what will you say? Who will you say has been made better by associating with you? Are you ashamed to answer, whether you have done any such work while you were in a private capacity, before you attempted to interfere in public affairs?

Callicles:: You are caviling, Socrates.

Socrates:: I do not ask you from a desire to cavil, but really wishing to know in what way you think public affairs ought to be conducted by us; whether on undertaking the management of affairs of state we ought to attend to any thing else than how we may become as good citizens as possible. Have we not already often admitted that a politician ought to do this? Have we admitted it or not? Answer. We have admitted it; I will answer for you. If, then, a good man ought to endeavor to procure this for his city, now call to mind and say with respect to those men whom you a little before mentioned, whether they still appear to you to have been good citizens, Pericles, Cimon, Miltiades and Themistocles.

Callicles:: To me they do.

Socrates:: If, therefore, they were good citizens, it is evident that each of them made their fellow-citizens better instead of worse. Did they so, or not?

Callicles:: Yes.

Socrates:: When Pericles, therefore, began to speak in public, were the Athenians worse than when he addressed them for the last time?

Callicles:: Perhaps so.

Socrates:: There is no ‘perhaps’ in the case, my good friend, but this is a necessary consequence from what has been admitted, if he really was a good citizen.

Callicles:: But what then?

Socrates:: Nothing. But tell me this moreover, whether the Athenians are supposed to have become better through Pericles, or quite the contrary, to have been corrupted by him. For so I hear, that Pericles made the Athenians idle, cowardly, talkative and avaricious, having been the first to give them pay.

Callicles:: You hear this, Socrates, from those whose ears have been bruised.

Socrates:: However, I no longer hear this, but I know well and so do you, that Pericles at first bore a high character, and that the Athenians passed no ignominious sentence upon him, when they were worse, but when by his means they had become upright and good, towards the close of the life of Pericles, they condemned him for peculation, and were on the point of sentencing him to death, clearly as being a bad citizen.

Callicles:: What then? Was Pericles on this account a bad man?

Socrates:: Such an one, indeed, would be thought a bad manager of asses, horses, and oxen, if having received them, neither kicking, nor butting, nor biting, he should make them do all these things through vice. Does not every trainer of any animal whatever appear to you to be a bad one, who, having received it gentle, has made it more vicious than he received it? Does he appear so, or not?

Callicles:: Certainly, that I may gratify you.

Socrates:: Gratify me, then, by answering this too, whether man is of the class of animals, or not?

Callicles:: How should he not be?

Socrates:: Had not Pericles, then, the care of men?

Callicles:: Yes.

Socrates:: What then? Ought they not, as we just now admitted, to have become more just, instead of more unjust, under his management, if he who took charge of them was a good politician?

Callicles:: Certainly.

Socrates:: And are not the just gentle, as Homer says? What say you? Is it not so?

Callicles:: Yes.

Socrates:: However, he made them more savage than he received them, and this against himself, which he would least of all have wished.

Callicles:: Do you wish that I should agree with you?

Socrates:: If I seem to you to speak the truth.

Callicles:: Be it so, then.

Socrates:: If, then, he made them more savage, he must have made them more unjust, and worse?

Callicles:: Be it so.

Socrates:: According to this reasoning, then, Pericles was not a good politician?

Callicles:: Not, as you say.

Socrates:: By Jupiter, nor as you say either, from what you have admitted. But, again, tell me with respect to Cimon. Did not they whom he took care of pass a sentence of ostracism upon him, in order that they might not hear his voice for ten years? And did they not do the very same to Themistocles, and beside punish him with exile? And did they not sentence Miltiades, the conqueror at Marathon, to be thrown into the Barathrum, and but for the Prytanis, would he not have been thrown into it? These, however, if they had been good men, as you say, would never have suffered these things.

Good drivers, surely, do not at first keep themselves from falling from their cars, but, when they have trained their horses, and have themselves become better drivers, then fall off. This is never the case, either in driving, or in any other employment. Does it appear so to you?

Callicles:: To me it does not.

Socrates:: Our former statements, then, as it appears, are true, that we do not know any man who has been a good politician in this city. You admit that you know of none at present, but you say that formerly there were some, and you have selected these men: but these have appeared to be much the same as those of the present day, so that, if they were orators, they did not make use of the true rhetoric, for in that case they would not have fallen, nor yet did they employ flattery.

Callicles:: However, Socrates, it is far from being the case, that any one of the present day will ever do such deeds as were done by any one of those.

Socrates:: Neither, my excellent friend, do I blame these men, as servants of the city, but they appear to me to have been more efficient than those of the present day, and better able to procure for the city what it desired. But in changing and repressing their desires, by persuading and compelling them to such a course as would make the citizens become better, they scarcely differed at all from those of the present day; yet that is the only duty of a good citizen. But, with respect to providing ships, walls, and docks, and many other such things, I agree with you, that they were more able than the men of our day. You and I, however, act ridiculously in our discussion. For during the whole time that we have been conversing we have not ceased to go round and round the same subject, and to misunderstand each what the other says. I think that you have often admitted and acknowledged that there is a twofold method of treatment, both with respect to the body and with respect to the soul: and that the one is ministerial, by which we are enabled to procure food, if our bodies are hungry, drink, if they are thirsty, and if they are cold, garments, coverlids, shoes, and all other things which the body stands in need of. And I purposely speak to you through these images, in order that you may understand me more easily. For when any one supplies these things, being either a retail tradesman or a merchant, or a manufacturer of any of them, a baker, a cook, a weaver, a shoemaker, or tanner, it is not at all surprising that such a person should appear, both to himself and others, to be concerned in the care of the body, that is, to all who are ignorant that, besides all these, there is a gymnastic and medicinal art, to which the care of the body really belongs, and whose duty it is to rule over all these arts, and to use their respective productions, through knowing what meats or drinks are good and bad for the health of the body, whereas all those others are ignorant of this; for which reason all those other arts are servile, ministerial, and base, as regards the management of the body, but the gymnastic art and medicine are justly the mistresses of these. That the case is the same with respect to the soul, you, at one time, appeared to me to have understood, and admitted it as if you knew what I meant; but shortly afterwards you went on to say that there have been good and upright men in this city, and when I asked you who they were, you appeared to me to adduce men very similar with respect to politics, as if, on my asking with respect to gymnastics, who have been or are good managers of the body, you had very seriously said to me, Thearion the baker, Mithsecus, who wrote on Sicilian cookery, and Sarambus the tavern-keeper, and that they take wonderful care of the body, the first making admirable bread, the second, made-dishes, and the third, wine. Perhaps, then, you would be angry if I said to you, My friend, you know nothing about gymnastics; you tell me of men who are ministers and purveyors to desires, but who do not understand any thing great and good respecting them, and who, it may so happen, having filled men’s bodies, and made them gross, and having been praised by them, end by ruining their old flesh. These men, on the other hand, through their ignorance, will not blame those who have pampered their appetites, as being the causes of their diseases, and of the loss of their old flesh, but they who may happen to have been with them, and to have given them some advice, when, after a long time, repletion, having been indulged in without any regard to health, comes bringing disease with it, these they will accuse and blame, and do them some mischief if they can, but those others, who are the causes of their maladies, they will extol. And now you, Callicles, act in very much the same way; you extol men who have pampered the Athenians by satiating their desires, and who they say have made the city great; and they do not perceive that it is swollen, and unsound through means of those ancient politicians: for, without considering temperance and justice, they have filled the city with harbors and docks, and walls and tributes, and such trifles. When, therefore, the crisis of their weakness comes, they will blame the advisers who are then present, but will extol Themistocles, Cimon, and Pericles, who were the causes of the mischief: and you perhaps, unless you are on your guard, and my friend Alcibiades, they will seize, when they have lost what they had before in addition to what they have acquired, although you are not the causes of the mischief, but perhaps accomplices. Moreover, I both now see a very foolish thing happening, and I hear of it with respect to men of former times. For I perceive that when a city punishes any of its politicians as guilty of wrong, they are angry, and complain bitterly that they are treated shamefully; and having done the city many good services, they are then unjustly ruined by it, as they allege. But the whole is a falsehood. For no president of a city can ever be unjustly ruined by the very city over which he presides. For the case seems to be the same with such as profess themselves to be politicians, as it is with the sophists. For the sophists, though wise in other things, commit this absurdity; whereas they affirm that they are teachers of virtue, they often accuse their disciples of acting unjustly towards them, by defrauding them of their wages, and not making other requitals for the benefits they have received from them. But what can be more unreasonable than such language as this, that men who have become good and just, who have been freed from injustice by their teacher, and have acquired justice, should yet act unjustly from that very quality which they have not? Does not this, my friend, appear to you to be absurd? Of a truth, Callicles, you have compelled me to make a speech by your unwillingness to answer me.

Callicles:: But should you not be able to speak unless some one answered you?

Socrates:: It seems as if I could: for now I have carried my discourse to a great length, seeing that you will not answer me. But my good friend, tell me, by Jupiter, the guardian of friendship, does it not appear to you unreasonable, that a man who says he has made another person good, should blame that person, because having been made good through his means, and being so, he has afterwards become bad?

Callicles:: To me it appears so.

Socrates:: Do you not, then, hear those speak in this manner who profess to instruct men in virtue?

Callicles:: I do. But what can you say of men of no worth?

Socrates:: What then can you say of those, who, while they profess to preside over the city, and to take care that it shall be as good as possible, then accuse it, when it so happens, as being very bad? Do you think that these differ at all from the former? My good man, a sophist and an orator are the same thing, or nearly so, and very like, as I said to Polus. But you, through ignorance, think that rhetoric is something exceedingly beautiful, and despise the other. But, in truth, the sophist's art is as much more beautiful than rhetoric, as the legislative is than the judicial, and the gymnastic art than medicine, But I for my part think that public speakers and sophists alone ought not to complain of the very thing that they teach, as being mischievous to themselves, or that in the very same charge they should at the same time accuse themselves for not having at all benefited those whom they profess to have benefited. Is it not so?

Callicles:: Certainly.

Socrates:: And surely to impart a benefit without a stipulated reward, as is probable, is proper for these men only, if they assert what is true. For one who has received any other kind of benefit, as, for instance, who has acquired swiftness of foot through the instructions of a teacher of gymnastics, perhaps might deprive him of his gratuity, if the teacher of gymnastics had left it to him, without having made an agreement for a fixed price, that he should be paid the money as nearly as possible at the same time that he imparted his skill to him. For men, I think, do not act unjustly through slowness, but through injustice. Do they not?

Callicles:: Yes.

Socrates:: If, therefore, any one should take away this, I mean injustice, there would be no danger of his ever being treated unjustly, but he alone might safely impart this benefit, if in truth he is able to make men good. Is it not so?

Callicles:: I admit it.

Socrates:: For this reason then, as it appears, it is not at all disgraceful to take money for giving advice about other things, as, for instance, about architecture, or other arts.

Callicles:: So it appears.

Socrates:: But with respect to this study, by what means a man may become as good as possible, and may best govern his own family or a city, it is reckoned disgraceful to withhold advice, except one should give him money. Is it not so?

Callicles:: Yes.

Socrates:: For it is evident that this is the reason that this alone of all benefits makes the person who has received it desirous of requiting it; so that it appears to be a good sign, if he who has imparted this benefit shall be recompensed in return; but otherwise not. Is this so?

Callicles:: It is.

Socrates:: To which method, then, of taking care of the city do you advise me? explain to me; whether to that of thwarting the Athenians, in order that they may become as good as possible, as if I were a physician, or to that by which I should serve them, and curry favor with them. Tell me the truth, Callicles. For, as you begun to speak freely to me, it is right you should continue to say what you think. And now speak well and nobly.

Callicles:: I say, then, that I advise you to serve them.

Socrates:: You advise me, therefore, most noble Sir, to employ flattery.

Callicles:: Unless you prefer calling him a Mysian, Socrates; for if you will do so—

Socrates:: Do not repeat what you have often said, that any one who pleases will kill me, lest I too should say again, that a bad man would slay a good one; nor that he will take away my property, if I have any, lest I too should say again, that after he has taken it away he will not be able to make any use of it, but as he has unjustly taken it from me, so having got it, he will make an unjust use of it; and if unjustly, basely; and if basely, wickedly.

Callicles:: How confident you seem to me to be, Socrates, that you will never suffer any of these things, as being one who lives out of harm's way, and who can never be brought before a court of justice by a man, perhaps, utterly depraved and vile!

Socrates:: I should indeed be foolish, Callicles, if I did not think that any one in this city might suffer any thing that might happen. This however I well know, that if I should go before a court of justice, and be exposed to any of the dangers you mention, he who takes me thither will be a bad man. For no good man would accuse one who has not committed injustice. And it would not be at all wonderful, if I should be condemned to death. Do you wish I should tell you why I expect this?

Callicles:: By all means.

Socrates:: I think that I, in conjunction with a few Athenians, that I may not say alone, apply myself to the true political art, and alone of those of the present day perform the duties of a citizen. Since, then, in the conversations which I enter into from time to time, I do not speak for the purpose of conciliating popular favor, but with a view to that which is best, and not to that which is most agreeable, and as I am not willing to do those fine things that you advise, I shall not have any thing to say in a court of justice. And the same illustration occurs to me that I mentioned to Polus. For I should be judged as a physician would be judged by children, with a cook for his accuser. For consider what defense such a man would make when taken before them, if one should accuse him as follows: ‘O boys, this man has done you a great deal of mischief, and destroys both you and even the youngest of you, for, by cutting, cauterizing, weakening and choking you, he reduces you to great straits, giving you the bitterest draughts, and compelling you to hunger and thirst; not as I do who feed you with many sweet and various dainties. What do you think a physician when brought to such an extremity would have to say? If he should say the truth, ‘I did all these things, boys, for your health,’ what a clamor do you think such judges would raise against him? Would it not be loud?

Callicles:: Probably; one must think so, at least.

Socrates:: Do you not think, then, that he would be altogether at a loss what to say?

Callicles:: Certainly.

Socrates:: And I know that I should be treated just in the same way, if I came before a court of justice. For I should not be able to mention any pleasures which I had procured for them, which they consider as benefits and advantages; but I neither envy those who procure them, nor those for whom they are procured. And if any one should say that I corrupt younger men, by causing them to doubt, or that I revile the elder men, by speaking bitter words, either privately or publicly, I should not be able to say the truth, that “I say and do all these things justly, and for your advantage, judges, and nothing else.” So that I should probably suffer whatever might happen.

Callicles:: Does a man, then, appear to you, Socrates, to be well off in a city who is thus circumstanced, and is unable to help himself?

Socrates:: If there is that in him, Callicles, which you have often allowed, namely, if he can assist himself, by neither having said or done any thing unjust towards men or towards gods. For this aid has often been acknowledged by us to be the best that a man can have for himself. If, therefore, any one could convict me of being unable to afford this assistance either to myself or another, I should be ashamed, whether convicted before many or few, or alone by myself, and if I should be put to death for this inability I should be deeply grieved: but if I should die through want of flattering rhetoric, I well know that you would behold me meeting death cheerfully. For death itself no one fears, who is not altogether irrational and cowardly, but he does fear to commit injustice; for to go to Hades with a soul full of crimes is the worst of all evils. But, if you please, I will tell you a story to show that such is the case.

Callicles:: Since you have brought the rest to a conclusion, bring this to a conclusion also.

Socrates:: Hear then, as they say, a very beautiful tale, which you will consider a fable, as I think, but I a tale; for what I am about to tell you, I tell you as being true. As Homer says, then, Jupiter, Neptune, and Pluto, divided the government among themselves, after they had received it from their father. This law, then, respecting men was in existence in the time of Saturn, and always was, and still is, established among the gods, that a man who has passed through life justly and piously when he dies should go to the isles of the blessed, and dwell in all perfect happiness free from evil, but that he who has lived unjustly and impiously should go to a prison of punishment and justice, which they call Tartarus. During the reign of Saturn, and even recently when Jupiter held the government, there were living judges of the living, who passed sentence on the very day on which any one was about to die. In consequence of this sentences were awarded badly. Pluto, therefore, and the guardians of the blessed isles, went to

Jupiter, and informed him that men came to them who did not deserve either sentence. Jupiter, therefore, said, I will prevent this in future. For now sentences are badly awarded, because those that are judged are judged clothed, for they are judged while living. Many, therefore, he continued, whose souls are depraved are invested with beautiful bodies, nobility of birth, and riches, and when the judgment takes place, many witnesses come in their behalf, to testify that they have lived justly. Hence the judges are awed by these things, and moreover, they too pass sentence when clothed, for their minds are veiled with eyes and ears, and the whole body. All these things, then, are obstacles to them, as well their own clothing as that of those that are judged. First of all, then, they must no longer be allowed to know beforehand the time of their death: for at present they do know it beforehand. Prometheus, therefore, has orders to deprive them of this power: next they must be judged divested of all these things; for they must be judged after they are dead: the judge too must be naked and dead, and examine with his soul the soul of each immediately after death, destitute of all his kindred, and leaving all that ornament on the earth, in order that the judgment may be just. Now I had observed these things before you, and accordingly have appointed my sons as judges, two from Asia, Minos and Rhadamanthus, and one from Europe, Eacus. These, then, when they are dead, shall judge in the meadow, at the three roads, of which two lead one to the isles of the blessed, the other to Tartarus. And Rhadamanthus shall judge those from Asia, and Eacus those from Europe. But to Minos I will give the prerogative of deciding in case any doubt occurs to the two others, in order that the judgment respecting the path men are to take may be as just as possible.

These are the things, Callicles, which I have heard, and believe to be true: and from these statements I infer the following results. Death, as it appears to me, is nothing else than the separation of two things, the soul and the body, from each other. But when they are separated from each other, each of them possesses pretty much the same habit that the man had when alive, the body its own nature, culture and affections, all distinct. So that if any one's body, while living, was large by nature, or food, or both, his corpse when he is dead is also large; and if corpulent, his corpse is corpulent when he is dead; and so with respect to other things. And if again he took pains to make his hair grow long, his corpse also has long hair. Again, if any one has been well whipped, and while living had scars in his body, the vestiges of blows, either from scourges or other wounds, his dead body also is seen to retain the same marks. And if the limbs of any one were broken or distorted while he lived, these same defects are distinct when he is dead. In a word, of whatever character any one has made his body to be while living, such will it distinctly be, entirely or for the most part, for a certain time after he is dead. The same thing too, Callicles, appears to me to happen with respect to the soul; all things are distinctly manifest in the soul after it is divested of body, as well its natural disposition, as the affections which the man has acquired in his soul, from his various pursuits. When, therefore, they come to the judge, those from Asia to Rhadamanthus, Rhadamanthus, having made them stand before him, examines the soul of each, not knowing whose it is, but often meeting with the soul of the great king, or of some other king or potentate, he sees nothing sound in the soul, but finds it thoroughly marked with scourges and full of scars, through perjuries and injustice, which the actions of each has imprinted on his soul, and he finds all things distorted through falsehood and arrogance, and nothing upright, in consequence of its having been nurtured without truth; he also sees the soul full of disproportion and baseness through power, luxury, wantonness and intemperate conduct. On seeing it he forthwith sends it ignominiously to prison, where on its arrival it will undergo the punishment it deserves. But it is proper that every one who is punished, if he is rightly punished by another, should either become better, and be benefited by it, or should be an example to others, that they, beholding his sufferings, may be made better through fear. But those that are benefited, at the same time that they suffer punishment both from gods and men, are such as have been guilty of curable offences; their benefit however both here and in Hades, accrues to them through means of pain and torments; for it is not possible to be freed from injustice in any other way. But those who have committed the most extreme injustice, and have become incurable through such crimes, serve as examples to others, and these are not benefited at all, as being incurable, but others are benefited by beholding them suffering for ever the greatest, most bitter, and most dreadful punishments for their sins, being suspended in the prison of Hades altogether as examples, a spectacle and warning to the unjust men who are constantly arriving. Of these, I say, Archelaus will be one, if Polus says true, and every other tyrant that resembles him. I think too, that the most of these examples will consist of tyrants, kings, and potentates, and such as have governed the affairs of cities; for these through their power commit the greatest and most impious crimes. Homer also bears witness to this; for he makes those to be kings and potentates, who are punished for ever in Hades, Tantalus, Sisyphus and Tityus; but Thersites, or any other private man who was depraved, no one has represented as suffering great punishments as if incurable; for I think it was not in his power to commit them; on which account he was more happy than those who had the power. But, Callicles, the most wicked men are amongst the powerful; nothing however hinders but that good men may be found amongst them; and when they are found they deserve the highest admiration: for it is a difficult thing, Callicles, and deserves high praise, when one who has great power of acting unjustly, passes through life justly. There are however a few men of this kind; for they have existed both here and elsewhere, and I think there will be hereafter good and upright men, endued with the virtue of administering justly whatever is committed to their charge. There has been one who is very celebrated among all the Greeks, Aristides, son of Lysimachus. But, my excellent friend, the generality of potentates prove wicked. As I said, then, when Rhadamanthus has got any such person in his power, he knows nothing else about him, neither who he is, nor who are his parents, but only that he is wicked; and on discerning this, he sends him away to Tartarus, signifying at the same time whether he appears to be curable or incurable; but he arriving thither suffers according to his deserts. Sometimes, Rhadamanthus beholding another soul that has passed through life piously and with truth, whether it be of some private man, or any other, but I say, Callicles, especially of a philosopher, who has attended to his own affairs, and has not made himself very busy during life, he is delighted, and sends it to the isles of the blessed. Æacus too, does the very same things. And each of them passes sentence, holding a rod in his hand. But Minos sits apart looking on, and is the only one that has a golden sceptre, as the Ulysses of Homer says he saw him; “bearing a golden sceptre, and administering justice to the dead.” I therefore, Callicles, am persuaded by these accounts, and consider how I may exhibit my soul before the judge in the most healthy condition. Wherefore, disregarding the honours that most men value, and looking to the truth, I shall endeavor in reality to live as virtuously as I can, and when I die, to die so. And I invite all other men, to the utmost of my power, and you too I in turn invite to this life and this contest, which I affirm surpasses all contests here, and I upbraid you because you will not be able to assist yourself, when you will have to undergo the sentence and judgment which I have just now mentioned; but when you shall come before the judge, the son of Ægina, and when he shall seize you and bring you before his tribunal, you will there gape and become dizzy, no less than I should here, and perhaps some one will strike you ignominiously on the face, and treat you with every species of contumely.

Perhaps, however, these things appear to you to be like an old woman's fable, and you accordingly despise them. And it would not be at all wonderful that we should despise them, if on investigation we could find any thing better and more true than them. But now you see that you three, who are the wisest of the Greeks of this day, you, Polus, and Gorgias, are unable to prove that we ought to live any other life than such as appears to be advantageous hereafter, but among so many arguments, while others have been refuted, this alone remains unshaken, that we ought to beware of committing injustice rather than of being injured, and that above all a man ought to study not to appear good, but to be so, both privately and publicly: and that if any one is in any respect wicked, he should be punished, and that this is the next good to the being just, to become so, and to submit to the punishment one deserves; and that all flattery, whether of one's-self or others, whether of few or many, must be avoided; and that rhetoric, and every other action, is always to be employed with a view to what is just.

Be persuaded by me then, and follow me to that place, by going to which you will be happy, both living and after you are dead, as your own argument proves. And suffer any one to despise you as senseless, and to treat you with contumely, if he pleases, and by Jupiter, do you cheerfully let him strike that ignominious blow; for you will suffer nothing dreadful, if you are in reality upright and good, and devoted to the practice of virtue. And when we have thus exercised ourselves in common, we will then, if it should appear desirable, apply ourselves to politics, or we will deliberate on whatever we shall think desirable, being better qualified to deliberate than we now are. For it is disgraceful, being in the condition in which we appear to be at present, to pride ourselves, like youths, as if we were something, who yet never retain the same opinion on the same subjects, and these of the greatest moment; to such a pitch of ignorance have we reached! Let us use as our guide, then, the reasoning that has now been made clear to us, which teaches us, that this is the best mode of life, to live and to die in the exercise of justice and the other virtues. This, then, let us follow, and invite others to do the same, not that, to which you confidently invited me: for it is of no value, Callicles.

# Gorgias.

Translated by E. M. Cope.

PERSONS OF THE DIALOGUE.

Callicles, Socrates, Chærepho, Gorgias,
And Polus.

---

Callicles:: This is the time, they say, Socrates, to come in at a fight and a fray.

Socrates:: What? are we come at the tail of a feast, as the saying is, and too late?

Callicles:: Yes indeed, and a very dainty feast it was. For Gorgias has just been treating us to a fine long declamation.

Socrates:: Aye but for that, Callicles, my friend Chærephon here is to blame, because he forced me to stay loitering in the market-place.

Chaerephon:: No matter, Socrates: as I was the cause so I'll find the cure. For Gorgias is a friend of mine, and therefore hell declaim for us, if you like at once, or if you prefer it by and by.

Callicles:: How's that, Chærephon? Is Socrates anxious to hear Gorgias?

Chaerephon:: To be sure, that's precisely the object of our being here.

Callicles:: Well then if you please to come home to my house—For Gorgias is staying with me, and he'll favor you with one of his addresses.

Socrates:: Thank you, Callicles. But do you think he wouldn't mind conversing with us? for I want to learn from the gentleman what is the real meaning of his art, and what it is that he professes to teach. The rest of his address he may deliver, as you say, at some future time.

Callicles:: There’s nothing like asking him, Socrates. That in fact was one of the points in the address that he gave us. At all events he invited just now every one of the present company to ask him any question he pleased, and he said he was ready to answer them all.

Socrates:: I am so glad to hear it. Ask him, Chærephon.

Chaerephon:: Ask him what?

Socrates:: Who he is.

Chaerephon:: What do you mean?

Socrates:: Why suppose he had been a maker of shoes, he would have answered, I presume, that he is a shoe-maker. You understand what I mean, don’t you?

Chaerephon:: I understand, and will ask him the question. Tell me, Gorgias, is it true, as Callicles here says, that you profess to answer any question that may be put to you?

Gorgias:: Quite true, Chærephon; in fact, that was the very profession that I was making just now, and I tell you that for many years nobody has ever yet asked me any new question.

Chaerephon:: Then I presume you find no difficulty in answering, Gorgias.

Gorgias:: You may try the experiment if you please, Chærephon.

Polus:: Yes, ’egad, and upon me too, if you like, Chærephon. For I am afraid Gorgias must be quite tired by the long speech which he has just been delivering.

Chaerephon:: How say you, Polus? do you think that you can answer better than Gorgias?

Polus:: And pray what does that matter, if I do it well enough for you?

Chaerephon:: Not at all. Well then, since such is your wish, answer me.

Polus:: Ask away.

Chaerephon:: I will. If Gorgias had been master of the same art as his brother Herodicus, what name would it have been proper to give him? Would it not have been the same as the other?

Polus:: No doubt it would.

Chaerephon:: Then in calling him a physician we should have given him his right name.

Polus:: Yes.

Chaerephon:: And if he had been skilled in the art of Aristophon son of Aglaophon, or his brother (Polygnotus), what would it have been proper to call him?

Polus:: Plainly a painter.

Chaerephon:: And as it is, what is the art in which his skill lies? and what would be the proper name to give him in consequence?

Polus:: Chærephon, there are many arts amongst mankind from experiences experimentally invented: for it is experience that makes our days proceed by rule of art, the want of it by chance: and in each of these men participate various in various variously, the best of them in the best: of whom in fact Gorgias here is one, and so is a member of the noblest of all professions.

Socrates:: Barely indeed to all appearance, Gorgias, is Polus provided for making speeches; still however he is not fulfilling his promise to Chærephon.

Gorgias:: What in particular, Socrates?

Socrates:: He doesn’t seem to me exactly to answer the question put to him.

Gorgias:: Well then, if you please, do you ask him.

Socrates:: Not if you wouldn’t mind answering yourself, but I should much prefer asking you. For it is plain to me even from what Polus has already said, that he has studied rather what is called the art of rhetoric, than that of (dialectical) conversation.

Polus:: How so, Socrates?

Socrates:: Because, Polus, when Chærephon asks you what art Gorgias is master of, you pronounce an eulogium upon his art, just as if any one found fault with it; without answering what it is.

Polus:: Why, didn’t I answer that it was the noblest of all?

Socrates:: Yes indeed you did. But no one asked you what sort of art Gorgias’ was, but what, and by what name Gorgias ought to be called; just as Chærephon traced out the line for you before, and you answered him fairly and in few words, so now in the same way tell us what the art is, and what we are to call Gorgias. Or rather, Gorgias, do you tell us yourself what is the art you are master of, and what we are to call you in consequence.

Gorgias:: The art of rhetoric, Socrates.

Socrates:: Are we then to call you a rhetorician?

Gorgias:: Aye a good one, Socrates, if you please to call me what ‘I boast myself to be,’ as Homer says.

Socrates:: Well, I will with pleasure.

Gorgias:: Then pray do.

Socrates:: So then are we to say that you have the power of making others besides yourself the same?

Gorgias:: Yes, I certainly make this profession, not only here but elsewhere as well.

Socrates:: Would you then be good enough, Gorgias, to finish the conversation in the way in which we are now talking together, in alternate question and answer, and lay aside that lengthy style, in which Polus just began, for a future occasion? Come now, keep your promise, and don't disappoint me; but consent to answer briefly the questions put to you.

Gorgias:: There are some answers, Socrates, which are obliged to express themselves at great length: not but that I will do my best to make them as short as possible. For in fact this again is one of the things that I lay claim to, that no one could ever express the same meaning in fewer words than myself.

Socrates:: That's exactly what we want, Gorgias. This is precisely what I should like you to give us a specimen of, your short style; your lengthy one you can reserve for some future time.

Gorgias:: Well, I will do so; and you shall say that you never heard any one use fewer words.

Socrates:: Come then. Since you say that you are master of the art of rhetoric, and can make any one else an orator—what of all things is it that rhetoric deals with? as weaving for instance is employed upon the production of clothes; isn't it?

Gorgias:: Yes.

Socrates:: And music, again, upon the composition of tunes?

Gorgias:: Yes.

Socrates:: Faith, Gorgias, I do admire your replies. You are indeed answering in the very fewest possible words.

Gorgias:: Yes, and I think I do it very tolerably well, Socrates.

Socrates:: You are perfectly right. Come, then, answer me in the same way about rhetoric again; what are the things to which its knowledge is applied?

Gorgias:: To words.

Socrates:: To what sort of words, Gorgias? Do you mean those that point out by what course of treatment the sick may recover their health?

Gorgias:: No.

Socrates:: Then rhetoric does not deal with all words.

Gorgias:: Certainly not.

Socrates:: But still it makes men able to speak.

Gorgias:: Yes.

Socrates:: And to understand what they talk about as well?

Gorgias:: Of course it does.

Socrates:: Well, but doesn’t the art we were just now speaking of, medicine I mean, make men able to understand as well as to speak about the sick?

Gorgias:: Necessarily.

Socrates:: Then medicine too, it seems, deals with words?

Gorgias:: Yes.

Socrates:: Those which are about diseases?

Gorgias:: Precisely.

Socrates:: Well and doesn't the gymnastic art too deal with words, those namely which relate to the good and bad condition of bodies?

Gorgias:: Certainly.

Socrates:: And moreover the case is the same, Gorgias, with all other arts besides: each of them deals with words—those, that is, that belong to the thing which is the object of each particular art.

Gorgias:: So it appears.

Socrates:: Then why in the world don't you call all the rest of the arts rhetorical, when they are about 'words,' if you give the name of rhetoric to every one which deals with words?

Gorgias:: Because, Socrates, in all the other arts the knowledge is, so to speak, entirely confined to manual operations and such like actions, whereas in rhetoric there is no such manual process involved; but of all that it does and all that it effects words are the vehicle. That is why I claim on behalf of rhetoric that it is the art that deals with words; and I maintain that I am right.

Socrates:: I wonder whether I quite understand what sort of art you mean to call it? I shall know better by and by. Pray now answer me. We have such things as arts, haven't we?

Gorgias:: Yes.

Socrates:: But of all these arts, some I believe have production for their chief object, and require few words—some indeed none at all; in fact, the objects of the art might be carried out even in silence; such as painting and sculpture and many others. That is the kind which you seem to have in view, when you say that rhetoric has no connection with them. Isn’t it?

Gorgias:: You take my meaning perfectly, Socrates.

Socrates:: But other arts there are which perform all their operations by means of words, and as to acts, require either none at all, as one may say, in addition, or only in a very trifling degree; such as numeration for example, and reckoning, and land-measuring, and draughts, and a number of other arts, some of which have their ‘words’ pretty nearly equal in amount to their actions, most of them indeed more numerous; or even altogether their processes are carried on and their effects produced entirely by means of words. It is to this class, I believe, that you understand rhetoric to belong.

Gorgias:: Quite true.

Socrates:: But I don’t at all suppose that you mean to call any one of these rhetoric, although this was implied by the expression you used, in saying that the art whose effects are produced by words is rhetoric; and one might suppose if one chose to be captious in arguing, so then you mean arithmetic by rhetoric, do you, Gorgias? But I don’t believe you do mean either arithmetic or geometry when you speak of rhetoric.

Gorgias:: And quite right too, Socrates; your supposition is perfectly just.

Socrates:: Then let us begin at once, and do you do your part in dispatching the answer to my question. For as rhetoric is found to be one of those arts which chiefly employ words, and there are others also of the same kind, try to explain to me what it is in words upon which rhetoric operates in producing its effects; suppose, for instance, any one were to ask me about any one you please of the arts I just now mentioned—what is the art of numeration, Socrates? I should tell him, as you said just now, that it is one of those that produce their effects by words. And if he were further to inquire, what are those about? I should say that it is one of those which are about the even and odd, the whole series of each of them, whatever the number may amount to. And if again he were to ask, And reckoning, what art do you call that? I should reply that this likewise is one of those that effects all its operations by words. And if he were to ask still further, what is its object? I should say, in the language of the framers of bills drawn for the assembly, ‘in all else’ the art of reckoning is ‘like the foregoing;’ for its object is the same, the even and the odd; but there is just this amount of difference between them, that the art of reckoning or arithmetic takes into consideration the relative as well as the absolute properties and relations of the even and the odd in point of number. And if the same question were repeated about astronomy, and upon my replying, that this again effects all its processes by words, the questioner were to say, And what are the ‘words’ of astronomy about, Socrates? I should tell him that they are about the motion of the stars and the sun and moon, that is to say, their relative velocities.

Gorgias:: And you would be quite right, Socrates.

Socrates:: Come then, in your turn, Gorgias. It so happens, you see, that rhetoric is one of those arts that effect and give force to all their operations by words. Isn't it?

Gorgias:: It is so.

Socrates:: Then tell me what they deal with. What of all things in the world is that which is the object of the words which rhetoric employs?

Gorgias:: The most important of all human things, Socrates, and the best.

Socrates:: Nay, Gorgias, here again what you say is open to question, and by no means clear as yet. For I think you must have heard at parties after dinner people singing this catch, in which in the words of the song the good things of this life are enumerated, how that health is best of all, the second best thing is to be born handsome, and the third, as the author of the catch says, to be rich without fraud.

Gorgias:: To be sure I have; but what is your object in mentioning this?

Socrates:: Because those whose business lies in all those things that the composer of the catch spoke so highly of would straightway present themselves, physician and training-master and tradesman; and first of all the physician would say, My dear Socrates, Gorgias is deceiving you: for it is not his art that is employed upon mankind's greatest good, but mine. If then I were to ask him, And who are you that say this? he would reply probably, A physician. What say you then? Is it your art that has the greatest good for its object? How can health, Socrates, he would say very likely, be anything else? What greater blessing can men have than health?

And if again after him the trainer were to say, I should be surprised too myself, Socrates, if Gorgias can point out to you any greater good in his own art than I in mine; I should make answer to him again as to the other, And who may you be, my friend, I should like to know? and what's your business? A professor of gymnastics, he would say; and my business is to make men strong and handsome in their persons. And next to the training-master the tradesman, I dare say, would tell us with a lofty scorn of them all, Do pray consider, Socrates, whether you think that there is any blessing superior to wealth, either in the eyes of Gorgias or of any one else whatsoever. We should say to him accordingly, What's that pray? are you the man that makes that? He would say yes. And what's your name? A man of business. How then? do you judge wealth to be the greatest blessing to mankind? we shall say. Of course I do, he will reply. Aye, but Gorgias here contends that his own art is the source of greater good than yours, we should say. Plainly then his next question would be, And what is this good? let Gorgias make answer. Come then, Gorgias, consider yourself to be questioned by them as well as me, and answer us what is that which you say is the greatest good to mankind, and that you can produce it.

Gorgias:: That, Socrates, which really is the greatest good and the cause at once of freedom to men in general in their own persons, and no less to the individual man of acquiring power over others in his own city.

Socrates:: What name then pray do you give to this?

Gorgias:: The power of persuading by words, I should call it, the judges in a court of law, or the councilors in a council-room, or the assembly men in an assembly, or any other kind of meeting which is convened for a public purpose. And yet by the aid of this talent you may make the physician your slave, and the trainer your slave: and for your famous man of business, it will turn out that he makes his money for somebody else and not for himself, but for you who have the power of speaking and gaining the ear of the multitudes.

Socrates:: Now, Gorgias, I think you have come very near to an explanation of what you understand by the art of rhetoric, and, if I at all enter into your meaning, you define rhetoric to be the artificer of persuasion, and you say that its entire business and the whole sum and substance of it results in this. Or have you any power to mention that rhetoric possesses beyond that of producing persuasion in the minds of the hearers?

Gorgias:: None at all, Socrates; your definition seems to me to be sufficient; this is no doubt the sum and substance of it.

Socrates:: Then listen to me, Gorgias. I flatter myself, you may be quite sure, that if there be any one else in the whole world that engages in a discussion from a genuine desire to know just what the argument is about and no more, I too am one of that sort; and I make no doubt that you are another.

Gorgias:: Well, what then, Socrates?

Socrates:: I'll tell you directly. What your view is of the exact nature of the persuasion produced by rhetoric, and of the subjects to which it is applied, I assure you I by no means clearly understand; though at the same time I have a kind of suspicion of what I suppose you to mean by it, and what it deals with. Still I will ask you nevertheless what you do mean by the persuasion that proceeds from rhetoric, and what are the objects on which it is exercised.

Now why when I have a suspicion about the matter myself am I going to ask you instead of myself stating it? It is not on your account, but for the sake of the argument, that it may proceed in such a way as may make the subject of our conversation most clear to us. For see now if you don't think I am right in repeating my question. Take a parallel case. If my question had been, to what class of painters does Zeuxis belong? had you replied, he is a figure-painter, would it not have been quite fair in me to ask you, what sort of figures he paints, and on what occasions?

Gorgias:: Quite so.

Socrates:: And is not the reason this, that there are besides him other painters employed upon a number of other figures?

Gorgias:: Yes.

Socrates:: But if no one else were a painter but Zeuxis, your answer would have been right enough?

Gorgias:: Of course it would.

Socrates:: Well then tell me about rhetoric in the same way; whether it is your opinion that rhetoric is the only art that produces persuasion, or others besides it. What I mean is something of this sort: when any one teaches anything, does he persuade in teaching it? or do you think otherwise?

Gorgias:: Certainly not, Socrates; on the contrary, he most assuredly does persuade.

Socrates:: And again, if we apply our question to the same arts as we mentioned just now, does not numeration, or the man conversant with that science, teach us all the properties of number?

Gorgias:: Yes, no doubt.

Socrates:: And so likewise persuades?

Gorgias:: Yes.

Socrates:: Then numeration also is an artificer of persuasion?

Gorgias:: It seems so.

Socrates:: So then if we are asked what kind of persuasion and what about, we shall reply I presume, that which conveys instruction, which deals with the amounts of all the odd and even numbers. And we shall be able to show that all the rest of the arts that we were just now referring to are artificers of persuasion, and what that is, and what it is about. Shan't we?

Gorgias:: Yes.

Socrates:: It follows that rhetoric is not the only artificer of persuasion.

Gorgias:: True.

Socrates:: Since then it is not the only one that effects this object, but others besides it, we should be entitled next to put a further question to the speaker, as we did in the case of the painter, What sort of persuasion then is it of which rhetoric is the art, and what is that persuasion about? You think it would be fair, don't you, to put such a further question?

Gorgias:: Oh, yes.

Socrates:: Answer me then, Gorgias, since you agree with me in this view.

Gorgias:: Well then I mean that kind of persuasion, Socrates, which is exercised in law-courts and any other great crowds, as indeed I said just now; and it is about everything that is just and unjust.

Socrates:: I had a suspicion myself, to tell you the truth, Gorgias, that that was the kind of persuasion you meant, and that those were its objects: but that you may not be surprised if I ask you by and by some such question as seems to be quite clear, though I repeat it—for, as I say, I do so in order that our argument may be brought regularly to a conclusion; not on your account, but that we may not get into the habit of snatching up an over-hasty conclusion as to one another's meaning founded on a mere guess, but that you may state your views as you think fit according to your own notions.

Gorgias:: Indeed, Socrates, in my opinion you axe doing quite right.

Socrates:: Come then, let this be the next thing we examine. There is such a thing as what you call 'to have learnt'?

Gorgias:: There is.

Socrates:: And again 'to have believed'?

Gorgias:: Oh, yes.

Socrates:: Do you think then to have learnt and to have believed, and learning and believing, are the same thing, or something different?

Gorgias:: Different, I should think, Socrates.

Socrates:: And quite right too: and you may be sure of it from this. If you were asked, Is there such a thing, Gorgias, as false as well as true belief? you would say yes, I presume.

Gorgias:: I should.

Socrates:: But again, is there false as well as true knowledge?

Gorgias:: Certainly not.

Socrates:: To be sure, because it plainly appears a second time that they are not identical.

Gorgias:: True.

Socrates:: But still those that have learnt are persuaded, as well as those that have believed.

Gorgias:: It is so.

Socrates:: Would you have us then assume two forms of persuasion, the one conveying belief without knowledge, the other knowledge?

Gorgias:: Yes, by all means.

Socrates:: Then which of the two kinds of persuasion is it that rhetoric effects in law-courts or any other large assemblies on the subject of right and wrong? Is it that which gives rise to belief without knowledge, or that from which knowledge springs?

Gorgias:: Plainly, of course, Socrates, that which gives rise to belief.

Socrates:: Rhetoric then, it seems, is an artificer of persuasion productive of belief but not of instruction in matters of right and wrong.

Gorgias:: Yes.

Socrates:: Nor consequently is the rhetorician qualified to instruct law-courts or any other large masses of people on questions of right and wrong, but only to persuade them. For surely he never could be able to instruct such a great crowd in things of such importance in a few minutes.

Gorgias:: Certainly not.

Socrates:: Come, then, let us see what we do actually mean by rhetoric: for to tell you the truth, I can't yet distinctly make out even myself what my own opinion is. Whenever the city holds a meeting for the election of state-physicians or shipwrights or any other class of craftsmen, will not on such occasions the rhetorician refrain from offering his advice? plainly because in every election we are bound to choose the most skilful practitioner. Or, again, as to the building of walls, or the construction of harbors or docks, it is not he that will give advice, but the master-builders. Or, again, when advice is to be given upon the election of generals, or the disposition of troops to meet an enemy, or the occupation of military positions, on such occasions it is the military men that will advise, and not the rhetoricians. Or what say you, Gorgias, to such cases? For as you profess to be a speaker yourself and to qualify others for speaking, it is right to learn your opinion upon the matters of your own art. So pray suppose that I am acting now with a view to your interests. For very likely one of the present company here may be desirous of becoming a pupil of yours—as in fact I think I see some, and I dare say a good many—who perhaps might be ashamed to trouble you with repeated questions. And so when I repeat mine, suppose yourself to be questioned by them as well. What good shall we get, Gorgias, by frequenting your society? On what subjects shall we be able to offer advice to the city? is it about right and wrong alone, or all those things besides which Socrates was just now mentioning? Try then to give them an answer.

Gorgias:: Well, Socrates, I will try to reveal to you clearly the entire force and meaning of rhetoric: in fact you pointed out the way very well yourself. You know, I presume, that yonder docks and walls, the pride of your city, and the construction of your harbors, are due to the counsels of Themistocles, and partly to those of Pericles, but not to the masters of the several crafts.

Socrates:: So I am told, Gorgias, of Themistocles; Pericles I heard myself when he gave us his advice about building the ‘middle wall.’

Gorgias:: And so you see, Socrates, that wherever there is an election of such officers as you were just speaking of, it is the orators that give advice, and carry their opinions in such matters.

Socrates:: It is exactly because I was so surprised at this that I have been asking ever so long what the virtue of rhetoric can possibly be. For regarded in this light its grandeur and importance appear to me to be something quite supernatural.

Gorgias:: Aye, if you knew all, Socrates, how it embraces under it every kind of power, as one may say. I will give you a convincing proof of it. I myself have often ere now, in company with my brother (Herodicus), or any other physician, gone into the house of one of their patients, and upon his refusing to take their medicines, or to submit to be operated upon either by the knife or the cautery, when the physician failed to persuade him, I succeeded, by the aid of no other art than that of rhetoric. And I maintain too that if a physician and a rhetorician went together into any city you please, supposing they had to argue out the question before a general assembly or any other kind of meeting which of the two was to be elected, orator or physician, the latter would be totally extinguished, and the able speaker elected if he chose. And if the contest lay between him and the master of any other craft you please to name, the rhetorician would carry his own election sooner than any one else whatever: for there is no subject in the world on which the rhetorician could not speak more persuasively than the master of any other art whatsoever, before a multitude. Such then is the extent and such the quality of the power of this art. We are bound however, Socrates, to employ rhetoric in the same way as every other kind of exercise. For in fact all other exercises are not to be employed against every body indiscriminately merely because a man has become such a proficient in boxing and wrestling or the use of arms as to have the advantage over friend and foe: this does not entitle him to knock his friends down or stab or assassinate them. No by my faith, nor again if any one were to frequent a wrestling-school until he had got his body into prime condition, and become an expert pugilist, and then go and strike his father and his mother or any other of his relations or friends, would that be any reason for conceiving an aversion to trainers and fencing-masters, and expelling them from our cities. For they no doubt gave their lessons to these pupils of theirs with a view to the proper employment of them against enemies and wrong-doers, in self-defense, not aggression: whereas the others pervert their strength and their art to an improper use. Yet it does not follow that the teachers are rogues, nor that their art is either to blame for all this, or bad in itself; but those that misuse it, in my opinion. For it is true that the orator is able to speak against every body and upon every question in such a way as to find greater acceptance with all large assemblies, on any subject in a word he chooses. But he is none the more entitled on that account to rob either the physicians of their due credit, because he could do it if he liked, or artists of any other kind; but he is bound to use his rhetoric fairly, like skill in any other exercise. But it seems to me that, supposing a man to make himself a rhetorician and then to use this faculty and this art to commit wrong, it is not the teacher that ought to incur odium and to be banished from our cities. For he gave his lessons to be turned to a fair use, but the other perverts them. It is therefore he that abuses the art that may fairly be held in aversion and banished or put to death, and not the teacher.

Socrates:: I believe, Gorgias, that you like myself have had a good deal of experience in arguments, and in the course of them have arrived at the discovery of something of this sort, that it is no easy matter for people to come to any definite agreement upon any questions they may have undertaken to discuss, and after giving and receiving instruction so to bring the conversation to an end; but on the contrary, if a dispute arises between them upon any point, and the one declares that the other expresses himself either incorrectly or indistinctly, they get angry, and suppose that what is said proceeds from jealousy of themselves, from a spirit of mere rivalry, and not from a wish to sift the question proposed for discussion. And in fact occasionally this results at last in the most indecent scenes, in mutual abuse and recrimination of such a kind that even the bystanders are vexed on their own account that they ever condescended to listen to such a set of fellows. What then is my motive in saying this? It is because your present statements don't seem to me quite consistent or in harmony with what you said at first about rhetoric. Now I am afraid to refute you, for fear you should suppose that I speak with a disputatious object, not with a view to throw light upon the subject under discussion, but aiming at you personally. Now if you are one of the same sort of persons as I am myself, I should be glad to continue my questions, but if not, I would rather let it alone. And what sort of person am I? I am one of those that would be glad to be refuted when I assert anything that is untrue, and glad to refute any one else supposing he fall into any error; but just as glad to be refuted as to refute, because I consider it a greater benefit, in proportion as the benefit is greater to be delivered oneself from the greatest evil than to deliver another. For I think that there is no evil that can befall a man so great as a false opinion upon the subjects which we now have under discussion. Now if you as well as myself profess yourself to be one of this sort let us go on with the conversation: but if on the other hand you think we had better drop it, let us at once dismiss it and break off the argument.

Gorgias:: Nay, Socrates, I myself like you pretend to be one of that sort of persons whose character you are sketching: perhaps however we ought also to have consulted the convenience of the company present. For to say the truth, for some time before you came I had been delivering a long address to our friends here, and now again if we go on with our discussion we shall very likely protract it to a considerable length. We ought therefore to consider their inclinations as well as our own, and not to detain them when they may be wanting to do something else.

Chaerephon:: You hear yourselves, Gorgias and Socrates, the applause of our friends there, how anxious they are to hear any thing you have to say. For my own part however, God forbid that I should ever be so busy as to give up an argument so important and so well treated because I preferred doing anything else.

Callicles:: Yes, by my faith, Chærephon. And indeed for myself, though I have been present ere now at plenty of discussions I don’t know that I ever in my life was so much gratified as on the present occasion; and therefore as far as I am concerned, if you choose to go on talking all day long you will do me a favor.

Socrates:: Well you may be sure, Callicles, there is nothing to prevent it on my part, if Gorgias consents.

Gorgias:: After this Socrates, it would indeed be a shame for me to hang back, when I myself challenged the company to ask me any question they pleased. But if our friends here are of this mind, go on with the conversation and ask me what you like.

Socrates:: Then let me tell you, Gorgias, what surprises me in the words you used: to be sure I dare say you are right and it is I that misunderstand you. You say you are able to qualify any one for speaking who chooses to become your pupil.

Gorgias:: Yes.

Socrates:: Does that mean then that he is qualified to gain the ear of a crowd on any subject, not by way of instruction but persuasion?

Gorgias:: Just so.

Socrates:: You said just now if I mistake not that in sanitary matters too the orator will be more persuasive than the physician?

Gorgias:: I certainly did, in a crowd that is to say.

Socrates:: Well and doesn't 'a crowd' mean the ignorant? for surely amongst the well-informed he wont carry more weight than the physician?

Gorgias:: Quite true.

Socrates:: And so if he is to be better able to persuade than the physician, he becomes better able to persuade than the man of real knowledge?

Gorgias:: Yes certainly.

Socrates:: Not being a physician though, is he?

Gorgias:: True.

Socrates:: But one who is not a physician is unversed I presume in the art of which the physician is master.

Gorgias:: Plainly so.

Socrates:: It follows then that the ignorant man will be more persuasive among the ignorant than the man of real information, supposing the orator to be more persuasive than the physician. Does this follow, or any thing else?

Gorgias:: In this case no doubt it does.

Socrates:: And so likewise in respect of all the rest of the arts the case is the same with the orator and with rhetoric; there is no occasion, that is to say, for them to be acquainted with the things themselves, but it is enough for them to have discovered some instrument of persuasion which may enable them to present the appearance to the ignorant of knowing better than the well informed.

Gorgias:: Well and isn't it a great comfort, Socrates, without learning any of the other arts, but with this one alone, to be at no disadvantage in comparison with the professional people?

Socrates:: Whether the rhetorician is or is not at a disadvantage with the rest of the world by reason of this state of things [or, in consequence of this character, these qualifications of his] we will examine by and by, if we find that our argument requires it; but just at present let us consider this first, whether the rhetorician stands in the same relation to what is just and unjust and base and noble and good and bad, as to what is wholesome and the several objects of all the other arts; that is to say, that he is ignorant of what is good or bad or honorable or disgraceful or just or unjust, in itself, but has devised the means of persuasion about them, so as with ho knowledge at all to get the credit amongst the ignorant of knowing better than the man of real knowledge? Or is this knowledge absolutely required? and must any one who means to learn rhetoric be prepared with all this before he comes to you? or if not, shall you the master of the art give one who does come no instruction at all in these matters—for it's no business of yours—but make him in the eyes of the vulgar seem to know things of this kind when he doesn't, and seem to be good when he isn't? or will you be altogether unable to teach him rhetoric unless he have a previous acquaintance with the truth in these matters? or what are the real facts of the case, Gorgias? Do in heaven's name, as you said just now, draw aside the veil and tell us in what the virtue of rhetoric really does consist.

Gorgias:: Well I suppose, Socrates, if he does not know all this already I shall have to teach him this as well.

Socrates:: Hold there, for that is well said. If you make a man a rhetorician he must needs be acquainted with what is just and unjust either beforehand, or afterwards from your instructions.

Gorgias:: Just so.

Socrates:: How then? one who has learnt the art of building is a builder, isn't he?

Gorgias:: Yes.

Socrates:: And so one who has learnt music a musician?

Gorgias:: Yes.

Socrates:: And one who has studied medicine a physician? and so on for all the rest upon the same principle; every one who has studied any particular subject acquires that character which is imparted to him by the knowledge of it?

Gorgias:: No doubt.

Socrates:: And so likewise, by the same rule one that has learnt justice is a just man?

Gorgias:: Most undoubtedly.

Socrates:: But the just man it is to be presumed does just things.

Gorgias:: Yes.

Socrates:: So then must the rhetorician needs be a just man, and the just man desire to act justly?

Gorgias:: Yes, so it appears.

Socrates:: Consequently the just man will never desire to do wrong.

Gorgias:: Necessarily.

Socrates:: And it follows from what we said that the rhetorician must be a just man.

Gorgias:: Yes.

Socrates:: Consequently the rhetorician will never desire to do wrong.

Gorgias:: No, it seems not.

Socrates:: Then do you remember saying a little while ago that we have no right to find fault with the training masters nor expel them from our cities if a boxer makes an unfair use of his boxing and does wrong? and so in like manner if an orator employs his rhetoric unfairly, we are not accuse the teacher or expel him from the city, but the man that does the wrong and misuses his rhetoric? was that said or not?

Gorgias:: It was.

Socrates:: But now it appears that that very same person, the rhetorician, never could have been guilty of any wrong at all, doesn't it?

Gorgias:: It does.

Socrates:: And at the beginning of our conversation, Gorgias, it was stated that rhetoric deals with words, not words about even and odd numbers, but about what is just and unjust; wasn't it?

Gorgias:: Yes.

Socrates:: Well I supposed at the very time when you made that remark that rhetoric never could be an unjust thing, when all the speeches that it makes are about justice; but, when you told us shortly after that the orator might make an unjust use of his rhetoric, then I was surprised, and thinking that the two assertions did not harmonize with one another I said what I did, that if you thought it like myself an advantage to be refuted it was advisable to continue the conversation, or if not to let it drop: and now that we afterwards come to examine the point, you see yourself that we are come again to the conclusion that it is impossible for the rhetorician to make an unjust use of his rhetoric or consent to do wrong. Now to sift this matter thoroughly and satisfactorily to make out what the exact truth of it may be, by the dog, Gorgias, is a thing not to be done in a short interview.

Polus:: How's that, Socrates? is that your real opinion about rhetoric that you are now stating? Or do you suppose because Gorgias was ashamed not to admit that the rhetorician is acquainted with justice and honor and good, and if a pupil come to him without knowing all this that he will teach it himself—and then from this admission there followed I dare say some slight inconsistency in the expressions he used—just what you are so fond of, when it was you yourself that turned the conversation upon questions of that sort?

For who do you think is likely to deny either that he is acquainted with justice himself, or can teach it to others? Nay, it is very unmannerly to turn the conversation upon such things as these.

Socrates:: Well to be sure, fairest Polus, it is precisely for this reason that we provide ourselves with friends and children that as soon as the advance of age has made our footing uncertain you youngsters may be there to set our life on its legs again in word as well as in deed. And now if Gorgias and I are making any false step in our argument there you are to set us right again: indeed you are bound to do so. And I on my part am ready if you think any of our conclusions are wrong to retract any one of them you please, provided only you do me the favor to observe just one thing.

Polus:: What thing do you mean?

Socrates:: To keep that discursive style of yours in check, Polus, which you made the attempt to indulge in at first.

Polus:: How? Mayn't I be allowed to say as much as I please?

Socrates:: It would indeed be hard upon you, my admirable friend, if you were to have come to Athens, where there is the greatest freedom of speech in all Greece, and then you were to be the only person there who was debarred from it. But just set my case against yours. If you make a long speech and refuse to reply to my questions, wouldn't it be equally hard upon me not to be allowed to go away and not listen to you? No, no, if you have any regard for the argument we have been holding and want to set it right again, as I said just now take back any thing you please, and in your turn questioning and questioned, like myself and Gorgias, refute or submit to refutation. For you claim to be acquainted with all that Gorgias knows, I believe, don't you?

Polus:: Yes to be sure I do.

Socrates:: Then I suppose you like him invite people on all occasions to put any question to you they like as one that knows how to find an answer?

Polus:: No doubt I do.

Socrates:: Well then now, either put the questions or answer them, whichever you like.

Polus:: Well, so I will. Answer me then, Socrates. Since you seem to think that Gorgias is at a loss about rhetoric, what do you say it is yourself?

Socrates:: Do you ask me what art I say it is?

Polus:: Yes I do.

Socrates:: None at all, it seems to me, Polus, to tell you the exact truth.

Polus:: Well what do you take rhetoric to be then?

Socrates:: A thing which you tell us in the work that I lately read gave rise to art.

Polus:: What thing do you mean?

Socrates:: I mean a kind of acquired habit.

Polus:: So you take rhetoric to be an acquired habit?

Socrates:: Yes I do—if you have no particular objection.

Polus:: A habit of what?

Socrates:: Of the production of a sort of gratification and pleasure.

Polus:: Well and don't you think rhetoric a very fine thing, to be able to oblige one's fellow creatures?

Socrates:: Hallo, Polus, have I told you yet what I say it is, that you think yourself entitled to ask what follows that, whether I don't think it very fine?

Polus:: Why, haven't you told me that you call it a sort of habit?

Socrates:: Will you please then, since you set such a high value on 'obliging,' to oblige me in a trifling matter?

Polus:: To be sure I will.

Socrates:: Ask me now what art I take cookery to be.

Polus:: I ask you then, what art is cookery?

Socrates:: None at all, Polus.

Polus:: Well what is it? tell us.

Socrates:: I tell you then, a sort of habit.

Polus:: Of what? let us hear.

Socrates:: What I say is, of the production of gratification and pleasure, Polus.

Polus:: Do you mean to say then that cookery and rhetoric are the same thing?

Socrates:: Oh dear no, but a branch of the same kind of pursuit.

Polus:: What pursuit do you mean?

Socrates:: I fear it may be somewhat rude to say the truth: for on Gorgias' account I am reluctant to speak out, for fear he should suppose that I am satirizing his professional pursuits. At the same time whether this is the kind of rhetoric that Gorgias practices, I really don’t know; for in fact from our argument just now we arrived at no distinct notion of his views on this matter. But what I mean by rhetoric is a branch of a particular set of things which have nothing ‘fine’ about them at all.

Gorgias:: What is it, Socrates, pray let us know; don’t hesitate on my account.

Socrates:: It seems to me then, Gorgias, to be a sort of pursuit not scientific at all, but of a shrewd and bold spirit, quick and clever in its dealings with the world. And the sum and substance of it I call flattery [coaxing or wheedling]. Amongst a great number of branches of this kind of study one in particular I take to be cookery: which has indeed the appearance of an art, but according to my view is no art, but a habit and a knack. Of this I call the art of rhetoric a branch, as well as that of dressing and adorning oneself and of sophistic, four branches of it applied to four varieties of things. If then Polus wishes to make any inquiry, let him do so: for he has not yet heard which sort of branch of flattery I pronounce rhetoric to be; but without observing that I have not yet answered that question, he goes on to ask further whether I don’t think it a very fine thing. But I wont answer him whether I think rhetoric a fine thing or a foul one until I have first made answer what it is. For it is not fair, Polus: but if you want to learn, ask me what kind of branch of flattery I pronounce rhetoric to be.

Polus:: I ask you then, and do you answer me, what kind of branch?

Socrates:: I wonder whether you will understand me when I do answer. Rhetoric is according to my view the unreal image (counterfeit presentment) of a branch of Politics.

Polus:: Well then, do you say it is a fine thing or a foul one?

Socrates:: A foul one, I should say, for all bad things I call foul; since I must answer you as though you already understood my meaning.

Gorgias:: No upon my word, Socrates; why I myself don't understand what you say either.

Socrates:: Like enough, Gorgias, for I have not yet explained myself distinctly; but Polus (Colt) here is so young and hot.

Gorgias::: Well never mind him; but tell me what you mean by saying that rhetoric is the unreal image of a branch of Politics.

Socrates:: Well I will try to tell you what rhetoric appears to me to be: and if I am wrong Polus here will refute me. There is such a thing I presume as what you call body and soul?

Gorgias:: Of course there is.

Socrates:: And in these again you believe that there is a good condition of each?

Gorgias:: To be sure I do.

Socrates:: And again, an apparent but not real good condition? Take a case like the following: there are many that appear to have their bodies in good condition in whom it would not be easy for any one but a physician or one of your professors of gymnastics to discover that they are not so.

Gorgias:: Quite true.

Socrates:: Something of this sort I say there is in body and in soul, and that is what makes the body and the soul seem to be in good condition when they are not really so nevertheless.

Gorgias:: It is so.

Socrates:: Let me see then if I can explain my meaning more clearly to you. Two classes of things have I say two arts corresponding to them; that which has the soul under its direction I call Politics; and though for that which has charge of the body I can't find you just on the spur of the moment any single name, still the care of the body is one and has as I reckon two divisions, the one gymnastics and the other medicine. In Politics against gymnastics I set legislation, and as the counterpart to medicine I assign justice. In each of these pairs, however, medicine and gymnastics, justice and legislation, there is a good deal of intercommunication seeing that they deal severally with the same objects; yet still there is a difference between them. Well then of these four, which always have the highest good the one of the body the other of the soul in view in their treatment of them, the art of flattery takes note, and I don't say with a full knowledge but by a shrewd guess divides herself into four branches, and then smuggling herself into the guise of each of those other divisions pretends to be that of which she has assumed the semblance, and cares not one jot for what is best, but with the bait of what is most agreeable for the moment angles for folly and deludes it to such a degree as to get the credit of being something of the highest value.

And so I say cookery has assumed the disguise of medicine, and pretends to the knowledge of the kinds of food that are best for the body, so that if a cook and a physician had to go through a contest before a set of boys, or men as silly as boys, to decide which of the two understood the subject of good and bad kinds of food, the physician or the cook, the physician would die of starvation. Now I call it flattery, and I say that such a thing as this is base and contemptible, Polus—for now I am addressing you—because it aims solely at what is agreeable without considering what is best: and an art I do not call it but a habit, because it can render no account of the exact nature of the things which it applies, and so cannot tell the cause of any of them. But to nothing which is irrational can I give the name of art. If you contest any of these points I am ready to stand an examination. Now as I say cookery has taken the disguise of medicine, and the art of dressing in just the same way that of gymnastics, a knavish and cozening and ignoble and illiberal art, cheating people so by the aid of forms and colors and polish and dress as to make them in the endeavor to assume a borrowed beauty neglect the native and genuine beauty which comes by gymnastics. However not to be tedious, I will state the thing like the geometers—for by this time I dare say you will be prepared to follow me—as the art of dressing is to gymnastics so is cooking to medicine: or rather thus, as dressing to gymnastics so is sophistic to legislation, and as cookery to medicine so is rhetoric to justice. However as I say, though such is the natural distinction between them, still, as these arts are so nearly allied, sophists and rhetoricians and the things with which they deal are a good deal jumbled together, and they don't know either themselves what to make of their own profession, or any body else what to make of them. For in fact, if it were not the soul that had the control of the body, but the latter were its own master, and so cookery and medicine were not surveyed and distinguished by it, but the body itself were the judge, weighing and estimating them by the gratifications that they procure for it, the state of things described in the saying of Anaxagoras would prevail far and wide, my dear Polus—for you understand these things—every thing would be jumbled together in a mass (there would be an universal chaos) and things sanitary and wholesome and the cook's sauces and condiments undistinguishable. You have heard now what I affirm rhetoric to be, the counterpart of cookery in the soul corresponding to that in the body. Now perhaps I have done rather an odd thing in expatiating at such length myself when I refused to let you make a long speech. However I deserve to be excused; for when I spoke in short sentences you didn't understand me, nor could you make any use of the answer I then gave you, but required a detailed explanation. Now if I on my side don't know what to make of any of your answers you may expatiate in your turn, but if I can make good use of it, let me do so: for that is fair. And now if you can make any thing of this answer of mine, there it is for you.

Polus:: What say you then? Do you take rhetoric to be a sort of flattery?

Socrates:: Nay I said a branch of flattery. Why, have you no better memory at your age, Polus? What will you do by and by?

Polus:: Then is it your opinion that good orators are esteemed worthless in their cities as flatterers?

Socrates:: Is that a question you are asking, or the beginning of a speech?

Polus:: A question to be sure.

Socrates:: Then I don't think they are esteemed at all.

Polus:: How not esteemed? Are they not all-powerful in their cities?

Socrates:: No, if at least you mean that power is a good to its possessor.

Polus:: Why of course I mean that.

Socrates:: Then it seems to me that the orators have of all citizens the least power.

Polus:: How? Don't they like tyrants put to death any one they please, or strip of his property or banish from their cities any one they think proper?

Socrates:: By the dog, Polus, I am really quite in doubt at every word you say whether you are making an assertion yourself and delivering your own opinion, or asking me a question.

Polus:: Why I'm asking you to be sure.

Socrates:: Very good, my friend: and then do you ask me two questions at once?

Polus:: How two?

Socrates:: Didn't you say just now something of this sort, that the orators put any one they please to death, like the tyrants, or rob of his money, or banish from their cities any one they think proper?

Polus:: Yes I did.

Socrates:: I tell you then that these questions of yours are two, and I will give you an answer to both. For I maintain, Polus, that the orators and the tyrants have the smallest possible power in their cities, as I said just now; for they don't do anything at all that they desire, so to speak: however I admit that they do anything that they think best.

Polus:: Well and isn't that great power?

Socrates:: No, at least according to what Polus says.

Polus:: I say no? I beg your pardon, I say yes.

Socrates:: No by—indeed you don't, for you said that great power is a good to its possessor.

Polus:: Well and so I do.

Socrates:: Then do you think it a good for a man to do anything he thinks best, supposing he has no understanding? and do you call that great power?

Polus:: No not I.

Socrates:: Then you must prove to me that the orators are men of understanding, and that rhetoric is an art, and not a mere flattery, and so refute me. But if you leave me un-refuted, your orators who do what they think proper in their cities, and your tyrants, will find no advantage in that, if indeed power is as you say a good, and doing what one thinks fit without understanding you too admit to be an evil. You do, don't you?

Polus:: Yes I do.

Socrates:: Then how can orators or tyrants have great power in their cities unless Socrates be forced by Polus to own that they do what they desire?

Polus:: Here's a fellow—

Socrates:: I say they don't do what they desire—There now, refute me.

Polus:: Didn't you admit just before that they do what they think best?

Socrates:: Well and so I do now.

Polus:: Why then they do what they desire.

Socrates:: I say no.

Polus:: What? whilst they do what they think fit?

Socrates:: Yes.

Polus:: This is abominable, Socrates, quite monstrous.

Socrates:: Don't be abusive, most polite Polus, to address you in your own style: but if you have any question to put to me prove that I am wrong, or if not answer yourself.

Polus:: Well I will answer, to find out what really you do mean.

Socrates:: Is it your opinion then that people in doing any thing on any occasion desire simply what they do [i.e. the means to their end] or that which is the object of their doing what they do? As in the case of patients for instance who take medicine prescribed by the physicians, think you they desire merely what they do, to swallow the medicine and suffer pain, or that, health to wit, which is the object of their taking it?

Polus:: Plainly health, which is the object in taking it.

Socrates:: And so with foreign merchants or those that are engaged in any other branch of trade, what they desire is not what they are habitually doing; for who desires to incur all the risk and trouble of a voyage? what they desire I presume is that which is the object of their voyage, wealth: for it is for wealth they undertake it.

Polus:: Yes certainly.

Socrates:: And isn't the same true in all other cases? If a man do any thing for an object, he doesn't desire that which he does, but that which was his object in doing it?

Polus:: Yes.

Socrates:: Well then, is there any thing existing that is not either good or bad or indifferent, neither good nor bad?

Polus:: Most decidedly, nothing, Socrates.

Socrates:: Well do you call wisdom and health and wealth and every thing else of that sort good, and the opposites of these bad?

Polus:: Yes I do.

Socrates:: And by things neither good nor bad do you mean things like these, such as sometimes partake of the nature of the good and sometimes of the bad and sometimes of neither, as sitting for example and walking and running and sailing, or again things such as stones or sticks or any thing else of that sort? These are what you mean, are they not? or is there any thing else to which you give the name of neither good nor bad?

Polus:: No, these are what I mean.

Socrates:: Do people then do these indifferent (intermediate) things when they do them for the sake of the good, or the good for the sake of the indifferent?

Polus:: The indifferent for the sake of the good to be sure.

Socrates:: Consequently it is in pursuit of good that we either walk, when we do walk, because we think it better for us, or, the contrary, stand still, when we do stand, with the same object, the good, don't we?

Polus:: Yes.

Socrates:: And so likewise don't we put a man to death if we ever do such a thing, or banish him, or deprive him of his property, because we think it is better for us to do it than not?

Polus:: Yes no doubt.

Socrates:: So then it is for the sake of what is good that people do all these things that do them.

Polus:: I allow it.

Socrates:: Well but didn't we admit that when we do things with an object in view we don't desire those things, but that which is the object of our doing them?

Polus:: Quite so.

Socrates:: Then we don't desire to massacre people or expel them from our cities or rob them of their money merely in the abstract, but if these things are advantageous we desire to do them, but if mischievous we do not. For we desire what is good, as you allow; but what is neither good nor bad we do not desire, nor what is bad, do we? Do you think what I say is true, Polus, or not?—Why don't you answer?

Polus:: True.

Socrates:: Well then admitting this, if a man puts any one to death or expels him from the city or strips him of his property, whether he be tyrant or orator that does it, because he thinks it is better for him, when it is really worse, he I presume does what he thinks fit, doesn’t he?

Polus:: Yes.

Socrates:: But does he also do what he desires, supposing these things to be bad for him?—Why don’t you answer?

Polus:: No, I don’t think he does what he desires.

Socrates:: Can it be said then that such an one has great power in that city, if great power means something good according to your admission?

Polus:: It can not.

Socrates:: I spoke the truth then in saying that it is possible for a man to do what he pleases in a city and yet not to have great power nor to do what he desires.

Polus:: Just as if you, Socrates, would not choose to have the liberty of doing what you please in your city rather than not, and don’t envy a man when you see one that has either put some one to death or robbed or imprisoned him because he thought proper to do so.

Socrates:: Do you mean justly or unjustly?

Polus:: Whichever it be, is it not enviable either way?

Socrates:: Hush, hush, Polus.

Polus:: Why so?

Socrates:: Because we mustn’t envy the unenviable nor the miserable, but pity them.

Polus:: What? Is this your opinion of the condition of the men that I speak of?

Socrates:: How can it be otherwise?

Polus:: Then do you think a man who puts any one he pleases to death if he does it justly is wretched and an object of pity?

Socrates:: No I don't; but not enviable either.

Polus:: Didn't you say just now that he was wretched?

Socrates:: Nay I said if he did it unjustly, my friend, and an object of pity into the bargain; but if justly, unenviable.

Polus:: Oh no doubt a man who is put to death unjustly is pitiable and wretched.

Socrates:: Less so than the author of his death, Polus, and less so than one who deserves to die.

Polus:: In what way pray, Socrates?

Socrates:: In this, that to do wrong is the greatest of all evils.

Polus:: What? this the greatest? is not to suffer wrong a greater?

Socrates:: No by no means.

Polus:: Would you prefer then suffering wrong to doing it?

Socrates:: I should prefer neither for my own part; but if I were obliged either to do wrong or to suffer it I should choose suffering rather than doing it.

Polus:: Then I suppose you wouldn't accept despotic power?

Socrates:: No, if you mean by despotic power the same as I do.

Polus:: Well I mean what I said just now, to have the liberty of doing anything one pleases in one's city, the power of death or banishment or, in short, doing anything according to one's own will and pleasure.

Socrates:: My worthy friend, let me tell you something and then when it comes to your turn to speak you may criticize it. If in a crowded market I were to take a dagger under my arm, and whisper to you, Polus, I have just come into possession of quite a despotic power, perfectly amazing; for if I think fit that any one of those men that you see there should die this instant, he'll be a dead man, any one of them I please; or if it seems to me that any one of them ought to have his head broken, it'll be broken on the spot, or to have his coat torn in two, it'll be done: so great is my power in this city—If I say on finding you incredulous I were to show you my dagger, you would say probably when you saw it, why, Socrates, at this rate every body would have great power, for in this fashion any house too you please might be set on fire, aye and the Athenian docks as well and their men of war and all their other vessels public as well as private. But surely this is not the meaning of having great power, to do anything one pleases. Do you think it is?

Polus:: No certainly not, in that way.

Socrates:: Can you tell me then why you disapprove of power of this kind?

Polus:: Yes I can.

Socrates:: Why is it then? say;

Polus:: Because punishment is the inevitable consequence of doing such things as that.

Socrates:: And is not punishment a bad thing?

Polus:: To be sure it is.

Socrates:: And so, my fine fellow, you have come round again to the opinion that great power is a good provided the doing what one pleases be accompanied by some advantage in doing it, and that this alone really is great power; otherwise it is a bad thing and mere weakness. And next let us consider this point. We admit, don't we, that it is sometimes better to do such things as we were just speaking of, to put men to death or banish them or deprive them of their property, and sometimes not?

Polus:: Yes certainly.

Socrates:: Well then, it seems, you and I agree in admitting this.

Polus:: Yes.

Socrates:: Then when do you say it is better to do them? Tell me where you draw your line?

Polus:: Nay, Socrates, do you answer this same question yourself.

Socrates:: Well then I say, Polus, if you prefer hearing it from me, that it is better to do these things when they are done justly, and when unjustly then worse.

Polus:: Very hard indeed it is to refute you, Socrates. Why, couldn't any child prove you to be in the wrong?

Socrates:: Then I shall be very much obliged to the child, and equally so to you, if you refute me and deliver me from my absurdity. Pray now don't shrink from the trouble of doing a friend a kindness, but refute me.

Polus:: Why really, Socrates, there is no occasion to go back to stories of old times to refute you; for the events of only the other day are quite enough to prove you in the wrong and to show that many wrong doers are happy.

Socrates:: What are they?

Polus:: You see I presume that the famous Archelaus son of Perdiccas is king of Macedonia?

Socrates:: Well if I don't, I hear of it at any rate.

Polus:: Do you take him then to be happy or wretched?

Socrates:: I don't know, Polus, for I haven't the honor of his acquaintance.

Polus:: How's that? Do you mean to say you could discover it by making his acquaintance? Don't you know without that at once that he is happy?

Socrates:: No by my faith I don't.

Polus:: Then it's plain, Socrates, that you will say that you don't know that the great king is happy either.

Socrates:: And if I do I shall say the truth: for I don't know what is his condition in respect of his mental cultivation and moral character.

Polus:: How then? does happiness consist solely in this?

Socrates:: Yes according to my view, Polus: for an honest man or woman I say is happy, and one that is unjust and wicked miserable.

Polus:: Then according to your account the great Archelaus is miserable?

Socrates:: Yes, my friend, if he is unjust.

Polus:: Why of course, how can he be otherwise? He had no claim whatever to the throne which he now occupies, being the son of a woman (Simiche) who was the slave of Perdiccas' brother Alcetas, and in strict justice was Alcetas' slave; and if he had desired to do what was right he would have been the slave of Alcetas and happy according to your account. But now it is really amazing how miserable he has become, for he has done the most enormous wrong. First of all he invited this very same master and uncle of his to his court as if he meant to restore to him the dominions of which Perdiccas robbed him, and after entertaining him and his son Alexander, his own cousin, about the same age as himself, and making them drunk, he stowed them away in a carriage, carried them off by night, murdered them both and made away with them. And after all this wickedness he never discovered that he had made himself the most miserable of men, nor repented of what he had done, but he did not choose to make himself happy by bringing up as he was bound to do his brother the legitimate son of Perdiccas, a boy of about seven years old, to whom the throne came by right, and restoring to him his kingdom, but shortly after he threw him into a well and drowned him, and then told his mother Cleopatra that he had tumbled in as he was running after a goose and so come by his death. Doubtless therefore now as he is the greatest criminal in Macedonia he is the most miserable of all the Macedonians, and not the happiest, and I dare say there are a good many people in Athens; with yourself at their head, who would rather take the place of any other Macedonian whatever than that of Archelaus.

Socrates:: I complimented you before at the beginning of our conversation, Polus, upon your being as it seemed to me so admirably instructed in the art of rhetoric, though at the same time I thought you had somewhat neglected the dialogue. And so now, this is the famous argument, is it, with which any child could refute me? and this is the sort of talk by which in your opinion I now stand convicted when I assert that the wrong doer is not happy? How can that be, my good friend? And yet I don't admit a single word you say.

Polus:: No because you won't; for I'm sure you think as I say.

Socrates:: My dear creature, that's because you try to refute me in rhetorical fashion, as they fancy they do in the law courts. For there indeed the one party is supposed to refute the other when he brings forward a number of respectable witnesses in support of any statements he happens to make, whilst the opponent produces only a single one or none at all. But refutation of this kind is absolutely worthless for the purpose of ascertaining the truth: for it may even happen sometimes that a man may be overborne by the false witness of numbers and apparent respectability. And now if you want to bring forward witnesses to prove that I am wrong on the points you speak of, you will find nearly every body, Athenians and foreigners, agree with you. You may have for witnesses Nicias, if you please, son of Niceratus with his brothers, whose tripods are standing in a row in the Dionysium, or if you please

Aristocrates son of Scellias, the donor of that splendid offering again at Delphi, or if you like, the whole house of Pericles or any other family you choose to select out of those of this place. But I, alone as I stand here, refuse to admit it: for you can't convince me, but you try by bringing forward a number of false witnesses against me to dispossess me of my substance and of the truth. But for my part, if I don't produce yourself for one as a witness in confirmation of what I say, I think I have effected nothing of the least importance in advancing the object of our discussion; nor you either I think, unless I singly and alone bear witness in your favor, and you leave all the rest of those people entirely out of the question. This then is one kind of proof, as you and a good many others besides you imagine it to be; and there is also another which I on my side deem to be such. Let us then compare them together and see if we shall find any difference between them. For in truth the subject we are debating is one of by no means slight importance, nay it is one might almost say that on which to know is noblest and not to know most disgraceful: for what it all amounts to is, either to know or to be ignorant who is a happy man and who is not. First of all for instance, to take the particular point we are now discussing, you conceive it possible for a man to be happy in wrong doing and in wickedness, supposing that you think Archelaus to be a wicked man and yet happy. Are we not to suppose that this is your opinion?

Polus:: Yes certainly.

Socrates:: And I say it's impossible. Here is one point on which we differ. So far so good.

But will then a man be happy in wrong doing if he be overtaken by justice and punishment?

Polus:: No, by no means; in that case he would be most miserable.

Socrates:: But if the wrong doer chance to escape justice, according to your account he will be happy?

Polus:: That is my view.

Socrates:: And in my opinion, Polus, the wrong doer and the wicked man is in every case miserable; more miserable however if he escape justice and evade punishment for his iniquity, but less miserable if he pay the penalty of his crimes, and be duly punished by Gods and men.

Polus:: A strange paradox this, Socrates, that you undertake to maintain.

Socrates:: Aye and I will try to make you too maintain the same, my friend, for as a friend I regard you. So now, the points on which we differ are these. Look at them yourself. I told you I believe before that doing wrong is worse than suffering it.

Polus:: No doubt you did.

Socrates:: You on the contrary thought suffering it worse.

Polus:: Yes.

Socrates:: And I said that the wrong doers are miserable, and you refuted me.

Polus:: Yes, egad, that I did.

Socrates:: At least in your own opinion, Polus.

Polus:: And my opinion is right I should rather think.

Socrates:: But you said on the other hand that the wicked are happy, provided they escape justice.

Polus:: No doubt of it.

Socrates:: And I say they are most miserable, and those that are brought to justice less so. Will you refute that too?

Polus:: Why that's still harder to refute than the other, Socrates.

Socrates:: Not only so, Polus, but impossible; for the truth can never be refuted.

Polus:: How say you? If a man be detected in a criminal design of making himself absolute, and thereupon be put to the torture or mutilated or have his eyes burnt out; or, after having been himself subjected to every possible variety of the severest torments and been forced to look on whilst his own children and wife endured the like, then last of all be crucified or burnt to death in a coat of pitch—will he be a happier man than if he were to escape and make himself tyrant, and pass his life as supreme rider in his city in doing whatsoever he pleases, an object of envy and congratulation to his own citizens and all foreigners to boot? Is this what you say it is impossible to refute?

Socrates:: Now you are trying to scare me with bugbears, my brave Polus, instead of refuting me; just now you were citing witnesses against me. However never mind that, but just refresh my memory a little: "in a criminal design upon the tyranny," you said?

Polus:: Yes I did.

Socrates:: Then neither of them will ever be happier than the other, neither he that has unjustly compassed the tyranny nor he that is punished for his misdeeds: for of two miserable men neither can be said to be happier: still the more miserable is he that remains undiscovered and secures himself on the throne. [Polus smiles.] What does that mean, Polus? Are you laughing? Here’s another new kind of refutation; when an assertion is made to refute it by grinning instead of argument.

Polus:: Don’t you think, Socrates, you are confuted already, when you assert such things as no human being would maintain? Only ask any one of the company there.

Socrates:: Polus, I am not one of your public men; in fact only last year when I was elected member of the Council, and, my tribe having the Presidency, it became my duty to put a question to the vote, I made myself ridiculous by not knowing how to do it. So don’t ask me again this time to take the votes of the present company; but, as I said just now, if you have no better argument than those you have used, hand the matter over to me in my turn, and try the sort of proof that I think ought to be employed. For I know how to produce one witness in support of my assertions, and that is the man himself with whom I am arguing, the many I utterly disregard; and there is one whose vote I know how to take, whilst to the multitude I have nothing whatever to say. See then whether you will consent to submit to be refuted in your turn by answering my questions. For I think, you know, that you and I and every one else believes doing wrong to be worse than suffering it, and escaping punishment for one’s transgressions worse than enduring it.

Polus:: And I, that neither I nor anyone else in the world believes it. For would you rather suffer wrong than do it?

Socrates:: Yes, and so would you and every body else.

Polus:: You are quite wrong; on the contrary neither I nor you nor any one else.

Socrates:: Then will you answer?

Polus:: By all means, for in fact I am quite curious to know what you can possibly have to say.

Socrates:: Then tell me that you may know, just as if I was beginning my questions all over again, which of the two seems to you to be worse, Polus, doing or suffering wrong?

Polus:: Suffering it to be sure.

Socrates:: But what say you to ‘fouler?’ Which of the two is that?

Polus:: Wrong doing.

Socrates:: And so likewise worse, if fouler.

Polus:: No by no means.

Socrates:: Oh, I understand: you think fair and good and bad and foul are not the same things.

Polus:: Certainly not.

Socrates:: But what of this? All fair things, as bodies and colors and figures, and sounds and pursuits—is it with reference to no standard at all that you call them fair every time you use the word? for instance first, when you apply the term fair to fair bodies is it not either in respect of their use, with reference, that is, to the purpose which any of them may be made to serve; or in respect of some kind of pleasure, when they give delight to those that look at them in the act of contemplation? Have you any account to give beyond this of beauty of body?

Polus:: None.

Socrates:: And so with everything else in the same way, figures and colors, is it in virtue of some pleasure or advantage or both that you term them fair?

Polus:: Yes it is.

Socrates:: And with sounds too and every thing in music, is it not just the same?

Polus:: Yes.

Socrates:: And moreover in all that belongs to laws and habits of life, their beauty I presume is to be found nowhere beyond these limits, that is to say, either the utility or the pleasure that is in them, or both.

Polus:: No, I think not.

Socrates:: And so again with the beauty of studies is it not the same?

Polus:: Yes no doubt; and this time, Socrates, I do really like your definition, when you define what is fair by pleasure and good.

Socrates:: And may I in the same way define what is foul by the opposites, pain and evil?

Polus:: Of course you may.

Socrates:: So then when of two fair things one is fairer, it is so because it surpasses in one of these two or both of them, either in pleasure or utility or both.

Polus:: Certainly.

Socrates:: And when again of two foul things the one is fouler, it will be so by the excess either of pain or mischief. Is not that a necessary consequence?

Polus:: Yes.

Socrates:: Come then, what was said just now about doing and suffering wrong? didn't you say that suffering wrong is worse, but doing it fouler?

Polus:: I did.

Socrates:: Well then if doing wrong is fouler than suffering it, it is either more painful, and fouler by excess of pain, or of mischief or both? Does not this also necessarily follow?

Polus:: Of course it does.

Socrates:: First of all then let us consider whether doing wrong exceeds suffering it in pain, whether, that is, those that do wrong feel more pain than those that suffer it?

Polus:: Oh no, Socrates, not that.

Socrates:: So then it is not in pain that it exceeds.

Polus:: Certainly not.

Socrates:: And accordingly if not in pain, it cannot now exceed in both.

Polus:: It appears not.

Socrates:: It only remains then (that it exceed) in the other.

Polus:: Yes.

Socrates:: In mischief.

Polus:: It seems so.

Socrates:: So it is because it exceeds in mischief that doing wrong is worse than suffering it.

Polus:: Plainly so.

Socrates:: Is it not then admitted by the mass of mankind, as it was in fact by yourself a little while ago, that doing wrong is fouler than suffering it?

Polus:: Yes.

Socrates:: And now it turns out to be worse.

Polus:: It seems so.

Socrates:: Would you then prefer the greater evil and the greater deformity to that which is less? Don't hesitate to reply, Polus, it will do you no harm, but bravely submit yourself to the argument as to a physician, and answer yes or no to my question.

Polus:: Well I should not prefer it, Socrates.

Socrates:: And would any one else in the world?

Polus:: No I think not, as you put the case now.

Socrates:: Then I spoke the truth in saying that neither you nor I nor any one else in the world would prefer doing to suffering wrong; because it's worse.

Polus:: So it appears.

Socrates:: You see then, Polus, that when the one mode of proof is brought into comparison with the other, there is no resemblance between them; but you have the assent of every one else except myself, whereas I am satisfied with your own assent and your own evidence single and alone, and I take only your own vote and pay no sort of attention to the rest. And so let this be considered settled between us. And next let us examine the second question on which we differed; whether, namely, for a guilty man to be brought to justice is the greatest of all evils as you thought, or to escape it is a greater as was my opinion. Let us consider it thus. Do you call being brought to justice and being justly chastised for wrong doing the same thing?

Polus:: Yes I do.

Socrates:: Can you deny that all just things are fair, in so far as they are just? Now consider well before you speak.

Polus:: Well I do think so,. Socrates.

Socrates:: Then look at this again. When any one does an act, is it necessary that there should be a something acted upon by this agent?

Polus:: Yes I think so.

Socrates:: And does that something suffer exactly what the agent does? and receive an impression of the same kind as the action of the agent? To explain my meaning by an example—when any one strikes a blow, something must necessarily be struck?

Polus:: Just so.

Socrates:: And if the striker strikes hard or quick, the object struck is struck in the same way?

Polus:: Yes.

Socrates:: Consequently the effect is of the same kind in the object struck as is the action in the striking agent?

Polus:: To be sure.

Socrates:: Or again, when a man burns, something must of necessity be burnt?

Polus:: Of course.

Socrates:: And if he burns severely or painfully, the object burnt must be burnt in the same way as the burning agent burns?

Polus:: Yes certainly.

Socrates:: And so when a man cuts, the same rule applies, that is to say something is cut?

Polus:: Yes.

Socrates:: And if the cut is large or deep or painful, the cut produced in the object cut is precisely of the same kind as the thing cutting cuts it?

Polus:: So it appears.

Socrates:: Well then in a word, see if you admit universally the rule I just stated: the effect in the patient is of exactly the same kind as the action in the agent.

Polus:: Well I do.

Socrates:: This then being admitted, is to be punished to suffer something or to do it?

Polus:: To suffer of course, Socrates.

Socrates:: And that too by the hands of some agent?

Polus:: No doubt of it, by the hands of him that inflicts the punishment.

Socrates:: But he that punishes aright punishes justly.

Polus:: Yes.

Socrates:: And in doing that does he do what is just?

Polus:: What is just.

Socrates:: And again one that atones for his crime by punishment suffers what is just?

Polus:: So it appears.

Socrates:: And what is just I believe we have admitted to be fair?

Polus:: Yes certainly.

Socrates:: Consequently of these two the one does what is fair, and the other, the man who is punished, suffers it.

Polus:: Yes.

Socrates:: And so if fair then good, for that is either pleasant or useful.

Polus:: Of course.

Socrates:: So then one who is punished for his sins suffers what is good?

Polus:: It seems so.

Socrates:: Then he receives a benefit?

Polus:: Yes.

Socrates:: Is it that kind of benefit which I suspect? namely that his soul is improved if he is justly punished.

Polus:: Yes probably.

Socrates:: Then is one that is brought to justice relieved from vice of soul?

Polus:: Yes.

Socrates:: And is not that the greatest of all evils that he is relieved from? Look at it in this way. In a man's pecuniary condition do you discern any other evil than poverty?

Polus:: No, only poverty.

Socrates:: Or again in his bodily condition? would you not say the evil is weakness and disease and ugliness and such like?

Polus:: Yes I should.

Socrates:: And so in soul don't you believe that there is some inherent vice?

Polus:: No doubt of it.

Socrates:: And don’t you call this injustice and ignorance and cowardice and so forth?

Polus:: To be sure.

Socrates:: So then in mind body and estate, these three, you have pointed out three several vices, poverty disease injustice?

Polus:: Yes.

Socrates:: Then which of these kinds of vice is the foulest? Is it not injustice, or in a word the vice of the soul?

Polus:: Yes by far.

Socrates:: And if foulest then likewise worst?

Polus:: How mean you by that, Socrates?

Socrates:: This. It follows from our previous conclusions that what is most foul is so always by reason of its bringing with it either the greatest pain or bane or both.

Polus:: Quite so.

Socrates:: And now we have just admitted injustice and in general vice of soul to be what is foulest?

Polus:: We have no doubt.

Socrates:: So then it is either most painful, or in other words it is because it surpasses in painfulness that it is the foulest of all of them, or banefulness or in both ways?

Polus:: Necessarily.

Socrates:: Is then to be unjust and licentious and cowardly and ignorant more painful than poverty and sickness?

Polus:: No I think not, Socrates, from what we have been saying.

Socrates:: Prodigious then must be the amount of banefulness and amazing the evil by which the soul's vice exceeds all the rest so as to make it the foulest of them all, since it is not by pain, according to your account.

Polus:: So it appears.

Socrates:: But further, where the excess consists in the highest degree of banefulness that must I should think be the greatest of all evils.

Polus:: Yes.

Socrates:: Injustice then and licentious indulgence and all the rest of the soul's vices are the greatest of all evils.

Polus:: So it appears.

Socrates:: What is the art then that delivers us from poverty? Is it not that of trading?

Polus:: Yes.

Socrates:: And what from disease? Is it not the art of medicine?

Polus:: Beyond all doubt.

Socrates:: And what from wickedness and injustice? If you haven't an answer ready when the question is put in this way, look at it thus: Whither and to whom do we carry those whose bodies are diseased?

Polus:: To the physicians, Socrates.

Socrates:: And whither do we send the evil-doers and licentious?

Polus:: Before the judges do you mean?

Socrates:: To suffer for their crimes, isn't it?

Polus:: Yes.

Socrates:: Is it not then by the application of a sort of justice that those chastise who chastise aright?

Polus:: Plainly.

Socrates:: So then trading delivers us from poverty, medicine from disease, and justice from licentiousness and wickedness.

Polus:: So it appears.

Socrates:: Which then is fairest of these?

Polus:: What do you mean?

Socrates:: Trading, medicine, justice.

Polus:: Justice, Socrates, is far superior.

Socrates:: So then, again, if it is fairest it produces either the greatest pleasure or profit or both?

Polus:: Yes.

Socrates:: Well then, is medical treatment pleasant, and do those who submit themselves to such treatment like it?

Polus:: No I should think not.

Socrates:: But it is beneficial, isn't it?

Polus:: Yes.

Socrates:: Because the patient is rid of a great evil, and therefore it is well worth his while to undergo the pain and be well.

Polus:: Of course it is.

Socrates:: Is this then the happiest condition for a man's body to be in, to be cured by medical treatment, or never to be ill at all?

Polus:: Plainly never to be ill.

Socrates:: For, it seems, this is not what we said happiness consisted in, the deliverance from evil, but in never having had it at all.

Polus:: It is so.

Socrates:: Again. Of two persons that have something wrong in body or soul which is the more miserable? The one who puts himself into the physician's hands and so gets rid of the mischief, or he who does not and retains it?

Polus:: I should suppose the one who does not.

Socrates:: And didn't we say that to be punished for one's faults is a deliverance from the greatest evil, that is wickedness?

Polus:: We did.

Socrates:: Because I suppose justice brings us under control and makes us juster, and so becomes the art by which wickedness is cured.

Polus:: Yes.

Socrates:: Happiest of all then is he who is free from vice in his soul, seeing that we proved this to be the greatest of all evils.

Polus:: Evidently.

Socrates:: And in the second degree, I should suppose, he who gets rid of it.

Polus:: It seems so.

Socrates:: And he as we said is one who is admonished and rebuked and punished.

Polus:: Yes.

Socrates:: Consequently one who retains injustice and is not delivered from it leads the worst kind of life.

Polus:: So it appears.

Socrates:: And is not he that man who in the commission of the greatest crimes and the practice of the greatest iniquity has managed to escape reproof and correction and punishment, as you say Archelaus has contrived to do, and the rest of your tyrants and orators and potentates?

Polus:: It seems so.

Socrates:: Because, I should think, my excellent friend, what men of this sort have contrived to do for themselves is very much the same as if a man afflicted with disease of the worst kind were to contrive to escape giving satisfaction to the physicians for the faults of his body, that is, undergoing medical treatment, dreading like a child the pain inflicted by the cautery or the knife. Don't you think so yourself?

Polus:: Yes I do.

Socrates:: In ignorance it would seem of the great advantage of health and soundness of body. For it appears from the ¦conclusions at which we have just arrived that the conduct of those likewise who try to escape the penalty due to their transgressions is very much of this kind, Polus; they discern clearly enough its painfulness but are blind to its benefits, and are not aware how much more miserable than an unsound body it is to be associated with a soul that is not sound but corrupt and unjust and unholy. And hence it is that they strain every nerve to escape punishment and deliverance from the direst evil, by providing themselves either with money or friends or the means of making themselves the most accomplished speakers. But if our conclusions are true, Polus, do you perceive what follows from our argument? or would you like us to reckon it ail up together?

Polus:: Yes if you don't object.

Socrates:: Is not one result then that injustice and wrong doing is the worst of evils?

Polus:: So it appears.

Socrates:: And further it appeared that to suffer for one’s faults is a deliverance from this evil?

Polus:: It seems so.

Socrates:: And not to be punished for them is an abiding in us of the evil?

Polus:: Yes.

Socrates:: Wrong doing then is second of evils in degree; but to do wrong and not suffer for it is the first and greatest of them all.

Polus:: It seems so.

Socrates:: Well, my friend, was not this the point in dispute between us, that you pronounced Archelaus, the greatest of all criminals, happy because he enjoyed a complete immunity from punishment for his crimes, whilst I thought on the contrary that if any one, whether it be Archelaus or any one else in the world, pay no penalty for the wrong that he does he may justly be called preeminently miserable above all other men; and universally, that he that does wrong is more miserable than he that suffers it, and he that escapes the penalty for his transgressions than he that submits to it? Is not this what I said?

Polus:: Yes.

Socrates:: Well then is it not now proved that what I said was true?

Polus:: It appears so.

Socrates:: Very good. If then this is true, Polus, what is the great use of rhetoric? For, you know, it follows from our present conclusions that a man should himself keep the strictest watch over his own conduct to avoid all wrong, seeing that thereby he will bring on himself great evil; should he not?

Polus:: Yes surely.

Socrates:: But if he do commit a wrong, either himself or any one else he cares for, he must go of his own accord to the place where he may most speedily be punished for it, to the judge as to his physician, striving earnestly that the disease of his iniquity may not become inveterate and so make the ulcer of his soul deep-seated and incurable. Or if not, what are we to say, Polus, supposing our former admissions are to stand? Can the one be brought into harmony with the other in any other way than this?

Polus:: Why to be sure what else can we say, Socrates?

Socrates:: It follows then that for the purpose of a defense of crime, whether the guilt be in oneself or one's parents or friends or children or country, your rhetoric is of no use to us at all, Polus, unless indeed one were to suppose the very contrary, that it is a man's duty to accuse himself first of all, and in the next degree his relations or any one else of his friends who may at any time be guilty of a wrong; and instead of concealing the wrong to bring it to light, that the offender may suffer the penalty and so be restored to health; and again to force oneself and others not to flinch out of cowardice, but submit bravely with closed eyes as it were to a physician to be cut or burned, in the pursuit of what is good and fair, not counting the pain; if his crimes have been worthy of stripes submitting to the rod, or if of bonds to imprisonment, or if of a fine to payment of the fine, or if of exile to banishment, or of death to die; himself the first to be his own accuser and of all his friends and relations as well, and to this end employing his rhetoric that they may all by the disclosure of their crimes be delivered from the greatest of all evils, which is unrighteousness. Is this to be our conclusion, or not, Polus?

Polus:: A strange one, Socrates, it seems to me, but still perhaps you do find it in agreement with what you said before.

Socrates:: Well then either the other must be disproved, or this is the inevitable result.

Polus:: Yes, that is certainly so.

Socrates:: And conversely again, if on the contrary one were ever required to do a man a mischief, whether an enemy or any one else—provided only the wrong be not inflicted by the enemy on oneself, for that we must be very careful to avoid—but supposing the wrong to be done by him to some one else, we should contrive by every means in our power both by word and deed to secure him impunity and prevent him from appearing before the judge, or if he do, we must devise means that the enemy may effect his escape and not suffer punishment; but if he have stolen large sums of gold we must contrive that he may not refund it, but keep and spend it, on him and his, lawlessly and godlessly; or if again he have committed crimes worthy of death, that he may not die; if possible never, but be immortal in his wickedness, or if not, that he may prolong his life to the utmost being such as he is. Such are the objects as it seems to me, Polus, for which rhetoric is serviceable, for to one who does not intend to do wrong the use of it does not seem to me particularly great—if indeed there be any use in it at all—for to be sure in our preceding discourse it no where came to light.

Callicles:: Tell me, Chærephon, is Socrates in earnest in all this, or only joking?

Chaerephon:: I should say, Callicles, prodigiously in earnest. However there's nothing like asking him the question.

Callicles:: In faith, that's just what I am curious to do. Tell me, Socrates, are we to suppose that you are serious now or in jest. For if you are serious and what you say is really true, the life of all of us must have been turned upside down, mustn't it? and we are all doing the exact contrary it seems to what we ought to do.

Socrates:: Callicles, if we men had not certain feelings in common, though they do vary in different individuals, but if one of us had feelings peculiar to himself and so differing from the rest of mankind, it would not be easy for one of us to exhibit to his neighbor any of his own impressions. I make this remark in consequence of having observed that you and I are just now in pretty much the same condition, enamored, that is, the pair of us, of two things apiece, I of Alcibiades son of Clinias and philosophy, and you of the Athenian Demus and the son of Pyrilampes. Now I remark constantly that with all your cleverness however much your favorite may talk and whatever opinion he may happen to pronounce about any thing, you can't contradict him, but are constantly changing backwards and forwards. If it be in the assembly that you are making a speech, and Demus—the Athenian Demus I mean—doesn’t agree with you, you veer round at once and say any thing it pleases, or when you are talking to that fair youth the son of Pyrilampes, the very same thing happens to you; you can’t resist any thing that your minion resolves or says, and therefore if any one were to express surprise at the oddity of what you are constantly saying to oblige them, you would tell him I dare say, if you chose to speak the truth, that unless your favorite can be prevented from talking in that way you too must always go on saying the same. Imagine then that you have to receive precisely the same answer from me, and don’t be surprised at my saying this, but make my mistress Philosophy leave off talking in this way. For, my dear friend, she always holds the same language as you hear from me now, and is far less inconstant to me than any other mistress; for that son of Clinias is at the mercy now of this now of that opinion, but Philosophy is ever constant to the same. Her assertions are what you are now so surprised at, though you were present yourself when they were made. So then either refute her, as I said just now, by showing that wrong doing and impunity in guilt is not the extremest of all evils; or if you leave this unrefuted, by the dog, God of the Egyptians, Callicles, Callicles won’t agree with you, but there will be a discord between you all your life long. And yet I should think that it were better for me that my lyre should be out of tune and discordant, or any chorus that I had furnished, or that any number of men should disagree with me and say the contrary, than for my own single self to be out of harmony with and contradict myself.

Callicles:: Socrates, you seem to be running riot in your talk like a genuine popular orator; and now you are declaiming in this way because Polus has fallen into just the same error as he was accusing Gorgias of being betrayed into in his argument with you. For he said if I remember right, that when you asked Gorgias, supposing any one came to him with the intention of studying rhetoric without the knowledge of justice, whether he would teach it him, he turned bashful and said he would, in compliance with the popular prejudice, because people would be indignant if he said no; and so by reason of this admission he was forced to contradict himself; which is exactly what you are so fond of. And he was quite right in my opinion in ridiculing you as he did then. But now this time he has met with the very same disaster himself; and for my own part, what I don't approve of in what Polus said is just this, that he conceded to you that doing wrong is fouler than suffering it; for it was in consequence of this admission that he himself in his turn got completely entangled by you in the argument and had his mouth stopped, because he was ashamed to say what he thought. For, Socrates, you do really divert the argument to such vulgar fallacies and popular claptrap, whilst you pretend all the time to be in the pursuit of truth, to what is 'fair' not by nature but merely by law or convention: whereas in fact for the most part these are opposed to one another, nature and convention: and so if a man is timid and doesn't venture to say what he thinks, he is forced to contradict himself. And this forsooth is your ingenious device that you have discovered to take people in with in your discussions; when a man asserts any thing as according to law or convention you slyly substitute ‘according to nature’ in your questions, and when he is appealing to natural principles you refer to convention. As for instance in the present case, of doing and suffering wrong, when Polus was speaking of what is conventionally ‘fouler,’ you followed up what he meant ‘conventionally’ by arguing upon it in the ‘natural’ sense. For it is only by custom and convention that doing wrong is fouler; by nature every thing is fouler which is likewise worse, as suffering wrong. For in fact the endurance of such a thing as wrong is not a man’s part at all, but a poor slave’s, for whom death is better than living—as it is indeed for any one who is unable to help himself when wronged and insulted or any one else for whom he cares. However the law makers to be sure are the weaker and more numerous part of mankind. It is with a view therefore to themselves and their own interest that they frame their laws and bestow their praises and their censures; and by way of frightening the stronger sort of men who are able to assert their superiority, in order that they mayn’t assert it over them, they tell them that self-seeking is foul and unjust, and that this is what wrong doing consists in, trying namely to get the advantage over one’s neighbors; for they are quite satisfied no doubt, being the inferiors themselves, to be on an equality with the rest.

Such then is the reason why seeking to get more than the mass of mankind is conventionally styled unjust and foul, and why they call it doing wrong: whereas the truth is, in my opinion, that nature herself shows on the other hand that it is just that the better should have more than the worse, and the abler than the less able. And it is plain in many instances that this is so, not only in all the other animals, but also in mankind in entire states and races, that right I mean is decided to consist in this, that the stronger should bear rule and have the advantage over the weaker. For by what right did Xerxes invade Greece, or his father Scythia? or in any other of the ten thousand similar cases of the kind that might be produced? No, no, these men no doubt follow nature in acting thus, aye by my faith and law too, the law of nature; not however I dare say that which we frame by way of molding the characters of the best and strongest of us, whom we take from infancy, and taming them like lions by spells and conjuring tricks reduce them to abject slavery, telling them that they must be content with their fair share and that this is the meaning of fairness and justice. But I fancy when there arises a man of ability he flings off all these restraints and bursts them asunder and makes his escape; and trampling under foot all our written enactments and juggleries and spells and laws, clean against nature every one of them, our would-be slave rises up against us and shows himself our master, and then natural justice shines forth in its true light. And it seems to me that Pindar too confirms what I say in the ode in which he says "Law the Lord of all, mortals and immortals:" He, you know, he continues, "inflicts, and justifies, the utmost violence with supreme hand. I appeal in proof to the deeds of Hercules, for unbought—" The words are something like that, for I don’t know the ode well. He says however, that he neither purchased nor received as a gift from Geryones the cows that he drove off, as though this were natural right, that cows or any other property of the inferior and weaker should all belong to the superior and stronger.

Such then is the truth in this matter, and you will be convinced of it if at length you leave off your philosophy and pass on to higher things. For to be sure, Socrates, philosophy is a pretty thing enough, if only a man apply himself to it to a moderate extent at the proper age; but if he go on spending his time upon it too long, it’s the ruin of a man. For if he be ever so clever and yet carries these studies far on into life he must needs turn out ignorant of every thing that one who would be an accomplished and eminent citizen should be conversant with. For in fact people of this sort show themselves ignorant of the laws of their own cities, and of all that a man ought to say in his ordinary dealings with the world, public or private, and of human pleasures and desires, and in short quite unacquainted with the varieties of human character. Accordingly when they come to undertake any private or public business they make themselves ridiculous—just as no doubt your public men do when they take part in your occupations and discussions. For the fact is, as Euripides says;

> Each shines in that, to that end presses forward,
> Devotes to that the better part o’ the day,
> Wherein he chances to surpass himself:

Whereas everything in which a man is weak he shuns, and calls it bad names; but the other he praises, out of regard for himself, thinking in this way to praise himself at the same time. But no doubt the best course is to take advantage of both. Philosophy it is well to cultivate just so far as serves for education, and it is no disgrace for a lad to study it: but when a man already advanced in life still goes on with it, the thing, Socrates, becomes ridiculous; and for my own part the feeling which I have towards students of philosophy is very much the same as that with which I regard those that lisp in a childish way. For whenever I see a little child to whom it is still natural to talk in this way with a childish lisp, I like it, and it strikes me as pretty and a sign of gentle breeding and suitable to the infant's age: but when I hear a little creature talk distinctly it gives me quite a disagreeable impression and offends my ears and seems to me vulgar and only fit for a slave. When on the other hand one hears a man lisp or sees him playing childish tricks it appears unmanly and one would like to give him a good flogging. Just the same is the feeling that I have towards philosophical studies. For when I observe attention to philosophy in a young lad I approve of it, and it strikes me as becoming, and I look upon it as a mark of gentle birth and breeding in him, and one who neglects it I account illiberal, and as one that will never deem himself capable of any fine or generous action: but then when I see one advanced in life still going on with his philosophy, and unable to lay it aside, such a man as that, Socrates, seems to me to want flogging. For as I said just now a man like that, clever as he may be, cannot fail to become unmanly by avoiding the centers of the city and the market-places which as the poet said are the places where men acquire distinction; his fate is to skulk in a comer and pass the rest of his life whispering with three or four lads, and never give utterance to any free and noble and generous sentiment.

Now, Socrates, I have a great regard for you; and accordingly I seem to be inspired now with the same feeling towards you as Zethus in Euripides, whom I just referred to, has towards Amphion. In fact it occurs to me to say very much the same to you as he says to his brother, that ‘you neglect,’ Socrates, ‘what you ought to pay attention to, and a soul endowed by nature with her noblest gifts you disfigure by a boyish disguise; and neither amid the counsels of justice will you ever deliver an opinion aright, nor find aught probable and persuasive, nor devise any gallant resolution on another’s behalf.’ And yet, my dear Socrates—and now don’t be angry with me, for all that I am about to say is out of regard for you—don’t you think it a shame for a man to be in the condition which I consider you to be in, together with all those who are constantly going deeper and deeper into philosophy. For as it is, if a man were to arrest you or any one else of those like you and drag you off to prison charging you with some crime of which you were entirely innocent, you know very well that you wouldn’t know what to do with yourself, but there you would stand with your head swimming and your mouth open not knowing what to say; and when you were brought up before the court, however contemptible and wretched your accuser might be, you would be condemned to die if he chose to lay the penalty at death. And yet how can this be a wise thing, Socrates, ‘for an art to find a man highly gifted and make him worse,' unable either to help himself or to rescue from the greatest dangers himself or any one else, and liable to be stript by his enemies of all his substance, and to pass his life in the city an absolute outlaw. Why such an one, though the expression is perhaps somewhat coarse, may be slapped in the face with impunity. Come, come, my good friend, 'take my advice, leave off' refuting, 'and cultivate the accomplishment' of business, and cultivate what will gain you the reputation of good sense; leave to others these over-nice frivolities or nonsense or whatever else they should be called, 'which will end in your dwelling in an empty and desolate house'; and emulate, not men who waste their time in such trivial debates, but those whose portion is wealth and fame and many other good things.

Socrates:: If my soul had happened to be made of gold, Callicles, don't you think I should have been delighted to find one of those stones with which they test gold, the best of them, which would enable me by the application of it—provided, that is, it bore me witness that my soul had been duly cared for—to be quite sure that I am in a satisfactory state, and have no need of any other touchstone?

Callicles:: What is the meaning of this question, Socrates?

Socrates:: I'll tell you directly. It seems to me that in meeting you I have met with such a treasure.

Callicles:: Why so?

Socrates:: I am quite convinced that whenever you agree with me in any of the opinions that my soul forms, that must needs be the very truth. For I perceive that one who would put a soul to a sufficient test as to whether she is leading a right life or the reverse, ought for that purpose to be possessed of three things, all of which you have, knowledge and good-will and candor. For I meet with many people who are unable to test me because they are not wise, as you are; others again are wise enough, but don’t choose to tell me the truth because they don’t care for me, as you do; and our two foreign friends here, Gorgias and Polus, are no doubt wise and kindly disposed towards me, but they are somewhat deficient in frankness and are rather more shy and bashful than the occasion requires: surely it must be so, when they carried their modesty to such a pitch, that out of sheer modesty each of them ventures to contradict himself in the presence of a large company, and that on subjects of the highest importance. But you have all these qualifications which the others want. For you are sufficiently instructed as many of your countrymen will be ready to allow, and well disposed to me. What proof have I of that? I will tell you. I know, Callicles, that there are four of you that have set up a partnership for the pursuit of wisdom, yourself, and Tisander of Aphidnae, and Andron son of Androtion, and Nausicydes of Cholarges. And I once heard you deliberating how far the cultivation of wisdom should be carried, and I remember that an opinion something like this was carried in your society; that the study of philosophy was not to be so eagerly pushed forward into all its minutiae, but you recommended one another to be very careful not to make yourselves over wise for fear you should unconsciously get spoiled. So then when I hear you giving me the same advice as you did to your most intimate friends it is a satisfactory proof to me that you really have a kindness for me. And further that you are able to speak out your mind without any superfluous modesty, you not only say yourself, but the speech which you made us no long time ago fully bears out your assertion. Well then, this is plainly the state of the case at present; if there be any point in which you agree with me in our argument that must have been fully tested by both of us, and there will be no further occasion to submit it to any other touchstone; for it cannot have been either want of wisdom or excess of modesty that induced you to make the concession, nor again could it be for the purpose of deceiving me, because you are my friend, as you tell me yourself: and so any argument between you and me must in reality attain the very perfection of truth. And, Callicles, there can be no nobler subject of inquiry than that on which you just now took me to task, what a man's character ought to be, and what pursuits he should engage in, and to what extent, early or late in life. For of this you may be sure, that if there be any thing in my own conduct in life that is wrong, the error on my part is not intentional but is due solely to my ignorance. Pray then don't desist from admonishing me as you did at first, but point out to me clearly what it is that I ought to pursue, and how I may best attain it. And if you find me assenting to you now, and afterwards not acting in conformity with what I agreed to, set me down for an absolute dunce and never give me any advice again as an irreclaimable reprobate. And now pray repeat to me all over again what you and Pindar understand natural justice to consist in. Is it that the superior should carry off by force the property of the inferior, and the better rule the worse, and the nobler have more than the meaner? Is justice any thing else according to you, or does my memory serve me right?

Callicles:: No, I said that before, and I say so now.

Socrates:: And do you mean the same thing in calling a man better and superior? For to tell you the truth I was just as unable before as now to make out your precise meaning. Is it the stronger that you call superior, and are the weaker bound to listen to the stronger—as for example I believe you showed us before that it is in pursuance of their natural right that the great states attack the little ones, because they are superior and stronger, on the assumption that what is superior and better and stronger is all the same—or is it possible to be better and at the same time inferior and weaker, and to be superior and yet worse? or is the definition of the better and superior the same? This is precisely the thing that I want you distinctly to determine for me, whether what is superior and what is better and what is stronger are the same thing or different.

Callicles:: Well I tell you distinctly that it is all the same.

Socrates:: Well but are not the many superior by nature to the one? those you know that make the laws to control the one, as you said yourself just now.

Callicles:: Of course.

Socrates:: Consequently the institutions of the many are those of the superior.

Callicles:: No doubt.

Socrates:: And so of the better? for the superior are far better according to your account.

Callicles:: Yes.

Socrates:: And so their institutions are naturally ‘fair,’ since they are superior?

Callicles:: I allow it.

Socrates:: Is not this then the opinion of the many, as you said just now yourself, that justice consists in having an equal share, and that it is ‘fouler’ to do wrong than to suffer it? Is that so or not? And mind you don’t allow yourself this time to be caught in a fit of modesty. Is it, or is it not, the opinion of the many that to have one’s fair share, and not a larger share, is just, and that there is more disgrace in doing than in suffering wrong? Don’t grudge me an answer to my question, Callicles; in order that, supposing you agree with me, I may then fairly assure myself of the truth of it as coming from you, when I find it admitted by a man so competent to decide.

Callicles:: Well to be sure the generality of men do think so.

Socrates:: Then it is not by law alone that doing wrong is more disgraceful than suffering it, and that justice consists in having one’s fair share, but by nature too. And so you seem to be mistaken in what you said before and to find fault with me unjustly in saying that law and nature are opposite to one another, and that I, you know, am perfectly aware of all that, and take an unfair advantage of it in arguing; when a thing is asserted 'according to nature' recurring to law, and when 'according to law' is meant, to nature.

Callicles:: Here's a fellow that can not forbear trifling. Tell me, Socrates, are you not ashamed to be word-catching at your age, and if a man happen to trip in an expression to take that for a wonderful piece of luck? For do you suppose I mean anything else by being superior than being better? Haven't I been telling you ever so long that I maintain what is better and superior to be the same thing? Or do you suppose I mean that if a rabble of slaves and all sorts of fellows good for nothing except perhaps in mere bodily strength get together, and they pronounce anything, that this and nothing else is law.

Socrates:: Very good, most sagacious Callicles: that's your opinion, is it?

Callicles:: To be sure it is.

Socrates:: Well, my dear sir, I have been surmising myself ever so long that you meant something of that sort by superior, and I now repeat my questions from a real curiosity to know what your meaning is. For I presume you don't think that two are better than one or that your slaves are better than yourself because they are stronger than you are. Come now tell me all over again, what you really mean by 'the better,' since it is not the stronger. Only, my good friend, do pray be a little milder in your lessons that I may not be obliged to run away from your school.

Callicles:: You are sarcastic, Socrates.

Socrates:: No by Zethus, Callicles, whose character you assumed just now to indulge in a good deal of sarcasm against me; but come, do tell us who you mean by the better.

Callicles:: I mean the more worthy.

Socrates:: There now, you see you are word-catching yourself and explaining nothing. Won't you say whether you mean by the better and superior the wiser or any others?

Callicles:: Why to be sure of course I mean these, most emphatically.

Socrates:: Then according to your account one man of sense is often superior to ten thousand fools, and he ought to be master and the others submit to his authority, and the governor ought to have more than the governed. That is what your words seem to me to imply—and I am not word-catching—if the one is superior to the ten thousand.

Callicles:: Well that is what I mean. For my opinion is that this is what natural justice consists in, and that one that is better and wiser should have power and other advantages over the meaner and inferior.

Socrates:: Stop there now. What is it that you say again this time? Supposing that there are a number of us together, as now, in the same place, and we have in a common stock a quantity of eatables and drinkables, and are people of all sorts, some strong others weak; and one of us, a physician say, be wiser than the rest in such matters, and be as is likely stronger than some of us and weaker than others, will not he as being wiser than we are be better and superior in these things?

Callicles:: No doubt of it.

Socrates:: Is he then to have a larger share than the rest of us in these provisions because he is better? or ought he in virtue of his authority to have the distribution of them all, but in respect of spending and consuming them upon his own person to have no advantage at all, but only have more than some and less than others? or if he chance to be the weakest of us all, ought he not, Callicles, though the best to have the smallest share of all? Is it not so, my good friend?

Callicles:: You are talking about things to eat and drink and physicians and a parcel of stuff; but that's not what I mean.

Socrates:: Well then, do you call one that is wiser better? say yes or no.

Callicles:: Yes I do.

Socrates:: But don't you allow that the better ought to have the larger share?

Callicles:: Yes, but not of things to eat and drink.

Socrates:: I understand. Well, of clothes perhaps, and the most skilful weaver ought to have the largest coat and go about dressed in the most extensive assortment of the finest clothes.

Callicles:: Clothes indeed! Nonsense.

Socrates:: Well in shoes then; plainly the wisest in them and the best ought to have the advantage. The shoemaker I dare say ought to walk about in the biggest shoes and the largest stock of them.

Callicles:: Shoes? Stuff. What nonsense you keep talking.

Socrates:: Well if you don’t mean that sort of thing, perhaps it is something of this kind: a farmer for instance of knowledge and skill in the cultivation of land; he perhaps ought to have an advantage in seed, and use the largest allowance of seed upon his own land.

Callicles:: How fond you are of perpetually repeating the same things, Socrates.

Socrates:: Yes, and not only that, Callicles, but on the same subjects too.

Callicles:: Yes by heaven, you absolutely never leave off talking about cobblers and fullers and cooks and physicians, just as if our argument had any thing to do with them.

Socrates:: Well then will you tell me what the things are in which the superior and the wiser man has a right to a larger share? or will you neither tolerate any suggestion of mine nor offer one yourself?

Callicles:: Why I have been telling you ever so long. First of all by ‘the superior’ I don’t mean shoemakers nor cooks, but those who have skill and ability in the administration of the affairs of state, and not only skill but energy and vigor too, able to execute any designs they have conceived and not men to flinch from feebleness of spirit.

Socrates:: Do you observe, most worthy Callicles, that you don’t find the same fault with me that I do with you? For you say that I am constantly repeating the same things and reproach me for it, whereas I charge you on the contrary with never saying the same thing on the same subject; but first you defined the better and superior to be the stronger, and next the wiser, and now here you are again with something different; you tell us that superiority and merit consists in a certain manliness and energy. Nay, my good friend, do tell us and have done with it who you really do mean by the better and superior and in what.

Callicles:: Why I have told you already, men of ability and energy in affairs of state. These are the men that ought to be masters in their cities, and justice means this, that these 'should have more than the rest, the governors than the governed.

Socrates:: How's that? Than themselves, my friend?

Callicles:: What do you mean?

Socrates:: I mean that every man is his own governor. Or is this governing one's self not required, but only governing others?

Callicles:: What do you mean by governing one's self?

Socrates:: Nothing that need puzzle you, but just what people in general mean; one that is temperate and has the control over himself, master of all the pleasures and desires in himself.

Callicles:: What a charming person you are! you mean those simpletons 'the temperate.'

Socrates:: How should I? every one knows that I don't mean that.

Callicles:: No indeed I should think not, Socrates. For how can a man be happy if he is a slave to any one whatever? But this is what is fair and just according to nature, as I tell you now quite frankly, that a man who would lead a right life is bound to let all his desires grow to their full extent and not to repress them, and to be competent to minister to them when they are as great as they can be by his manly energy and wisdom and to satisfy every desire that he may chance to conceive. But this I dare say is for the many impossible. And this is why they find fault with such characters, out of shame, to disguise their own weakness, and say forsooth that unrestrained indulgence is disgraceful, enslaving as I said before the more highly gifted of mankind; and, unable themselves to procure the gratification of their appetites, they commend self-control and justice by reason of their own want of manhood. For to such men as have had the advantage of being either kings' sons or of having abilities of their own adequate to procure for themselves any kind of power or tyranny or despotic authority what in very truth were baser and worse than self-control? if, when they are at liberty to have the enjoyment of all good things and nothing stands in their way, they were of their own accord to invite to be masters over them the laws and notions and censures of the vulgar herd of men? Or how could they fail to have been made miserable by the 'fairness' as you call it of justice and self-control, if they have no more to bestow upon their own friends than their enemies, and that too when they are rulers in their native cities? Nay, in good truth, Socrates, which you profess to seek after, the case stands thus: luxury and self-indulgence and liberty to do as you please, provided they have power to back them, these are virtue and happiness: and all the rest of these fine-sounding phrases, your conventions in violation of nature, are nothing but people's nonsense and utterly contemptible.

Socrates:: Upon my word, Callicles, there is really something quite noble in the candor with which you follow out your theory: you are indeed stating now distinctly what the rest of the world thinks no doubt, but doesn’t choose to express. I beg you therefore by no means to relax your efforts, that it may be made really plain how one ought to live. And now tell me; you say, do you, that the desires are not to be repressed if a man would be what he ought to be, but that he is to let them grow to their fullest extent and procure from some source or other satisfaction for them, and that this is virtue?

Callicles:: Yes, that’s what I say.

Socrates:: Then it isn’t true as people say that those that want nothing are happy.

Callicles:: Why at that rate stones and corpses would be happy.

Socrates:: Well to be sure, as you say, our life is indeed a strange one. For to say the truth I shouldn’t be surprised if Euripides is right when he says;

> Who knoweth if to live is to be dead,
> And to be dead to live?

and we are all really dead—as indeed I once heard from one of our sages, that in our present state we are dead, and the body is our tomb, and that part of the soul in which the desires reside is of a nature liable to be over persuaded and to be swayed continually to and fro. And so some smart clever fellow, a Sicilian I dare say or Italian, turned this into a fable or allegory, and, playing with the word, from its susceptibility to all impressions and capacity for holding belief gave it the name of a jar, and the foolish he called uninitiated: in these uninitiated, that part of the soul where the desires lie, the licentious and non-retentive portion of it, he compared to a jar full of holes, because there was no possibility of filling or satisfying it. So then he you see, Callicles, takes the opposite view to you, showing that of all those in Hades—meaning you know the invisible—those who are uninitiated will be the most miserable, and have to carry water into their leaky jar in a sieve perforated just like the other. And then by the sieve, as my informant told me, he means the soul: and the soul of the foolish he likened to a sieve because it is full of holes, as incapable of holding anything by reason of its incredulity and forgetfulness. Now all this to be sure is pretty tolerably whimsical; still it represents clearly what I want to prove to you, if I can manage it any how, in order to persuade you to change your mind; to choose, that is, in preference to a life of insatiable self-indulgence one that is orderly and regular and ever content and satisfied with what it has for the time being. But now am I making any impression upon you, and are you coming round to my opinion that the regular livers are happier than those who indulge themselves without restraint? or none at all? and will no amount of such fables incline you a bit the more to change your mind?

Callicles:: The latter is nearer the truth, Socrates.

Socrates:: Well then, let me give you another comparison from the same school as the preceding. See if you allow something of this sort to be a representation of each of the two lives, the life of self-control and of self-indulgence, as it might be if of two men each had several jars, and those of the one were sound and full, one of wine and another of honey and a third of milk and a number of others full of various things, and of these there were streams scanty and hard to get at and procurable only by many severe toils. Well, the one when he has filled himself draws no more and troubles himself no more about the matter, but as far as this is concerned remains quite at his ease: but the other finds, like the former, the streams possible though difficult to come at, and his vessels leaky and decayed, and is forced to be constantly filling them all day and all night on pain of suffering the extremity of misery. If such be the nature of each of these two lives do you maintain that that of the self-indulgent man is happier than that of the regular and orderly? Have I moved you at all by what I have said to admit that the life of order is better than that of self-indulgence, or have I not?

Callicles:: You have not, Socrates. For the one who has filled himself has no more pleasure remaining, but that is just what I called awhile ago living like a stone after a man is full, no more sensible to pleasure or pain. But the real pleasure of life consists in this, in the influx of as much as possible.

Socrates:: Well but if the amount of the influx be great must not that of what runs away be great too? and must not the holes for these discharges be of large size?

Callicles:: No doubt.

Socrates:: Then it's a plover's life that you are describing this time, and not that of a corpse or a stone. And now tell me, do you mean something of this kind, as for instance to be constantly eating when you are hungry?

Callicles:: Yes I do.

Socrates:: And to be thirsty, and always drinking when you are thirsty?

Callicles:: That is what I mean, and to have all the other desires, and to be able by the enjoyment one feels in the satisfaction of them to lead a life of happiness.

Socrates:: Bravo, most worthy Callicles; only go on as you have begun, and mind you don't let your modesty balk you. And it seems that I mustn't be deterred by any shyness either. So tell me first of all if a man in a constant state of itching and irritation, provided he have abundant opportunity of scratching himself, may pass his life happily in continual scratching?

Callicles:: What a strange creature you are, Socrates; and a thoroughpaced declaimer.

Socrates:: Just so, Callicles, and that's how I came to startle Polus and Gorgias before and put them out of countenance; but you never will be either startled or disconcerted, you are such a brave fellow. Come now, just answer my question.

Callicles:: Well then I allow that a man may pass a pleasant life in scratching himself.

Socrates:: And if a pleasant one a happy one too?

Callicles:: Yes certainly.

Socrates:: Is that so if the itching be confined to his head? or what more must I ask you? See, Callicles, what answer you will make if you be asked all that is naturally connected with this theory of yours one after another. And the climax of all things of this sort, the life of those who addict themselves to the indulgence of unnatural appetites, is not that scandalous and shameful and miserable? or will you venture to say that these are happy, provided they are abundantly supplied with what they want?

Callicles:: Are you not ashamed, Socrates, to introduce such abominations into the conversation?

Socrates:: What? is it I that introduce them, my fine fellow, or the man that pronounces so recklessly that all that feel pleasure, whatever that pleasure may be, are happy; and makes no distinction between the good and bad sorts of it? But come now, tell me once more whether you say that pleasure and good are the same thing, or that there is some kind of pleasure which is not good?

Callicles:: Well then in order to avoid the inconsistency of pronouncing them to be different, I say they are the same.

Socrates:: You are spoiling all the professions you made at the outset, Callicles, and you can no longer go along with me satisfactorily in the investigation of the truth, if you say what is contrary to your real opinion.

Callicles:: Why so do you, Socrates.

Socrates:: Well then I am quite in the wrong if I do, and so are you. But now, my dear fellow, look whether good be not something entirely different to what you say, that is to pleasure from whatever source derived: for not only those that I have just now hinted at, but a number of other shameful consequences manifestly follow, if this is really so.

Callicles:: Yes in your opinion, Socrates.

Socrates:: And do you really mean to maintain this, Callicles?

Callicles:: Yes I do.

Socrates:: Then are we to suppose you to be series and so enter upon the discussion of the question?

Callicles:: Oh yes by all means.

Socrates:: Well then since that is your opinion explain me this distinctly. There is some thing I presume to which you give the name of knowledge?

Callicles:: To be sure there is.

Socrates:: And didn't you say just now that there is such a thing as courage also as well as knowledge?

Callicles:: I did no doubt.

Socrates:: And you meant, didn't you, to speak of them as two things, because the one is distinct from the other?

Callicles:: Yes quite.

Socrates:: Again; pleasure and knowledge, are they the same thing or different?

Callicles:: Different to be sure, you mighty genius.

Socrates:: And courage again, is that distinct from pleasure?

Callicles:: Of course it is.

Socrates:: Come now, mind we don't forget this, that Callicles of Acharnæ pronounced pleasure and good to be the same thing, and knowledge and courage to be different from one another and from the good.

Callicles:: And Socrates of Alopece we can't get to admit it. He doesn't, does he?

Socrates:: He does not; and I think not Callicles either, when he has duly examined himself For tell me this, don't you think that those that are well off are in the opposite condition to those that are ill off?

Callicles:: Yes I do.

Socrates:: If then these two states are opposite to one another, must not the case be the same with them as with health and disease? For to be sure a man is never well and ill at once, nor is he delivered from health and disease at one and the same time.

Callicles:: How do you mean?

Socrates:: Take for instance any part of the body you please separately and look at it. A man we may suppose has that complaint in his eyes which is called ophthalmia?

Callicles:: Of course we may.

Socrates:: Then, it is to be presumed, he can't be sound in those same eyes also at the same time?

Callicles:: By no manner of means.

Socrates:: And again, when he gets rid of his ophthalmia, does he at that same time get rid of the health of his eyes too, and so at last get rid of them both together?

Callicles:: Quite impossible.

Socrates:: Because such a result would be marvelous and unreasonable, wouldn't it?

Callicles:: Very much so.

Socrates:: On the contrary, I should suppose, he acquires and v loses either of them alternately.

Callicles:: I agree.

Socrates:: And so with strength and weakness in the same way?

Callicles:: Yes.

Socrates:: And speed and slowness?

Callicles:: Certainly.

Socrates:: And likewise good things and happiness, and their opposites, bad things and misery, does a man acquire each of them in turn, and in turn lose it?

Callicles:: Most assuredly.

Socrates:: Then if we find any things which a man loses and retains simultaneously, it is plain that these cannot be what is good and what is bad. Do we admit this? Now consider very carefully before you answer.

Callicles:: Oh, I admit it to the most unlimited extent.

Socrates:: Then let us pass on to our former admissions. Did you say that hunger is pleasant or painful? hunger I mean in itself.

Callicles:: Painful to be sure; though at the same time eating when one is hungry is pleasant.

Socrates:: I understand: however at all events hunger in itself is painful, is it not?

Callicles:: I allow it.

Socrates:: And so with thirst likewise?

Callicles:: Quite so.

Socrates:: Must I then, ask you any more questions, or do you admit that every kind of want and desire is painful?

Callicles:: I admit it, don't ask me any more.

Socrates:: Very good. But drinking when one is thirsty, you admit, don't you, to be pleasant?

Callicles:: Certainly I do.

Socrates:: And in this phrase of yours the words 'when one is thirsty' imply pain I presume.

Callicles:: Yes.

Socrates:: But 'drinking' is the supplying of a want, and a pleasure?

Callicles:: Yes.

Socrates:: So then in the act of drinking you say a man feels pleasure?

Callicles:: Certainly.

Socrates:: When he is thirsty?

Callicles:: To be sure.

Socrates:: That is with pain?

Callicles:: Yes.

Socrates:: Do you perceive then what follows, that you allow that pleasure and pain are felt at once when you say that a man drinks when he is thirsty? Or does this not take place at once at the same time and place, in the soul or the body, whichever you prefer to call it: for I fancy it makes no difference. Is this so, or not?

Callicles:: It is.

Socrates:: But moreover you said it was impossible to fare well and ill at the same time.

Callicles:: And so I do.

Socrates:: But to feel pleasure in feeling pain you have admitted to be possible.

Callicles:: So it appears.

Socrates:: Consequently to feel pleasure is not to fare well, nor pain ill, so that it follows that what is pleasant is different from what is good.

Callicles:: I don't know what all this quibbling of yours means, Socrates.

Socrates:: Oh yes you do, but you affect ignorance, Callicles. Pray now go on yet a little further, in order that you may learn what a clever fellow you are that take me to task. Bo not in each one of us the thirst and the pleasure conveyed by drinking cease simultaneously?

Callicles:: I don't know what you are talking about.

Gorgias:: Don't do that Callicles, but answer him, if it be only for our sakes, that the argument may be fairly brought to a conclusion.

Callicles:: Oh but Socrates is always like this, Gorgias; he goes on asking over and over again a number of trifling and unimportant questions and so refutes one.

Gorgias:: Well but what does that matter to you? Any how the penalty does not fall upon you, Callicles: come, come, submit yourself to Socrates to refute as he pleases.

Callicles:: Well then go on with your paltry trumpery questions, since Gorgias wishes it.

Socrates:: You are a lucky fellow, Callicles, in having got initiated into the greater mysteries before the lesser; I thought that wasn't allowed. So then let us begin at the point where you left off, and let us know whether each of us doesn't cease to feel thirst and pleasure simultaneously.

Callicles:: I allow it.

Socrates:: And the same with hunger; and in all other cases, doesn’t he cease to feel the desires and the pleasures together?

Callicles:: It is so.

Socrates:: So then the pains likewise and the pleasures he ceases to feel together?

Callicles:: Yes.

Socrates:: But the cessation of what is good and bad is not simultaneous in him, as you admitted before—and won’t you do so now?

Callicles:: Yes I will; and what then?

Socrates:: Only that it turns out, my friend, that the good is not the same as the pleasant nor the bad as the painful; for the one pair ceases in a man simultaneously and the other does not, because they are distinct. How then can what is pleasant be the same as what is good or what is painful as what is bad? Or if you please, consider it again in this way; for I dare say even yet you don’t admit it. However look at it. In those that you call good, is not that name due to the presence of goodness, just as it is in the handsome to the presence of beauty?

Callicles:: To be sure.

Socrates:: Well; do you give the name of good men to fools and cowards? You didn’t just now at any rate, but to the brave and wise. These are the sort of people that you call good, are they not?

Callicles:: Certainly.

Socrates:: Well; have you ever seen a silly child pleased?

Callicles:: Yes I have.

Socrates:: And have you never seen a silly man pleased before now?

Callicles:: I should think so; but what has that to do with it?

Socrates:: Oh nothing; only answer the question.

Callicles:: I have.

Socrates:: And again,, a man of sense under the influence of pain or pleasure?

Callicles:: Yes.

Socrates:: And which of the two are more susceptible of pleasure and pain, wise men or fools?

Callicles:: I should suppose there isn't much difference.

Socrates:: Well even that's enough. And have you ever seen a coward in time of war?

Callicles:: Of course I have.

Socrates:: Well then, upon the enemy's retreat, which of the two seemed to you to feel more pleasure, the cowards or the brave?

Callicles:: Both of them, I thought: or if not more, pretty nearly equal.

Socrates:: That'll do just as well. However, the cowards do feel pleasure?

Callicles:: Oh yes, keenly.

Socrates:: And the fools, it seems.

Callicles:: Yes.

Socrates:: And upon their approach, do the cowards alone feel pain, or the brave as well?

Callicles:: Both.

Socrates:: In an equal degree.

Callicles:: More perhaps the cowards.

Socrates:: And on their retreat don't they feel more pleasure?

Callicles:: Very likely.

Socrates:: So then according to you the fools and the wise men, and the cowards and the brave feel pain and pleasure in pretty nearly the same degree, or the cowards more than the brave?

Callicles:: That is my opinion.

Socrates:: But further, are the wise and brave good, and the cowards and fools bad?

Callicles:: Yes.

Socrates:: Then the good and the bad are susceptible of pain and pleasure pretty nearly in the same degree?

Callicles:: True.

Socrates:: Are then the good and the bad good and bad in pretty nearly the same degree? or the bad even in a higher degree good and bad?

Callicles:: Upon my word I don't know what you mean.

Socrates:: Don't you know that you affirm that it is by the presence of good things that the good are good, and of evil things are bad? and that the good things are the pleasures, and the pains evil things?

Callicles:: Yes I do.

Socrates:: Accordingly in those that feel pleasure, good, that is pleasure, is present whenever they are pleased?

Callicles:: Doubtless.

Socrates:: And so, since good is present in them, those that feel pleasure are good?

Callicles:: Yes.

Socrates:: Again, in those that feel pain is not evil present, that is pain?

Callicles:: It is.

Socrates:: And it is by the presence of evil you say that the bad are bad. Or are you no longer of the same mind?

Callicles:: Oh yes, I am.

Socrates:: It follows then that all that feel pleasure are good, and all that feel pain bad?

Callicles:: Certainly.

Socrates:: And are they better, the more they feel it, and worse the less, and if in the same degree about the same?

Callicles:: Yes.

Socrates:: Well and you admit don't you that the wise and the fools, the cowards and the brave, are about equally accessible to pleasure and pain, or the cowards even more so?

Callicles:: Yes I do.

Socrates:: Aid me then in reckoning up the results we obtain from our conclusions. For, to be sure, as the saying is, 'twice yea thrice is it good to repeat fair things' and reconsider them. We say that the wise and brave man is good, don't we?

Callicles:: Yes.

Socrates:: And the fool and coward bad?

Callicles:: No doubt.

Socrates:: And again one that feels pleasure good?

Callicles:: Yes.

Socrates:: And one that feels pain bad?

Callicles:: Necessarily.

Socrates:: And that the good and bad are susceptible of pleasure and pain in the like degree, or perhaps the bad even more?

Callicles:: Yes.

Socrates:: So then is the bad man made good or bad in the same degree as the good one, or even good in a greater degree? Does not this follow as well as what we said before from the assertion that pleasure is identical with good? Is not this necessarily the consequence, Callicles?

Callicles:: To tell you the truth, Socrates, all this while that I have been listening to you and assenting to all you say, I have been thinking, if one makes you any concession even in joke, how delighted you are with it, and hold it tight like a child. Just as if you suppose that I or any one else in the whole world does not believe that some pleasures are better and others worse.

Socrates:: Ho ho! Callicles, what a sly rogue you are. You do indeed use me like a child, sometimes telling me that things are one way sometimes another, trying to mislead me. Why I thought you were my friend, and never would mislead me intentionally: but now I see I was mistaken, and it seems I must needs, as the old saying has it, make the best of what I can get, and accept anything you are pleased to offer me.—Well then what you say now, it seems, is that there are certain pleasures, some good and some bad. Isn’t it?

Callicles:: Yes.

Socrates:: Are then those that are beneficial good, and the injurious bad?

Callicles:: Certainly.

Socrates:: And are those beneficial which effect something that is good, and injurious something that is bad?

Callicles:: I believe so.

Socrates:: Are then these the sort you mean? To take for instance the bodily pleasures of eating and drinking that we were speaking of a moment ago, if some of them produce in the body health or strength or any other bodily excellence are those good, and those whose effects are contrary bad?

Callicles:: No doubt.

Socrates:: And so with pains in like manner, are some of them good and some bad?

Callicles:: Of course.

Socrates:: Accordingly the good pleasures and pains we are to choose and try to bring about?

Callicles:: To be sure.

Socrates:: And the bad ones not?

Callicles:: Evidently.

Socrates:: Because if you remember, Polus and I decided that all our actions should be done for the sake of what is good. Do you too agree in this view, that good is the end and aim of all our actions and that for the sake of that everything else is to be done, not that for the sake of the rest? Do you vote on our side as well, and make a third?

Callicles:: Yes I do.

Socrates:: Then it is for the sake of what is good that everything else including what is pleasant is to be done, not the good for the sake of what is pleasant.

Callicles:: No doubt.

Socrates:: Is it then in everybody's power to make the selection amongst things pleasant what are good and what bad, or is professional knowledge required for each case?

Callicles:: Professional knowledge.

Socrates:: Then let us recall to mind what I was saying to Polus and Gorgias. I said, if you recollect, that there were contrivances some extending only to pleasure, effecting merely that and no more, and ignorant of the distinction between better and worse, and others which distinguish what is good and bad: and I placed amongst those which deal with pleasure, the empirical skill, not art, of the cook, and amongst those which have good for their object the art of medicine. And now, by the God of friendship, Callicles, don't be so ill natured as either to jest with me yourself, or answer at random contrary to your real opinion, or again to take what I say as if I were joking. For you see that this subject on which we are talking is of a nature to engage the most serious attention of every man of the smallest sense, I mean what course of life one ought to follow; whether it be that to which you invite me, taking part in those manly duties you wot of, speaking in the public assemblies and cultivating rhetoric and engaging in public business as you do now a days, or this life of philosophical study; and what it is in which the one differs from the other. Perhaps then it is the best way to distinguish them first, as I attempted to do before, and when we have done that and come to an agreement between ourselves as to whether these two lives really are distinguishable, to consider next what is the difference between them and which of the two ought to be adopted. Perhaps now you don't yet quite understand my meaning.

Callicles:: No indeed I don't.

Socrates:: Well I will explain it more clearly. Now that you and I have agreed that there is such a thing as good and also such a thing as pleasant, and the pleasant different from the good, and that there is a particular mode of pursuit and contrivance for the acquisition of either of them, the one the quest of pleasure, the other of good—but first of all let me know whether you assent to as much as this or not: do you?

Callicles:: I do.

Socrates:: Well then to proceed, let us come to an understanding about what I was saying to our friends here, and see whether you think that what I then said was true. What I said was if I remember right, that cookery seems to me to be no art at all but a mere empirical habit; medicine an art; meaning that the one, that is medicine, has inquired into the nature of that which it treats and the causes of what it does, and can give an account of each of them; but the other enters upon the pursuit of the pleasure which is the object of all her care and attention quite unscientifically, without having bestowed any consideration upon either the nature or the cause of pleasure, and proceeds in a manner absolutely irrational, as one may say, without the smallest calculation, a mere knack and routine, simply retaining the recollection of what usually happens, by which you know in fact she provides all her pleasures. Now consider first of all whether you think that this account is so far satisfactory, and that there are in like manner certain other occupations of the same sort which deal with the soul, some of them scientific, exercising some forethought for the soul’s best interests; and others that pay no regard to this, but again as in the former case, study merely the soul’s pleasure, how, that is, it may be procured for her, neither inquiring which of the pleasures is better or worse, nor concerning themselves with any thing else but mere gratification, whether that be better or worse. For to me Callicles, it seems that there are, and this sort of thing I call flattery whether it be applied to body or soul or anything else, when the pleasure alone is studied without any regard to the better and the worse. And you now, do you coincide with us in opinion upon this matter or dissent?

Callicles:: Not I, I assent—in order that you may get through your argument, and I oblige my friend Gorgias here.

Socrates:: And is this true of only one soul, and not of two or many?

Callicles:: Not so, it is true of two and of many.

Socrates:: Then is it possible to gratify them in a mass all at once without taking any thought for what is best?

Callicles:: Yes I suppose so.

Socrates:: Can you tell me then which are the practices that do this? Or rather, if you please, as I ask you, when any of them seems to you to belong to this class say yes, and when not say no. And first of all let us examine the case of flute playing. Don’t you think it is one of that sort, Callicles? that it aims only at our gratification and cares for nothing else?

Callicles:: Yes I do.

Socrates:: And so with all others of the same kind, for example harp playing, as it is practiced in the musical contests?

Callicles:: Yes.

Socrates:: And again the Choral exhibitions and dithyrambic compositions, don't they appear to you to belong to the same class? Or do you suppose that Cinesias say as if son of Meles ever troubles himself in the least about the improvement of the audience by anything he says, or merely thinks of saying what will please the mob of spectators?

Callicles:: There is no doubt about that, Socrates, in Cinesias' case at least.

Socrates:: And his father Meles again—Did you ever suppose that he looked to what is best in his harp playing? Or rather, his aim perhaps was not what is most agreeable either; for he used to annoy the audience by his performance. But just consider; don't you think that all harp music and dithyrambic composition has been invented for the sake of pleasure?

Callicles:: Yes certainly.

Socrates:: But what say you now to the object of all the efforts of that stately and wonderful Tragic poetry? Are all her efforts and her pains, think you, bestowed merely upon the gratification of the spectators? or does she strive to the uttermost, if 'there be anything that is pleasant and agreeable but bad for them, not to say that, but if there be aught unpleasant but profitable, that to say and to sing whether they like it or not? Which of these two, think you, is the fashion that Tragic poetry assumes?

Callicles:: There can’t be any doubt, Socrates, that she is more bent upon pleasure and the gratification of the spectators.

Socrates:: Well but this kind of proceeding, Callicles, we said just now is flattery.

Callicles:: Certainly we did.

Socrates:: Again, if any kind of poetry be stript of its melody and rhythm and meter, is not the residue plain prose?

Callicles:: No doubt of it.

Socrates:: And this prose is addressed to great crowds of people.

Callicles:: It is.

Socrates:: Consequently poetry is a kind of public speaking.

Callicles:: So it appears.

Socrates:: And so it will be a rhetorical address to the public. You do think, don’t you, that the poets in the theatres practice rhetoric?

Callicles:: Yes I do.

Socrates:: So then now we have found a kind of rhetoric addressed to such a popular audience as consists of a mixture of women and children with men, and slaves as well as free, which we don’t altogether approve of, because we say it is of the nature of flattery.

Callicles:: Quite so.

Socrates:: Very good. But again, as to the rhetoric that is addressed to the Athenian people or to any other popular assemblies of freemen established in the various cities, what are we to say to that? Think you that the orators always speak with a view to what is best, with the sole aim of improving the citizens as far as possible by their speeches? Or do they too, bent upon gratifying their fellow-citizens, and sacrificing the public weal to their own private interest, deal with these assemblies as with children, trying only to humor them? and whether they will be better or worse in consequence trouble themselves not at all?

Callicles:: Your present question is not a simple one like the preceding; for there are some who show a real regard for their fellow-citizens in saying what they say; others there are again such as you describe.

Socrates:: That's enough. For if this also is two-fold, the one branch of it is, it may be presumed, a trick of flattery and a base kind of popular declamation; the other noble—the attempt, that is, to improve to the utmost the souls of the citizens, and the earnest striving to say what is best, whether that will prove more or less agreeable to the audience. But such rhetoric as this you never yet saw; or if you have any one of this sort to point out amongst the orators, let me know at once who he is.

Callicles:: No, by my faith, I can't name you any one, at any rate of the orators of the present day.

Socrates:: Well then, can you name any one of those of bygone days to whom the Athenians are indebted for any improvement, dating from the commencement of his harangues, from the worse condition in which they were previously? For for my own part I don't know who it is.

Callicles:: What? Haven't you heard of the virtues of Themistocles and Cimon and

Miltiades and the famous Pericles who is lately dead, whom you have heard speak yourself?

Socrates:: Yes, Callicles, if that is true virtue which you spoke of just now, the satisfaction namely of one's own and other people's desires; but if this is not so, but the truth is what we were forced to admit in the argument that followed, that those desires only which improve a man's character by their gratification should be fulfilled, and those which deteriorate it not, and that there is an art by which this may be effected—can you affirm that any one of these men has shown himself such an artist as that?

Callicles:: I really don't know what to say.

Socrates:: Nay if you search well you will find out. So then let us just consider this matter quietly and see whether any of these men has shown himself such—To begin; a good man and one who looks to what is best in everything that he says will not speak at random, will he, but always with some definite object in view? He will proceed in fact just like all other workmen, each with his own proper work in view, selecting anything that he happens to apply towards the forwarding of his work not at random, but for the purpose of giving some particular form to the work that he is engaged upon. Look at the painter for instance, if you please, or the builder or the shipwright, and all other trades and professions, any one of them you please, how each of these disposes everything in a fixed order, and forces the one part into conformity and harmony with the other, until he has constructed a regular and well ordered whole; and the same may be said you know of all other artists; and so with those that we were speaking of just now that deal with the body, trainers and physicians, they likewise it would seem introduce order and system into the body. Do we admit that this is so or not?

Callicles:: Let it be as you say.

Socrates:: So then a house in which order and harmony appear will be a good one, and where there is disorder a bad one?

Callicles:: I allow that.

Socrates:: And a vessel again in like manner?

Callicles:: Yes.

Socrates:: And further in our own bodies do we admit the same principle?

Callicles:: Yes certainly.

Socrates:: And how about the soul? Is it by disorder that it will be made good, or by some kind of order and harmony?

Callicles:: In accordance with our previous conclusions we must needs admit this too.

Socrates:: What name then do we give to that which arises in the body from order and harmony?

Callicles:: Health and strength I dare say you mean.

Socrates:: I do. And what again to that which is engendered in the soul from the same? Try to find the name of it, and tell it me as in the other case.

Callicles:: And why don’t you name it yourself, Socrates?

Socrates:: Well if you prefer it I will. And you, if you think what I say is right, say so; or if not, refute it and don’t let it pass. For my opinion is that order in the body of every kind bears the name of ‘healthy,’ whence it is that health is produced in it and every other bodily excellence. Is it so or not?

Callicles:: It is.

Socrates:: And the name of all the orders and harmonies of the soul is lawfulness and law, by which also men are made observant of law and orderly; and these are justice and self-control. Do you allow this or not?

Callicles:: Be it so.

Socrates:: So then it is to this that that genuine orator, the man of science and virtue, will have regard in applying to men’s souls whatsoever words he addresses to them, and will conform all his actions; and if he give any gift he will give it, or if he take aught away he will take it, with his mind always fixed upon this, how to implant justice in the souls of his citizens and eradicate injustice, to engender self-control and extirpate self-indulgence, to engender all other virtue and remove all vice. Do you agree or not?

Callicles:: I agree.

Socrates:: To be sure, Callicles, for what can be the advantage of offering to a sick and diseased body a quantity of the nicest things to eat and drink or anything else, when, fairly considered, they will do it no more good sometimes than the contrary, nay less? Is this so?

Callicles:: So be it.

Socrates:: Because I presume it is no advantage to a man to live with his body in a vicious state, since in that case his life also must needs be a vicious one. It is so, isn’t it?

Callicles:: Yes.

Socrates:: And so again when a man is in health, the physicians for the most part allow him to gratify his appetite, as for instance to eat as much as he pleases when he is hungry or drink when he is thirsty, but a sick man they never so to speak allow to indulge his appetites to the full Do you agree to this too?

Callicles:: Yes I do.

Socrates:: And with the soul, my excellent friend, is it not the same? as long as it is in a bad condition, senseless and self-indulgent and unjust and unholy, we must prevent it indulging its appetites, and not suffer it to do anything but what will make it better? Do you assent, or not?

Callicles:: I assent.

Socrates:: For so I presume it is better for the soul itself?

Callicles:: No doubt of it.

Socrates:: And is not restraining a man from what he desires correcting him?

Callicles:: Yes.

Socrates:: Then correction or restraint is better for the soul than unrestrained self-indulgence, as you thought just now.

Callicles:: I don't know what you are talking about, Socrates? do pray put your questions to some one else.

Socrates:: Here's a man that can't bear to have a service done him, and to submit to that himself which is the very subject of our conversation, to be corrected.

Callicles:: Well and I don’t care a straw for anything that you say, and I only answered you thus far to oblige Gorgias.

Socrates:: Very good. Then what shall we do? Are we to break off our argument in the middle?

Callicles:: You must decide that yourself.

Socrates:: Well they say that we have no right to leave off even one of our stories in the middle, in fact not till we have put a head upon it, that it mayn’t wander about like a headless monster. So pray finish your answers, that our argument may have a head too.

Callicles:: What a tyrant you are, Socrates; if you will take my advice, you will let this argument drop, or else carry on the conversation with some one else.

Socrates:: Who else will then? Surely we ought not to leave off the argument before it is finished.

Callicles:: Can’t you go through with it by yourself, either continuously in your own person, or answering your own questions?

Socrates:: And so as Epicharmus has it, that ‘what two men said before’ I may show myself equal to single-handed. Well it seems it must absolutely be so. Still if we are to do this, my own opinion is that we ought all of us to vie with one another in trying to discover what is true and what is false in this matter that we are discussing, for it is a common benefit to all that it be made plain. Well then I will carry on the discussion of this question as seems to me to be right; but if any of the admissions that I make to myself appear to any one of you to be untrue, it is his duty to lay hold of it and confute me. For to tell you the truth neither do I myself say what I say as having any certain knowledge, I am only engaged with you all in a search; and therefore if any one that disputes my assertions appear to have right on his side, I will be the first to admit it. This however I say on the supposition that you think the argument ought to be finished: but if you don't like that, let us drop it and go home.

Gorgias:: Well my opinion is, Socrates, that we ought not to go away yet, but that you should finish your argument: and I believe the rest of the company agree with me. For in fact I am myself desirous of hearing you go through the remainder by yourself.

Socrates:: Well to be sure, Gorgias, I should have been very glad on my own account to have continued the conversation with Callicles here until I had paid him Amphion's speech in return for his Zethus. But since you, Callicles, refuse to join me in bringing the argument to an end, at any rate check me as you listen whenever you think me wrong. And if you refute me I won't be angry with you as you were with me, on the contrary you shall be recorded in my memory as my greatest benefactor.

Callicles:: Go on, my good sir, by yourself, and make an end of it.

Socrates:: Then listen to me whilst I resume the argument from the beginning. Are pleasure and good the same thing? Not the same, as Callicles and I agreed. Is pleasure to be pursued for the sake of the good, or good for the sake of pleasure? Pleasure for the sake of the good. And is that pleasant which brings pleasure by its presence, and that good which by its presence makes us good? Just so. But further, we ourselves, as well as every thing else that is good, have that character by the acquisition of some virtue or other? In my opinion, Callicles, that is necessarily so. But to be sure the virtue of every thing, whether it be implement or body, or again soul or any living creature whatsoever, cannot be acquired best by accident; it must be due to that particular order and rightness and art which is assigned severally to each of them. Is that so? That is certainly my opinion. So then the virtue of everything implies order and harmonious arrangement? I should say so. In everything then it is by the introduction of some kind of order, that viz. which is proper to each, that this is in every case made good? I think so. Consequently a soul also when it has its own proper order and harmony is better than one which is devoid of order? Necessarily. But further one which is endowed with order is orderly? Of course it is. And the orderly soul is 'temperate'? Beyond all doubt. Consequently the temperate soul is good. I have nothing to say to the contrary, my dear Callicles: but if you have, pray inform us.

Callicles:: Go on, my good sir.

Socrates:: I proceed then to say, that if the temperate soul is good, that which has the properties contrary to temperance or soundness of mind is bad: and that was one that is devoid of sense and self-control? No doubt. And further the man of sound mind will do what is right towards gods and men? for no man could be sound in mind if he did the contrary? This must needs be so. And again when he does what is right and proper towards men, his actions will be just, and towards the gods pious; but a man who does what is just and pious must needs be a just and pious man? It is so. And to be sure he must be brave too: for certainly temperance or self-control consists not in pursuing or avoiding what one ought not, but in pursuing and avoiding what one ought, whether things or men, or pleasures or pains, and in steadfast endurance at the call of duty. So that we may be fully convinced, Callicles, that the ‘temperate’ man, as our argument has shown, being just and brave and pious has attained the perfection of goodness, and that the good man does well and fairly all that he does, and that he that does well is blessed and happy, and the bad man and evil doer wretched. And this must be the man who is in the opposite condition to the temperate, the licentious namely, whom you were applauding.

Such then is the view that I take of these matters, and this I assert to be the truth; and if it be true, that every one, as it appears, who desires to be happy must seek after and practice self-control, and flee from licentiousness, every one of us as fast as his feet will carry him, and contrive if possible to stand in no need of correction; but if he do require it, either himself or any of those connected with him, be it individual or state, then justice must be applied and correction, if he is to have any chance of happiness. Such seems to me to be the aim which a man should keep in view through life, and so act as to concentrate all his own efforts as well as those of the state upon this one object, that justice and temperance may be essential to the attainment of happiness, not letting his desires grow without restraint, and so in the attempt to satisfy them, a never-ending torment, leading the life of a robber. For neither to any man else can such an one be dear, nor to God; for he is incapable of fellowship, but with one in whom there is no fellowship friendship is impossible. And, Callicles, the heaven and the earth and gods and men, as the wise tell us, are kept together by fellowship and friendship and orderliness and temperance and justice, and this is why, my friend, they give the name of 'order' to yonder universe and not of disorder or license. But you it seems have not paid attention to this, clever as you are, but have overlooked the mighty power of geometrical equality in heaven as well as earth. You suppose that a spirit of inequality, the desire of obtaining more than one's fair share, is what ought to be cultivated; because you don't care for geometry. Well. Either then we must refute this argument that it is by the possession of justice and self-control that the happy are happy, and by that of vice that the wretched are wretched; or if this be true, we must consider what are its consequences. All those former results follow, Callicles, about which you asked me if I was in earnest, when I said that a man should accuse himself or his son or friend if he do wrong, and that this is what rhetoric should be used for. And what you supposed Polus to concede out of mere shame was true after all, that to do wrong is worse than to suffer it in the same proportion as it is baser: and that any one who means to be a rhetorician in any true sense of the word must after all be a just man, and fully acquainted with the principles of justice, which again Polus said that Gorgias was forced by shame to admit.

This being the case, let us consider what amount of truth there really is in all that you taunt me with; that I am unable to help myself or any of my friends or connections, or to rescue them from the greatest dangers; and that, like the outlaws who are at every one's mercy, I am in the power of any one that chooses to slap me in the face, according to your truly spirited expression, or rob me of my property, or expel me from the city, or, worst of all, put me to death: and to be in such a condition is according to your account the very worst of all infamies. But my view you know—and though it has been already repeatedly stated, yet there is no reason why it should not be repeated once more—I deny, Callicles, that to be slapt on the cheek wrongfully is the worst of all disgrace, or to have my purse cut or my person; but I say that to strike or wound me or mine wrongfully is more disgraceful and worse: aye and stealing besides and kidnapping and housebreaking, and in a word any wrong whatsoever done to me or mine, is worse and more disgraceful to the doer of the wrong than to me who suffer it. All this, which has already been brought before us in an earlier part of our discourse in the way that now I state it, is bound down and fastened—though the expression may appear somewhat too strong—with arguments of iron and adamant, as it would seem at any rate on the face of it; which you, or some still more gallant and enterprising spirit than yourself, must answer, or else you will find it impossible to speak aright upon the subject in any other language than that which I now use. For I for my part always say the same, that I am ignorant of the true nature and bearings of these things, and yet of all that I have ever encountered as now none has ever been able to maintain any other views without making himself ridiculous. Well then I assume again that it is as I say. But if it be so, and injustice is the greatest of all evils to the wrong doer, and still greater than this greatest, if that be possible, to do wrong with impunity, what sort of help is that which a man must be able to render to himself on pain of being really ridiculous? is it not that which will avert from us the greatest mischief? Nay surely this must needs be the kind of help which it is most disgraceful not to be able to render to one's self or one's friends or connections, and second to it the inability to avert the second degree of evil, and the third the third, and so forth; in proportion to the magnitude of each kind of evil, so likewise is the glory of being able to find help against each sort, and the disgrace of failure. Is it so, Callicles, or otherwise?

Callicles:: Not otherwise.

Socrates:: Then of the two, doing and suffering wrong, we pronounce doing wrong to be the greater, and suffering it the lesser evil. What provision then must a man make for helping himself in order to secure both of these advantages, those namely which arise from not doing and not suffering wrong? Is it power or will? What I mean is this. Will a man escape suffering wrong by merely wishing not to suffer it, or will he escape it by procuring power to avert it?

Callicles:: Oh that's plain enough, by power.

Socrates:: But what say you to doing wrong? Is the mere wish to avoid injustice sufficient for a man, because in that case he wont do it? or again to effect this must some kind of power or art be provided, because if he do not learn and practice it he will do wrong? This is a point on which I particularly want your answer, Callicles, so tell me at once whether you think there was any real necessity or not for Polus and me to admit as we did in the foregoing argument that no one desires to do wrong, but all that do wrong do it against their will.

Callicles:: Let it be as you please, Socrates, that you may get your argument finished.

Socrates:: Then for this purpose again, it seems, we must provide ourselves with some kind of power or art, to avoid doing wrong.

Callicles:: Yes by all means.

Socrates:: Then what may be the art that supplies the means of suffering no wrong at all or as little as possible? See if you agree with me as to what it is. For in my opinion it is this: one must either be a ruler—or indeed a tyrant—in one's state, or else a friend of the existing government.

Callicles:: I hope you observe, Socrates, how ready I am to praise you when you say anything that deserves it This seems to me to be extremely well said.

Socrates:: Then see if you think this well said too. It seems to me that the strongest bond of friendship between man and man is that which the wise men of old tell us of; 'like to like.' Don't you agree with me?

Callicles:: Yes I do.

Socrates:: And so where a savage and illiterate ruler is lord and master, if there were any one in the city far better than he, the tyrant it may be presumed would be afraid of him and never could possibly become his friend with his whole heart?

Callicles:: It is so.

Socrates:: Nor again the friend of one who was for inferior to himself, any more than the other; for the tyrant would despise him, and never treat him with the attention due to a friend.

Callicles:: That is true too.

Socrates:: So then the only friend worth speaking of that is left for such an one is the man who resembling him in character, blaming and praising the same things, chooses to submit to his authority, and to be subject to him as his ruler. He it is that will have power in such a state, him none will wrong with impunity. Is it not so?

Callicles:: Yes.

Socrates:: Accordingly if in such a city as this one of the young men were to reflect within himself—how can I acquire great power and no one do me wrong?—he has the same path it seems to follow, to accustom himself from his very earliest years to feel delight and displeasure in the same things as his master, and to make himself as nearly as possible like the other: hasn’t he?

Callicles:: Yes.

Socrates:: And so he will establish for himself a lasting immunity from suffering wrong, and to use your own language, great power in the city.

Callicles:: No doubt of it.

Socrates:: And from doing wrong too? or quite the contrary, if he is to resemble the wicked governor and acquire great influence with him? Nay I should think that his efforts will be directed to the exact opposite, to the acquisition that is of the power of doing as much wrong as possible, and escaping the penalty for all the wrong that he does. Wont they?

Callicles:: It seems so.

Socrates:: So then the greatest of all evils will befall him, to have his soul depraved and deformed by the imitation of his master and the power that he has acquired.

Callicles:: You have the oddest way, Socrates, of twisting arguments every now and then and turning them upside down. Don't you know that this imitator, as you call him, will put to death any one that does not imitate him if he pleases, or strip him of all he possesses?

Socrates:: Indeed I do, my worthy Callicles, if I am not deaf, so often have I heard it from you and Polus of late, and indeed from nearly every body else in the city. But now do you in your turn hear what I have to say, that he may kill me if he pleases, but it will be a villain killing an honest man.

Callicles:: Well and isn't this the very thing that arouses one's indignation?

Socrates:: Not in a man of sense, as our argument indicates. You don't think, do you, that the object of all a man’s efforts should be to live as long as possible, and to study those arts which preserve us from dangers; like that for instance which you bid me study, the art of rhetoric, which ensures us safety in courts of justice?

Callicles:: Yes indeed I do, and very good advice it is.

Socrates:: Well but, my excellent friend, do you think the art of swimming a very dignified one?

Callicles:: No faith not I.

Socrates:: And yet that too saves men from death when any accident happens to them in which the knowledge of the art is required. But if this appears to you of too trivial a character, I’ll mention to you another of more importance than this, the art of navigation, which not only saves men’s lives, but their bodies too and goods from the extremest perils, just like rhetoric. And yet this is modest and sober, and does not give itself airs, and throw itself into attitudes, as if it were performing some very extraordinary feat: but for a service at least equal to that of the art forensic, for conveying one safe home, it may be from Ægina, it asks a fee I dare say of a couple of obols; or if it be from Egypt or the Pontus, at the utmost in return for this important service, for carrying safe as I said just now self and children and goods and women, when it has landed them all in the harbor its fare is a couple of drachmas: and the possessor of the art himself after he has done all this gets out and takes his walk by the shore alongside of his vessel with a perfectly unassuming demeanor. For he knows I dare say how to take into account that it is quite uncertain which of his passengers he has done a service to by saving them from drowning, and which of them he has injured, fully aware that he has landed them not a bit better than they were when they went on board in body or soul. He reflects accordingly that it cannot be that a man who has escaped drowning whilst he labors under the affliction of great and incurable bodily diseases is miserable in that he has been preserved from death, and has received no benefit from him at all—and yet that one who is laden with many incurable diseases in that which is so much more precious than the body—in the soul—that he, I say, should be allowed to live on, and that he did him service in rescuing him whether it be from the sea or a law-court or anywhere else you please—No, he knows that it is better for man in a vicious state not to live, for he must needs live ill.

This is why it is not the fashion for the pilot to give himself airs, though he does save our lives. No nor the engineer either, my worthy friend, though he has sometimes the power of saving lives just as much as a general—to say nothing of a pilot—or any one else. For sometimes he saves whole cities. Think you he is to be compared with the lawyer? And yet if he chose to talk and magnify his business as you do, Callicles, he might overwhelm you with his words, arguing and urging upon you the duty of making yourselves engineers, for there is nothing else like it: for he would have plenty to say for himself. Still you none the less look down upon him and his art, and as a term of reproach would nickname him ‘the machine maker,’ and you wouldn’t consent to bestow your daughter upon his son, nor to take his yourself for your own. And yet on the principles upon which you extol your own pursuits, what fair excuse have you for despising the engineer and all the rest that I just now mentioned? I know you would say that you are a better man and better born. But if ‘better’ does not mean what I say it does; if virtue means this and nothing more, to save one’s self and what belongs to one, whatever one’s character may chance to be, your contempt for the engineer and the physician and all the other arts which have been invented with the object of saving men’s lives becomes ridiculous. Nay, my dear fellow, see to it, whether the noble and the good be not something quite different from saving and being saved.

Consider whether the true man ought not to disregard this, I mean any particular length of life, and to renounce all love of mere life; ought not rather to leave all this to the will of heaven, and, believing what the women say that no one can escape his destiny, consider hereupon how he may best pass his allotted portion of life; whether it be in assimilating himself to any form of government under which he may happen to live, and so now accordingly, whether you are bound to make yourself as like as possible to the Athenian people, if you mean to gain its affections and acquire great power in the city. Consider whether this is really beneficial to you and me, that we mayn’t meet with the fate of the Thessalian women who draw down the moon from heaven: upon the choice of this power in the state our dearest interests will be staked. But if you suppose that any one in the world can impart to you such an art as will raise you to great power in the state without being like the government either for the better or worse, it seems to me, Callicles, that you are very ill advised: for you must be not a mere imitator but radically like them, if you mean to effect any thing genuine in the way of friendship with Demus the Athenian people, aye faith and with Demus the son of Pyrilampes to boot Whoever therefore shall produce in you the nearest possible resemblance to them, he it is that will make you a statesman, in the sense in which you desire to be a statesman, and a rhetorician: for with words accommodated to their own character every body is pleased, but such as are adapted to a foreign one they dislike—unless you have any thing to say to the contrary, my darling. Have we anything to say against all this, Callicles?

Callicles:: Some how or other, Socrates, there seems to me to be truth in what you say. But I feel as most people do, I don't quite believe you.

Socrates:: That's because the love of Demus has planted itself in your soul and resists me, Callicles; but if perhaps we were to examine these same questions often over again and better, you'd be convinced. Remember however that we said that there are two processes which may be adopted in training anything, whether body or soul, one to make its pleasure the object of all our dealings with it; the other what is best for it, not humoring it, but striving against it to the uttermost. This is the distinction that we drew before, is it not?

Callicles:: Yes, certainly.

Socrates:: Well then, the one, that which is directed to pleasure, is ignoble and nothing but flattery, is it not?

Callicles:: Be it so, if you please.

Socrates:: And of the other the object is to make that which we have charge of, whether it be body or soul, as good as possible?

Callicles:: Yes, no doubt.

Socrates:: Ought not then our object to be in undertaking the care of our city and its citizens to make them as good as possible? For without this, you know, as we found in our preceding argument, there is no use in offering any other kind of service, unless, that is, the thoughts and intentions of those who are to acquire either wealth or authority over others or any other kind of power be honest and virtuous. Are we to assume this?

Callicles:: Yes, by all means, if you prefer it.

Socrates:: Supposing then that you and I, Callicles, in the ordinary course of public business, were inviting one another to undertake the building department, the most important structures it may be of walls or docks or temples, would it have been our duty to consider and examine ourselves, first of all whether we are acquainted or not with the art of building, and from whom we learnt it? would it, or not?

Callicles:: Yes no doubt.

Socrates:: And again, in the second place, whether we have ever erected any building for private use, either for one of our friends or ourselves, and whether this building is handsome or ugly? And if we found upon consideration that we had had good and well-reputed masters, and that many handsome buildings had been erected by us under our masters' direction, and many by ourselves of our own, after we had parted from our masters; under such circumstances men of sense might be permitted to undertake public works; but if we had no master of ourselves to produce, and of buildings either none at all, or ever so many and all worthless, surely in this case it would be the height of folly to attempt public works, and invite one another to undertake them. May we pronounce this to be correct, or not?

Callicles:: Yes, certainly.

Socrates:: And similarly with the rest; supposing for instance we had undertaken the office of state-physicians, and were inviting one another to it as thoroughly well qualified for the task, our first step would be, I presume, to examine one another's qualifications, you mine and I yours. Marry now, let us see, how stands the case with Socrates in regard of the health of his own body? or has any one else, slave or free man, ever yet been cured of a disease by means of Socrates? And I again, I dare say, should have made exactly similar inquiries about you. And if we found that we had never been the means of making any one better in his bodily health, citizen or stranger, man or woman, in heaven's name, Callicles, would it not be truly absurd that human beings should ever be brought to such a pitch of folly as to begin with the wine-jar in learning the potter's art, as the saying is, you know, and before they had in their private practice, often failing it may be, and often succeeding, exercised themselves sufficiently in the art, undertake to serve publicly as physicians themselves and invite others like them to do the same? Don't you think it would be folly to act so?

Callicles:: Yes I do.

Socrates:: And now, my excellent friend, as you yourself are; just beginning to enter into public life, and are urging me to do the same, and reproaching me for not doing it, shall we not examine one another, as thus, Let us see, has Callicles ever yet made any of the citizens better than he was before? Is there any one of them who was before wicked, unjust and licentious and foolish, and by Callicles' means has been made an honest man, stranger or citizen, bond or free? Tell me, Callicles, if any one examines you thus, what will you say?

What human creature will you claim to have improved by his intercourse with you? Do you hesitate to answer, if you have anything to show which you have done in your private capacity as a preliminary to engaging in public business?

Callicles:: You are captious, Socrates.

Socrates:: Nay it is not out of captiousness that I put the question but from a real wish to know what you think your duty as a public man is in our city, whether, that is to say, we shall find you concerning yourself about anything else in your administration but making us citizens as good as possible. We have already several times admitted, haven't we, that this is the statesman's proper business? Have we admitted it or not? Answer me. We have; I will answer for you. If then this is what a good man is bound to effect for his native city, now call to mind those men whom you mentioned just now, Pericles, and Cimon, and Miltiades, and Themistocles, and tell me if you still think that they approved themselves good citizens.

Callicles:: Yes I do.

Socrates:: Well then if they were good, it is plain that every one of them made the citizens better than they were before. Did they do so, or not?

Callicles:: They did.

Socrates:: Accordingly when Pericles began to speak before the People the Athenians were worse than when he made his last speeches?

Callicles:: Perhaps.

Socrates:: Not perhaps at all, my very good sir: it follows necessarily from our admissions, if at least he was a good statesman.

Callicles:: Well what then?

Socrates:: Oh nothing. Only just tell me this as well, whether the Athenians are commonly said to have owed any improvement to Pericles, or just the contrary, to have been corrupted by him. For what I hear is this, that Pericles has made the Athenians lazy and cowardly and talkative and greedy, by establishing first the system of fees.

Callicles:: You hear all that from those broken-nosed gentry, Socrates.

Socrates:: Aye but this I don't hear merely, but know full well, and so do you, that first of all Pericles was popular with the Athenians, who never passed a sentence upon him involving any disgrace as long as they were 'worse;' but as soon as they had been made by him thoroughly honest and good men, at the end of Pericles' life they found him guilty of peculation, and nearly condemned him to death—plainly because they thought him a rogue.

Callicles:: What then? did that make Pericles a bad man?

Socrates:: At all events a herdsman of that sort who had the care of asses or horses or oxen would be thought a bad one, if the animals which he took under his charge free from all propensity to kick or butt or bite turned out under his management given to all these tricks out of mere wildness. You would call, wouldn't you, any keeper of any animal whatsoever a bad one who makes those which he has received under his charge tame and gentle wilder than they were when he took them? Would you do so or not?

Callicles:: Oh yes, by all means, to oblige you.

Socrates:: Then oblige me still further by answering this one question whether man too is one of the animal creation or no?

Callicles:: Of course he is.

Socrates:: And had not Pericles the charge of man?

Callicles:: Yes.

Socrates:: Well then, ought they not, as we agreed just now, to have been improved by him in justice if they really were under the care of a good statesman.

Callicles:: Yes certainly.

Socrates:: Well and the just are tame and gentle, as Homer said. But what say you? Is it not so?

Callicles:: Yes.

Socrates:: But yet he made them wilder and more savage than they were when he took them in hand, and that against himself, the very case in which he would least have desired it.

Callicles:: Do you want me to agree with you?

Socrates:: Yes if you think I speak the truth.

Callicles:: Then let it be as you say.

Socrates:: And accordingly if wilder, more unjust and worse.

Callicles:: Be it so.

Socrates:: So then it follows from what we have said that Pericles was not a good statesman.

Callicles:: So you say.

Socrates:: Faith and so must you say too, after the admissions you just made. And now again about Cimon, tell me; did not those whom he tended ostracize him in order that they mightn't hear the sound of his voice for ten years? And didn't they treat Themistocles in the very same way, and punish him with exile to boot? and Miltiades the hero of Marathon they sentenced to be thrown into the pit, and had it not been for the president into it he would have been thrown. And yet these men had they been good in the way that you describe them, would never have been treated thus. At all events good drivers don't keep their seat in the chariot at the commencement of their career, and then get thrown out after they have trained their horses and improved themselves in driving. This is not the case either in charioteering or in any other business whatsoever. You don't think so, do you?

Callicles:: No, not I.

Socrates:: So then what we said before was true, that we know no one who has approved himself a good statesman in this city of ours. You admitted this of the men of the present day, but some of those of former times, and to these men you gave the preference. But these now turn out to be on a par with the men of the present day; and therefore if these were orators, they employed neither the genuine art of rhetoric, else they would not have lost the popular favor, nor the flattering sort of it.

Callicles:: But surely, Socrates, none of the present generation has ever done anything like such deeds as one of those others, any one of them you please.

Socrates:: My dear sir, neither do I find any fault with them, at least as ministers in the state's service, on the contrary I think they have shown themselves more dexterous ministers than the men of our time, and better able to provide the city with all that she desired. However in changing the direction of the citizens' desires instead of giving way to them, leading them by persuasion or compulsion to that which would improve their character, in all this so to speak these were in no respect superior to the others: and yet this is the only business of a good statesman. But as to providing ships and walls and docks and a variety of other such-like things, I grant you myself that these men were cleverer than the others. So it seems you and I are doing an absurd thing in this argument of ours. For during the whole time that our conversation has lasted we have never ceased coming round constantly to the same point and misunderstanding one another's meaning. I at all events believe that you have admitted ever so many times and decided that this business of dealing with either body or soul is two-fold, and that the one of these is ministerial; whereby meat may be provided for our bodies when they are hungry, and drink when they are thirsty, and when cold clothing, bedding, shoes, or anything else that bodies are led to desire. And I purposely use the same images in my illustration that you may the more easily understand me. For as to being capable of supplying such things, either as a shopkeeper or merchant, or maker of any of the things themselves, baker or cook or weaver or shoemaker or tanner—it is no wonder, I say, that a man being such should fancy himself and be considered by others as one who takes care of the body; by every one, that is, who is not aware that there is besides all these an art of medicine and gymnastics which really is a training of the body; which has in fact a natural claim to authority over all the arts, and a right to make use of their works, because it knows what is good and bad in meat and drink for promoting a perfect condition of body, of which all those others are ignorant; and so it is that all these are servile and ministerial and illiberal in their treatment of the body, I mean all the rest, and medicine and gymnastics have a fair claim to be their mistresses. That I maintain the very same to be the case with the soul you seem to me at one time to understand, and admit it as though you knew what I meant; and then by and by you come and tell me that men in our city have shown themselves citizens of sterling worth, and when I ask you who, you seem to me to put forward men of exactly the same sort in statecraft, as if when I asked you who are or ever have been good trainers of the body in gymnastics you told me quite seriously, Thearion the baker, and Mithaecus the author of the treatise on Sicilian cookery, and Sarambus the vintner, these are they that have shown marvelous skill in training men's bodies by supplying the one admirable loaves, the second entries, and the third wine. Now perhaps you would have been offended if I had said to you, My friend, you know nothing at all about gymnastics: you tell me of a parcel of fellows, ministers and caterers to men's appetites, with no sound and true knowledge of them whatever, who, very likely, will first stuff and fatten men's bodies—applauded by them for it all the while—and then make them lose even the flesh they had of old. They in their turn from ignorance will not throw the blame of their diseases and the loss of their old flesh upon those who thus indulge them; but whoever happen to be near them at the time or to offer them any advice, just at the moment when the original stuffing and pampering, carried on as it was without the least regard to what is wholesome, has at length, it may be ever so long after, brought disease upon them, them they will accuse and find fault with and do them a mischief if they can, whilst they will applaud those earlier advisers, the real authors of the disaster. And you, Callicles, are now doing something precisely similar: you are applauding men who have indulged those charges of theirs with all the good things that they desired. And people say that they have made the city great: but that it is mere swelling and internal ulceration that has been brought about by these famous statesmen of old, they do not perceive. For disregarding temperance and justice they have stuffed the city with harbors and docks and walls and tribute and suchlike nonsense: and so whenever the fit of sickness we spoke of actually comes, they will lay the blame upon their then present advisers, and applaud Themistocles and Cimon and Pericles, the authors of all the mischief: and when besides their subsequent acquisitions they have lost all that they originally had into the bargain, they will probably lay hold of you, if you don't take good care, and my friend Alcibiades, who though not the immediate authors of all the mischief are yet perhaps partly to blame for it. There is however one senseless thing which I see happening now, and hear of the men of the past generation. Whenever, that is, the city takes one of these public men in hand as a wrongdoer, I hear them venting their indignation with loud outcries against such shameful treatment: 'so then after all their long and valuable services to the city the return she makes is injustice and ruin,' according to their story. But all this is entirely false. For there is no single instance in which the ruler of a city could ever be unjustly brought to ruin by the very city over which he bears rule. For the case appears to be precisely the same with those that pretend to the name of statesmen as with those who profess the sophistical art. The sophists in fact with ail their cleverness in everything else in this one point are guilty of an egregious absurdity: for claiming to be teachers of virtue they often charge their pupils with wronging them by cheating them of their fees and in other respects showing them no gratitude for all the service they have done them. Now what can be more unreasonable than such language? That men after they have been made good and just, after all their injustice has been eradicated by their teacher and justice planted in its stead, should commit injustice by means of that which they have not. Does not this seem to you absurd, my friend? You have really forced me to make quite a speech, Callicles, by refusing to answer.

Callicles:: So you then pretend that you can't speak unless some one answer you?

Socrates:: It seems I can. This time at any rate I have gone on talking a good while, because you wont answer me. Come now, my good fellow, tell me in the name of the god of friendship, don't you think it is unreasonable for a man to profess to have made another good, and then, after he has been made by him and still is good, to find fault with him for being bad?

Callicles:: Yes, I do think so.

Socrates:: Well and you hear, don't you, those that profess to train men in virtue say such things?

Callicles:: Yes I do. But what is to be said [what's the use of talking] of such a worthless set of fellows?

Socrates:: And what is to be said of those who, pretending to control the state and to take care that it be made as good as possible, turn round upon her when the occasion arises, and accuse her of being as bad as she can be? Think you there is any difference between these and the others? The sophist and the orator, my dear fellow, are the same thing, or as nearly as possible alike, as I said to Polus. But you for want of knowledge think the one, rhetoric, a very fine thing, and the other you despise. Whereas in truth sophistic is a finer thing than rhetoric, in proportion as legislation is superior to the administration of justice, and gymnastics to medicine. In fact for my own part I always thought that public speakers and sophists were the only class of people who have no right to find fault with the thing that they have themselves trained for behaving ill to them; or else they must at the same time by these very same words charge themselves as well with having done no good to those that they pretend to benefit. Is it not so?

Callicles:: Yes, quite so.

Socrates:: Aye, and they alone might be expected according to all probability to have the power of bestowing their services freely without fee or reward, if what they say were true. For a man when he has received any other benefit, as for instance if he has been taught to run fast by a trainer, might perhaps cheat him of his reward, supposing the trainer gave him his services for nothing, and made no agreement with him for a fee which was to be paid as nearly as possible at the very moment of imparting to him the speed in question: for it is not by slowness of foot I conceive that men do wrong, but by injustice; isn’t it?

Callicles:: Yes.

Socrates:: And so if any one removes from others this particular vice, that is injustice, he need never be afraid of being unjustly treated; but this benefit alone can be bestowed for nothing with security—supposing that is, that any one really has the power of making men good. Is it not so?

Callicles:: I allow it.

Socrates:: This then, it appears, is the reason why there is no disgrace in taking money for giving advice of any other kind, as about building or the rest of the arts.

Callicles:: So it seems.

Socrates:: But about this particular process of making a man as good as possible, and enabling him to manage to the best advantage his own household or a state, it is reckoned disgraceful to refuse to give advice without receiving money for it. Isn't it?

Callicles:: Yes.

Socrates:: The reason plainly being this, that this is the only kind of service that makes the recipient desire to requite the benefit; and therefore the symptom seems a favorable one [of something having been really taught], when any one after having performed this particular service is repaid for it; and if not, the contrary [an unfavorable one]. Is this as I say?

Callicles:: It is.

Socrates:: Then tell me definitely which of those two modes of serving the state it is that you invite me to? that of carrying on a constant struggle with the Athenians, like a physician, to make them as good as possible, or as one that would minister to all their humors and deal with them solely with a view to their gratification? Tell me the truth, Callicles: for you are bound, as you began by speaking your mind so freely to me, to go on now and tell me all that you think. So now pray speak out fairly and frankly.

Callicles:: I say then, as one that would minister to them.

Socrates:: Then, my very ingenuous friend, you invite me to play the flatterer.

Callicles:: You may call yourself a Mysian' if you like it better, Socrates; for if you don't do as I say—

Socrates:: Don't repeat what you have said so often, that I am at the mercy of any one that chooses to put me to death, that I may not be obliged to repeat in my turn, that it will be the case of a rogue putting to death an honest man: nor that any one can strip me of all that I have, that I may not be obliged to say in my turn, Well, but after he has done so, he wont know how to use what he has got, but as he robbed me wrongfully so in like manner he will employ wrongfully what he has taken; and if wrongfully then basely; and if basely then ill.

Callicles:: It seems to me, Socrates, that you don't believe in the possibility of your meeting with any one of these calamities, as though you were dwelling far out of harm's way, and never could be dragged into a court of justice by some perhaps utterly wretched and contemptible fellow.

Socrates:: Then I must indeed be a fool, Callicles, if I think that in this city of ours any one whatsoever is exempt from the risk of any possible form of calamity. Of this however I am quite sure, that if I ever am brought before a court of justice and incur any of those risks you speak of, it will be some villain that brings me there: for no honest man would ever prefer a criminal charge against an innocent person. Aye and it were no marvel if I were condemned to death. Would you have me tell you why I expect this?

Callicles:: Yes, by all means.

Socrates:: I think that I am one of very few, not to say the only man in all Athens, that attempts the true art of Politics, and that I am the only man of the present day that performs his public duties at all. Seeing then that the gratification of my hearers is never the object of the discussions that I am in the habit of taking part in, that they aim at what is best, not what is most agreeable, and because I don't choose to do those fine clever things that you recommend, I shall have not a word to say before the tribunal. And the same case may now be applied to me as I was describing to Polus: for I shall be like a physician tried before a jury of children on a charge brought by a cook. Only consider what defense a man like this would make in such a predicament, if the prosecutor were to open his case thus: My dears, here's a man that has done you all a vast deal of mischief, and even the very youngest of you he maims for life by cutting and burning, and drives you to your wits' end by starving and choking you, administering the bitterest draughts and forcing you to abstain from eating and drinking; not like me, who used to feast you with every variety of nice things in abundance. What think you that a physician reduced to such a strait would find to say for himself? Or supposing he were to say the truth, All this I did, my boys, for your health—how great think you would be the outcry that such judges would set up? a loud one, wouldn't it?

Callicles:: I dare say: one would think so.

Socrates:: Don't you suppose then that he would be utterly at a loss what to say?

Callicles:: Certainly he would.

Socrates:: Such however I well know would be my own fate if I were brought before a court of justice. For I shall have no pleasure to describe that I have provided for them; which they account as benefits and services—whereas I envy neither those that procure them nor those for whom they are procured—and if any one charges me either with corrupting the juniors by perplexing their minds with doubts, or with reviling the seniors with bitter words either in private or in public, I shall not be able to tell them either the truth, 'all this that I say is right, and it is your interest, alone, O my judges, that I am serving in acting thus,' or indeed anything else. And therefore very likely there is no saying what my fate may be.

Callicles:: Do you think then, Socrates, that a man in such a condition and unable to help himself cuts a good figure in a city?

Socrates:: Yes, Callicles, he would if he had that advantage which you have so often admitted; if he had 'helped himself' by never having said or done any wrong either to men or gods. For this we have repeatedly allowed to be the best of all possible kinds of self-help. Now were I to be convicted of incapacity for rendering help of this kind to myself or another, of such conviction I should be ashamed whether it took place before many or few or by myself alone; and if my death were due to this kind of incapacity I should indeed be vexed. But if it were for want of your 'flattering' rhetoric that I died, I am very sure you would see me meet my death with calmness and composure. For death itself no man fears, unless he be an absolute fool or coward; it is doing wrong that a man fears: for to arrive at the world below with the soul laden with many offences is the uttermost of all evils. And now, if you please, I'll tell you a tale to show you that this is really so.

Callicles:: Well as you have done all the rest, you may as well finish this too.

Socrates:: 'Listen then,' as they say, 'to a very pretty story:' which you, I dare say, will take for a fable, but I regard as a true story: for all that I am about to say I wish to be regarded as true.

Zeus Poseidon and Pluto, as Homer tells us, divided amongst themselves the empire which they derived from their father. Now in the days of Cronus there was a law concerning mankind, which still at the present day as ever prevails in heaven, that every man who has lived a just and holy life departs after death to the Islands of the Blest, and there dwells in perfect happiness beyond the reach of ill; but whosoever has led a life of injustice and impiety is consigned to the dungeon of vengeance and punishment, which, you know, they call Tartarus. Of these there were in the days of Cronus, and still are in more recent times under the empire of Zeus, living judges of living men, who were appointed to sit in judgment upon every man on the very day on which he was to die. And so the cases were decided amiss. So Pluto and the guardians from the Isles of the Blest came and reported to Zeus how that men undeserving were constantly coming to them as well as to the other place. So spoke Zeus: Nay, said he, I will put an end to this. For true it is that now the cases are ill judged. And this is because they that are brought to trial are tried with their clothes on, seeing that they are tried alive. Now many, said he, whose souls are wicked are clothed with fair bodies and nobility and wealth, and at the judgment many witnesses appear to testify on their behalf that their lives have been passed in justice. So the judges are confounded not only by their evidence, but at the same time because they themselves sit in judgment wrapt in clothes, with the veil of eyes and ears and indeed of the entire body interposed before their own soul. All this therefore stands in their way, their own wrappings as well as those of them that stand before their bar. First of all then, he continued, we must put an end to their foreknowledge of their own death, for now they have this foreknowledge. This however Prometheus has already received my orders to put a stop to. Next they must be stript of all these clothes before they are brought to trial; for they must be tried after death. The Judge too must be naked, dead, with very soul scrutinizing the very soul of each the moment after his death, each man bereft of the aid of all his friends and relations and with all that ornamental furniture left behind him upon earth that the judgment may be just. Knowing all this before yourselves, I have already appointed judges sons of my own, two from Asia, Minos and Rhadamanthus, and one from Europe, Æacus: These three after their death shall sit in judgment in the Meadow at the

Cross Roads, whence the two lead, one to the Isles of the Blest, the other to Tartarus.

And the souls from Asia Rhadamanthus shall try, and those from Europe Æacus: and upon Minos I will confer the privilege of deciding in the last resort in case of doubt on the part of the other two, that the judgment upon man's final journey may be perfectly just.

This, Callicles, is what I have heard and believe to be true, and I reckon that from these tales may be drawn some such moral as this. Death, as it seems to me, is nothing but the dissolution, the parting from one another, of two things, the soul and the body. And accordingly after their separation, each of them retains its own state and condition pretty nearly the same as it had when the man was alive, the body retaining its own nature with the results of its training and its accidental affections, all quite visible. For instance, if any one's body was of great size either naturally or by feeding or both, whilst he was alive, his corpse will be of great size too after he is dead: and if he was fat, it will be just as fat after his death; and so on for the rest. Or if again he adopted the fashion of wearing his hair long, his dead body in like manner will have long hair. Again if any one had been flogged and bore traces of the stripes in the shape of scars on his body, whether these were left by the scourge or by wounds of any other kind, in life, his body visibly retains the marks of them when the man is dead. And if the limbs of any one were broken or distorted in life the very same will be visible in death. And in a word, whatever characteristics a man's body presented in life, the same likewise are visible in it after his death, all or most of them, for a certain time. And so, Callicles, it seems to me, the very same is the case with the soul also; when a man's soul is stript of its bodily covering, all its natural properties, as well as those accidental ones which the man's soul contracted from his various habits and pursuits, are visible in it. So as soon as they are arrived at the place of judgment, they of Asia before Rhadamanthus, them Rhadamanthus sets before him, and examines each man's soul, not knowing whose it is; nay often when he has laid hold upon the Great King himself, or any other prince or potentate, he detects at once the utter unsoundness of his soul, deeply marked by the scourge and covered with wounds inflicted by perjury and iniquity, of which its own acts have left the print on each individual soul; full of distortion arising from falsehood and imposture, and all crooked by reason of its having been reared without truth: or from power and pride and insolence and incontinence finds the soul laden with disproportion and ugliness. When he has found such an one he sends it away in disgrace straight to the place of ward, where on its arrival it is doomed to endure all the sufferings that are its due.

Every one who undergoes punishment, if that punishment be rightly inflicted by another, ought either to be made better thereby and derive benefit from it, or serve as an example to the rest of mankind, that others seeing the sufferings that he endures may be brought by terror to amendment of life. Now those who derive benefit from the punishment which they receive at the hands of Gods and men are they that have been guilty of remediable offences: yet still the benefit both here and in the world below is conveyed to them through the medium of pain and suffering; for in no other way can the release from iniquity be effected. But all those that have done extreme wrong and by reason of such crimes have become incurable, these are they of whom the examples are made: and these are no longer capable of receiving any benefit themselves, seeing that they are incurable, but others are benefited who behold them for their transgressions enduring the severest most painful and most fearful sufferings in that prison house in the world below, time without end; hung up as signal examples there, a spectacle and a warning to the wicked as they continually arrive. Of whom I say Archelaus too will be one, if what Polus tells us is true, and every other tyrant that resembles him. And I believe that the majority of these examples is derived from tyrants and kings and potentates and ministers of the affairs of states: for they by reason of the license that they enjoy are usually guilty of the greatest and most impious transgressions. Homer too is a witness to the truth of this; for he has introduced kings and lords, Tantalus and Sisyphus and Tityus, as those who are suffering everlasting punishment in the lower world. But Thersites or any other private person that was wicked no poet has described as incurable and therefore subjected to any heavy punishment; because no doubt he wanted the power, and therefore was so far happier than those that had it. However, Callicles, be that as it may, it is to the class of the powerful that the men who are distinguished for wickedness actually belong. Still there is nothing to prevent good men being found even amongst these, and eminently worthy of admiration are those that prove themselves such: for it is hard, Callicles, and highly praiseworthy for a man to lead a just life when he has full liberty of doing wrong. But small indeed is the number of such: for true it is that here and elsewhere there have been, and I don't doubt there will be hereafter, men thoroughly accomplished in this virtue, the virtue of administering justly all that has been confided to their care. And one there has been very celebrated indeed, whose fame is spread all over Greece, Aristides son of Lysimachus. But most powerful men, my good friend, turn out bad.

So as I was saying, whenever such an one appears before that Rhadamanthus we spoke of, he knows nothing else about him whatsoever, neither who he is nor whence derived, except that he is a bad man: and as soon as he discovers this he sends him away at once to Tartarus, with a mark set upon him to show whether he is curable or incurable; and upon his arrival there he is submitted to the sufferings appropriate to his case. And sometimes, when he sets his eyes upon another soul that has lived a holy life in the society of truth, a private man's or any other's, especially as I should say, Callicles, that of a philosopher who has attended to his own business, and not meddled in the affairs of life, he is struck with admiration and sends it off to the Isles of the Blest. Precisely the same is the practice of Æacus. And each of these two sits in judgment with a rod in his hand. But Minos sits alone overlooking the proceedings holding a golden scepter, as Ulysses in Homer says that he saw him;

> ‘Wielding a scepter of gold, and judging
> amongst the Departed.’

Now for my part, Callicles, I am convinced by these stories, and I consider how I may appear before my judge with my soul in its healthiest condition. So renouncing the honors which are the aim of the mass of mankind I shall endeavor in the search after truth really to the utmost of my power to lead a life of virtue and so to meet death when it comes. And all other men I invite likewise to the best of my ability, and you especially I invite in return to this course of life and this conflict, which I say is worth all other conflicts here on earth put together; and I retort your reproach, that you will be unable to help yourself when that trial and that judgment comes upon you of which I was even now speaking; but when you appear before your judge, the son of Ægina, and he lays hold on you to drag you to his bar, you will stand with open mouth and dizzy brain, you there no less than I here, and some one perchance will smite you, yea shamefully slap you in the face, and treat you with every variety of insult.

All this however may perhaps seem to you a mere fable, like an old wife’s tale, and you look upon it with contempt. And there would have been no wonder in our despising it, if we could have found by any amount of search anything better and truer. But as it is, you see that you three, three of the wisest of the Greeks of our time, you and Polus and Gorgias, axe unable to prove that we should lead any other life than this, which appears to be of advantage to us for the other world as well as this; but amidst the multitude of questions that we have been arguing, whilst all the rest were refuted this doctrine alone stands unshaken, that doing wrong is to be more carefully avoided than suffering it; that before all things a man should study not to seem but to be good in his private and public life; that if a man become bad in any respect, he is to be corrected; and that this is good in the second degree, next to being just to become so, and to be corrected by punishment: and that all kinds of 'flattery.' whether of oneself or others, of few or of many, are to be avoided: and that rhetoric, as well as every other kind of action, is to be employed ever for the maintenance of the right, and for that alone.

So take my advice and follow me to that bourn, where when you have attained it, you will be happy in life and after death, as our argument promises, and let any one look down upon you as a fool and insult you if he pleases—aye, by heaven, and cheerfully submit to endure from him even that blow of infamy: for it will do you no harm if you be really an honest and true man, practicing virtue. And hereafter when we have so practiced it together, then and not till then will we set about politics, if it seem right to do so, or consult then about any other plans we think proper, better prepared for deliberation than we are now. For it is a shame for men in the condition in which we now manifestly are to assume airs of consequence, though we are never of the same mind for two moments together upon the same subjects, and those of the deepest moment; such is the undisciplined state of our minds. Let us then take as a guide the views that have even now declared themselves to us, which point out that this course of life is best, in the practice of justice and of every other virtue to live and to die. These then let us follow and invite all others thereto; not those you put faith in and invite me to: for they are nothing worth, Callicles.

# Gorgias.

Translated by Jowett 3rd ed.

*PERSONS OF THE DIALOGUE.*

Callicles. Socrates. Chaerephon.
Gorgias. Polus.
Scene: The house of Callicles.

---

Callicles:: The wise man, as the proverb says, is late for a fray, but not for a feast.

Socrates:: And are we late for a feast?

Callicles:: Yes, and a delightful feast; for Gorgias has just been exhibiting to us many fine things.

Socrates:: It is not my fault, Callicles; our friend Chaerephon is to blame; for he would keep us loitering in the Agora.

Chaerephon:: Never mind, Socrates; the misfortune of which I have been the cause I will also repair; for Gorgias is a friend of mine, and I will make him give the exhibition again either now, or, if you prefer, at some other time.

Callicles:: What is the matter, Chaerephon—does Socrates want to hear Gorgias?

Chaerephon:: Yes, that was our intention in coming.

Callicles:: Come into my house, then; for Gorgias is staying with me, and he shall exhibit to you.

Socrates:: Very good, Callicles; but will he answer our questions? for I want to hear from him what is the nature of his art, and what it is which he professes and teaches; he may, as you [Chaerephon] suggest, defer the exhibition to some other time.

Callicles:: There is nothing like asking him, Socrates; and indeed to answer questions is a part of his exhibition, for he was saying only just now, that any one in my house might put any question to him, and that he would answer.

Socrates:: How fortunate! will you ask him, Chaerephon—?

Chaerephon:: What shall I ask him?

Socrates:: Ask him who he is.

Chaerephon:: What do you mean?

Socrates:: I mean such a question as would elicit from him, if he had been a maker of shoes, the answer that he is a cobbler. Do you understand?

Chaerephon:: I understand, and will ask him: Tell me, Gorgias, is our friend Callicles right in saying that you undertake to answer any questions which you are asked?

Gorgias:: Quite right, Chaerephon: I was saying as much only just now; and I may add, that many years have elapsed since any one has asked me a new one.

Chaerephon:: Then you must be very ready, Gorgias.

Gorgias:: Of that, Chaerephon, you can make trial.

Polus:: Yes, indeed, and if you like, Chaerephon, you may make trial of me too, for I think that Gorgias, who has been talking a long time, is tired.

Chaerephon:: And do you, Polus, think that you can answer better than Gorgias?

Polus:: What does that matter if I answer well enough for you?

Chaerephon:: Not at all:—and you shall answer if you like.

Polus:: Ask:—

Chaerephon:: My question is this: If Gorgias had the skill of his brother Herodicus, what ought we to call him? Ought he not to have the name which is given to his brother?

Polus:: Certainly.

Chaerephon:: Then we should be right in calling him a physician?

Polus:: Yes.

Chaerephon:: And if he had the skill of Aristophon the son of Aglaophon, or of his brother Polygnotus, what ought we to call him?

Polus:: Clearly, a painter.

Chaerephon:: But now what shall we call him—what is the art in which he is skilled?

Polus:: O Chaerephon, there are many arts among mankind which are experimental, and have their origin in experience, for experience makes the days of men to proceed according to art, and inexperience according to chance, and different persons in different ways are proficient in different arts, and the best persons in the best arts. And our friend Gorgias is one of the best, and the art in which he is a proficient is the noblest.

Socrates:: Polus has been taught how to make a capital speech, Gorgias; but he is not fulfilling the promise which he made to Chaerephon.

Gorgias:: What do you mean, Socrates?

Socrates:: I mean that he has not exactly answered the question which he was asked.

Gorgias:: Then why not ask him yourself?

Socrates:: But I would much rather ask you, if you are disposed to answer: for I see, from the few words which Polus has uttered, that he has attended more to the art which is called rhetoric than to dialectic.

Polus:: What makes you say so, Socrates?

Socrates:: Because, Polus, when Chaerephon asked you what was the art which Gorgias knows, you praised it as if you were answering some one who found fault with it, but you never said what the art was.

Polus:: Why, did I not say that it was the noblest of arts?

Socrates:: Yes, indeed, but that was no answer to the question: nobody asked what was the quality, but what was the nature, of the art, and by what name we were to describe Gorgias. And I would still beg you briefly and clearly, as you answered Chaerephon when he asked you at first, to say what this art is, and what we ought to call Gorgias: Or rather, Gorgias, let me turn to you, and ask the same question,—what are we to call you, and what is the art which you profess?

Gorgias:: Rhetoric, Socrates, is my art.

Socrates:: Then I am to call you a rhetorician?

Gorgias:: Yes, Socrates, and a good one too, if you would call me that which, in Homeric language, ‘I boast myself to be.’

Socrates:: I should wish to do so.

Gorgias:: Then pray do.

Socrates:: And are we to say that you are able to make other men rhetoricians?

Gorgias:: Yes, that is exactly what I profess to make them, not only at Athens, but in all places.

Socrates:: And will you continue to ask and answer questions, Gorgias, as we are at present doing, and reserve for another occasion the longer mode of speech which Polus was attempting? Will you keep your promise, and answer shortly the questions which are asked of you?

Gorgias:: Some answers, Socrates, are of necessity longer; but I will do my best to make them as short as possible; for a part of my profession is that I can be as short as any one.

Socrates:: That is what is wanted, Gorgias; exhibit the shorter method now, and the longer one at some other time.

Gorgias:: Well, I will; and you will certainly say, that you never heard a man use fewer words.

Socrates:: Very good then; as you profess to be a rhetorician, and a maker of rhetoricians, let me ask you, with what is rhetoric concerned: I might ask with what is weaving concerned, and you would reply (would you not?) with the making of garments?

Gorgias:: Yes.

Socrates:: And music is concerned with the composition of melodies?

Gorgias:: It is.

Socrates:: By Herè, Gorgias, I admire the surpassing brevity of your answers.

Gorgias:: Yes, Socrates, I do think myself good at that.

Socrates:: I am glad to hear it; answer me in like manner about rhetoric: with what is rhetoric concerned?

Gorgias:: With discourse.

Socrates:: What sort of discourse, Gorgias?—such discourse as would teach the sick under what treatment they might get well?

Gorgias:: No.

Socrates:: Then rhetoric does not treat of all kinds of discourse?

Gorgias:: Certainly not.

Socrates:: And yet rhetoric makes men able to speak?

Gorgias:: Yes.

Socrates:: And to understand that about which they speak?

Gorgias:: Of course.

Socrates:: But does not the art of medicine, which we were just now mentioning, also make men able to understand and speak about the sick?

Gorgias:: Certainly.

Socrates:: Then medicine also treats of discourse?

Gorgias:: Yes.

Socrates:: Of discourse concerning diseases?

Gorgias:: Just so.

Socrates:: And does not gymnastic also treat of discourse concerning the good or evil condition of the body?

Gorgias:: Very true.

Socrates:: And the same, Gorgias, is true of the other arts:—all of them treat of discourse concerning the subjects with which they severally have to do.

Gorgias:: Clearly.

Socrates:: Then why, if you call rhetoric the art which treats of discourse, and all the other arts treat of discourse, do you not call them arts of rhetoric?

Gorgias:: Because, Socrates, the knowledge of the other arts has only to do with some sort of external action, as of the hand; but there is no such action of the hand in rhetoric which works and takes effect only through the medium of discourse. And therefore I am justified in saying that rhetoric treats of discourse.

Socrates:: I am not sure whether I entirely understand you, but I dare say I shall soon know better; please to answer me a question:—you would allow that there are arts?

Gorgias:: Yes.

Socrates:: As to the arts generally, they are for the most part concerned with doing, and require little or no speaking; in painting, and statuary, and many other arts, the work may proceed in silence; and of such arts I suppose you would say that they do not come within the province of rhetoric.

Gorgias:: You perfectly conceive my meaning, Socrates.

Socrates:: But there are other arts which work wholly through the medium of language, and require either no action or very little, as, for example, the arts of arithmetic, of calculation, of geometry, and of playing draughts; in some of these speech is pretty nearly coextensive with action, but in most of them the verbal element is greater—they depend wholly on words for their efficacy and power: and I take your meaning to be that rhetoric is an art of this latter sort?

Gorgias:: Exactly.

Socrates:: And yet I do not believe that you really mean to call any of these arts rhetoric; although the precise expression which you used was, that rhetoric is an art which works and takes effect only through the medium of discourse; and an adversary who wished to be captious might say, 'And so, Gorgias, you call arithmetic rhetoric.' But I do not think that you really call arithmetic rhetoric any more than geometry would be so called by you.

Gorgias:: You are quite right, Socrates, in your apprehension of my meaning.

Socrates:: Well, then, let me now have the rest of my answer:—seeing that rhetoric is one of those arts which works mainly by the use of words, and there are other arts which also use words, tell me what is that quality in words with which rhetoric is concerned:—Suppose that a person asks me about some of the arts which I was mentioning just now; he might say, 'Socrates, what is arithmetic?' and I should reply to him, as you replied to me, that arithmetic is one of those arts which take effect through words. And then he would proceed to ask: 'Words about what?' and I should reply, Words about odd and even numbers, and how many there are of each. And if he asked again: 'What is the art of calculation?' I should say, That also is one of the arts which is concerned wholly with words. And if he further said, 'Concerned with what?' I should say, like the clerks in the assembly, 'as aforesaid' of arithmetic, but with a difference, the difference being that the art of calculation considers not only the quantities of odd and even numbers, but also their numerical relations to themselves and to one another. And suppose, again, I were to say that astronomy is only words—he would ask, 'Words about what, Socrates?' and I should answer, that astronomy tells us about the motions of the stars and sun and moon, and their relative swiftness.

Gorgias:: You would be quite right, Socrates.

Socrates:: And now let us have from you, Gorgias, the truth about rhetoric: which you would admit (would you not?) to be one of those arts which act always and fulfill all their ends through the medium of words?

Gorgias:: True.

Socrates:: Words which do what? I should ask. To what class of things do the words which rhetoric uses relate?

Gorgias:: To the greatest; Socrates, and the best of human things.

Socrates:: That again, Gorgias, is ambiguous; I am still in the dark: for which are the greatest and best of human things? I dare say that you have heard men singing at feasts the old drinking song, in which the singers enumerate the goods of life, first health, beauty next, thirdly, as the writer of the song says, wealth honestly obtained.

Gorgias:: Yes, I know the song; but what is your drift?

Socrates:: I mean to say, that the producers of those things which the author of the song praises, that is to say, the physician, the trainer, the money-maker, will at once come to you, and first the physician will say: ‘O Socrates, Gorgias is deceiving you, for my art is concerned with the greatest good of men and not his.’ And when I ask, Who are you? he will reply, ‘I am a physician.’ What do you mean? I shall say. Do you mean that your art produces the greatest good? ‘Certainly,’ he will answer, ‘for is not health the greatest good? What greater good can men have, Socrates?’ And after him the trainer will come and say, ‘I too, Socrates, shall be greatly surprised if Gorgias can show more good of his art than I can show of mine.’ To him again I shall say, Who are you, honest friend, and what is your business? ‘I am a trainer,’ he will reply, ‘and my business is to make men beautiful and strong in body.’ When I have done with the trainer, there arrives the money-maker, and he, as I expect, will utterly despise them all. ‘Consider, Socrates,’ he will say, ‘whether Gorgias or any one else can produce any greater good than wealth.’ Well, you and I say to him, and are you a creator of wealth? ‘Yes,’ he replies. And who are you? ‘A moneymaker.’ And do you consider wealth to be the greatest good of man? ‘Of course,’ will be his reply. And we shall rejoin: Yes; but our friend Gorgias contends that his art produces a greater good than yours. And then he will be sure to go on and ask, ‘What good? Let Gorgias answer.’ Now I want you, Gorgias, to imagine that this question is asked of you by them and by me; What is that which, as you say, is the greatest good of man, and of which you are the creator? Answer us.

Gorgias:: That good, Socrates, which is truly the greatest, being that which gives to men freedom in their own persons, and to individuals the power of ruling over others in their several states.

Socrates:: And what would you consider this to be?

Gorgias:: What is there greater than the word which persuades the judges in the courts, or the senators in the council, or the citizens in the assembly, or at any other political meeting?—if you have the power of uttering this word, you will have the physician your slave, and the trainer your slave, and the money-maker of whom you talk will be found to gather treasures, not for himself, but for you who are able to speak and to persuade the multitude.

Socrates:: Now I think, Gorgias, that you have very accurately explained what you conceive to be the art of rhetoric; and you mean to say, if I am not mistaken, that rhetoric is the artificer of persuasion, having this and no other business, and that this is her crown and end. Do you know any other effect of rhetoric over and above that of producing persuasion?

Gorgias:: No: the definition seems to me very fair, Socrates; for persuasion is the chief end of rhetoric.

Socrates:: Then hear me, Gorgias, for I am quite sure that if there ever was a man who entered on the discussion of a matter from a pure love of knowing the truth, I am such a one, and I should say the same of you.

Gorgias:: What is coming, Socrates?

Socrates:: I will tell you: I am very well aware that I do not know what, according to you, is the exact nature, or what are the topics of that persuasion of which you speak, and which is given by rhetoric; although I have a suspicion about both the one and the other. And I am going to ask—what is this power of persuasion which is given by rhetoric, and about what? But why, if I have a suspicion, do I ask instead of telling you? Not for your sake, but in order that the argument may proceed in such a manner as is most likely to set forth the truth. And I would have you observe, that I am right in asking this further question: If I asked, 'What sort of a painter is Zeuxis?' and you said, 'The painter of figures,' should I not be right in asking, 'What kind of figures, and where do you find them?'

Gorgias:: Certainly.

Socrates:: And the reason for asking this second question would be, that there are other painters besides, who paint many other figures?

Gorgias:: True.

Socrates:: But if there had been no one but Zeuxis who painted them, then you would have answered very well?

Gorgias:: Quite so.

Socrates:: Now I want to know about rhetoric in the same way;—is rhetoric the only art which brings persuasion, or do other arts have the same effect? I mean to say—Does he who teaches anything persuade men of that which he teaches or not?

Gorgias:: He persuades, Socrates,—there can be no mistake about that.

Socrates:: Again, if we take the arts of which we were just now speaking:—do not arithmetic and the arithmeticians teach us the properties of number?

Gorgias:: Certainly.

Socrates:: And therefore persuade us of them?

Gorgias:: Yes.

Socrates:: Then arithmetic as well as rhetoric is an artificer of persuasion?

Gorgias:: Clearly.

Socrates:: And if any one asks us what sort of persuasion, and about what,—we shall answer, persuasion which teaches the quantity of odd and even; and we shall be able to show that all the other arts of which we were just now speaking are artificers of persuasion, and of what sort, and about what.

Gorgias:: Very true.

Socrates:: Then rhetoric is not the only artificer of persuasion?

Gorgias:: True.

Socrates:: Seeing, then, that not only rhetoric works by persuasion, but that other arts do the same, as in the case of the painter, a question has arisen which is a very fair one: Of what persuasion is rhetoric the artificer, and about what?—is not that a fair way of putting the question?

Gorgias:: I think so.

Socrates:: Then, if you approve the question, Gorgias, what is the answer?

Gorgias:: I answer, Socrates, that rhetoric is the art of persuasion in courts of law and other assemblies, as I was just now saying, and about the just and unjust.

Socrates:: And that, Gorgias, was what I was suspecting to be your notion; yet I would not have you wonder if by-and-by I am found repeating a seemingly plain question; for I ask not in order to confute you, but as I was saying that the argument may proceed consecutively, and that we may not get the habit of anticipating and suspecting the meaning of one another's words; I would have you developed your own views in your own way, whatever may be your hypothesis.

Gorgias:: I think that you are quite right, Socrates.

Socrates:: Then let me raise another question; there is such a thing as ‘having learned’?

Gorgias:: Yes.

Socrates:: And there is also ‘having believed’?

Gorgias:: Yes.

Socrates:: And is the ‘having learned’ the same as ‘having believed,’ and are learning and belief the same things?

Gorgias:: In my judgment, Socrates, they are not the same.

Socrates:: And your judgment is right, as you may ascertain in this way:—If a person were to say to you, ‘Is there, Gorgias, a false belief as well as a true?’—you would reply, if I am not mistaken, that there is.

Gorgias:: Yes.

Socrates:: Well, but is there a false knowledge as well as a true?

Gorgias:: No.

Socrates:: No, indeed; and this again proves that knowledge and belief differ.

Gorgias:: Very true.

Socrates:: And yet those who have learned as well as those who have believed are persuaded?

Gorgias:: Just so.

Socrates:: Shall we then assume two sorts of persuasion,—one which is the source of belief without knowledge, as the other is of knowledge?

Gorgias:: By all means.

Socrates:: And which sort of persuasion does rhetoric create in courts of law and other assemblies about the just and unjust, the sort of persuasion which gives belief without knowledge, or that which gives knowledge?

Gorgias:: Clearly, Socrates, that which only gives belief.

Socrates:: Then rhetoric, as would appear, is the artificer of a persuasion which creates belief about the just and unjust, but gives no instruction about them?

Gorgias:: True.

Socrates:: And the rhetorician does not instruct the courts of law or other assemblies about things just and unjust, but he creates belief about them; for no one can be supposed to instruct such a vast multitude about such high matters in a short time?

Gorgias:: Certainly not.

Socrates:: Come, then, and let us see what we really mean about rhetoric; for I do not know what my own meaning is as yet. When the assembly meets to elect a physician or a shipwright or any other craftsman, will the rhetorician be taken into counsel? Surely not. For at every election he ought to be chosen who is most skilled; and, again, when walls have to be built or harbors or docks to be constructed, not the rhetorician but the master workman will advise; or when generals have to be chosen and an order of battle arranged, or a position taken, then the military will advise and not the rhetoricians: what do you say, Gorgias? Since you profess to be a rhetorician and a maker of rhetoricians, I cannot do better than learn the nature of your art from you. And here let me assure you that I have your interest in view as well as my own. For likely enough some one or other of the young men present might desire to become your pupil, and in fact I see some, and a good many too, who have this wish, but they would be too modest to question you. And therefore when you are interrogated by me, I would have you imagine that you are interrogated by them. ‘What is the use of coming to you, Gorgias?’ they will say—‘about what will you teach us to advise the state?—about the just and unjust only, or about those other things also which Socrates has just mentioned?’ How will you answer them?

Gorgias:: I like your way of leading us on, Socrates, and I will endeavor to reveal to you the whole nature of rhetoric. You must have heard, I think, that the docks and the walls of the Athenians and the plan of the harbor were devised in accordance with the counsels, partly of Themistocles, and partly of Pericles, and not at the suggestion of the builders.

Socrates:: Such is the tradition, Gorgias, about Themistocles; and I myself heard the speech of Pericles when he advised us about the middle wall.

Gorgias:: And you will observe, Socrates, that when a decision has to be given in such matters the rhetoricians are the advisers; they are the men who win their point.

Socrates:: I had that in my admiring mind, Gorgias, when I asked what is the nature of rhetoric, which always appears to me, when I look at the matter in this way, to be a marvel of greatness.

Gorgias:: A marvel, indeed, Socrates, if you only knew how rhetoric comprehends and holds under her sway all the inferior arts. Let me offer you a striking example of this. On several occasions I have been with my brother Herodicus or some other physician to see one of his patients, who would not allow the physician to give him medicine, or apply the knife or hot iron to him; and I have persuaded him to do for me what he would not do for the physician just by the use of rhetoric. And I say that if a rhetorician and a physician were to go to any city, and had there to argue in the Ecclesia or any other assembly as to which of them should be elected state-physician, the physician would have no chance; but he who could speak would be chosen if he wished; and in a contest with a man of any other profession the rhetorician more than any one would have the power of getting himself chosen, for he can speak more persuasively to the multitude than any of them, and on any subject. Such is the nature and power of the art of rhetoric! And yet, Socrates, rhetoric should be used like any other competitive art, not against everybody,—the rhetorician ought not to abuse his strength any more than a pugilist or pancratiast or other master of fence;—because he has powers which are more than a match either for friend or enemy, he ought not therefore to strike, stab, or slay his friends. Suppose a man to have been trained in the palestra and to be a skilful boxer,—he in the fullness of his strength goes and strikes his father or mother or one of his familiars or friends; but that is no reason why the trainers or fencing-masters should be held in detestation or banished from the city;—surely not. For they taught their art for a good purpose, to be used against enemies and evil-doers, in self-defense not in aggression, and others have perverted their instructions, and turned to a bad use their own strength and skill. But not on this account are the teachers bad, neither is the art in fault, or bad in itself; I should rather say that those who make a bad use of the art are to blame. And the same argument holds good of rhetoric; for the rhetorician can speak against all men and upon any subject,—in short, he can persuade the multitude better than any other man of anything which he pleases, but he should not therefore seek to defraud the physician or any other artist of his reputation merely because he has the power; he ought to use rhetoric fairly, as he would also use his athletic powers. And if after having become a rhetorician he makes a bad use of his strength and skill, his instructor surely ought not on that account to be held in detestation or banished. For he was intended by his teacher to make a good use of his instructions, but he abuses them. And therefore he is the person who ought to be held in detestation, banished, and put to death, and not his instructor.

Socrates:: You, Gorgias, like myself, have had great experience of disputations, and you must have observed, I think, that they do not always terminate in mutual edification, or in the definition by either party of the subjects which they are discussing; but disagreements are apt to arise—somebody says that another has not spoken truly or clearly; and then they get into a passion and begin to quarrel, both parties conceiving that their opponents are arguing from personal feeling only and jealousy of themselves, not from any interest in the question at issue. And sometimes they will go on abusing one another until the company at last are quite vexed at themselves for ever listening to such fellows. Why do I say this? Why, because I cannot help feeling that you are now saying what is not quite consistent or accordant with what you were saying at first about rhetoric. And I am afraid to point this out to you, lest you should think that I have some animosity against you, and that I speak, not for the sake of discovering the truth, but from jealousy of you. Now if you are one of my sort, I should like to cross-examine you, but if not I will let you alone. And what is my sort? you will ask. I am one of those who are very willing to be refuted if I say anything which is not true, and very willing to refute any one else who says what is not true, and quite as ready to be refuted as to refute; for I hold that this is the greater gain of the two, just as the gain is greater of being cured of a very great evil than of curing another. For I imagine that there is no evil which a man can endure so great as an erroneous opinion about the matters of which we are speaking; and if you claim to be one of my sort, let us have the discussion out, but if you would rather have done, no matter;—let us make an end of it.

Gorgias:: I should say, Socrates, that I am quite the man whom you indicate; but, perhaps, we ought to consider the audience, for, before you came, I had already given a long exhibition, and if we proceed the argument may run on to a great length. And therefore I think that we should consider whether we may not be detaining some part of the company when they are wanting to do something else.

Chaerephon:: You hear the audience cheering, Gorgias and Socrates, which shows their desire to listen to you; and for myself, Heaven forbid that I should have any business on hand which would take me away from a discussion so interesting and so ably maintained.

Callicles:: By the gods, Chaerephon, although I have been present at many discussions, I doubt whether I was ever so much delighted before, and therefore if you go on discoursing all day I shall be the better pleased.

Socrates:: I may truly say, Callicles, that I am willing, if Gorgias is.

Gorgias:: After all this, Socrates, I should be disgraced if I refused, especially as I have promised to answer all comers; in accordance with the wishes of the company, then, do you begin, and ask of me any question which you like.

Socrates:: Let me tell you then, Gorgias, what surprises me in your words; though I dare say that you may be right, and I may have misunderstood your meaning. You say that you can make any man, who will learn of you, a rhetorician?

Gorgias:: Yes.

Socrates:: Do you mean that you will teach him to gain the ears of the multitude on any subject, and this not by instruction but by persuasion?

Gorgias:: Quite so.

Socrates:: You were saying, in fact, that the rhetorician will have greater powers of persuasion than the physician even in a matter of health?

Gorgias:: Yes, with the multitude,—that is.

Socrates:: You mean to say, with the ignorant; for with those who know he cannot be supposed to have greater powers of persuasion.

Gorgias:: Very true.

Socrates:: But if he is to have more power of persuasion than the physician, he will have greater power than he who knows?

Gorgias:: Certainly.

Socrates:: Although he is not a physician:—is he?

Gorgias:: No.

Socrates:: And he who is not a physician must, obviously, be ignorant of what the physician knows.

Gorgias:: Clearly.

Socrates:: Then, when the rhetorician is more persuasive than the physician, the ignorant is more persuasive with the ignorant than he who has knowledge?—is not that the inference?

Gorgias:: In the case supposed:—yes.

Socrates:: And the same holds of the relation of rhetoric to all the other arts; the rhetorician need not know the truth about things; he has only to discover some way of persuading the ignorant that he has more knowledge than those who know?

Gorgias:: Yes, Socrates, and is not this a great comfort?—not to have learned the other arts, but the art of rhetoric only, and yet to be in no way inferior to the professors of them?

Socrates:: Whether the rhetorician is or is not inferior on this account is a question which we will hereafter examine if the enquiry is likely to be of any service to us; but I would rather begin by asking, whether he is or is not as ignorant of the just and unjust, base and honorable, good and evil, as he is of medicine and the other arts; I mean to say, does he really know anything of what is good and evil, base or honorable, just of unjust in them; or has he only a way with the ignorant of persuading them that he not knowing is to be esteemed to know more about these things than some one else who knows? Or must the pupil know these things and come to you knowing them before he can acquire the art of rhetoric? If he is ignorant, you who are the teacher of rhetoric will not teach him—it is not your business; but you will make him seem to the multitude to know them, when he does not know them; and seem to be a good man, when he is not. Or will you be unable to teach him rhetoric at all, unless he knows the truth of these things first? What is to be said about all this? By heaven, Gorgias, I wish that you would reveal to me the power of rhetoric, as you were saying that you would.

Gorgias:: Well, Socrates, I suppose that if the pupil does chance not to know them, he will have to learn of me these things as well.

Socrates:: Say no more, for there you are right; and so he whom you make a rhetorician must either know the nature of the just and unjust already, or he must be taught by you.

Gorgias:: Certainly.

Socrates:: Well, and is not he who has learned carpentering a carpenter?

Gorgias:: Yes.

Socrates:: And he who has learned music a musician?

Gorgias:: Yes.

Socrates:: And he who has learned medicine is a physician, in like manner? He who has learned anything whatever is that which his knowledge makes him.

Gorgias:: Certainly.

Socrates:: And in the same way, he who has learned what is just is just?

Gorgias:: To be sure.

Socrates:: And he who is just may be supposed to do what is just?

Gorgias:: Yes.

Socrates:: And must not the just man always desire to do what is just?

Gorgias:: That is clearly the inference.

Socrates:: Surely, then, the just man will never consent to do injustice?

Gorgias:: Certainly not.

Socrates:: And according to the argument the rhetorician must be a just man?

Gorgias:: Yes.

Socrates:: And will therefore never be willing to do injustice?

Gorgias:: Clearly not.

Socrates:: But do you remember saying just now that the trainer is not to be accused or banished if the pugilist makes a wrong use of his pugilistic art; and in like manner, if the rhetorician makes a bad and unjust use of his rhetoric, that is not to be laid to the charge of his teacher, who is not to be banished, but the wrong-doer himself who made a bad use of his rhetoric—he is to be banished—was not that said?

Gorgias:: Yes, it was.

Socrates:: But now we are affirming that the aforesaid rhetorician will never have done injustice at all?

Gorgias:: True.

Socrates:: And at the very outset, Gorgias, it was said that rhetoric treated of discourse, not [like arithmetic] about odd and even, but about just and unjust? Was not this said?

Gorgias:: Yes.

Socrates:: I was thinking at the time, when I heard you saying so, that rhetoric, which is always discoursing about justice, could not possibly be an unjust thing. But when you added, shortly afterwards, that the rhetorician might make a bad use of rhetoric I noted with surprise the inconsistency into which you had fallen; and I said, that if you thought, as I did, that there was a gain in being refuted, there would be an advantage in going on with the question, but if not, I would leave off.

And in the course of our investigations, as you will see yourself, the rhetorician has been acknowledged to be incapable of making an unjust use of rhetoric, or of willingness to do injustice. By the dog, Gorgias, there will be a great deal of discussion, before we get at the truth of all this.

Polus:: And do even you, Socrates, seriously believe what you are now saying about rhetoric? What! because Gorgias was ashamed to deny that the rhetorician knew the just and the honorable and the good, and admitted that to any one who came to him ignorant of them he could teach them, and then out of this admission there arose a contradiction—the thing which you so dearly love, and to which not he, but you, brought the argument by your captious questions—[do you seriously believe that there is any truth in all this?] For will any one ever acknowledge that he does not know, or cannot teach, the nature of justice? The truth is, that there is great want of manners in bringing the argument to such a pass.

Socrates:: Illustrious Polus, the reason why we provide ourselves with friends and children is, that when we get old and stumble, a younger generation may be at hand to set us on our legs again in our words and in our actions: and now, if I and Gorgias are stumbling, here are you who should raise us up; and I for my part engage to retract any error into which you may think that I have fallen—upon one condition:

Polus:: What condition?

Socrates:: That you contract, Polus, the prolixity of speech in which you indulged at first.

Polus:: What! do you mean that I may not use as many words as I please?

Socrates:: Only to think, my friend, that having come on a visit to Athens, which is the most free-spoken state in Hellas, you when you got there, and you alone, should be deprived of the power of speech—that would be hard indeed. But then consider my case shall not I be very hardly used, if, when you are making a long oration, and refusing to answer what you are asked, I am compelled to stay and listen to you, and may not go away? I say rather, if you have a real interest in the argument, or, to repeat my former expression, have any desire to set it on its legs, take back any statement which you please; and in your turn ask and answer, like myself and Gorgias—refute and be refuted: for I suppose that you would claim to know what Gorgias knows—would you not?

Polus:: Yes.

Socrates:: And you, like him, invite any one to ask you about anything which he pleases, and you will know how to answer him?

Polus:: To be sure.

Socrates:: And now, which will you do, ask or answer?

Polus:: I will ask; and do you answer me, Socrates, the same question which Gorgias, as you suppose, is unable to answer: What is rhetoric?

Socrates:: Do you mean what sort of an art?

Polus:: Yes.

Socrates:: To say the truth, Polus, it is not an art at all, in my opinion.

Polus:: Then what, in your opinion, is rhetoric?

Socrates:: A thing which, as I was lately reading in a book of yours, you say that you have made an art.

Polus:: What thing?

Socrates:: I should say a sort of experience.

Polus:: Does rhetoric seem to you to be an experience?

Socrates:: That is my view, but you may be of another mind.

Polus:: An experience in what?

Socrates:: An experience in producing a sort of delight and gratification.

Polus:: And if able to gratify others, must not rhetoric be a fine thing?

Socrates:: What are you saying, Polus? Why do you ask me whether rhetoric is a fine thing or not, when I have not as yet told you what rhetoric is?

Polus:: Did I not hear you say that rhetoric was a sort of experience?

Socrates:: Will you, who are so desirous to gratify others, afford a slight gratification to me?

Polus:: I will.

Socrates:: Will you ask me, what sort of an art is cookery?

Polus:: What sort of an art is cookery?

Socrates:: Not an art at all, Polus.

Polus:: What then?

Socrates:: I should say an experience.

Polus:: In what? I wish that you would explain to me.

Socrates:: An experience in producing a sort of delight and gratification, Polus.

Polus:: Then are cookery and rhetoric the same?

Socrates:: No, they are only different parts of the same profession.

Polus:: Of what profession?

Socrates:: I am afraid that the truth may seem discourteous; and I hesitate to answer, lest Gorgias should imagine that I am making fun of his own profession. For whether or no this is that art of rhetoric which Gorgias practices I really cannot tell:—from what he was just now saying, nothing appeared of what he thought of his art, but the rhetoric which I mean is a part of a not very creditable whole.

Gorgias:: A part of what, Socrates? Say what you mean, and never mind me.

Socrates:: In my opinion then, Gorgias, the whole of which rhetoric is a part is not an art at all, but the habit of a bold and ready wit, which knows how to manage mankind: this habit I sum up under the word ‘flattery;’ and it appears to me to have many other parts, one of which is cookery, which may seem to be an art, but, as I maintain, is only an experience or routine and not an art:—another part is rhetoric, and the art of attiring and sophistry are two others: thus there are four branches, and four different things answering to them. And Polus may ask, if he likes, for he has not as yet been informed, what part of flattery is rhetoric: he did not see that I had not yet answered him when he proceeded to ask a further question: Whether I do not think rhetoric a fine thing? But I shall not tell him whether rhetoric is a fine thing or not, until I have first answered, ‘What is rhetoric?’ For that would not be right, Polus; but I shall be happy to answer, if you will ask me, What part of flattery is rhetoric?

Polus:: I will ask, and do you answer? What part of flattery is rhetoric?

Socrates:: Will you understand my answer? Rhetoric, according to my view, is the ghost or counterfeit of a part of politics.

Polus:: And noble or ignoble?

Socrates:: Ignoble, I should say, if I am compelled to answer, for I call what is bad ignoble:—though I doubt whether you understand what I was saying before.

Gorgias:: Indeed, Socrates, I cannot say that I understand myself.

Socrates:: I do not wonder, Gorgias; for I have not as yet explained myself, and our friend Polus, colt by name and colt by nature, is apt to run away.

Gorgias:: Never mind him, but explain to me what you mean by saying that rhetoric is the counterfeit of a part of politics.

Socrates:: I will try, then, to explain my notion of rhetoric, and if I am mistaken, my friend Polus shall refute me. We may assume the existence of bodies and of souls?

Gorgias:: Of course.

Socrates:: You would further admit that there is a good condition of either of them?

Gorgias:: Yes.

Socrates:: Which condition may not be really good, but good only in appearance? I mean to say, that there are many persons who appear to be in good health, and whom only a physician or trainer will discern at first sight not to be in good health.

Gorgias:: True.

Socrates:: And this applies not only to the body, but also to the soul: in either there may be that which gives the appearance of health and not the reality?

Gorgias:: Yes, certainly.

Socrates:: And now I will endeavor to explain to you more clearly what I mean: The soul and body being two, have two arts corresponding to them: there is the art of politics attending on the soul; and another art attending on the body, of which I know no single name, but which may be described as having two divisions, one of them gymnastic, and the other medicine. And in politics there is a legislative part, which answers to gymnastic, as justice does to medicine; and the two parts run into one another, justice having to do with the same subject as legislation, and medicine with the same subject as gymnastic, but with a difference. Now, seeing that there are these four arts, two attending on the body and two on the soul for their highest good; flattery knowing, or rather guessing their natures, has distributed herself into four shams or simulations of them; she puts on the likeness of some one or other of them, and pretends to be that which she simulates, and having no regard for men's highest interests, is ever making pleasure the bait of the unwary, and deceiving them into the belief that she is of the highest value to them. Cookery simulates the disguise of medicine, and pretends to know what food is the best for the body; and if the physician and the cook had to enter into a competition in which children were the judges, or men who had no more sense than children, as to which of them best understands the goodness or badness of food, the physician would be starved to death. A flattery I deem this to be and of an ignoble sort, Polus, for to you I am now addressing myself, because it aims at pleasure without any thought of the best. An art I do not call it, but only an experience, because it is unable to explain or to give a reason of the nature of its own applications. And I do not call any irrational thing an art; but if you dispute my words, I am prepared to argue in defense of them.

Cookery, then, I maintain to be a flattery which takes the form of medicine; and tiring, in like manner, is a flattery which takes the form of gymnastic, and is knavish, false, ignoble, illiberal, working deceitfully by the help of lines, and colors, and enamels, and garments, and making men affect a spurious beauty to the neglect of the true beauty which is given by gymnastic.

I would rather not be tedious, and therefore I will only say, after the manner of the geometricians, (for I think that by this time you will be able to follow,)

as tiring : gymnastic :: cookery : medicine;

or rather;

as tiring : gymnastic :: sophistry : legislation;

and

as cookery : medicine :: rhetoric : justice.

And this, I say, is the natural difference between the rhetorician and the sophist, but by reason of their near connection, they are apt to be jumbled up together; neither do they know what to make of themselves, nor do other men know what to make of them. For if the body presided over itself, and were not under the guidance of the soul, and the soul did not discern and discriminate between cookery and medicine, but the body was made the judge of them, and the rule of judgment was the bodily delight which was given by them, then the word of Anaxagoras, that word with which you, friend Polus, are so well acquainted, would prevail far and wide: ‘Chaos’ would come again, and cookery, health, and medicine would mingle in an indiscriminate mass. And now I have told you my notion of rhetoric, which is, in relation to the soul, what cookery is to the body. I may have been inconsistent in making a long speech, when I would not allow you to discourse at length. But I think that I may be excused, because you did not understand me, and could make no use of my answer when I spoke shortly, and therefore I had to enter into an explanation. And if I show an equal inability to make use of yours, I hope that you will speak at equal length; but if I am able to understand you, let me have the benefit of your brevity, as is only fair: And now you may do what you please with my answer.

Polus:: What do you mean? do you think that rhetoric is flattery?

Socrates:: Nay, I said a part of flattery; if at your age, Polus, you cannot remember, what will you do by-and-by, when you get older?

Polus:: And are the good rhetoricians meanly regarded in states, under the idea that they are flatterers?

Socrates:: Is that a question or the beginning of a speech?

Polus:: I am asking a question.

Socrates:: Then my answer is, that they are not regarded at all.

Polus:: How not regarded? Have they not very great power in states?

Socrates:: Not if you mean to say that power is a good to the possessor.

Polus:: And that is what I do mean to say.

Socrates:: Then, if so, I think that they have the least power of all the citizens.

Polus:: What! are they not like tyrants? They kill and despoil and exile any one whom they please.

Socrates:: By the dog, Polus, I cannot make out at each deliverance of yours, whether you are giving an opinion of your own, or asking a question of me.

Polus:: I am asking a question of you.

Socrates:: Yes, my friend, but you ask two questions at once.

Polus:: How two questions?

Socrates:: Why, did you not say just now that the rhetoricians are like tyrants, and that they kill and despoil or exile any one whom they please?

Polus:: I did.

Socrates:: Well then, I say to you that here are two questions in one, and I will answer both of them. And I tell you, Polus, that rhetoricians and tyrants have the least possible power in states, as I was just now saying; for they do literally nothing which they will, but only what they think best.

Polus:: And is not that a great power?

Socrates:: Polus has already said the reverse.

Polus:: Said the reverse! nay, that is what I assert.

Socrates:: No, by the great—what do you call him?—not you, for you say that great power is a good to him who has the power.

Polus:: I do.

Socrates:: And would you maintain that if a fool does what he thinks best, this is a good, and would you call this great power?

Polus:: I should not.

Socrates:: Then you must prove that the rhetorician is not a fool, and that rhetoric is an art and not a flattery—and so you will have refuted me; but if you leave me unrefuted, why, the rhetoricians who do what they think best in states, and the tyrants, will have nothing upon which to congratulate themselves, if, as you say, power be indeed a good, admitting at the same time that what is done without sense is an evil.

Polus:: Yes; I admit that.

Socrates:: How then can the rhetoricians or the tyrants have great power in states, unless Polus can refute Socrates, and prove to him that they do as they will?

Polus:: This fellow—

Socrates:: I say that they do not do as they will;—now refute me.

Polus:: Why, have you not already said that they do as they think best?

Socrates:: And I say so still.

Polus:: Then surely they do as they will?

Socrates:: I deny it.

Polus:: But they do what they think best?

Socrates:: Aye.

Polus:: That, Socrates, is monstrous and absurd.

Socrates:: Good words, good Polus, as I may say in your own peculiar style; but if you have any questions to ask of me, either prove that I am in error or give the answer yourself.

Polus:: Very well, I am willing to answer that I may know what you mean.

Socrates:: Do men appear to you to will that which they do, or to will that further end for the sake of which they do a thing? when they take medicine, for example, at the bidding of a physician, do they will the drinking of the medicine which is painful, or the health for the sake of which they drink?

Polus:: Clearly, the health.

Socrates:: And when men go on a voyage or engage in business, they do not will that which they are doing at the time; for who would desire to take the risk of a voyage or the trouble of business?—But they will, to have the wealth for the sake of which they go on a voyage.

Polus:: Certainly.

Socrates:: And is not this universally true? If a man does something for the sake of something else, he wills not that which he does, but that for the sake of which he does it.

Polus:: Yes.

Socrates:: And are not all things either good or evil, or intermediate and indifferent?

Polus:: To be sure, Socrates.

Socrates:: Wisdom and health and wealth and the like you would call goods, and their opposites evils?

Polus:: I should.

Socrates:: And the things which are neither good nor evil, and which partake sometimes of the nature of good and at other times of evil, or of neither, are such as sitting, walking, running, sailing; or, again, wood, stones, and the like:—these are the things which you call neither good nor evil?

Polus:: Exactly so.

Socrates:: Are these indifferent things done for the sake of the good, or the good for the sake of the indifferent?

Polus:: Clearly, the indifferent for the sake of the good.

Socrates:: When we walk we walk for the sake of the good, and under the idea that it is better to walk, and when we stand we stand equally for the sake of the good?

Polus:: Yes.

Socrates:: And when we kill a man we kill him or exile him or despoil him of his goods, because, as we think, it will conduce to our good?

Polus:: Certainly.

Socrates:: Men who do any of these things do them for the sake of the good?

Polus:: Yes.

Socrates:: And did we not admit that in doing something for the sake of something else, we do not will those things which we do, but that other thing for the sake of which we do them?

Polus:: Most true.

Socrates:: Then we do not will simply to kill a man or to exile him or to despoil him of his goods, but we will to do that which conduces to our good, and if the act is not conducive to our good we do not will it; for we will, as you say, that which is our good, but that which is neither good nor evil, or simply evil, we do not will. Why are you silent, Polus? Am I not right?

Polus:: You are right.

Socrates:: Hence we may infer, that if any one, whether he be a tyrant or a rhetorician, kills another or exiles another or deprives him of his property, under the idea that the act is for his own interests when really not for his own interests, he may be said to do what seems best to him?

Polus:: Yes.

Socrates:: But does he do what he wills if he does what is evil? Why do you not answer?

Polus:: Well, I suppose not.

Socrates:: Then if great power is a good as you allow, will such a one have great power in a state?

Polus:: He will not.

Socrates:: Then I was right in saying that a man may do what seems good to him in a state, and not have great power, and not do what he wills?

Polus:: As though you, Socrates, would not like to have the power of doing what seemed good to you in the state, rather than not; you would not be jealous when you saw any one killing or despoiling or imprisoning whom he pleased, Oh, no!

Socrates:: Justly or unjustly, do you mean?

Polus:: In either case is he not equally to be envied?

Socrates:: Forbear, Polus!

Polus:: Why ‘forbear’?

Socrates:: Because you ought not to envy wretches who are not to be envied, but only to pity them.

Polus:: And are those of whom I spoke wretches?

Socrates:: Yes, certainly they are.

Polus:: And so you think that he who slays any one whom he pleases, and justly slays him, is pitiable and wretched?

Socrates:: No, I do not say that of him: but neither do I think that he is to be envied.

Polus:: Were you not saying just now that he is wretched?
